$1095

A New ESSEX

A Roomier Open Car—A Greater Chassis

You can have no appreciation of what this price buys until you examine and drive it.

To all that made Essex such a wonderful value in the past are added refinements and comforts never before offered in a car of its price class. Roomier seating, wider doors and greater riding ease, contribute something new in personal comfort.

smoothness is even more pronounced. You will instantly note its greater beauty. Its care and attention are easier, cleaner, more convenient.

It will reveal a charm you never suspected in any except the large costly cars.

The Result of Three Years' Experience

Back of the new Essex is all we learned in building 70,000 earlier Essex cars. Finer precision standards have resulted and Essex

- Wider Seats
- Wider Doors
- Lubricated with an oil can—no messy grease cups.
- Thief-proof Lock, reduces insurance cost 15% to 20%.

It Improves in Service

Old owners tell you of a car so enduringly designed and built that its performance improves for thousands of miles.

But today's Essex combines advantages no earlier owner knows. Go see, and ride in it. It is the best Essex ever built, and at the lowest price.

Touring, $1095 Cabriolet, $1195 Coach, $1295

Freight and Tax Extra

ESSEX MOTORS, Detroit, Michigan

VETERINARY

(Continued from page eight.)

ounce of Fowlers' solution of arsenic on the feed once daily for two or three weeks; then give him a rest and repeat the treatment.

Tender Shoulders.—Is there any way of treating tender shoulders of horses to prevent gallings? E. M. K.

Apply glycerite of tannin to the shoulders once daily for a few days before the horse is placed on heavy work. If this can not be done, then apply the medicine to the shoulders with a little friction at night and let it toughen the shoulders by morning.

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. They struggle slowly westward, meeting up with others also headed for the gold diggings. With a party of men traveling by handcart they all but starve for water on a desert, but dig a well and escape. They meet with a family by the name of Cooper, one member of which is a girl of years and manner that at once captivate young Orlando, who delights in keeping near her prairie schooner as they journey on. Once the entire party gives up the westward trip when they meet discouraged gold seekers returning, but Orlando and Hazel Cooper induce them to turn to the west again. They have many interesting experiences on the way, finally coming upon a great Indian camp. Not many days later they sighted Pike's peak, and a little later plodded into a little frontier town that has since grown to be the great city of Denver, Colorado. Here they learned that a rich gold strike had been made not far away at what was called Gregory's diggings. They mail letters to the folks back home and hurry on toward the place of the strike. At the foot of the mountains the women and children are left in camp to care for most of the supplies, while the men travel on foot into the steep interior. They pitch their first camp well up among the rugged Rockies.

CHAPTER THIRTEEN.

At the Gregory's Gulch Diggings.

The foot travelers' camp was not far from the bank of a small but noisy mountain stream. Pine trees grew all around, and they had to rake back the pine needles before kindling their fire. Not far away, luckily, was a little patch of grassland, where Brindle could find her supper. Other travelers were camped scarcely a stone's throw off, some on their way to the gold diggings, other returning to Denver.

Being weary after their unaccustomed exertion of mountain climbing, the company of 10 had camped early. And they ate their supper before dark. After supper Orlando took his gun and, followed by Frisk, strolled away down the branch. In spite of his weariness, he was feeling unusually cheerful.

He was supposed to be hunting for game. But, when well out of sight of the camp he stopped, set his gunstock on the ground and took a little black case out of his pocket. Opening the case, he stood gazing at a daguerreotype of Hazel Cooper. She had given it to him only the day before. Not caring to open the picture where all that crowd of men could see, he had come away on purpose to be alone.

He had also intended to do some hunting, but so much time did he spend gazing at the picture that he returned to camp, at dusk, without any game. But it seemed to him that he had made some progress in his courtship. Besides having the daguerreotype, he was now traveling in a mining party with the girl's father. Orlando was usually careful of his words and conduct, but he resolved to be more careful than ever before. Whether Cooper himself had any thought of such a thing or not, the young traveler could not help feeling that he was on trial as a son-in-law.

Next morning the party ate their breakfast in the dim, chilly dawn, then packed up and marched on toward the gold diggings.

It was about the middle of the forenoon when, going down a steep mountainside, they found themselves in Gregory's Gulch. This was the scene of the greatest gold excitement in all the Rocky mountain region. Here had already been discovered mines which, in the years to come, would prove the richest in the as yet unheard-of state of Colorado.

At this time there were 5000 or 6000 people in Gregory's Gulch. They were strung up and down the gulch for miles and were living in tents, or under brush sheds, or in the rudest of pine log cabins. Some of the cabins were covered with tents, and a few with hand-sawn planks, or with the usual layer of dried mud on logs and grass. But most of them could boast only a roof of brush.

Besides the thousands of men who swarmed everywhere, there were women, a good number of them, in camp. Most of the women were busy along the stream, washing clothes. At the prices they were reported to receive, they doubtless washed out more gold than most of their miner husbands were washing out.

After passing through the busiest part of the gulch, till they came to the far side of it, the newcomers established their camp. Leaving the cart and Brindle there, all the men but one started out to learn what they could of gold mining. Nof a man of them had had any mining experience, and it was important that they gather up all the information possible.

The first and most discouraging fact they learned was that every desirable claim in Gregory's Gulch was already taken. Claims were changing hands constantly, some being sold for several thousand dollars apiece. The miners found no gold in the creek bed, they reported. The gold they obtained came from washing out "rotten quartz," as they called it, which they dug up on the mountainside or at the foot of the mountain.

Here, for the first time, these people fresh from the states saw what was termed sluice mining. When a miner had dug up some earth he carried it to the creek and emptied it into a long wooden trough, through which a stream of water was flowing. The swift current would carry on the dissolved earth, but the heavy particles of gold would drop to the bottom and lodge against cleats.

Most of the miners, however, were merely using pans. Filling their mining pans with earth, they would go to the stream's edge and keep washing, carefully, till the earth and sand were washed away and only the gold remained. The pans were made of black iron, so that the yellow particles of gold would be easily visible against it.

One miner, whom the newcomers watched at his work, washed out, while they were watching him, a panful of dirt that left him more than $5 worth of gold.

"Can you do that well every time?" questioned Orlando, eagerly.

"No, I cain't—you bet your bottom dollar I cain't! If I could—if I only could, I'd mighty soon be well enough fixed to strike back for the states. Done better'n this, though, I have. Lot's better. One pan I washed out a few days ago paid me jest a lettle up'ards of $17. Big trouble is, pans that pays well is few and fur part. Most of 'em pays little or nothin'."

As the sightseers strolled on from claim to claim, they learned that some of the miners—those who had the best claims—were washing out good pay for their work. But many of them were not earning as much as what they were eating cost.

Besides the miners, there were many people here who made their living in various ways. Some men had brought cows to the gulch and were selling milk to the miners. The animals found good grazing on the mountainsides, and the milk brought high prices. One of these milk peddlers, with whom Orlando talked, complained that, unless he watched his cows all the time, he had much trouble to keep other men from milking them on the sly.

After remaining together for a little while, the party of nine had scattered, each wandering wherever inclination led him. Not till their noontime appetites drove them back to their own camp did they all come together again. Now they compared experiences, each exchanging what he had learned for what all the others had learned.

When they had discussed the situation in all its details, Cooper announced his conclusion: "From everything I can pick up, all the pay claims here have some fellow roosting on 'em. We're every one as green as grass about this gold-mining business. About all we can do here is to learn the best methods. Then when we find some good place to take up claims we'll know how the thing's done."

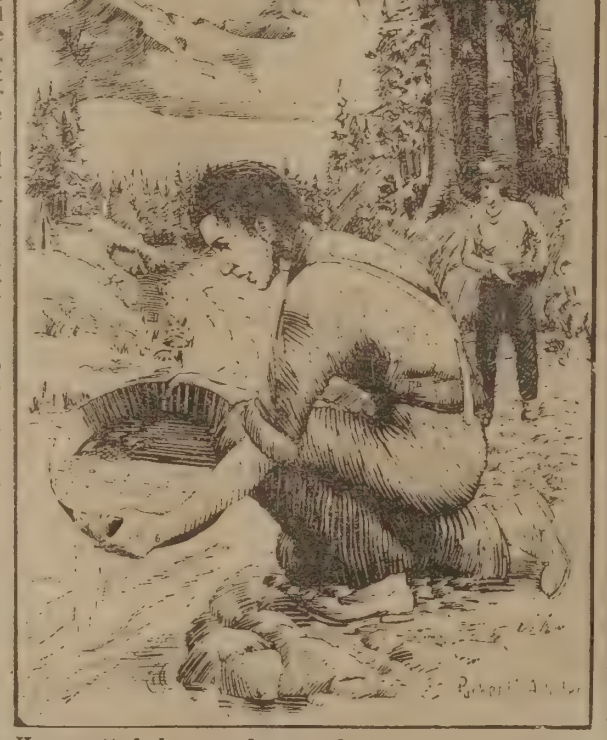
"But if we don't dig here, where can we go to do better?" demanded Orlando.

"Oh, we've got the whole Rocky mountain range to prospect over," Sanders reminded him. "Just about as apt to be gold in one place as another, as far as I can make out. Worlds of room here for everybody that comes."

"Even here most of the miners are not washing out dust enough to pay their board," Givens remarked. "It's a sort of lottery, this whole mining business."

"Of course, Jeff. I knew that before I started from home," spoke Holloway. "I'd had a good chance to learn. You've heard me tell about it already, but the others haven't. Five years ago this spring I started with a big drove of beef steers from Texas to California. We couldn't get through to California, as it happened, so we turned east and drove to Missouri instead. I stopped there and got married, and I've been living in Missouri and Kansas territory ever since.

"But what I began to say was that the three owners of the cattle, Joe Burgess, Jeddy Johnson and Phil Gregory, were all from California. That is, they'd gone out there in '49 and spent years in mining. Most of the time they made barely enough to exist on. But at last they struck it rich—dug up $30,000 or $40,000 in gold. In spite of that, though, Burgess always declared that gold mining is the veriest gamble. He insisted that it cost somebody $2 for every dollar dug out of the mines. A few people strike it rich, he said, like he and his partners had done. The others don't get back the money they spend, much less pay for their back-breaking labor."



"That was a mighty discouraging way of looking at mining, Holloway," Cooper commented. "After hearing that from a man who knew, I marvel that you got up spunk to start out and try mining on your own hook."

Holloway laughed. "Well, there's always a chance, you know, that you'll be the lucky fellow—the fellow to strike it rich."

"Yes, we're all hoping to draw a big prize in this gold-mining lottery. That's what drove us out to this wild region," Sanders put in.

"And then there's the experience, boys," suggested Cooper. "As I've already said to some of you, I think it's worth a whole lot to have interesting things to think about and talk about. Our journey across the plains, though not very exciting, was full of interesting happenings. And then look at what we see here. We'll never live long enough to forget this, or to quit talking about it. I'd crossed the plains before, but this is my first experience in a gold miners' camp. I wouldn't have missed this busy, buzzing beehive for anything."

After eating and resting, most of the party wandered away through the mining camps again. And the first thing of interest they noticed was a Mexican pack train. Several Mexicans had come from New Mexico, driving a number of burros loaded with flour and meal. They had halted near a stream and were selling their stuff about as fast as they could measure it out.

He squatted down and proceeded with the washing.

Leaving the rest of their party talking to a miner, Orlando and Esau strolled on. At length they came to a covered wagon, which was standing not more than 50 yards from the creek. There they found Esau's acquaintances, the Hinksons. The woman, with a tub, a big pot and a fire by the stream's edge, was washing clothes. Her husband was working with a miner, and the youngest children were playing about.

"Well, got you a claim a'ready, I see," Esau remarked to Hinkson.

"Nope. We jest stopped here for a little while, and I've hired to this man to help him till I make up my mind what to do. Ain't no very good chance here to try any minin' on my own hook, as fur as I can see. We're all busy enough, though. I'm swingin' a pick and mammy's got some washin' to do. Becky, she's away up yander on the mountainside, whar you hear them two bells, a-mindin' the steers and the cows. Reckon maybe we'll have some milk to sell after our cows picks up a bit."

Esau and Orlando now moved on. After a little while they separated, each wandering away in search of the things that interested him most. During the afternoon Orlando chatted with no telling how many miners and saw many new things. Here and there he passed a tent where groceries were sold, all at amazingly high prices. A number of men he saw who were dressed differently from the miners. One of those, whom he stopped to interview, explained with evident pride that he was a gambler. Other tents the young sightseer passed where, as a bold but crudely-lettered sign never failed to make known, strong liquors were sold. Night was coming on when the young man returned to his own camp.

There he found most of his party, and the others arrived a little later. Each of them had many things to tell, and was eager to tell them.

Holloway had happened upon some former acquaintances—the men he had started with on the Smoky Hill route. They had kept on, and had succeeded in getting through to water, though not till they had driven 80 or 90 miles without it. But they had experienced even worse times afterward. Having come to where there was no grass, they had been under the necessity of feeding all their meal, flour and beans to their oxen, to keep them able to travel. Still later, there being little game the men themselves had been forced to eat such things as they could find. Two or three times they had feasted on owls, and once, so extreme was their hunger, they had been driven to kill a rattlesnake, cook it and eat it.

"My! But ain't I glad we three had the gumption to turn back when we did?" Holloway exclaimed, after relating what he had been told.

Two of the handcart's crew had come upon a relative of theirs, from Indiana. The man had a claim near the upper end of Gregory's Gulch. And two other men, partners of his, had claims by him.

Early next morning Orlando and Esau walked over to the creek to wash some of their clothes. While they were thus employed, and chatting with the miner whose claim they were on, they saw a rather numerous company advancing down the road into the gulch. One of these proved, on coming nearer, to be a striking-looking figure. He was mounted on a mule. After the party had passed on up the gulch it was learned that several of them were newspaper correspondents. And the mule rider was no other than Horace Greeley, already famous as the editor of the New York Tribune. Several years later he would be a candidate for the presidency.

Orlando had heard and read much of this man, and he had also read the weekly edition of his paper more or less. He saw him several times during the day, and when word passed through the camp that Greeley would make a speech, both he and Esau were among those who assembled to hear him.

The meeting was held just before sunset, after the miners had ended their day's work. Perhaps 2000 men came together in a grove of pine trees to listen to what the famous editor had to say. Having been among the first to arrive at the appointed place, Orlando stationed himself close enough to where the speakers stood to hear every word. Others of the newspaper party spoke, but Orlando was interested mostly in the editor of the Tribune.

Greeley was a benevolent-looking man, with a very bald head and a face smoothly shaven, except for a fringe of billy-goat whiskers under his chin. He was not a particularly pleasing speaker. In fact, the young man was somewhat disappointed in the speech as a whole. But the sentiments were excellent. The speaker urged his hearers to live as if they were among their families at home, instead of being out here in a wild mountain gorge, hundreds of miles from civilization.

The speaking over, the miners scattered to their claims, and Orlando and Esau went back to their own camp. They saw the editor again next morning when he was returning to Denver on muleback, as he had come.

Not very long after the newspaper men had disappeared up the mountainside the 10 gold seekers who had come in together assembled around their campfire to decide what to do. They had been here long enough to undertsand the situation as well as they were likely to understand it.

Sanders was the first to utter his sentiments: "For my part, I wouldn't give a bawbee for our chances here. We're too late to grab any claims worth working."

"Exactly my opinion, that is," agreed Cooper. "But then another question bobs up: Where can we go to better ourselves?"

"I've been told there's a chance to get good claims over to the west of here, on Clear creek." Jess Holloway was speaking. "There's a new mining camp just starting up over there, and it may turn out as rich as these Gregory diggings. From all I can learn, that seems as good a place to try our luck as any."

"Yes, I've listened to ever so much talk about that Clear creek camp," Sanders said. "In fact, I've tried to rake up all the information I could from miners who've been there. Must [illegible] rather favorably of the pl[illegible] I'd be perfectly willing to t[illegible] way and see how the outloo[illegible]

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: Will you allow a grandmother to send in a line on child training, that others may profit by some of her sad mistakes?

One of my worst mistakes was slapping children in the mouth for "sauciness" or talking back. I did not think I was slapping hard at the time, but one of my daughters would be a very handsome woman except for her crooked teeth, which have spoiled the shape of her mouth in such a way that dentists say artificial teeth will not remedy it.

I am sure my slapping her did the damage, as the other children, who were never given to talking back, all have lovely teeth. They escaped that punishment. I have thought since how much better it would have been to have made her sit in a corner for a while, increasing the time on a second or third offense.

See if you can not start a sunshine club in your family. Prepare a card with two lines against the names of each member of the club, one on the first line marked sunshine, the second marked clouds. Put a cross for good behavior and a black ball for disobedience and bad temper, etc. It might add to the interest of the club if father's and mother's name headed the list. (It would be a good idea if a system of canceling the black balls was followed, say, after two days of very good behavior to cancel the black balls and start again.—A. W. B.)

Mothers, teach the little ones to help you, even while they are only 3 or 4 years old. They can dust and pick up their toys and if you provide a little box cupboard to hold them the children can be taught to be orderly. One can be made out of a small box with a pretty little curtain in front.

Always answer your children truthfully. You can not expect them to tell the truth if you do not do so.

It is a great privilege to be a parent, but too few are worthy to be guides to the dear children. Few children are bad at heart, but get led into badness. One should never speak of a child's faults to others or before the child. It is humiliating and makes the child feel rebellious and inclined to live up to the name he has been given for badness. There is good in every one if we will but look for it, but we are too prone to see the bad, and, worse yet, to call the attention of others to it instead of directing our thoughts toward the good traits. A GRANDMOTHER.

Oregon.

Dear Mrs. Barland: In an effort to do my bit for the Circle page I am going to give my experience in making pin money on the farm. I shall be very glad to hear from others along the line of pin money.

Two years ago this spring I asked my husband to get a few new-born lambs from a flock a few miles from us. The sheep were to follow the range and we were given five lambs which were twins and would be too much for the mothers.

We purchased lamb nipples from the drug store and fed them from bottles on whole milk for about two weeks and then on skim milk until they were eating grass well. From time to time we added a tablespoon of salad oil to the milk to guard against constipation. They grew wonderfully well and in September brought $32.50 on the market at 9 cents a pound. I felt well repaid for the interesting experiment.

I also invested in a few sittings of pure strain Rhode Island Red eggs. The next spring I was selling hatching eggs at 75 cents a sitting or $4 per hundred. I have 40 hens culled for color and laying qualities and they are bringing into the family treasury about $10 a week during the hatching season. One must have the blood lines back of the stock and then advertise. This fall my fries and culls will net me a nice little bank account.

I hope to have at least 100 laying hens this winter. No other line on the farm has paid such large returns for the small investment. MRS. H. R. V.

Idaho.

Dear Mrs. Barland: Could another busy mother enter the Circle?

I will give a few things I have learned that I hope will help some one. Iodine can be removed by kerosene; also kerosene will remove grease spots old or new from a floor; pour it on the spot and [illegible] to evaporate.

[illegible] us. Uncle [illegible] remove black hat dye.

$50,000. 554 [illegible] MRS. H. C.

When [illegible] Barland: For years back I don't fail [illegible] subscriber of this paper and [illegible] very many things that have [illegible] helpful, and I enjoy it week by week as it comes. The Family Circle is my favorite and I find comfort and cheer on that page many times.

The life of a farm wife is not all cloudless, especially one with small means. But no matter how limited is one's income there can be happiness in the home, for that is something money can not buy.

I have always worked hard, saving in all ways, but still the time is not yet in sight when I can realize my ambition nor even provide myself with the modern conveniences with which to lighten the work of the house. But I am hoping the time will come when I can have these things. I am thankful for what I have. The children are growing up fast and will soon be gone. For them I have sacrificed everything, have given my all and they are my fortune and my joy. I wish we could keep them always with us.

Only three times have I met with any one who could speak the tongue of my native land, the most beautiful part of the world, French Switzerland.

MARIETTA.

Dear Mrs. Barland: I enjoy the Circle letters and I wonder why so many withhold their names. I read the letters and am anxious to know the names to see if I know any of the writers.

I wonder how many of the sisters caponize their roosters? I have done so for two years and when you have eaten a capon once you will want them ever after. My capons mother my little chicks and make the best of mothers.

MRS. H. B. KINNEY.

Prosser, Wash., Route 2.

In a recent issue of THE FARMER the printer made me say "the Majestic carries 41,000 passengers"; it should have said 4100. A. W. B.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A few weeks ago I went to Chicago to accept honorary membership in the "One Hundred Year club." The president is Dr. Josephine Paine, an enthusiastic advocate of the doctrine that nature constructed the human machine in so painstaking a manner as to make it capable of successful operation through a full century.

Dr. Copeland.

In inviting me to the meeting, she wrote that the object of the club is to defeat Father Time by conserving youth and spreading health propaganda.

This organization believes that the knowledge and practice of the fundamentals of hygiene and correct living inculcate the spirit of youth and efficiency. It believes this sort of living increases the useful years and makes glorious, rich and beautiful the sunset of life.

Here is the inspiring motto of the club: "Young at 50, efficient at 80, remain happy at 100."

By right living and right thinking the average person should live to be 100. Not only should he live to be 100, but, like Moses, his eye should be undimmed and his natural force unabated.

The most fallacious thought in the world is the accepted belief that threescore years and ten mark the limits of human life.

Old age is a matter of physical neglect, almost invariably founded on ignorance or bad advice.

The human family is progressing in length of life. Fifty years ago in my city the expectation of life was 42 years. Now it is 53 years. There is no reason why it should not grow better with each new decade.

These figures refer to the public health, to the mass. So far as the individual is concerned he can do as he likes with his own life. If he has the character, the willpower, the perseverance, and adds to them the knowledge of how to live, he should look forward to 100 years of efficient life.

You can not indulge your appetite, stay up nights, expose yourself to all the extremes and live to the century mark. But if you can get set to a sensible and simple way of living and will heed the early complaints of your body, you may be a worthy candidate for 100 years of useful life.

There are 3500 men and women in the United States past 100 years of age.

I am proud to be a member of the One Hundred Year club. I like the spirit of my co-members. Won't you join us in the determination to live to be 100?

Just Folks

Hunger is king.

To look up is to go up.

Literature includes a lot of unnecessary things.

Half thoughts are better than no thoughts.

The extraordinary does not count in the grand total.

It has long been my opinion that our common schools should be of continual service to the public and not be merely a charge on the public. We are overlooking the tremendous aggregate of boy and girl power in our schools. These services of a public nature, which can be rendered by the school children, will as well add much to the value of their education which they are now receiving in the schools.

I am reminded of this by the news item that J. A. Churchill, state superintendent of schools of Oregon is sending out literature to 7000 teachers in Oregon dealing with the white pine blister rust, which, reports indicate, is destroying many thousands of dollars' worth of valuable timber in different parts of the state.

It is the purpose of the state superintendent that the teachers shall instruct their pupils how to detect the disease, which usually is found on white pine trees, currants and gooseberries. Presence of the disease, according to the literature, should be reported to the state superintendent of schools, who later will transmit the reports to the government officials at Washington.

Some years ago at a dry farming congress in Lethbridge, Alberta, I was talking with government weather experts, and they were emphasizing the importance of a larger number of volunteer weather observers, the need of a larger amount of data on the rainfall. I inquired if there was any good reason why every rural school should not be a weather station to gather this data, and if the teacher and pupils could not observe and record the needed information. They agreed that it was entirely practicable; that the instruments would cost only a few dollars and there was nothing intricate about the work. This little addition to the school duties would be eminently educational as well.

There are a lot of other ways by which the schools could help out in public ways, and help themselves in the ways of knowledge as well. E.A.S.

Home Recipes

Grape Juice: First heat the jars, then to each jar put in one cup of grapes and one-half cup sugar, fill the jar with boiling water and seal air tight. Be sure to have your jars in hot water, then add the boiling water slowly. The juice will not have much color at first, but in a few weeks it will be ready to use. Shake the jars gently while still hot to stir the sugar.

RUBY A.

Dear Mrs. Barland: I think it well to give quite a little attention to the floors in a house and find that a well-kept floor is easy to clean and always looks nice.

I make my floor wax at home and it is very inexpensive and just as effective as what you buy. It is suitable for any varnished floor and as good for furniture. Here it is:

Floor wax: One pint turpentine, four ounces beeswax; ammonia water, three ounces; water, one pint. Mix the beeswax and turpentine and heat by placing the vessel containing them in hot water until the beeswax dissolves, then remove and add the ammonia and water and stir vigorously until the mass becomes creamy. Never heat the mixture over a direct flame, as the turpentine is explosive. This floor wax should be applied in very thin coats and thoroughly rubbed in with a heavy wax brush wrapped in burlap or coarse carpet.

MRS. EMMA M. MURPHY.

Washington.

Dear Mrs. Barland: Will some one who has a specially good way to prepare a roast of beef write and tell all about it? What spices or savors should be used and how much salt?

I will give my recipe for sour dough hot cakes: On quart of flour, two teaspoons of baking powder, one teaspoon soda, two eggs beaten separately, two cups sour milk enough sweet milk to thin the batter. Save out almost a pint and the next morning use this instead of sour milk for hotcakes. The sour dough will grow better after four or five days.

MRS. GUY ALLGIN.

Ellensburg, Wash.

DOUGLAS COUNTY PRUNES.

Douglas county estimates a prune crop this year of about 15,000,000 pounds, bringing about $1,250,000 into the county. Many of the producers have sold their prunes at 10 cents a pound. Others are holding for more.

High Points in News of the Week

The war between Turkey and England, and possibly involving several European nations, apparently has been temporarily if not permanently averted. England, France and Italy have agreed upon terms of settlement in the controversy that are believed to be agreeable to the Turkish leaders. A conference with the Turks has been called and steps are now being made for an armistice pending the actions of the conference. The terms agreed upon by the allies will permit Turkey to take possession again of eastern Thrace, on the European side of the Dardanelles, the sea of Marmora and the Bosphorus, from which the Turks were expelled during the recent World war. The Dardanelles is a narrow neck of water connecting the southern tip of the sea of Marmora with the Aegean sea, which in turn opens into the Mediterranean. The Bosphorus is a similar neck of water connecting the northern tip of the sea of Marmora with the Black sea. The three combined form a division between southern Europe and south Asia, or Asia Minor, and are a natural channel of commerce between the interior of Asia, primarily Russia, and the civilized world. At the present there is a neutral strip of land the entire length of this outlet and the terms agreed upon by the allies provides that it shall remain neutral and that the outlet shall remain open for free world commerce.

* * *

The 67th congress adjourned last week, not to meet again until the opening of the next regular session in December, unless President Harding calls for a special session, which is understood to be probable. A summary of the important measures enacted by the session now ended includes the following:

The tariff bill as completed last week; creation of the allied debt funding commission; appropriation of $20,000,000 for Russian relief; appointment of a "dirt farmer" on the federal reserve board; cooperative marketing by farmers; regulation of grain futures so as to meet the supreme court decision, making the original Capper-Tincher law inoperative; creation of 25 more federal judges; extension of 3 per cent immigration quota law for two years; scrapping of naval vessels in accord with the arms conference treaties; reorganization of the patent office with an increase in its force; reorganization of the basis of pay of army, navy and marine officers; decrease in personnel and expense of army and navy; monthly payment of pensions; development of rivers and harbors; appropriation of $7,500,000 to continue work on the Muscle Shoals, Ala., power project; appropriation of $1,500,000 to loan farmers for seed grain; appropriation of $500,000 for prosecution of war frauds; continuation of wartime bonus pay of federal employees.

* * *

In the senate last week Senator Borah of Idaho made public a letter from Bernard M. Baruch, former head of the war industries board, declaring that there could be no justification for the cancellation of the American loan to Great Britain, because the British government had used a substantial part of the proceeds to build ships for her mercantile fleet, purchase food for her civilian population and engage in other commercial enterprises.

At no time has THE FARMER been in sympathy with this hysterical, sentimental crusade for the cancellation of the $11,000,000,000 owed to us by European allies. It is especially ridiculous to argue that we should cancel the more than $4,000,000,000 that Great Britain borrowed from us during the war.

In the first place, Great Britian's territory was not devastated by the war.

In the second place, she is demanding indemnity from Germany, while the United States is not claiming a dollar of reparations.

In the third place, as a result of the war, Great Britain vastly increased her possessions, while the United States did not take another acre of territory. We had hoped that the agitation would die out in Great Britain and that the British people would have too much pride to keep resurrecting this question after the facts were weighed.

Any administration or any congress that might dare to make a gift of that $11,000,000,000 owed to us by the allies would quickly feel the just indignation of the American people.

* * *

The federal court of Chicago last week sustained the government's plea for a country-wide temporary injunction against striking railroad shopmen. The injunction is a continuation of that issued three weeks ago and is designed to prevent interference in any way by the strikers with the operation of the railroads.

* * *

President Harding signed the tariff bill of 1922 September 21 in the presence of Chairman McCumber of the senate finance committee, Chairman Fordney of the house ways and means committee, a number of house members and others.

Remarking that the measure had been "long in the making," President Harding, after he had affixed his signature with a pen presented to him by Mr. Fordney, who said he intended to keep it as a souvenir, said that "if we succeed as I hope we will succeed in making effective the elastic provisions of the bill, this will prove the greatest contribution toward progress in tariff making in a century."

* * *

President Harding has issued a proclamation designating Monday, October 9, as National Fire Prevention day. The fire waste in the United States year after year, the president declares, reaches appalling figures, which are not approached in any other country. He adds, there ought to be ways to minimize such losses. The Chamber of Commerce of the United States announces that local commercial bodies throughout the United States "will take the lead" in observing the fire prevention week from October 2 to 9. In placing before business associations a suggestive program for the week, the United States Chamber of Commerce says:

"Property valued at about $7,869,000,000 was destroyed by fire in the United States in the 40 years ending with 1921. The loss during the last year of this period was approximately six times as great as that of the first year. In 1921 more than 15,000 lives were lost and property valued at $500,000,000 was destroyed by fire. This was simply the total of many separate fire losses and was not the result of any great conflagration.

"During the first seven months of the current year, property valued at $230,000,000 was added to the nation's ash heap."

* * *

The Capper-Tincher bill providing for regulation of trading in future on grain markets has been signed by President Harding.

Under the provisions of the bill, Secretary Wallace said, exchanges are prohibited from discriminating against cooperative associations of grain producers who may desire membership in order to obtain use of the facilities of the exchanges.

Undue manipulation, attempts to corner the market and the dissemination of false or misleading information about crops or markets can be prevented under the law.

The secretary of agriculture also has power to examine the books and records of the members of the exchanges and to require such reports as may be necessary to carry out its provisions.

The reports that this law will put the exchanges out of business or interfere with their legitimate functions are without foundation, the secretary said.

* * *

Governor Kendall of Iowa in a statement last week, said he believed it would be wise for the government to transfer to cereals for two weeks the priority now enjoyed by coal so that the farmers of the Mississippi valley might dispose of their surplus before a further break occurs in prices.

"The car shortage in Iowa," Governor Kendall said, "is a serious embarrassment to all industry and enterprise, and it is one of the most difficult to remedy."

* * *

Investigation preceding the veto of the bonus bill by President Harding brought out the statement that a deficit of $650,000,000 faces the country for the fiscal year which began last July and ends June 30 next.

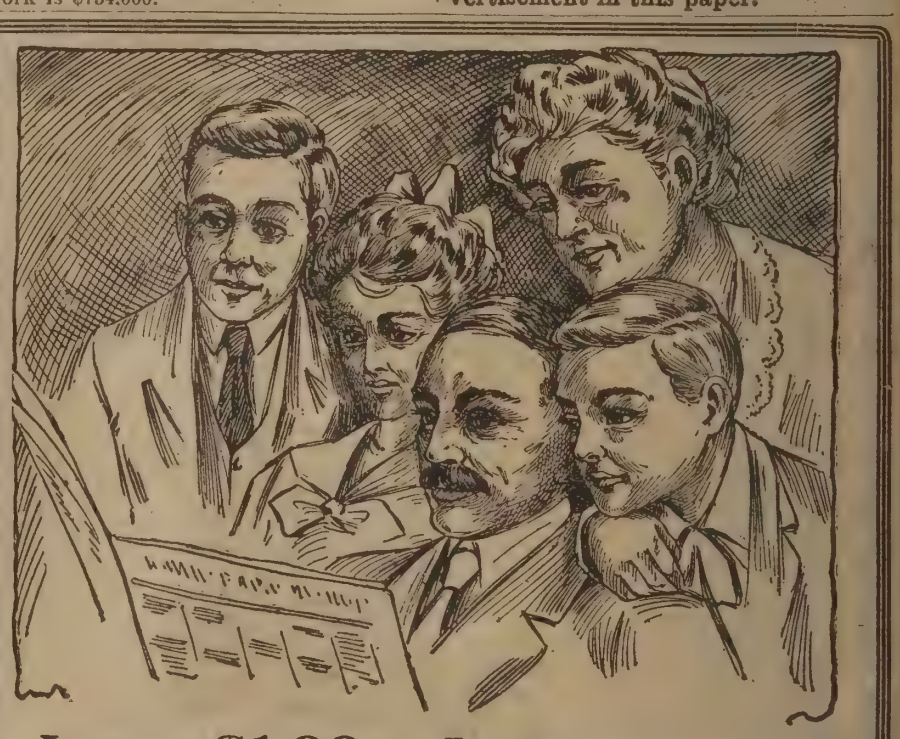
FOR BOYS' AND GIRLS' CLUB PRIZES.

Approximately $450,000 is being provided by the various counties in the United States this year in prizes for the boys and girls in club work. Many county farm bureaus are contributing liberally. The total amount being offered in prize money to boys and girls this year to encourage the work is $734.000.

WESTERN CANADA for Stock Raising

Vast stretches of undeveloped fertile agricultural land of the highest productiveness await the settler in Western Canada. The land possesses the same character of soil as that which has produced the high quality of cereals that have carried off the world's premier honors so many times. **Native grasses are Rich and Abundant.** Cattle fattens on them without any grain being fed.

The place for the man with limited capital to overcome difficulties of high priced land or the burden of heavy rents is in Western Canada—where *land is cheap*, where a home may be made at low cost, and where *dairying, mixed farming and stock raising are particularly profitable.*



Homestead of 160 acres in the more remote districts **FREE to settlers.**

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write to

Invest $1.00 in Instruction and Entertainment for Your Family

When you send $1.00 for a five-year subscription to The Washington Farmer, you spend the money, not for yourself alone, but for the good of the entire family.

This home and farm weekly keeps the entire family informed about the farm life of the state, and brings new light to bear on every phase of agricultural progress. The interests of boys and girls are given plenty of space. There is a constant interchange of experiences, ideas, opinions and methods of strong appeal to the housewife. The stories, illustrations and special features appeal to all.

A dollar seems a small sum to pay when you consider how many receive pleasure from its expenditure.

This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

Bits of Fun for Everyone

Yes, Indeed!

"Do you believe in long engagements?" she asked.

"Indeed, I do," he returned. "A couple should be happy just as long as they can."—Country Gentleman.

Qualified.

Negro rookie—I'd lahk ta have a new pair o' shoes, suh.

Sergeant—Are your shoes worn out?

Rookie—Worn out! Man, the bottoms of mah shoes are so thin Ah can step on a dime and tell whether it's heads or tails.

He Made an Impression.

Kitty, age 4, had been naughty and her father had had to administer vigorous correction before going to business.

That an impression had been made was apparent in the evening. Kitty called upstairs with frigid politness: "Mother, your husband's home."—Successful Farming.

Their Future Assured.

Graduate: "Darling, we can be married at last. I have obtained a position in the university."

Prof.'s daughter: "But we can never live on an instructor's salary."

Graduate: "Ah, but the job I've got is that of a janitor."—Columbia State.

Matching Wits.

"I want a mattress that is cool to sleep on in hot weather."

"One of these air mattresses, madam, you will find just the thing; they were filled during the cool weather."

"How clever! And I suppose their resilient qualities are due to their being filled with spring air."—Boston Transcript.

Laying the Blame.

"Yes, sir; an' the last time I was wounded they was in such a 'urry ter dew me up they went and left a sponge inside me—and it's there now."

"Good gracious! Doesn't it hurt you?"

"No, sir, thank you. But it do make me most uncommon thirsty!"—The Doctor.

A Valuable Animal.

Do you mean to tell me that you ask $100 for that horse?" inquired the deacon. "Why, look at her—she's got the blind staggers."

"Blind staggers nuthin," replied Elias Hoot. "That horse is trained and he's up-to-date. He's shimmyin'!"—Capper's Farmer.

Not Experienced.

Down in Texas the short cotton crop forced a large number of country negroes to the cities. One of these applied for a job at one of the large employment agencies.

"There's a job open at the Eagle laundry," said the man behind the desk. "Want it?"

The applicant shifted uneasily from one foot to the other.

"Tell you how it is, boss," he said finally. "I sure does want a job mighty bad, but de fack is, I ain't never washed an eagle."—Argonaut.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4109-4014. Lady's Costume. Waist 4109 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 32-inch material for a medium size. Skirt 4014 cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure, and requires 2 5-8 yards of 40-inch material for a 29-inch size. The width at the foot is about 2 1-4 yards with plaits extended. Two separate patterns, 10 cents for each pattern.

3851. Lady's Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 3-4 yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

4133. Child's "Play Dress." Cut in four sizes: 2, 4, 6 and 8 years. A 6-year size requires 3 1-4 yards of 36-inch material. Price 10 cents.

4103. Girl's Cape. Cut in six sizes: 6, 8, 10, 12, 14 and 16 years. A 12-year size requires 4 yards of 44-inch material. Price 10 cents.

3781. Girl's Jumper Dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require 4 1-2 yards of 40-inch material. Price 10 cents.

3736. Lady's House Dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 5 1-4 yards of 38-inch material. Price 10 cents.

3895. Misses' One-Piece Dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size requires 4 1-2 yards of 36-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

4121. Lady's Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The guimpe will require 2 3-8 yards of 36-inch material and the dress 3 3-4 yards for a 38-inch size. If the guimpe is made with short sleeves it will require 1 7-8 yards of material. To make the guimpe and dress of one material requires 6 1-8 yards 36 inches wide. The width of the skirt at the foot is 2 5-8 yards. Price 10 cents.

3889. Girl's Dress. Cut in four sizes: 4, 6, 8 and 10 years. The guimpe will require 1 1-2 yards of 27-inch material, and the dress 2 3-8 yards for a 6-year size. Price 10 cents.

4129. Lady's Negligee. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 6 1-4 yards of 27-inch material. Price 10 cents.

4131. Lady's Two-Piece Undergarment. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A 38-inch size requires 1 5-8 yards of 36-inch material for the drawers and 1 5-8 yards for the chemise. Price 10 cents.

4118. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

Will the Suit You Buy Stand This Test?

COULD you soak *your* suit in water—a whole suit, made up of so many little, yet important parts (fabric, findings, haircloth, canvas, thread, etc., all put together carefully)—and then after it has been soaked, dried and pressed, be sure that it would be as good as new?

You CAN, if it is a Clothcraft Suit!

Read the dramatic story of the test in this little folder. But don't be content with reading. Examine the actual serge samples enclosed in the folder. Test them critically.

We'd like to send you one of these Swatch Folders *without charge*. Just fill in the blank below, or simply use a postcard.

THE JOSEPH & FEISS CO.
Cleveland, Ohio.

The Joseph & Feiss Co.
2175 West 53rd Street
Cleveland, Ohio

Please send me, without obligation, folder containing actual swatches of Clothcraft Serge.

Name .....

Address .....

A new cousin in Stevens county, Washington, joins the Corner. He is Jay Atkinson, who will be 11 on his next birthday, October 29, 1922. Jay writes that he has a nice teacher, Miss Athow. His school commenced September 5. He is in the fourth grade.

Birthday Greetings

THURSDAY, September 28—Frances Schnuriger, 11 years old; Mary Wuotila, 11.

FRIDAY, September 29—Joyce McDonald, 8 years old; Fern Parnell, 10; Roger Stone, 11.

SUNDAY, October 1—Lola Benner, 11 years old; Emrose Corbin, 9; Evelyn Darrah, 11; Sarah Moses, 10; Annie Thomson, 11; Arthur Toivonen, 9.

MONDAY, October 2—Marjorie Dean, 8 years old; Nina Kirkpatrick, 11; Margaret Layne, 11.

TUESDAY, October 3—Donald Leed, 11 years old; Inez Osterberg, 8; Alice Perkins, 11; Irene Torppa, 10.

WEDNESDAY, October 4—Loretta LaFollette, 10 years old; Loren Penney, 11; Gwendolyn Schuyleman, 8; Mildred Watson, 7.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Daurice Mae Davis, May Sanders, Helen Sanders, Carl Crosby, T. Edward Crosby, Vera Bice, Inez Tillotson, Evelyn Ellis, Margrit Norberg, Eda Gross, Martha Keehner, Alice Sanborn, Joe Flork, Bill Engstrom, Anna Turner, Virgil Sills, Ella Duim.

BEDTIME STORIES

By THORNTON W. BURGESS.

UNC' BILLY IS LONESOME.

The news that Unc' Billy Possum wasn't dead at all, but that he was back in his hollow tree soon spread through all the Green Forest and over the Green Meadows. Everybody hastened to pay their respects—that is, everybody but Reddy Fox. Unc' Billy and his partner, Jimmy Skunk, told every one who called how Reddy Fox had thought that Unc' Billy was a ghost and had been frightened almost to death, so that he ran away as fast as his legs could take him. Unc' Billy grinned as he told how Reddy had sat under the hollow tree and sung because he was so glad that Unc' Billy was dead and all the little people of the Green Forest laughed until their sides ached when in a funny cracked voice Unc' Billy sang the song for them.

Thereafter, whenever one of them caught sight of Reddy Fox at a safe distance, he would shout:

Ol' Bill Possum, he's gone before!
Ol' Bill Possum, he is no more!

It got so that Reddy never came down on the Green Meadows in the daytime and

"Ah reckon Ah'll have to go back to Ol' Virginny, Ah sutt'nly do," said Unc' Billy Possum.

at night he avoided meeting any one, if possible, even his old friend, Bobby Coon. And, of course, Reddy hated Unc' Billy Possum more than ever.

But Unc' Billy didn't care, not he! He knew that all the rest of the little people of the Green Forest and the Green Meadows thought him the smartest of them all because of the way in which he had fooled Bowser the Hound and Farmer Brown's boy. He liked his neighbors, he liked the Green Forest, and so he made up his mind that this was the place for him to stay.

But in spite of all his friends, Unc' Billy was lonesome. The longer he stayed, the more lonesome he grew. Unc' Billy wanted his family whom he had left way down in Ol' Virginny. Finally he told Jimmy Skunk all about it and for once Unc' Billy had forgotten how to grin. Yes, sir, Unc' Billy had forgotten how to grin. Instead, he just wept, wept great big tears of lonesomeness into his red bandanna handkerchief.

"Ah reckon Ah'll have to go back to Ol' Virginny, Ah sutt'nly do," said Unc' Billy Possum from the depths of his red bandanna handkerchief.

Jimmy Skunk grew very thoughtful. Since he and Unc' Billy Possum had been in partnership Jimmy had had more eggs to eat than ever before in his whole life. Now Unc' Billy was talking about going away. Jimmy thought very hard. Then he had a bright idea.

"Why not send for your family to come here and live in the Green Forest, Uncle Billy?" he asked.

Unc' Billy stopped crying. His two little eyes looked out sharply from the midst of the red bandanna handkerchief. "How do yo' alls reckon Ah can send word?" he asked.

Jimmy scratched his head. "There's Mr. Skimmer, the Swallow; he's fixing to go south; perhap's he'll take the message to your family," said he.

"The very thing!" cried Unc' Billy Possum, wiping his eyes and stuffing the red bandanna into his coattail. "Ah thanks yo', sah. Ah does indeed. Ah'll see Mr. Skimmer at once."

And without another word Unc' Billy Possum started down the Crooked Little Path for the Green Meadows to look for Mr. Skimmer Swallow.

Pike's Peak or Bust

(Continued from page eighteen.)

creek. But it soon came out that four of the handcarters preferred to remain in Gregory's Gulch, at least for a while. The two who had found a relative had been offered a share in the relative's claim if they would help to work it. And the other two handcarters had been offered shares in the relative's partners' claims on the same conditions.

All the four urged Sanders to go with them up there. But he had no faith in the claims they were going to. Also, there would already be seven in the new party, and that number, they had learned, was fully as many as could work together advantageously.

"You boys go right ahead if you believe that's the wisest thing to do," he told his partners. "As for myself, I prefer to try Clear creek diggings. That will leave six of us here, anyway, and all of the same mind. The seven of you will make another party, and that will be numerous enough."

And thus the matter was arranged. Sanders owned the cart, but he permitted his former partners to use it to wheel their tools and supplies up the gulch to where they were planning to mine. He and Orlando went with them to bring back the empty cart.

It was late in the day when the two returned, and the start to Clear creek was postponed till the following morning. Then, with most of their things on the cart and the rest on Brindle, they set off westward.

The distance, on an air line, was only a few miles. But the party of six took a roundabout course to avoid the mountains. They themselves did not know the way, but there were others with them, some of whom had been to the new camp before. Those would serve as guides for the whole party.

Not till late in the day did the six gold seekers, with their dog, their cow and their cart, arrive at the diggings they had started for. There they found more than a hundred miners at work along a creek between two mountains. Every man had a claim, and nearly every man was trying to wash gold out of his claim. No very rich discoveries had been made as yet. So there had been no great rush to this particular place.

However, the newcomers quickly learned that, while none of the miners was washing out much gold, all who worked steadily were making wages; usually from $1 to $2.50 a day.

So the party of six promptly decided to take up claims. Going to the upper end of the camp, they measured them off and staked them out. Each man's claim was 50x150 feet. One end of every claim was against Clear creek. The six men would thus have 300 feet of running water for washing out their gold—if they found any gold to wash out.

As soon as the last of their claims had been staked off the party proceeded to establish their camp on one of them.

All the six claims stretched across a narrow little valley, which was rather higher near the creek than farther back. On this high place it was that the newcomers had established their camp.

"Most of the miners here have struck pay dirt, they tell me," Cooper remarked. "I'm guessing our claims are as rich as theirs, and we ought to do at least as well."

"For me, I don't see why the' shouldn't be as much gold here as in Gregory's Gulch," commented Esau.

"May be more. We can't know till we dig," Holloway observed.

"Our chances are as favorable here as they would be any other place I know of," was Sanders' opinion.

When bedtime came the party found the ground pretty hard where they expected to sleep. So they took some bags they had, went back to the mountainside and filled them with pine needles. On this rosiny, odorous foundation the men made their pallets of quilts and blankets.

While the others were lying down, Orlando walked back toward the mountain to see about Brindle. After milking her he had tethered her there, on a patch of grass. Looking after the cow was usually the last thing he did before going to sleep. Returning to camp, he lay down in the bed which he and Esau had prepared.

But the strange, wild surroundings seemed to drive sleep from his eyes, and he remained awake for a good while. Others also had trouble in sleeping at first. In their ears was the constant and rather loud but not harsh roar of the creek near by. And in and beneath that roar were other noises, very different. Those were made by the stones, some an inch in diameter, other weighing hundreds of pounds, which the swift, bold creek was rolling down its rocky channel. Sixty years later, the thing of this night that one member of the party would recall most distinctly would be the grinding of those boulders under the force of the current, the noise having seemed to reach his ears through the ground on which he lay.

However, the party were all weary from their day's travel, and when they did once fall asleep they slept soundly, in spite of the water noises and other noises around them. Long they had been looking forward to this. But now, for the first time in any of their lives, they were about to try their luck at actual gold mining.

Hence they were up and cooking breakfast before daylight. And by the time the morning sun was gliding the mountain tops every man was ready to do his first digging.

Before actually beginning work, however, they discussed their plans in detail. It had already been agreed that they would share equally, all the gold they washed out being put together till they were ready to divide it. Six men were rather more than could work at the same time. They had not much meat, any of them, and as it was important that they should be as saving as possible of their small supply, they agreed that two of their number should go hunting every day and try to bring back some game. The hunters could also do more or less prospecting for minerals while they were out. Of the others, any one not actually working could be preparing dinner or supper, so as to have it ready when the gold diggers were ready to eat.

Everything agreed upon, the whole party moved about over their big claim, looking for the best place to dig. They knew little of such matters. But a man on a claim below theirs, who told them that he had mined in California, suggested that the low land back near the foot of the mountain would be the most likely spot. Gold, being a very heavy metal, would naturally gravitate to the lowest point it could reach. So it was there that the party of six began their digging.

The shaft they started was much like a well; only it was larger than most wells. While some with picks dug up the earth, others with shovels stood near to shovel it out, and still others waited with their pans, ready to receive the dirt and carry it to the creek.

Orlando Medford, full of eagerness and suppressed excitement as he was, was the first to receive a shovelful of dirt into his pan. Hurrying, almost running, to the creek with it, he squatted down at the water's edge and proceeded with the washing. Having watched numerous experienced miners at such work during the last few days, he knew pretty well how it should be done.

First he put his pan almost under the water. Then he began to move it, so as to make the water carry off the loose dirt as the movements of the pan stirred it up. Having continued that till all the dirt had been washed out, there remained some gravel. That he threw out with his fingers. Now he found sand in the bottom of his pan—black sand. When the sand had been cautiously washed out he was delighted to see numerous small particles of gold against the black iron.

Others were now washing out dirt—all the others, in fact. And they, too, soon found the color of gold in their pans. While the amount obtained was very small, the new miners were greatly encouraged by it.

Steadily, eagerly they toiled. When night came, and they had weighed their accumulated dust on Cooper's small scales, they found that they had about $7 worth. That was a little more than $1 apiece for their day's work.

(To Be Continued.)

News for Breeders

Northwest's List Grows

Two Washington bulls have entered the list of sires with 50 or more A. R. O. daughters since January 1, and many other indications of progress by the Holstein-Friesian breed in the northwest are shown in a recent summary corrected to July 17.

The two bulls referred to are Judge Segis, owned by Hollywood farm, now credited with 62 A. R. O. daughters, and Matador Segis Walker, owned by Carnation stock farm, now credited with 64. Johanna McKinley Segis, formerly owned by Carnation, has increased his total from 89 to 94 and is now nearing the "century" mark. It is interesting to note that two of these bulls were sired by King Segis and the third by one of his sons.

One 30,000-pound cow, Stanhope Belle Johanna, has been credited to Oregon since January, giving Washington and Oregon five out of a total of 25 for the breed. Idaho has added one 30-pound (butter) cow, Florence of Rigby, owned by C. E. Johnson of Idaho Falls, to her previous total of five; Oregon has added one, Lady Milly Colantha, owned by Dr. W. T. Phy of Hot Lake, to her previous total of two, and Washington has added six to her previous total of 76, as follows: Princess Pietertje Artis, formerly owned by S. V. Butchart of Sunnyside; Highland Sylvia Segis Lady, Carnation Setske Segis and Carnation Princess Segis, owned by Carnation stock farm, and S. V. H. Molly and Illustrites Pontiac of Greenbank, owned by Western State hospital of Steilacoom.

Oregon has made the largest proportionate gain in number of 1000-pound butter producers, having added four to her previous total of three. In order of standing they are: Stanhope Bellen Johanna; Model Segis Prilly Gelsche, owned by C. J. Berning of Mount Angel; Lucy Freela Pontiac, owned by Mas Arp of Eugene, and Gertie De Kol, owned by J. F. Peerenboom of Roy. Idaho's one 1000-pounder, Idaho Violet Posch Ormsby, owned by the University of Idaho, made another 1000-pound record during the period, and to Washing's previous total of 33 in this class seven were added, as follows: Segis Clothilde Emma, owned by Carnation stock farm; Chimacum Wayne Bess and Glassa Lelah 2d, Lee Brothers, Mount Vernon; Cascade Maggie, R. L. Rutter Jr., Ellensburg; North Star Daisy Johanna, F. S. Stimson company, Hollywood; Cascade Blossom, Cascade Piebe and Cascade Pietertje, William Todd & Sons, Yakima, and Von Heim Winifred Colantha, R. H. Tuttle, Walla Walla.

HERD SHOWS IMPROVEMENT.

There are 70 head of milch cows on the Pete Omdahl farm, near Sedro-Woolley, Skagit county. Twenty-five of these animals are purebred Holsteins. This herd was started several years ago with a bunch of grade animals with the intention of building up a commercial dairy herd. Mr. Omdahl soon found that many cows were not paying for their feed, and, according to his own statement, determined to dispose of some of the poorer ones and buy a few registered cows. With these he has built up the present herd of 25 animals, and has also produced a number of promising females from his grade cows by the use of a good bull. A 6-year-old cow in the herd is milking between 30 and 40 pounds daily, and was only dry six days before she freshened with a heifer calf. She will be put on official test this fall. Mr. Omdahl has a new bull calf by Chimacum King Korndike Sadie Vale. There are seven Hartog heifers from the Smith bull at Sumas. Practically all of the daughters in this herd show a better production than their dams.

A BIG HOG RANCH.

There are approximately 6000 hogs at the Pacific hog ranch, near Kirkland, in King county, Washington. I. W. Ringer, manager, is planning on having 525 sows farrow this fall. All animals are immunized from diseases at an early age. There have been as high as 11,000 hogs on this ranch at one time.

INTEREST IN GARDENING.

Two hundred and sixty thousand farm families either made their first home garden or changed their previous ways of gardening in 1921, as a result of demonstrations of improved methods by agricultural extension agents, according to reports received by the United States department of agriculture.

HOLD CONSIGNMENT SALE.

The Shorthorn and Hereford sale made up of animals consigned by five members of the Okanogan County Purebred Breeders' association recently offered evidence of the desirability of fitting animals well for public sale. Feed shortage last year considerable proportion of those sold, this considerable proportion of those sld, this condition resulting in low prices. Well-fitted animals sold at an average of from $115 to $150 each. Nearly all those sold remained in the general locality of Tonasket, where the sale was conducted. Five head of Jerseys were also sold, bringing up to $175 each, or somewhat higher than the beef cattle. The sale was cried by Colonel Harry C. Cranke of Moscow, Idaho.

One Big Apple

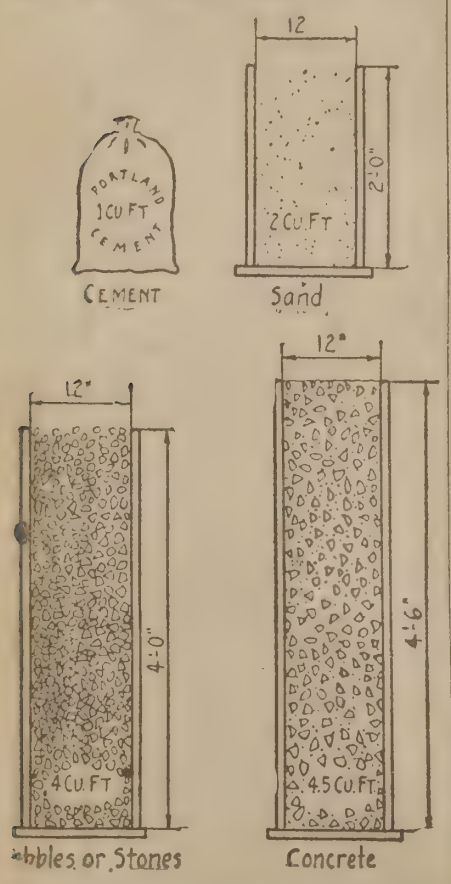
Worth More Than Two Little Ones

"One big apple is worth more than two little ones," according to information which was given at the horticultural booth arranged by the extension service of the state college for a number of the fall fairs. "An apple 2 9-16 of an inch in diameter will pack 188 to the box. Apples 3 3-16 of an inch in diameter will pack 96 apples to the box, one of which will nearly equal two of the small sized apples.

"By increasing the diameter of a 188-sized apple five-eights of an inch the volume is double. By growing one 96, instead of two 188 apples the value is increased approximately 60 cents per box." This can be accomplished by thinning the crop during the late spring months, and is explained by E. G. Wood, horticultural specialist of the extension service.

As a graphic illustration of the above statements, a few figures for the prices of apples have been arranged. Following are prices made to the grower of 1921 crops of Janathans:

Extra fancy, from 96 to 125 in box, $1.90; 138 to 163 in box, $1.65; 175 to 225 in box, $1.15.



Fancy, from 96 to 225 in box, $1.65; 138 to 163 in box, $1.40; 175 to 225 in box, 98 cents.

C grade, from 96 to 163 in box, $1.30; 175 to 225 in box, 90 cents.

Thinning has become one of the most necessary tasks in an orchard, because it has been found to pay big returns. It not only saves picking a larger number of apples, but it brings in a larger return for the larger sized fruit. There are also less packing and transportation expenses to be paid.

What Concrete Is

Concrete is made by mixing Portland cement, sand, pebbles or broken stone and water in certain definite proportions, according to the kind of work for which the concrete is to be used, and then permitting the mixture to harden under proper conditions in forms or molds. As soon as concrete has been mixed, if left undisturbed, it begins to harden and soon becomes like stone. The hardening process, which is a chemical change that takes place in the cement when mixed with water, continues for a long time after the concrete has acquired sufficient strength for the purpose intended. This continual increase of strength is the quality by which concrete differs from all other materials. Concrete grows ever stronger, never weaker, by age.

Cement, sand and pebbles in the proper proportions when mixed with water harden into the solid mass that is concrete. Note that one cubic foot of cement, two cubic feet of sand and four cubic feet of pebbles do not make seven cubic feet of concrete, but 4.5 cubic feet.

Theory of Mixing Concrete.

Pebbles, sand and cement must be mixed in correct proportions in order to make a dense, strong concrete.

For this reason, in mixing concrete, stone and sand are used in such proportions that the amount of spaces or voids between them is as small as possible, and all the surfaces of the sand and pebbles are coated with a film of cement. The smaller the voids are, the stronger and more dense will be the concrete. A dense concrete is also watertight; if the voids are not all completely filled, the concrete will be porous and will not be impervious to water.

It is very important that no dirt or finely powdered sand be used, as the use of such material interferes with the action of the cement in hardening. The strength of the concrete depends upon the adhesion of the cement mixture to the clean surfaces of sound, hard particles of sand or stone.

New Live Stock Class

At the Snoqualmie Valley fair held at Tolt, King county, Wash., September 14-16, a new live stock class was tried out for the first time. This class was open only to members of the local cow testing association who had finished a year's record. Two cows were exhibited from each of four herds.

The judging took into consideration three distinct points as follows: (1) Conformation of the individual cows exhibited; (2) individual butterfat record, and (3) average profit over feed per cow for the herd from which the cows came.

For a perfect dairy conformation, a total of 25 points was allowed for each cow. Deductions were made according to defects found. On an individual record of 300 pounds of fat, 25 points were allowed and in addition there was a credit of one point for each five pounds of fat above the 300 pounds. For the average profit per cow over feed cost 100 points was allowed if the profit was $60 per cow, and one point was added for each $5 profit per cow above $60, returns being figured uniformly on the basis of 50 cents per pound butterfat.

This new class created a great deal of interest and comment, especially at the time of the judging. H. E. McNatt of the western Washington experiment station did the placing and scoring for conformation. When he had placed the whole group of eight cows it was interesting to note that the grade cow which stood first in the association in fat production also stood first in this class for conformation. She was given a score of 22 1-2 points out of a possible 25 on conformation.

With the exception of this first place, it was clearly shown that good conformation was sixth in production.

Fifty dollars prize money was donated for this class—$25 by the Carnation stock farm and $25 by the fair association. This money was divided pro rata to all exhibitors scoring 200 points or more.

The following is a list of the exhibitors with their scores: A. E. Moore, Tolt, 318.7, $15.10; L. J. Clark, Bellevue, 263.3, $12.50; Methow Valley Live Stock company, Tolt, 249.0, $11.80; H. L. Allen & Co., 223.4, $10.60.

ASOTIN COMMUNITY CLUB.

The Asotin Community club, during the coming winter, proposes to concern itself with the erection of a community house, which will contain a public meeting room, accommodations for the library, and office space for civic organizations. Last year the club turned its attention to the improvement of the park on Asotin creek water was piped, the band stand repaired and the lawn improved.

GENERAL ADVERTISING.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

WRITE OUR ADVERTISERS

It will pay you to write for free booklets and information offered in the advertising columns; and when you DO write, please mention THE THE WASHINGTON FARMER.

Subsoiling improves crops

By shattering the hardened stratas of earth, the hard-pans and plow-pans, the air and water gets deep down into the soil. New soil resources are unlocked, bacterial action begins to work the soil into plant food; the little feeder roots reach out and draw the plant food in.

New orchard and vineyard land should be thoroughly subsoiled before planting. Successful growers are securing improved crops in old orchards and vineyards by subsoiling.

POWER is the key to modern soil culture. The Best "Sixty" handles the big 5-standard subsoiler and the combined equipment of large farming operations. The Best "Thirty" is adapted to the deep tillage demands of the smaller farm, orchard and vineyard.

For Good Farming, Attractive Country Homes and Happy Country People

Large Crowd at Whatcom County Fair

By RALPH ERSKINE.

It takes more than bad weather to keep people of western Washington from attending their county fair, as was shown by the large turnout for the Whatcom county fair which was held at Lynden, September 26 to 30. Although the weather was by no means ideal and there was one day of drizzling rain, the people turned out in large numbers. Friday, the fourth day of the fair, was a half holiday for Bellingham and other towns in the county and even the school children helped by coming out in a body and filled the ground to overflowing.

Two of the biggest divisions of the fair this year were the live stock show and the poultry department while the vegetables, fruits, sewing and canned goods in the agricultural building should not be overlooked. The live stock section was made up largely of Jerseys and Guernseys, the former breed having one of the best turnouts that was ever known in the history of the fair.

The entertainment part of the day's program was complete and aside from the races there were ball games to keep something going on in front of the grandstand constantly. The concessions were of the cleaner type and many of the "hot-dog" stands were arranged by local people.

In the agricultural building one could find almost any kind of farm products except live stock. The grange and community booths were very attractive and the large variety of vegetables, fruits and canned goods indicated that Whatcom county was truly a land of plenty. The Ten Mile grange took first award while Councilman grange was second and the grange from Ferndale third.

The general farm products section took up one entire corner of the building and contained a large number of individual entries. The horticultural section brought out a large number of apple varieties as well as many kinds of pears. There was also a good collection of soft fruits which had been collected from home gardens.

There were 21 potato entries, all of which were arranged on a long table running almost the entire length of the building. They were entered as 100-pound displays and represented the commercial varieties that bring the best returns in this district.

In the long white potato class, W. Baer of Ferndale won first on Netted Gems, and L. H. Silver won second. O. A. Runolfson of Blaine took first in the Burbank seed and Early Rose.

The flower display in the horticultural building was much larger and better in many respects than it was last year. The display was largely cut flowers from home gardens and there was a large number of dahlies. Other seasonal flowers were shown which added to the variety and quality of the display.

The extension service of the state college had two booths in the building, one a poultry booth showing the value of high producing hens for money makers and the other a home economics booth which demonstrated many labor savers about the kitchen as well as a variety of decorative stitches. A third booth was put on in the dairy barn which gave a few details of silo construction as well as other dairy farm subjects and pointed out the value of high production for economic returns.

The women's department was in the balcony of the agricultural building and included fancy work, art, canned goods and cooking.

Women's Department Attracts.

The Whatcom county home economics clubs fitted a booth in this building in which they showed all branches of work which they have been doing throughout the year. Their home-made fiber furniture, rugs, garments and fancy work showed that the clubs were active in their endeavor to create new articles for the homes and to make over old clothing as well. Their home-made hats were as attractive as could be expected from an experienced milliner and a display of hat trimmings made from odd pieces was unusual.

The women from these 17 different clubs meet once each month at the home of some member and do sewing or other work with the help of the leader or by an occasional visit of a specialist from the state college. Last year some of these women took up the making of woolen comforts. This year a new work has been accomplished, the making of corsets. By the use of the dress form a corset can be made with very little expense that will fit the owner perfectly.

The child welfare department had a number of sample meals which were recommended for children. A scale was set up and the children encouraged to weigh and measure themselves to see if they were of normal weight for their age.

Largest Show of Jerseys.

The Jerseys had one of the largest shows that has ever been seen on the grounds. There were seven exhibitors out and some 70 animals. The local herds had the majority of entries, although one herd, owned by A. M. Starr, came from Coaldale, Alberta. The senior and grand champion bull was Mr. Hormblow of the Starr herd. He was a 9-year-old animal with a deep chest, good barrel and decided masculine front. Double St. Mawes of the David McLeod herd at Bellingham was senior and grand champion female. G. S. Bulkley, who judged the classes, said that she had one of the best coupled udders he had ever seen.

Peter Meenderink of Lynden had the junior champion female, a neat little junior calf with a typy head and an abundance of quality. The junior champion bull was Primrose's Washington St. Mawes, a senior calf of the R. I. Turner herd, a typical St. Mawes calf with a strong hind quarter and good shoulders.

Poppy's Koffee Roaiare, an aged gold medal cow of the Tanner herd, was placed second to the grand champion female by a very close margin. She is the winner of two gold and two silver medals with a 764-pound record as a 7-year-old.

Other Jersey exhibitors that deserve mention here are Nels Jordal of Ferndale who had nine head in all, including a junior bull calf that made a close run for junior champion, and B. C. Crabtree of Lynden who had 10 head of very typy animals and Peter Meenderink of Lynden who showed 13 head.

The milking Shorthorns were represented by the seven head from the De Graff Brothers herd of Lynden. Although this was the only herd of the breed there was one heifer that was particularly outstanding, Glenside Emma Clay. She is a 2-year-old out of Leta Clay, one of the De Graff cows and sired by Glenside's Roan Prince.

Guernseys Make Good Showing.

It was to be expected that the Guernsey would make a good showing since there are a number of herds in the county and adjoining territory. There were three of the better known breeders from the county that entered and S. P. Davis of Olga, San Juan county, brought three head. La France of Bralee, the 5-year-old cow of the Dr. A. McRae Smith herd of Lynden, was placed senior and grand champion above all the other class winners, although there were some excellent individuals competing. Fircrest's La France's Pride, an outstanding heifer of the same herd, was made junior champion female.

Another one of the Smith animals, Fircrest La France's Rival, a junior yearling, was unquestionably the junior and grand champion bull, and Butternut Boy, the 4-year-old herd sire of the J. O. Anderson herd, was senior champion. The latter animal had some excellent type and his pedigree traced back to Governor of the Chene on the sire's side. He has been in the Anderson herd since a calf.

The 11 head shown by Vander Griend Brothers of Lynden were a credit to the breed and they gave their competitors a close run for the placings made.

Ayrshires From Whatcom.

The Ayrshire exhibitors numbered five in all and came from Whatcom county only. Both of the grand champions were in the herd of C. Vos Camp of Lynden. Glenwood's Sentinel II., the well built yearling with a perfect topline, was the junior and grand champion bull, while Idiline of Laurel, a 6-year-old female, was made senior and grand champion cow. She had a true dairy type and an udder that was well placed. The junior champion female was Nooksack Lady King, a senior yearling of the Arnold Kaas herd of Ferndale. Other exhibitors were G. A. Palmer of Lynden and George Brown of Ferndale.

The grand champion Holstein female was an 8-year-old cow, Nettie Wayne De Kol, an unfaulted animal with a wonderful udder. She was shown by J. I. Hutchen of Lynden. H. J. Evans of Ferndale, another exhibitor of the breed, brought out five of his best individuals and had the junior champion bull, while J. Barteld of Lynden had the junior champion female, Lady Whatcom Delight Piebe, a senior calf.

Swine Entries.

There were four breeds of swine represented at the hog barn, which was under the supervision of M. J. Morris of Lynden. There were 38 head in the whole show, the greater part of which were black hogs. The Berkshires were shown by Mr. Morris who had the champion boar, Bonnie's Baron IV., and Wynona's Dutchess, a 7-year-old sow. Connie Verduin of Lynden and E. Glassburn of Ferndale, each had one entry.

The Poland Chinas brought out 11 entries from John Bulkley of Ferndale, who had the champion boar and sow, while O. Vos Camp of Custer and Peter Jensen of Ferndale each had one entry.

The Duroc-Jerseys had the largest number in the show, 14 head, all of which were shown by one exhibitor, N. Bellinger of Lynden.

Connie Verduin had the only Chester White, a young gilt. There were eight head of Hampshire sheep shown by D. A. Dow of South Bellingham, who took all the awards.

Birds From Canada.

The poultry show brought in a large number of birds from Canada as well as from some of the local breeders. There were two carloads of birds from across the line, one from Coaldale, Alberta, and the other from Cornwall, Ontario. There were also a few entries from New Westminster, B. C. All of these entries made up a large assortment of some of the less common breeds. Two White Wyandottes came direct from London, England.

The show had some of the best individual exhibits that have ever been shown on the American continent, according to Harry J. Beernick of Lynden, superintendent of the poultry department. The Leghorns came out the strongest of any breed while the Barred Plymouth Rocks were of a very good quality. There was also a good display of water fowl, which included one large local exhibitor, Cowherd's Duckery of Ferndale. The classes were judged by Harry Collier of Tacoma.

Prize Herds Headed This Way

All roads lead to the Pacific northwest about this time of the year and prize live stock will soon be found traveling most of them bound for the Western Royal and the Pacific International live stock shows. The latter show has become well recognized as the climax of the show season of the west, and even rivals the great Chicago International for national place.

This year an especially fortunate relationship as to dates of other shows exists, making the San Francisco show and the National Dairy show at Minneapolis natural feeders for the two big northwestern expositions.

The Western Royal at Spokane will this year be held October 28 to November 2, opening two weeks after the close of the Minneapolis and five days after the close of the San Francisco show. Immediately following the Royal will be the Pacific International at Portland. The result is that several of the big herds, especially of dairy cattle, showing at Minneapolis, will come west and participate in the shows out here, and that several herds of various classes of stock will come north from San Francisco. With several Canadian herds and flocks already entered, both of these shows promise to be not national, but international events.

While some doubt had been expressed as to the holding of the Western Royal this year, its certainty has been announced by President Huston McCroskey of Garfield and Manager J. T. O'Brien of Spokane. Prize money totaling $17,000 has been assured. President McCroskey is now in the east working in the interest of the show.

The Royal will be held this year under the elevated tracks of the Union Pacific and Milwaukee railroads in the heart of the business district of Spokane, where it was located last year. There was a little room to spare last year, but preliminary entries indicate that every available stall will be occupied this year.

Superintendents for the show have been announced as follows: General superintendent, Ralph Close, Spokane; beef department, C. W. Hickman, Moscow, Idaho; dairy cattle, John L. Smith, Spokane; horses, H. E. Goldsworthy, Rosalia, Wash.; hogs, D. M. Adams, Spokane; sheep, Howard Hackedorn, Pullman, Wash. All these men have volunteered their services, not only guaranteering excellent supervision throughout the show, but saving the association much expense.

The list of judges has not yet been completed. It is expected that Duncan Marshal of Canada will judge the beef cattle, John B. Irwin of Minneapolis the dairy cattle and W. L. Carlyle of Alberta the horses.

Grain Futures Act

Statement by Secretary Wallace

Concerning the grain futures act, which was signed by President Harding September 21, Secretary of Agriculture Wallace says in a statement sent out by the United States department of agriculture that "the reports that this law will put the grain exchanges out of business or interfere with their legitimate function are without foundation." Secretary Wallace's statement follows:

"The new law takes the place of the regulatory provisions of the future trading act August 24, 1921, which were declared unconstitutional by the supreme court of the United States last May. In substance the new law is the same as the old, but the new law is based on the power of congress to regulate interstate commerce, while the former statute was based on the taxing power of congress. The new law does not become operative until November 1. As all of the exchanges were fully acquainted with the requirements of the former law, there should be no difficulty or delay in complying with the new law. The exchanges affected are those at Chicago, Minneapolis, Duluth, Kansas City, St. Louis, Toledo, Milwaukee, San Francisco, Los Angeles and Baltimore.

"This law does not interfere with hedging transactions on the boards of trade. Neither does it interfere with ordinary speculation in the buying or selling of contracts for future delivery. If, however, there should be evidence of undue manipulation, or attempts to corner the market, or of the dissemination of false or misleading information about crop or market conditions by members of the exchanges, such conduct would be inquired into and promptly dealt with as required by the law. In addition, it prohibits the exchanges from discriminating against cooperative associations of grain producers who may desire membership in order to obtain the use of the facilities of the grain exchanges. The secretary of agriculture also is given the requisite authority to examine the books and records of the members of the exchanges and to require such reports as may be necessary to carry out its provisions.

"The reports that this law will put the grain exchanges out of business or interfere with their legitimate functions are without foundation. It will not interfere with the proper operation of such exchanges. No one will be persecuted. No proper business will be harassed. The law gives us an opportunity to observe and inquire into the operations on grain exchanges and to put a stop to improper practices, if such exist. It gives opportunity to study this whole system of registering prices of grains. In a year or so we should be able to speak with authority concerning grain exchange dealings. Nobody can do that now.

"In the administration of this law I am confidently expecting hearty cooperation from legitimate dealers in grain and from all others who favor free, open and competitive markets."

To Feature Domestic Science

The domestic science department of the Pacific Northwest Fruit exposition at Seattle will be an important part of the exhibits this year. Miss Maud Wilson, state home demonstration leader, will have charge of the work. The premium list includes nearly all known fruit products that have a practical value in the kitchen. There are over 200 lots listed. Club displays are to be emphasized and a $50 prize is offered for first place and $25 for second. All articles sent to the exposition will be returned to the owner after the show is over. The committee plans on making this division one of the most educational features of the exposition.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Unionizing Public School Teachers

In a recent address in New York, United States Senator Stanley of Kentucky declared that "national ownership of industry would transform industrial conflicts into political struggles. It changes a strike against employers into an insurrection against the state."

Undoubtedly the Kentucky senator has put his finger on the danger spot of government ownership of such industries as the railroads and coal mining. As these industries are labor-unionized, it would be difficult, if not impossible, for the government to de-unionize them after it had taken them over under government ownership.

As matter of fact, the executive council of the American Federation of Labor, in conference at Atlantic City recently, declared for a more aggressive policy of unionizing the teachers of the public schools of the United States. It announced a nationwide effort to organize the teachers into labor unions. If that were done, as Senator Stanley says, a strike by the teachers would be an insurrection against the state.

THE FARMER is not antagonistic to organized labor. It clearly sees that labor must have the right to organize, within reasonable bounds, for its own protection. Without such organization it would be at the mercy of combinations of capital. But organized labor must understand that the great body of the American people, who are friendly to it up to this point, will not stand for the unionizing of the public school system, the police and fire departments in towns and cities, and the railroads and coal mines, if those industries were taken over for public ownership.

Culling Increases Profit

During July of this year the extension service of the State College of Washington sent out L. W. Cassell of the poultry department to give a series of 12 culling demonstrations in King county. Instructions on the latest methods of culling were given to 490 poultrymen owning 49,779 birds.

At these demonstrations, record cards were handed out, on which the poultrymen reported—number of birds in the flock, number of culls taken out, number of eggs laid by the culls in one week and the number of eggs laid by the remaining flock the same week. Reports have now been received from 33 poultrymen who own 7605 birds. They culled out 992 birds, or 13%.

During one week the culls laid 771 eggs, which is equivalent to a 11.1% lay. The good hens remaining in the flocks laid 24,023 eggs, which is equivalent to a 52% lay. If the culls had been left in the flocks the per cent of lay would have been 46.5%.

If 33 poultrymen can raise the average lay of their flocks from 46.5% to 52% by culling it can be done by every poultryman in the county. It is a little late now to get the best results from culling. Still it is not too late and it will be found that even as late as this it will pay to look over your flocks and if you see any yellow shanks, yellow beaks, shriveled up combs, and bright, clean plumage, it would be well to examine more carefully and see if they are not culls.

The saving in culling is not only in the fact that you save in the feed bill, but there is more room for the workers, and you are less likely to have disease in your flock if you sell off the culls as fast as you find them. In addition there is a small income from the sale of the culls on the market.

The 30-10 School Tax Plan

In 1921, 295,113 children attended public schools in the 2595 school districts of the state. Of these children, 287,345 attended school for 161 days (eight months) or over, and 147,652 of these attended for 181 days (nine months) or over. Only 7768 children (2.6 per cent) had less than eight months' schooling. It is because of these 7768 children in scattered, remote and sparsely settled districts with small taxable property that the 30-10 bill proposes to increase taxation all over the state $10 for every school child, from the present levy of $20 per school child to $30 per school child.

Is it necessary or advisable?

In 1910 Washington actually ranked at the head of all the states in expenditure of money per school child, and in efficiency as measured by school attendance. In 1921 California and Nevada slightly surpassed her in expenditure per school child, owing to peculiar conditions in those two states, but Washington was ahead of all the other states, and far ahead of most of them. We spent $97.85 last year per school child, twice what we spent in 1912, while Massachusetts spent $82.54, Minnesota $88, Virginia $33.83. The average for the United States in 1918 was $49.12 per child.

Moreover, while Washington by direct taxation has been generously increasing its contribution for education 270 per cent or more in the last 10 years, its taxable property has only increased 17 per cent and its school attendance 35 per cent. Surely no sane person can call the state niggardly. The total cost of public school education in Washington last year was $28,553,333.

Since it appears that 97.4 per cent of our children have eight months of schooling, or more, and since the experts praise highly the general efficiency of our school system, it follows that no educational emergency exists, especially as the 30-10 bill puts up to the people this November a plan of educational reorganization which would normally come before the legislature two months later, in January.

Other points involved in this school problem will be taken up in later issues of The Washington Farmer. In this week's issue, in other columns, will be found an argument for and one against the 30-10 plan.

LOOKING INTO OTHER FARM FIELDS

Agricultural market information is now distributed by wireless from the Eiffel tower.

* * *

Delaware, with over 1150 carloads, has shipped nearly one-fifth of this season's car lot supply of early apples.

* * *

Meadow fescue, or English blue grass seed, is produced in eastern Kansas and western Missouri. Most of it is exported to European counties, chiefly Germany.

* * *

The Australian Producers' Cooperative Federation has just established a selling agency in France, the demand for Australian unsalted butter in that country having increased tremendously, according to R. H. Fisher of the American consulate at Sydney in a report to the department of commerce. Australian butter in France is reported to be realizing on the average if 15 shillings per hundredweight above rates ruling in the United kingdom, and while it is impossible to estimate the exact demand in France for Australian butter, it is put down roughly at 10,000 to 15,000 boxes weekly from December to April.

State Farm News

Governor Hart has received from the federal government a check for $69,303.64 as this state's share of receipts from the sale of timber in national forests in Washington during 1922. The money will be distributed by State Treasurer Babcock to the counties in which the forests are located, to be used proportionately for schools and roads. The receipts from the different forests follow: Chelan, $5381.45; Columbia, $6966.18; Colville, $3556.16; Kaniksu, $13,645.70; Olympic, $11,445.46; Rainier, $2960.37; Snoqualmie, $11,293.98; Umatilla, $1263.51; Washington, $9018.76; Wenatchee, $3742.07.

* * *

The Five Mile school held a fair September 22, attended by about 150 persons. The proceeds were $21, which will be devoted to school purposes. The displays were of fruits, vegetables and flowers. A program, consisting of music, readings and a playlet, was given.

* * *

Regular daily apple trains are now the rule out of the Wenatchee terminals and these will soon be increased to from two to three solid trainloads every 24 hours. The new terminals and shops of the Great Northern railway costing $1,500,000 will be completed and occupied within the next 15 days, it is announced, when the storage and handling of fruit trains will be greatly facilitated. Total apple shipments to date are more than 600 cars, and these are being added to at the rate of over 50 per day.

* * *

About 250 apple growers of Yakima county have approved a contract for pooling the entire crop, prepared by Clyde Shelton, C. P. Wickersham, O. V. Armstrong, W. H. Burrill and S. M. McKee. It provides for the crop to be assigned to a pool, with forfeiture clauses for withdrawal.

* * *

Grain warehouse men all over the state have been notified by the department of public works in Olympia that the practice of deducting a full pound from the weight of the sack when weighing grain must be stopped at once or immediate prosecution will result. The department's weighing rule provides for the deduction of three-quarters of a pound for the weight of the sack. The law provides a penalty of $1000 for each violation of the rule.

* * *

A. E. Lundeen of Rochester is building a wooden hoop stave silo under the direction of E. B. Stookey, Thurston county agricultural agent. This silo will measure eight feet in diameter and will be ready in time for the harvesting of a crop of corn. Mr. Lundeen has one of the best herds of Jersey cattle in the county.

* * *

Yellow Bantam corn ears measuring 14 inches and Evergreen sweet corn 10 inches long were raised this season by Martin Secondo, rancher of the Cowiche. Young trees planted last spring show in some cases new growth of five and a half feet. Mr. Secondo's corn patch comprises three acres and his orchard is 20 acres in extent. He bought the place of 40 acres last spring from O. A. Fechter and has been doing intensive work on it since.

Potatoes planted May 18, although not ready to be dug yet, are running from four to nine inches, he said. The place had been in alfalfa before he took it over.

* * *

P. S. Darlington, who has been for some time the deputy horticultural inspector in the Wenatchee district, has been transferred to district No. 9, with headquarters in King county. F. S. Neilson has been appointed to fill the vacancy in Wenatchee.

* * *

The Walla Walla seed potato association at a recent meeting decided to market its potatoes in the county this fall as much as possible, instead of shipping out.

The reason given is that many potatoes coming in are diseased and it is feared the disease will spread. Locally grown potatoes were found to be comparatively free from disease. Some potatoes will be handled through produce houses and others will be stored in pits until they are in demand.

* * *

A. A. Prince, sales manager of the Walla Walla branch of the North American Fruit exchange, says that Jonathan apples are bringing 50 to 75 cents less this year than last and Delicious apples from $1 to $1.50 less than in 1921. The market for late-keeping varieties is better.

* * *

D. A. Scott, head of state conservation and development; Ivan Goodner, state conservation engineer, and Marvin Chase, state hydraulic engineer, have been on a tour of inspection of irrigation projects in the Methow valley. It is expected that in a short time crews will be set at work checking up on the old Chandler survey of the proposed Pateros-Brewster project, with a view to putting that in shape for financing.

* * *

According to a statement by W. H. Paulhamus of Puyallup, the 1922 raspberry deal has given the growers an average of more than $2 per crate on all stock they shipped out as fresh. This will constitute at least one-third of the whole yield, it is stated.

* * *

Plans to raise $100,000 from citizens of the state to be loaned to farmers in the crop failure districts in the Big Bend country for winter seed and feed seed have been begun by the directors of the Spokane Chamber of Commerce. State Senator H. D. McMillan of Ephrata emphasized the serious conditions in some parts of Lincoln, Grant, Adams and Douglas counties. Some of the farmers, he said, would require feed as well as seed. Senator McMillan estimated the need of $100,000 in loans.

* * *

Improvements, to cost about $85,000, will be done on the canals and flumes of the Wenatchee reclamation district this winter. Work will be begun as soon as the water is turned off between October 10 and 15.

The improvements planned will fit in with any program to increase the capacity of the system which may be adopted by the reclamation district engineers as a result of complaints by water users this summer that they were not getting enough water, although receiving their full quota.

The winter work is for safety, and to insure delivery and conservation of water. Replacement of flumes by ditches, installation of steel and wood pipe, concreting of ditches at places and preparing the newly completed 3300-foot tunnel, opposite Cashmere, for diverting the water through it next spring, are among the improvements to be done.

FARM BUSINESS AND MARKETS OUTLOOK

Demand for beef steers maintains its recent breadth and receipts at the leading markets last week, 50 per cent larger than 60 days ago and above normal for the season, were absorbed without material loss in values. At the same time, beef prices in eastern cities advanced sharply. The upward trend in wage scales and almost universal employment are partly responsible. Feeders also are taking their full share of the crop, including fleshy steers suitable for killers.

Prime steers at Chicago reached a new high of $12. Lower grades declined slightly at that point due to an influx of westerns, but at Kansas City values on grassers advanced. Butcher cows and heifers are feeling western competition more keenly and were variously quoted at steady to lower and the same description applies to bulls. Choice veal calves are scarce with prices on a high level, but the trend is downward. The movement of heavy calves from the southwest is at high tide with Kansas City receipts setting a new record.

Receipts of cattle generally reached the crest of the autumn run around the middle of October, so that after another 60 days the lower grades will be on a more secure footing. Warmed up steers will increase in number, however, as grassers decreased, so that no beef shortage is in prospect. Feeder shipments from all stock yards during August were the largest for that month in six years at least. Many of these cattle will be returning to market during the late fall and will keep the market platter reasonably well covered.

Cattle feeders are still buying at above the normal rate, so that the countryward movement may not yet become heavy enough to create an unhealthy situation for the winter and spring market. September shipments, like those of August, promise to set a new record for the month and car shortage is preventing as heavy purchases as would be made otherwise. The new tariff is expected to curtail the movement of cattle from Canada, many of which were in feeder condition.

Pork Consumption Satisfactory.

Storage stocks of lard in the United States declined nearly 25,000,000 pounds during August compared with an average decrease in that month of 17,000,000 pounds. Stocks of hog meats in storage decreased 63,500,000 pounds compared with an average decrease of 120,000,000 pounds. Evidently the lard market is proportionately better than the market for hog products, but in view of the fact that hog slaughter in August was the largest on record and average weights were high, the showing is not altogether unfavorable. Furthermore, stocks of both lard and meats on September 1 were below the five-year average on that date. Packers report marked broadening in the foreign demand for hog products, especially lard, in the last 10 days, the Near East situation probably being a factor.

Receipts of hogs are increasing and the market is developing an easier tone. A heavy autumn run is on the horizon and a downward trend in values is probable.

Lamb Receipts Below Normal.

Arrivals of lambs and sheep have increased slightly in the last two weeks, but are still running 40 per cent or more below normal for this season of the year. Since the season at which the supply usually declines will soon be at hand, the market appears to be in an exceptionally strong position. Besides the limited supply, the eager demand for feeders, the strong market for dressed lamb and buoyant tone in wool all are contributing factors. Prices have advanced to the highest point of the season, feeders ascending fully as rapidly as fat classes. The number being placed in feedlots is small in spite of high prices which feeders are paying, so that operations show more evidence of safety. Early in the season the movement from the 12 leading markets was comparatively heavy, but it has not increased at a normal rate since that time because the lambs were not to be had. The total from July 1 to September 16 is only 596,960 head compared with 621,243 head last year.

Wool Market Firm and Active.

The wool market has been active recently with prices firm. Passage of the 31-cent tariff, scoured basis, has given the trade a more settled outlook. Over 100,000,000 pounds of wool which have been held in bond will now be released, but manufacturers are steadily absorbing all offerings. Foreign markets are firm, including Australian, where the new clip is on sale. The South African clip is said to be 60 per cent larger than those of recent years, but the South American clip is the smallest for a long while. The outlook for the next clip in the United States is bright with a reasonably high tariff, a marked shortage in the sheep population and apparently a secondary period of inflation as the controlling influences.

War News Sustains Wheat.

The war scare in Europe furnished the motive power back of advances in the wheat market last week. The upturn has been partly lost, but there has been a notable turn in trade sentiment which is always an important factor in shaping the course of the market over short periods at least.

Buying of cash wheat by exporters has not expanded much as yet, but the amounts being sold are as large as when wheat was around $1 per bushel. In addition, it is believed that exporting concerns have themselves purchased millions of bushels of wheat in the futures market, mostly at Winnipeg, during the past 10 days. Whether these purchases are purely speculative or based on consummation of export contracts under cover is unknown.

Foreigners have not bought ahead as much as usual in the last two months. Shipments from exporting countries have fallen off recently and the amount on ocean passage has declined, so that a shortage of near-by wheat available to European interests has added to the uneasiness created by the political situation. It is believed that Europeans need approximately 2,000,000 bushels of wheat per day from North America from the present time until the end of January or a total of around 200,000,000 bushels altogether. Even if the war scare vanishes, purchases for export are likely to give the market support, at least around the dollar level at Chicago.

Domestic flour trade is fairly active with buyers showing fear of a further advance in wheat. Millers are grinding about 12,000,000 bushels of wheat per week, which is not far from the full amount reported as arriving at primary markets.

Spring wheat is being held back more or less, due to car shortage and low prices, so that the movement to northwestern markets is not as heavy as expected and total primary receipts now are only equal to the average for the corresponding period in the preceding 10 years, while in July and August they were considerably above the average.

With the war scare on, the weight of Canadian wheat has not been so prominent, although the advance in prices recently has resulted in a marked increase in offerings. Congestion of transportation facilities in Canada as well as in the United States is retarding the movement in both countries to some extent. Canadian wheat remains 6 to 10 cents cheaper than United States wheat besides being of higher milling quality, so that exporters are partial to the former.

All statistical compilations show a reasonable margin in the exportable surpluses over the needs of importing countries, but the surplus is not burdensome and with wheat disappearing rapidly in the United States it is becoming more clear that the price is low enough to stimulate absorption of the surplus. If industrial conditions improve or a war is started a higher level is probable.

Corn in Strong Position.

Coarse grain prices are showing much strength influenced to some extent by the action of wheat, although there has been no marked change in the volume of export business. The car shortage is restricting country offerings of corn to some extent and they are now smaller than a week ago when the price was lower. The increase in live stock production and the smaller crop and reduced carryover of old corn are making for a strong situation in corn.

Big Advance in Oats.

The season is past in which the usual after-harvest run of oats takes place and receipts at primary markets are declining slowly. The eastern and New England demand for oats is the broadest in a long while. Prices are up about 30 per cent or more from the low point of the season. The visible supply is only about half as large as last year, when it was extraordinarily large.

Cash Grain Markets.

The range of cash grain prices for the week ending September 27 was as follows:

Chicago—Wheat—No. 2 red, $1.10 1-2; No. 3, $1.07 1-2@1.12; No. 2 hard, $1.06@1.09; No. 3, $1.07 1-2@1.07 3-4. Corn—No. 2 mixed, 62 3-4@65 3-4c; No. 3, 62 1-4@65 1-4c; No. 4, 62@65c; No. 2 yellow, 63 1-4@66 1-2c; No. 3, 62 1-4@65 1-2c; No. 4, 61 3-4@65 1-4c; No. 2 white, 62 3-4@66 1-4c; No. 3, 62 1-2@65 1-2c; No. 4, 61 3-4@65c. Oats—No. 2 white, 40 1-4@42c; No. 3, 39@41 1-4c; No. 4, 38 3-4@40c. Rye—No. 3, 68@68 3-4c. Barley—57@62c.

Seed Movement Above Average.

Receipts of clover seed at Chicago from July 1 to September 16 totaled 1,415,000 pounds compared with 932,000 pounds last year and 890,000 pounds two years ago. Receipts of timothy totaled 15,236,000 pounds compared with 16,293,000 pounds last year and 6,845,000 pounds two years ago. At Toledo for the season to September 16 receipts of red clover seed totaled 2243 bags compared with a four-year average of 1481 bags; while alsike totaled 3060 bags compared with 2266 bags, and timothy 1502 bags compared with 1605 bags.

Prices on September 27 were:

Chicago—Per 100 pounds: Clover, $15@18; timothy, $4.50@5.50.

Toledo—Per bushel: Prime red clover, $10.50; prime timothy, $2.95@3.20.

Feed Market Sharply Higher.

A sharp advance has occurred in feed prices in the last two weeks. Buying is limited to prompt shipments, however, and is scattered, while production is up to normal, so that justification for the advance is not clear and it is not likely to be sustained. Car shortage is a factor.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $21.50; standard middlings, $22.50; flour middlings, $25@26; cottonseed meal, 36 per cent, $40; 43 per cent, $44; hominy feed, $27; gluten feed, $31.35; old process oil meal, $44; tankage, $60.

Hay Prices Firm.

Hay prices are firm on midwestern markets although eastern markets are easy. Demand is limited, but receipts and country loadings are light in spite of the large crop. Arrivals at Kansas City, the chief distributing market, for the entire year to September 20 totaled 15,046 cars compared with 14,820 cars to the same date last year.

Prices per ton in carlots—Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 clover mixed, $20@21; No. 1 closer, $14@16; No. 1 clover mixed, $16@17; No. 1 alfalfa, $20@23; upland prairie, $16@18; midland prairie, $12@14; rye straw, $10@11; oat and wheat straw, $8@10.

Egg Prices Still Gaining.

Egg prices have continued to advance. In spite of an increase in poultry production, receipts of eggs at the leading markets in the last 30 days have been running below the average for the corresponding period in the three preceding years. As a rule the supply of fresh eggs declined approximately 50 per cent from the middle of September to the middle of November. A similar decrease this year may mean a still higher price level, although the huge storage stocks will be drawn upon extensively to make up the shortage in fresh arrivals.

Poultry prices are showing resistance although the trend is most likely to be lower in the next two months. The advance in butter, eggs and cheese recently which is giving cold storage operators a chance to get out whole will put these operators in better humor to store poultry.

Butter Prices Highest of Year.

Butter prices advanced last week to the highest point in the calendar year. The seasonal decline in production has gone far enough to create marked scarcity of fancy fresh butter, while the demand shows no abatement as a result of the advance of nearly 30 per cent in values from the low point of the season. Recent rains apparently have done little to increase production, although they may help to maintain it during the fall. Large quantities of "short-held" and storage butter are already being used to make good the shortage in current receipts. Reductions in storage stocks in the first 20 days of September at the four leading markets averaged 250,000 pounds daily while the total September reduction last year was only 150,000 pounds.

Prices for 92 score fresh butter on September 27 were: Chicago, 41c; New York, 43 1-2c; Boston, 43c; Philadelphia, 44 1-2c; San Francisco exchange quotation, 33c.

Cheese Markets Firm.

Cheese markets were firm last week with an active demand, especially for shipments from country points to the south and east. Receipts at distributing markets have increased during the last two weeks, but dealers in closest touch with the trade are disposed to view the situation with confidence as no cheese is being pressed for sale. Some storage cheese is being moved, but there is no anxiety on the part of holders so that they are not offering their stocks at concessions. Some one and two year old twins and cheddars have been sold at 29 cents. Brick cheese has advanced more than any other style with the supply quite limited. Foreign styles have shared in the general brisk demand.

Prices for No. 1 American cheese on September 27 were:

Chicago—Twins, 22@23c; S. Daisies, 22@23 1-2c; D. Daisies, 22@22 1-2c; Young Americas, 22@23c; Longhorns, 22 1-2@23 1-2c.

Fruits and Vegetables.

Receipts of potatoes are increasing as the late crop states are shipping freely, the movement in the week ending September 23 being 6527 cars, the largest yet this year. In the last three years the high point of the season's movement has been reached around the middle of October so that in a few more weeks the pressure should reduce. Prices are uneven, but show little change. Northern round whites are quoted at a range of $1 to $1.15 per 100 pounds sacked in midwestern markets. Prices for rurals in wagonloads at Idaho shipping points range around 50 cents to growers while Early Ohios in Nebraska are bringing 50 to 60 cents.

Carlot shipments of apples are increasing steadily, but are now only about equal to the average for the corresponding period in the three preceding years. Shipments from the box apple states are running less than half as large as last year. Barrel apple prices have strengthened materially in the last few weeks, but are weakening again with Jonathans quoted at $3 to $5 wholesale in midwestern markets while Grimes Golden are bringing $1.75 to $2 a box.

LATEST QUOTATIONS.

Snohomish Fair

Brings Out Best of Farm Produce

By RALPH ESKINE.

The Snohomish county fair this year brought out the fact that the people in that county believe in a yearly exhibition of their best produce and in practical demonstrations for the benefit of their community rather than a number of concessions and horse races.

This county has for many years had its county fair at Granite Falls, a community in the eastern part of the county. The fair association owns its own buildings and grounds, and each year holds a very attractive little fair. The location of the grounds gives the fair a kind of a community aspect, but when one examines the exhibits he finds that they have been brought in from all parts of the county, thus making it truly a county institution.

For the amusement features the association has found it best to resort to such athletic games as can be arranged, since the grounds as yet are not sufficiently large to allow for a race track. This year the weather man did not favor them, as he has done in the past, but there was a good turnout all three days and the football game on September 30, the last day, drew a crowd from many parts of the county.

In the agricultural building the vegetables took up a large part of the space, while flowers from home gardens made a very creditable showing. The state college extension service had arranged three of their booths: horticulture, the booth showing a model farm with the proper rotation of crops, and the bee and honey display. Each of these exhibits was demonstrated by cards which explained each detail that was not self-evident. There were two of the extension specialists with the exhibits, R. N. Miller, the farm management specialist, and A. B. Slocum, bee specialist.

Another interesting booth in this building was arranged to show the girls' home work, which included such articles as fancy work, cooking and sewing. The display was very well arranged and displayed some neat handiwork.

Another building was reserved for the commercial booths, but also housed other departments, such as the home demonstration and county agent's department. The latter consisted of a comparison of two pens of White Leghorn hens, one with birds that averaged 128 eggs per hen and the other a 241-egg average. The difference in profit was given as over $2000 for the year.

Another comparison was made to show the value of selecting and treating seed potatoes. The seed that was taken from the bin and planted without treatment returned a crop of only 6.4 tons to the acre, while the seed that had been selected from the field and treated with corrosive sublimate produced 14.4 tons to the acre. Mr. Love, the county agent, also had a potato grader set up to show how time could be saved in sorting tubers for market.

Mrs. Harriet Stow, county home demonstration agent, had arranged a very complete display of articles which had been made from flour and sugar sacks. In most cases the garments had been dyed and decorated to make them look more attractive. It was surprising what a large number of useful and attractive garments could be made of this material.

A lesson in nutrition was another feature of this department which brought out the point that it was not necessary to buy expensive articles in order to obtain vitamines, as is sometimes thought, but by supplying a good variety of vegetables, fruits, milk and its products the necessary vitamines may be had. The woman's department proper was in this building and had the usual variety of fancy work, sewing and canned goods that go to make up the list of articles made at home.

There were three breeds of dairy cattle in the barns, but the 20 head entered did not do justice to the numerous dairy herds that are to be found about the county. The animals that were shown were representative of the different breeds and demonstrated some excellent type and quality.

The Guernseys were shown by three breeders. J. E. Wrage of Arlington had the grand champion bull, Lishman's Son, the 5-year-old herd sire of the Valley Gem farm. Traveler's Starlight, a junior calf, was the junior and grand champion female and was from the C. E. Entsminger herd of Arlington. The other exhibitors of Guernseys were Mr. Englebretzen of Granite Falls and H. P. Lewis of Arlington.

The Jerseys were shown by Floyd Heavens of Granite Falls, who won all awards in the classes filled. He had a good herd of Island type Jerseys, with Bess' Oxford Fern's Lad, a 7-year-old bull, as the herd sire.

William Milne of Granite Falls had 11 head of Ayrshires on exhibit. The herd bull, Ben Hur, of the Willowmoor strain, is now 4 years old and has a straight top line with a good barrel. The females of the herd were put up for sale the last day of the fair. Mr. Milne resorted to this means in order to reduce the number of animals in his herd.

The swine show was made up of three breeds, Hampshires, Duroc Jerseys and Chester Whites. Dr. H. K. Stockwell of Monroe had the black and white belted hogs, including some young classes, as well as one entry in the sow and litter class. A. Turley of Monroe had the Duroc Jersey boar, an 18-month-old animal, with plenty of size. Two Chester Whites were shown which had just been purchased by Ed Hoem of Snohomish, from Leonard Newman of Thorp, Kittitas county.

All of the classes of live stock were judged by C. W. Krassin of Snohomish, a graduate of the state college and a breeder of Holstein cattle.

The poultry show was made up largely of Barred Plymouth Rocks, which brought out some excellent birds. The Rhode Island Red classes were also well filled, but the lighter breeds did not turn out as might be expected from a county where there are as many commercial flocks as are found in Snohomish county. There were, however, some Brown Leghorns and some of the less common breeds. The waterfowl and turkey display was good and was made up of birds from near-by farms.

Wenatchee Apples Stronger

The Wenatchee apple market is showing greater strength than at any time previously during the present season. While no advance in prices is noted, buyers from outside are coming into the market more generally than ever before. A premium is being offered for extra fancy grades of both Jonathans and Delicious, as neither of these varieties is very well colored. All other varieties are coloring up since frosty nights came.

The building of a $450,000 cold storage and icing plant at Chelan station by the Great Northern railway is regarded as one of the most important developments of the season in that district. The work will commence at once and the new plant will be completed in time for the next fruit shipping season. In addition to furnishing ice for the refrigerator cars of the road, several hundred cars' capacity of cold storage may be provided in the new plant.

A Granddaughter of a Grand Old Guernsey

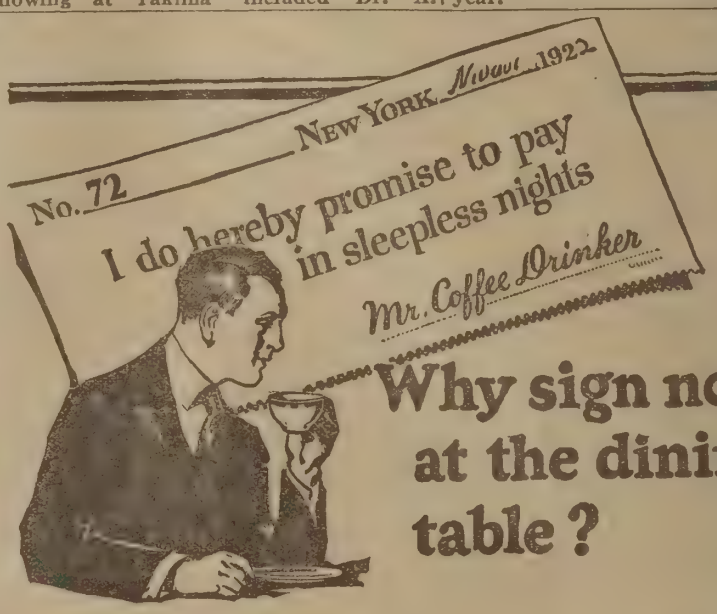
Unaware of the fact that her illustrious granddam was no longer with the herd, the beautiful Guernsey heifer pictured here left the Spokane Interstate fair, where she had won first place in the junior yearling class, competed in an even stronger class at the state fair at Yakima and again went back to her stalls wearing the blue ribbon. The heifer is Wanda Topsy of Orchard Hill farm, a granddaughter of Sammamish Topsy, the cow of the Dr. Park Weed Willis herd that, as the record Guernsey west of the Mississippi river, made the Guernsey excursion by boat about the islands of Puget sound late in July this year. It is not a far stretch of the imagination to see in this trip possibly the beginning of the exposure that resulted in Sammamish Topsy becoming ill at the Interstate fair and dying at Spokane shortly after its close, the second week in September. She had also been shown with the Orchard Hill herd at the Southwest Washington fair late in August.

A feature of the fair circuit this season has been the strength of the Guernsey competition. Similar shows have never before been seen at Chehalis, Spokane or Yakima. Neither has there been on any show grounds a more enthusiastic aggregation of breeders than the breeders of the fawn-and-whites as they watched the judging at the state fair. Dr. Willis, owner of Wanda Topsy and 19 other offspring of Sammamish Topsy, who is shown standing behind the heifer in the picture, was as enthusiastic as any of them, notwithstanding the fact that he is selling out his entire herd at the farm near Redmond, King county, November 22. Inability to take time from his practice as a physician in Seattle for the proper development of his live stock interests is given as his reason for closing out his herd. Other Washington Guernsey men showing at Yakima included Dr. A. Macrae Smith of Bellingham, Wallace & Fordyce of Sunnyside, Albion L. Gile of Chinook, H. E. Angel & Son of Mabton, Mr. and Mrs. Roy R. Bush of Outlook and several other breeders who showed a few head each.

SET ORCHARD WAGE SCALE.

Representative Wenatchee growers have set the following wage scale for orchard help:

Picking, 40 cents an hour or 5 cents a box; sorting, 35 cents an hour; packing, 5 cents a box off the grader and 7 cents a box off the bench; all other orchard and warehouse labor, 40 cents an hour. These wages are about the same as last year.



WHEREVER window shades are operating silently and unnoticed, you will usually find that they are mounted on Hartshorn Rollers. For *Hartshorn* is the guarantee of unvarying perfection in window shade service.

Why sign notes at the dining table?

IF your mealtime cup of coffee leads you into midnight wakefulness and mid-afternoon drowsiness (as so often happens) why not stop giving the promise to pay?

It is so easy to keep out of debt by turning to Postum.

Postum is a satisfying, mealtime drink, rich in flavor and aroma—and with no regretful settlements, afterward.

Why not try Postum instead of coffee today, and pave the way to better health and happiness?

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

Sold by All Grocers

Wenatchee Apples

Crop Smaller Than Anticipated

By E. H. M'PHERSON.

As the apple harvest progresses it is evident that the total crop of the Wenatchee district will not be nearly so large as had been anticipated. The first estimate was for 15,000 carloads. On September 1 Inspector Neilson reduced this to practically 14,000 cars and many shippers who are in close touch with the situation now predict that not more than 12,500 or 13,000 cars will be actually shipped.

Worm and hail loss are largely responsible for this decrease in the commercial crop. Worms wrought havoc around Wenatchee and hail was almost equally destructive in the Lake Chelan and Okanogan sections. Inspection is much more rigid this year than last, as there is a double check on all apples on the part of both the state and federal authorities besides the inspection of shippers and selling organizations. Every defect, no matter how minute, is seized upon as a cause of rejection or regrading. As a result the quality of the fruit sent out from the Wenatchee district will be higher than ever before.

According to a report issued by the United States bureau of agricultural economics, actual apple sales from the Wenatchee district to September 16 amounted to 1000 cars, which is only one-third as many as had been sold up to the same date last year. But it is more than the actual sales of the Yakima, Hood River, Walla Walla, Spokane and all the Idaho apple districts combined, according to the same authority. Superior sales organization and the district advertising campaign is credited with this showing.

An aggressive campaign for a temporary reduction of freight rates on apples will be conducted by the growers and shippers of the Wenatchee district. While a rereduction was figured was never actually time ago in all freight rates, this did not benefit the fruit districts of the northwest, as the advanced rate from which the reduction was figured, was never actually in effect. Present market conditions and the exceptionally heavy apple crop of the country are two of the principal arguments being advanced by the Wenatchee Valley Traffic association.

Short Courses

Practical Instruction at W. S. C.

In the short courses in agriculture at the Washington State college practical instruction is offered over a period of eight weeks, from January 8 to March 3, inclusive. This is divided into two terms of four weeks each. The work in either may be taken by the student, but it is so planned that the second term's work is of the greatest value of those who have taken the first. Certain subjects of general interest are required. In addition, classes are provided which offer special work in the particular subdivision of farming which may be of most interest to the individual student.

Special four weeks' courses in horticulture and in dairying are offered during the first four weeks for those engaged in practical orchard work or in dairy farming. Two weeks' courses in gas engines, gas tractors, creamery operation and milk testing also are offered.

Any person who can read and write and who is above the age of 16 years may enroll in any of the short courses.

Tuition is free to the winter short course students except for the gas engine and tractor courses, for which a fee of $5 for each two weeks is charged and the creamerymen's course, for which the fee also is $5.

All students contemplating taking short course work should be on hand for registration in James Wilson hall on the day the course begins. For further information write to the dean, college of agriculture, Pullman, Wash.

Wait Till the Fur Is Prime

Trappers often get anxious just as the season is about to open and start trapping before the pelts of the animals are fully prime. They lose money through trapping too early as well as by making preparations too late.

It is difficult to lay down a general rule as to when the pelts of the several animals are first in good condition for trapping. Everything will depend on the locality and the animal. But here are a few general instructions which serve the trapper as a very fair guide:

Don't trap skunk till the last part of October.

Don't trap muskrat till late fall. Muskrat skins are in best condition in midwinter and early spring.

Don't start trapping mink till the middle of November.

Coon can be taken the first of November.

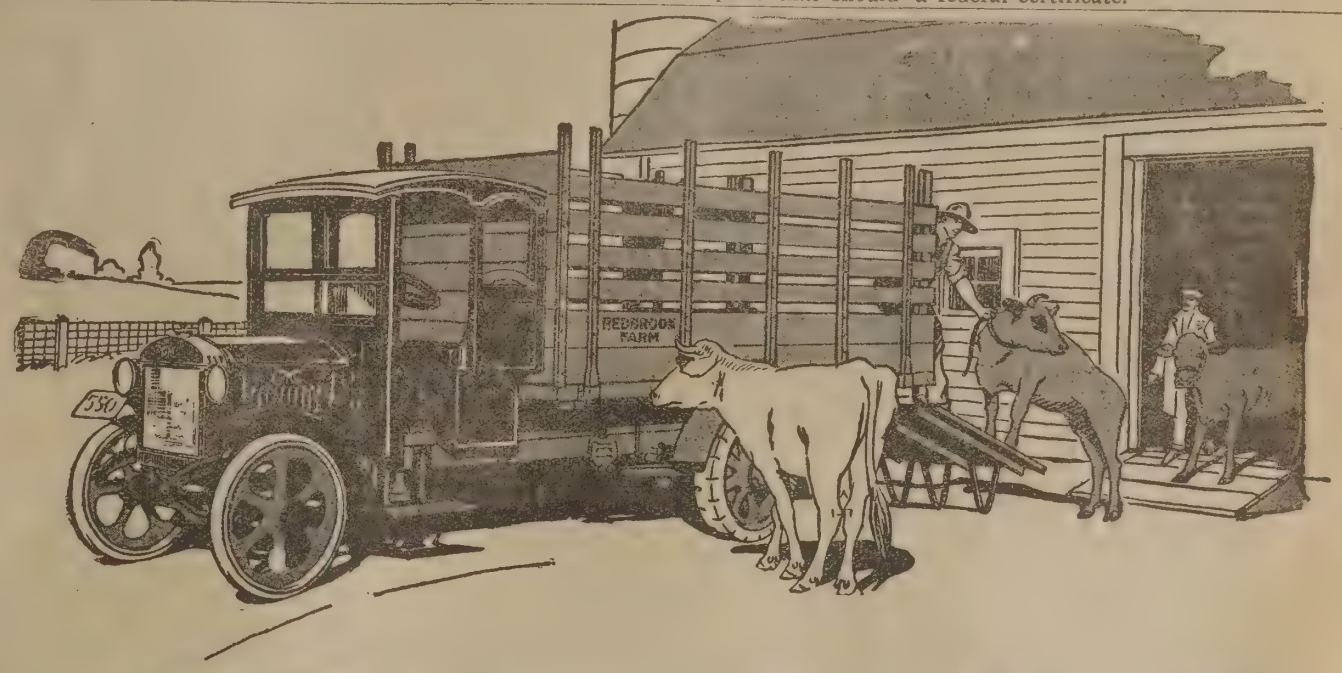
Foxes are in good condition about the middle of November.

Learn the game laws covering your section. Write to your local game warden for them. The large fur houses will send you game laws for every state in the Union. Never violate either the spirit or the letter of the law. Your game laws will tell you the earliest possible date when you can start trapping.

But though you can easily trap too early, it is safe to say that you can not start too soon on the work of preparation. Give yourself plenty of leeway in which you can bring your outfit up to date, order new supplies, decide where you are going to run your trap line and all the other operations which are important and require time. Start early to prepare for trapping, but don't trap too early.

Work With Farm Bureau

To the outsider one of the most interesting phases of farm bureau work in Walla Walla county is the friendly spirit of cooperation that exists among the various special organizations. All of their members join the county farm bureau membership, which costs $10 per year, in addition to the special organization dues, which is usually $1 per annum. The farm bureau helps in the general excursions by encouraging members not especially interested in swine, for instance, to join in them. Subsidies are also given sometimes to these special organizations.



Among the associations thus organized are:

The Walla Walla Purebred Breeders' association, whose unstinted efforts helped largely in the extraordinary county fair held recently, and which conducts an annual consignment sale. The Walla Walla County Poultry association, whose winter show is one of the best in the northwest.

The Certified Seed Potato association, just recently organized to encourage and supervise this new enterprise that should be so profitable, especially in the foothill country, and the cow testing association, whose members conduct regular monthly tests on 350 cows. This latter organization is unique in that a Walla Walla high school student in vocational agriculture has this for his project. The members pay $2 a cow per annum; the boy owns his own auto and gets pay for the work. Besides this he has an excellent opportunity for studying various methods of management of his herds.

FEDERAL APPLE INSPECTION.

About 4000 acres of fruit have been signed by growers of Wenatchee district for the new federal inspection. Eastern prices are reported to be giving preference to apples shipped under the federal requirements. It is, however, optional with the grower to have his fruit inspected for a federal certificate.

GMC

Model K41—Two Ton

$2375

Chassis Only—At the Factory

GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added

Haul Stock This Fall With a GMC

Flashing along the good highways at a fast speed and also developing more pulling power in bad going than is averaged by trucks of like capacity, the Model K-41, Two Ton GMC truck, is the finest equipment yet produced for hauling stock and for other heavy work on the farm.

Like the "Jim-Dandy" one ton GMC, this truck has exclusive improvements that increase operating economy and reduce the time and expense of maintenance. Model K-41 is equipped with the GMC Two-Range Transmission, providing greater pulling power in combination with more road speed—a combination never before accomplished until the development of this distinctive feature by GMC engineers.

The Two-Range transmission has successfully multiplied economical engine power into greater power at the wheels and has opened up new fields for motor truck use, both in the city and on the farm. With this transmission a GMC truck will go anywhere that wheels can get traction and on good roads will speed 18 miles an hour with solid tires.

It has such other advantages as GMC Removable Cylinder Walls, Pressure Lubrication, Removable Valve Lifter Assemblies, Instantaneous Governor Action, Magneto Ignition, Conduit Wiring, Thermo-Syphon Cooling, Electric Lights and Generator, Provision for Starting Motor and many other refinements not usually found on motor trucks.

Write for an illustrated booklet "GMC Trucks on the Farm."

LIVESTOCK AND DAIRY

Filling the Silo

By F. L. BALLARD.

Silo filling time is at hand. Preliminary arrangements include getting the silo and silage cutter in proper condition. All bolts in silage cutters should be tightened and the knives sharpened. In the case of a stave silo the hoops should be adjusted, as doubtless they have become loosened during the summer season. If the silo is of concrete and the inside is rough it may be well to paint or paraffin.

One of the most important factors in silage production lies in the proper stage of cutting the crop. Immature crops contain a high percentage of sugar and make silage of poor quality. Crops standing in the field until they are brown and dry require the addition of much water to replace the natural plant juices. Silage from such crops does not pack well. The best time for cutting corn is when the ears are well dented and are beginning to glaze. Sunflowers should be at least 60 to 70 per cent in blossom. Oats and peas should be cut when the oats are in stiff dough stage and when the peapods first begin to turn yellow. It is important that the silage cutter cut in uniform lengths, or poor silage will result. Farmers purchasing a silage cutter should consider the possibility of using it for chopping hay also, as this practice is found profitable when hay is high in price. The crop should be cut into pieces of uniform lengths, three-fourths of an inch or less. It is much better to cut silage too fine than to have it too coarse. On the average one-half inch is a most satisfactory cut. If the silage will exude moisture freely when a double handful is squeezed tightly it is sufficiently moist. If the water runs out in a stream there is too much moisture and a few loads of oat or wheat hay should be run in. In case more moisture is needed, water should be added. If a hose is not available it is best to set a barrel high enough so that water may run from it to the blower.

One of the most important points in silage making is proper packing. Continual tramping must be given the silage as it comes from the blower. Otherwise air centers the food mass and spoilage results. With large cutters it is often necessary for three to six men to be actively tramping in the silo. The middle of the silage mass should be kept lower than the edges and most of the tramping done on the edges.

It is best not to feed silage for two or three weeks after filling, as it requires about this time for proper fermentation.

ELECTRIC PLANT FOR SALE.

Perfect condition; 32-volt capacity; 50 lights, also pump and motor complete for pumping water; will install if required. Bargain for quick sale. Specially suited for farm or country place.

Box 893, Seattle. Phone Kenwood 1192.

The Tester Knows

The only sure and accurate way to determine just how close your separator is skimming is by means of the Babcock Test, and the most accurate operators of the Babcock Test are the cow testers employed by the various cow testing associations. The following statements from cow testers are interesting:

—"The closest skimming of milk I have in this association is done with a De Laval. Of the 29 separators in this association 16 are De Lavals."—Tester for the second largest association in Minnesota.

—"De Laval Separators and Milkers are to my mind superior to any other makes. The separator is the most efficient skimmer of milk and its durability is lasting. In this community we have practically all De Laval Separators."—Tester for a Pennsylvania association.

A De Laval soon pays for itself and is sold on such easy terms that you can use it while it is doing so.

VETERINARY

By DR. S. B. NELSON.

Throat Worms.—What can one give to a 6-month-old calf to cure it of throat worms? What is the method of dehorning young calves with caustic?

A. L. S.

There is only one way that I know of that you may get fairly good results from treating young calves for throat worms, and that is to put them into a practically air-tight building, in the center of which is put a couple of bricks and place a tin pan full of sulphur. Set this afire and allow the calves to breathe the fumes for several minutes, then turn them out to the fresh air. This should be repeated after four or five days, possibly two or three times.

To dehorn young calves with caustic the caustic should be used when the calf is from 3 to 5 days old, just when you can feel the button. Wet the caustic slightly and press firmly with the caustic on the top of the button, working it around so as to cover the base of the button. Be sure to cover all of it, otherwise you would have a slight stub of a horn come out where the horn root was not killed.

Gilt Is Lame.—I have a 6-month-old gilt that has been lame for a month. There is a swelling on her knee and down in her leg. C. B. S.

I would suggest that you give your gilt 10 grains of potassium iodid once daily for a week or 10 days. It is also suggested that you paint the swelling on the leg with tincture of iodine once daily four or five time.

Indigestion.—I have a young cow that had pigs August 7. The pigs seemed to do all right for about 10 days and then they couldn't eat very good and they ran backwards and got stiff in the front legs. Two died and the rest seem sick, so we took them away from the sow. The sow seems healthy and eats good. G. D.

The sow was too good a feeder for the pigs; too much milk for them and consequently caused a slight indigestion, which is manifested in pigs by the symptoms which you give. This can generally be overcome by giving the pigs more exercise, because it is difficult to keep them from getting all the milk that the sow gives. One very important stockman is in the habit of throwing tightly wadded newspapers into the pen where the little pigs are. The pigs will nose around and begin to play with the ball and thus give themselves exercise. He does this sometimes four or five times a day.

Stringy Milk

By A. B. NYSTROM.

I would like some information concerning a cow. The milk seems fine, but on washing the pans, as soon as what little milk and cream left in the pans mixes with the washing water, the water thickens and gets stringy, which is disagreeable. The cow seems in good health. I am using the milk for a year-old baby.

Bickleton, Wash. N. B. M.

It is not probable that the milk is dangerous to feed your baby. However, since it is possible that the bacteria which causes stringy milk are present I would advise you to sterilize by boiling for 20 minutes all pans, milk utensils and strainers. Also have the cow tested for tuberculosis. Cows recently fresh often give milk containing a large amount of dead tissue or broken-down cells. When this tissue comes in contact with water that has any soap or alkili in it, a slimy substance is formed. It is not necessarily a diseased condition that makes this, although it is more prevalent when the cow is not in the best of health.

A VITAL ESSENTIAL.

Complete the job before you quit.

NO OTHER SHOE IS LIKE

WOLVERINE!

The 1000 Mile Shoe

September 8, 1921.

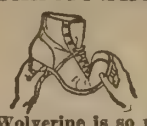
The first pair of Wolverine Shoes we sold was on August 21st, 1920. Customer has worn this pair every day since and wishes another pair.

This customer is a farmer and has sweaty feet, and has worn shoes in barnyard manures. Shoes have not been soled or repaired in any manner except renailing.

Stoffel & Earl,
Casey, Iowa.

The
Hi-Cut Wolverine
King of Storms.

Horsehide
Through and Through



Secret Tanning Process
Makes This Leather *Stay* Soft

Every man knows what it is to dry out wet shoes. The leather dries out stiff as a board, hard and uncomfortable.

Now this discomfort is ended. For, thanks to our exclusive, secret, double-tanning process the Wolverine shoe dries out after every soaking as soft as new buckskin. *This amazing shoe stays soft.* No other shoe made is like it!

We tan the leather in our own tannery. We take selected horse hide of the superfine quality formerly used for expensive Cordovan shoes and Cossack saddles—the toughest, longest-wearing leather known. Yet by our secret tanning process we give this wear-resisting leather the softness and pliability of buckskin. It never loses its softness—and it wears and wears and wears. For we even increase its natural durability.

WOLVERINE
Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

Unusual Economy
Work Shoes for All Purposes

We operate our own tannery and our shoe factory as one organization. This effects very large economies. So every Wolverine shoe is very low priced when you consider the quality.

There is a Wolverine for every use. For field and shop, for lumbering and hunting, for the mines and the oil fields. The hi-cut model shown assures dry, warm feet in blizzard weather. The ever-soft leather in every model assures perfect comfort always. This new-day shoe is the one all men want.

If your dealer cannot supply you we will see that you are supplied. *Send the coupon for catalog.*

The Thirty-Ten Plan--Yes or No?

Readers of The Washington Farmer who have followed the discussion of the 30-10 plan as it has appeared in previous issues of THE FARMER will be interested in the pros and cons of this important subject as presented in the two statements herewith. The 30-10 plan will be on the ballot in November and all good citizens will vote yes or no on it. It provides that there shall be raised by a state-wide tax $30 for every school child in the state ($20 is now raised by state-wide tax) and by county tax $10 per school child in the county. It provides also that no school district may levy more than 17 mills local tax (the legal limit now is 20 mills).

YES By J. MALTBY, Spokane Chairman Publicity Committee, 30-10 Plan.

My conversion to the proposed educational measure, 30-10, was slow. The arguments of the opposition were freely voiced by me until I fully understood the measure, its origin, its purpose, and the conditions that are crying for correction. I, therefore, submit three points which are underlying principles of 30-10, with the hope that, as they have grounded me firmly on the rock of assurance, against which opposition beats in vain, they may do the same for others

Is 30-10 a radical, untimely proposition? The first step in my conversion came when it became clear that 30-10 is just the next step in educational finance, just the next logical step in the historical march of a century. At the National Educational association at Boston in July one-third of the program was given to the problem of school finances. The issues covered in 30-10 were discussed and the search light of the National Educational association turned on federal aid as a remedy. We are not even leaders in the relief measure. California and Utah, I understand, are operating under measures similar to 30-10.

Will 30-10 increase the taxes of the state about $4,000,000? At first I thought it was an attempt to raise more money for education. When I learned clearly and definitely that 30-10 planned to operate with the same budget, the same amount of money as education receives under the present plan, another objection was removed. I knew we were most of us still paying for the war and our burdens were not easy. This is not a time to ask for increases. Thirty-ten simply means collecting the same amount of money on a different basis and distributing in a better way.

Are there many poor districts in the state which would really be helped by 30-10? At first I was quite firm in my convictions that there were only a few districts that would be helped by 30-10. I had yet to learn the extent of the gross inequality of opportunity that exists for the children of the state, because of the variations of wealth in the districts. The following table will answer this question.

116 districts raise only 1 mill for schools
279 districts raise the limit of 20 mills
667 districts raise 5 mills or less
1226 districts raise 5 mills to 10 mills
644 districts raise 10 mills to 20 mills

One district in Washington raises 1-2 mill, while 279 raise 40 times as much. Many districts taxing themselves the limit, 20 mills, have been able to maintain only a short term at a low salary.

In addition to these points it may be of interest to the rural schools to learn that under the present plan of distribution the average district school sends but $200 more to the state in taxes than it receives back into its local school fund from the state. This $200 goes to the centers of population. It is a safe estimate that 75 per cent of the districts in Spokane county, formerly, under 30-10 will receive back from the state all the money they put in and then some. This will give all rural schools an opportunity to hold a full term of school and pay an adequate salary.

What do you pay? How long is your term? are questions whose answers have settled the fate of many schools for decades.

Although 30-10 does not ask for an increase, it is not asking for a decrease, in expenditures for education. In this respect it is in accord with decided sentiment all over the country not to cut expenditures for education. This attitude is manifested everywhere from Portland to Wisconsin, from Spokane and Los Angeles to Canada and Great Britain.

Under 30-10 the districts rich in children but poor in wealth will have an opportunity to lower their local taxation. If this is their greatest need and desire they will do it. Under 30-10 they have a choice. That choice, which expresses the will of a democratic community, once made is surely their concern.

The voters of Washington are to be congratulated on having the opportunity of voting on a measure of wisdom and vision somewhat in advance of most of the states of this nation.

NO By JOSEPHINE CORLISS PRESTON, State School Superintendent.

An impression exists in some parts of the state that I am supporting initiative measure No. 46, known as the 30-10 measure. To correct that impression I wish to make my position clear.

I am not in favor of the plan in the form in which it is now before the people. It would increase the state school tax nearly $4,000,000 and add a levy of over 3 mills on all taxable property in the state for that purpose. I do not believe that there is an emergency in education that demands such a change.

The measure would tend to increase the total amount of taxation for school purposes. While automatically increasing the state tax it does not guarantee lower local taxes. I am opposed to any considerable increase in school expenses during the present business depression.

The bill makes an objectionable change in the distribution of school funds.

State money is now distributed in proportion to the attendance of children.

This measure would distribute one-half on the basis of attendance and the other half in proportion to the number of teachers.

The distribution of county funds would be on the same basis, instead of the present basis of one-third in proportion to the number of teachers.

The consolidation bonus is also eliminated.

These changes would encourage needless duplication in the number of teachers and schools and discourage the present movement toward centralization in natural community centers which is the greatest factor in the improvement of rural schools.

We are trying to give the country people strong school centers that can maintain rural high schools and keep the boys and girls at home during the high school age.

This measure would place great obstacles in our way.

I regret to find myself differing from many people who are sincerely interested in education, but I feel that much of sentiment in favor of the bill is based on a misunderstanding of its real effect.

Any thoughtful person will know that as superintendent of public instruction I am deeply and unselfishly interested in the civic and school welfare of the children of this state. It is my business to be interested if I had no other urge or impulse.

My experience and contact with our schools have convinced me that the 30-10 measure will not be for the best interests of education.

ED CAREY BUYS ORCHARD.

Ed Carey has purchased from Joe Conn 20 acres of bearing orchard, located near Peshastin, Chelan county, for $34,000. The orchard consists of the very best commercial varieties, half Delicious and the balance Winesaps and Rome Beauties. Mr. and Mrs. Carey have moved to the ranch and will take care of the crop this year.

IT NEVER DECAYS.

One virtue of concrete construction is that it is permanent.

TO BOOST CANADIAN APPLES.

William Noxon, agent general for Ontario in London, states that the British government is willing to give to Canadian fruit growers certain concessions to advance the fruit interests of the country.

A Special Sort of Specialist

A special sort of swine specialist is J. W. Yenne of Milton, Ore. His specialty is selling purebred Duroc Jerseys at weaning time to Walla Walla valley farmers and makes more money from this than from any other phase of his diversified farm of 93 acres, located half way from Walla Walla to Milton.

"Convinced that I had the goods," Mr. Yenne stated recently, "I took my herd boar and several sows to the Walla Walla county fair and was more than pleased with my success, especially that I had not fitted much. Getting first with my Orion boar over the strong Cornell boar of Grandview, Wash., the grand champion at Spokane made be me feel pretty good.

While I have been raising hogs for 15 years, I have been in the purebred Duroc Jerseys only two years, but I am so well satisfied with them that I shall continue breeding them.

Mr. Yenne has 93 acres, 35 of which, being under the ditch, is planted to a young orchard, garden stuff and alfalfa being grown between the rows of trees. The rest of the land extending back up on the hill is wheat land.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

LEARN - AUTOS - TRACTORS AND AUTO ELECTRICITY

AT ADCOX SCHOOL

LARGEST IN THE WEST

100,000 auto mechanics needed

From the Pacific Northwest—from California—from the Mountain States—from the East! By letter and telegram, calls are pouring in for Adcox men. I foresaw this condition several months ago. I then strongly urged more men and young men to become "Gas Engineers"—start their training at once. Some responded—but others, because things were in a slump, put the matter off. Now the "big rush" is on—we've had more "hurry-up calls" for Adcox men during the last sixty days than during any previous six months. And the demand for men is going to increase. Just think! More new cars have been sold during the last three months than in any previous six months of automobile history. Nearly 11,000,000 automobiles—and only 40,000 garages. 275 cars for every garage! 50 cars will support a garage and two mechanics. Ever see such an opportunity? More than 100,000 auto mechanics needed! I can't tell you the whole story in this limited space—but it's all in my "Big Red Book"—which costs $1.50 a copy to print, but which I will send FREE to any man or young man who is sufficiently interested to mail the coupon below. Mail it right now, please—NOW, before you forget.

L. L. ADCOX, President,
Adcox Auto & Aviation School,
Portland, Oregon.

Send me FREE copy of your Big Red Book No. 1 on the auto business, and I'll read it.

Too Wet or Too Dry

Narrow Zone Between the Limits of Which Plant Life Can Develop

The fine optimism which comes through the heading of our two great irrigation communities, that of the senate and that of the house, with two splendid leaders from the Pacific northwest, McNary of Oregon and Smith of Idaho, calls to mind the fact that the two problems of irrigation and drainage are not so far apart, after all.

E. A. Bryan.

Scientific agriculture has called attention to many things. For example, that there is in temperatures a narrow zone between the limits of which plant life can develop.

Too cold, and the life processes are checked and soon stop. Too hot, the same thing occurs.

It is like the temperatures of our bodies. A while ago that pest, the "flu," put my temperature at subnormal—96 or 97 degrees—for a week or so. The doctor said, "Lie by. Don't work till your temperature is normal." A few years ago, with typhoid fever, my temperature was running 104 to 105, and my family and friends were fearing that they might soon attend my funeral. A narrow zone of 10 degrees, out of the thousands of possible degrees, marking the possibility of human life.

The agricultural scientists have pointed out that a similar narrow zone of soil moisture marks the upper and lower limits of crop production. The swamp and the desert are akin. In the swamp, too much; in the desert, too little water.

Plant life takes its mineral food in liquid form. It can take no pills, even for its health. The plant can eat no solid food. Some folks think that in some magical way earth is converted into cornstalk or squash or apple. Yes, it is by a magic process, but that is by the solid matter going into solution and the plant food being taken up in liquid form. So water, the "universal solvent," must dissolve the elements of plant food and thus prepare it for use. But there must not be too much water. It is but a narrow zone of moisture that is possible in the case of ordinary crops.n There must neither be too much or too little.

Even when we provide for irrigation we are wise if we look to it that drainage, artificial or natural, is at hand. And, of course, we must not use too much water, which some men do to save work.

Over at Sunnyside years ago some men were pouring on 10 feet annually, breaking out the plant food and drowning the crops, and, of course, ruining the land. But the swamp lands, with a great excess of water, are even surer than arid lands to be more fertile and they are less liable to be impregnated with alkali. Besides this, when drained on a proper scale, the cost per acre is usually much less and the upkeep is often negligible.

The lower Mississippi valley in particular has large areas of very level, very rich lands, which, when properly drained and diked, become almost inexhaustible farm lands. Climate likewise favors a maximum production of farm staples. The unfortunate fact that much of these lands is in private ownership or may easily pass into that state is a drawback to easy governmental reclamation projects. One must drain intervening areas in any event and so the difficulty of making the owner bear his fair share of the cost is all the more difficult.

The combination, however, of the reclamation of arid lands and swamp lands is important from many points of view, not the least significant of which is the political.

To what extent and how cutover lands should be included is more questionable, but into that question I can not now go.

Control of the water supply so as to give the land enough, but not too much, and to withdraw the surplus water, but not to too great an extent, puts the soil in condition where it may produce its maximum and in any case a profitable crop. Peaty lands often are drained to such an extent, without provision to flood, that fires destroy the surface deposits. Northern Idaho and both eastern and western Washington, with certain parts of Idaho, have some lands of this description.

Our congressional leaders in this reclamation matter, who fortunately are from the northwest, should be backed up to the limit by every citizen.

September 4, 1922.

E. A. Bryan

Wire Worm

Menace to the Potato Industry

The greatest single factor menacing the potato industry in the Yakima valley is the wire worm, according to W. L. Close, district horticultural inspector, who has been keeping an eye on the situation for some time past.

"In saying that the wire worm is the greatest pest which the potato industry has to contend with, I am not telling the growers anything new," said Mr. Close, "but what I do wish to bring out is the fact that mighty little is known about the pest. With the idea in mind of solving this important problem, I suggest that the farm bureau, the extension service of the Washington State college and the state department of agriculture get together and secure a good federal man to devote his entire time to the wire worm situation. Until we get some one on the job the wire worm will continue to make culls of No. 1s and to decrease our profits accordingly."

PREVENTS MUCH TROUBLE.

Punctuality gives one the right start.

Texas Gulf Sulphur

Best for Agricultural Use

Crude Sulphur---Flour Sulphur---Inoculated Sulphur

Direct Shipments From Portland, Oregon

As the world's largest producers of sulphur we can serve you best. Texas Gulf Brand contains 99 1-2 per cent pure sulphur and is supplied in three different forms, as above.

We will give your dealer or county agent full cooperation.

Write us in detail regarding your sulphur requirements or wire us a night letter, charges collect, stating alfalfa acreage, kind and amount of sulphur you will use, name and address of dealer or county agent. We will promptly supply information and quotations.

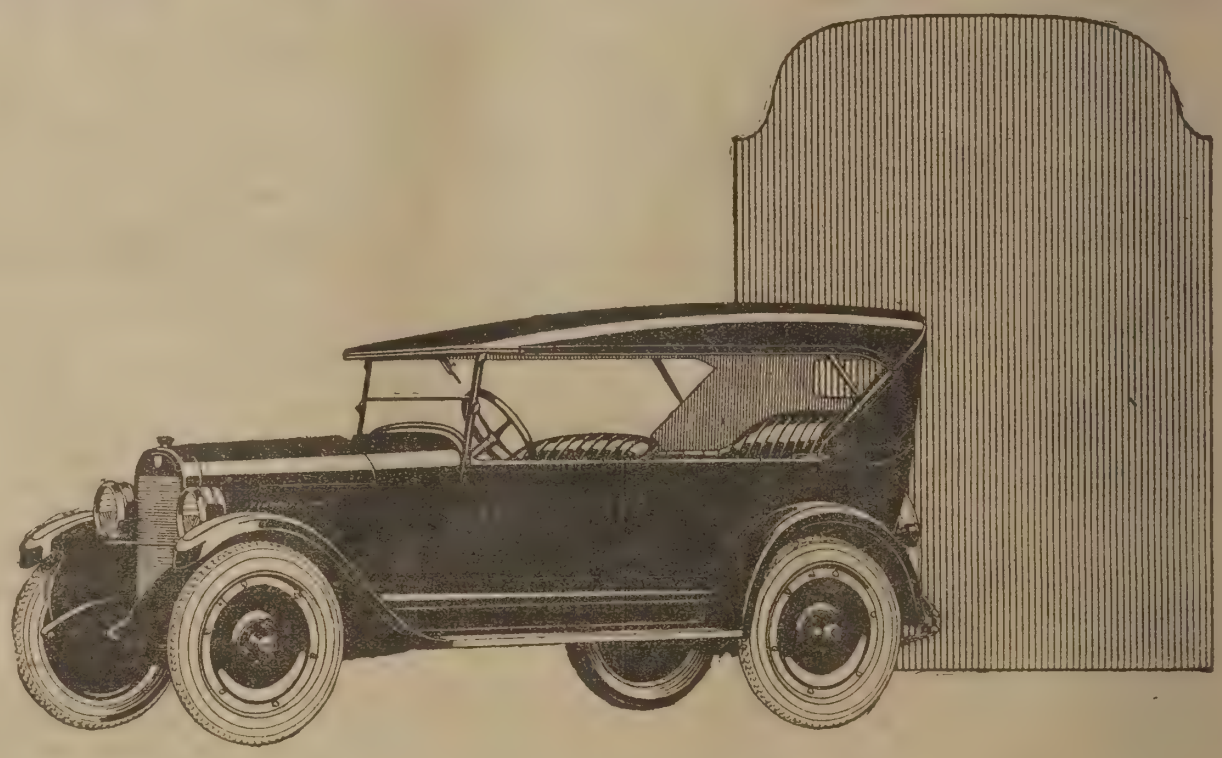
Dr. E. E. Heg Dies

The death of Dr. Elmer E. Heg of East Stanwood, Snohomish county, which occurred early on Tuesday morning, September 26, marks the loss of one of the state's well-known dairymen. For many years past. Dr. Heg had been engaged in the breeding of Holstein cattle, having lived in the vicinity of Chimacum for a number of years before moving to O'Brien, in King county, just before he and his two sons, Henry and Hans, entered the World war. Again, in 1919, Dr. Heg began the operation of a dairy farm in the Florence district, near East Stanwood, having rented out some of the best cows for the period of the war. Both of his sons helped in the operation of this farm, Henry being with him at the time of his death, which was due to heart failure.

Vote New Irrigation District



By a vote of 133 to 3 owners of 5000 acres of land in the Spokane valley brought into existence a new irrigation district September 26. The district lies in part on the south side of the Spokane river, but includes lands on the north side at East farms, Greenacres, Millwood, Orchard avenue and other points. Seventeen hundred acres of the included area are the property of the Spokane Valley Land and Water company, from whom it is purposed to purchase the water, under a gravity system. The estimated cost per acre of placing these 5000 acres under water is given as not to exceed $15.

The original petition for this district included lands in the already existing water district at Greenacres, upon which it was proposed to replace pumped water with the new supply by gravity. A new procedure was necessary under the ruling of the state attorney general, who held that lands within the already existing district were barred from inclusion in the new.

Under the second and successful petition are included 800 acres of dry land not embraced in the previously defined project, and lying chiefly at the west end and in the region of West farms. The holdings of Arthur D. Jones, Peter Morrison, the Liberty Valley Land company and others who had opposed the original project have been excluded from the district, as finally created. The canvassing of the vote and other steps have not as yet been taken by the county commissioners, but in view of the decisive returns of the election they are regarded as purely formal. It is thought that consolidation of the new district with that at Greenacres is now probable, making regular the process by which the older district may receive the proposed benefits of a change from a pumping system to a gravity flow.

SALE OF LOGGED LANDS.

Fifteen thousand acres of logged lands in the western part of Grays Harbor county have been sold in the last year by one Aberdeen realty firm. The sales have been at from $3 to $5 an acre and some of the tracts have run into thousands of acres.

Such value as you will not find elsewhere—value that expresses itself in a new kind of beauty, in all-satisfying performance, in savings that make a motor car worth while on the farm.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor-driven electric horn; unusually long springs; deep, wide, roomy seats; real leather upholstery in open cars, broadcloth in closed cars; open car side-curtains open with doors; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight windshield. Touring Car, $885; Roadster, $885; Sedan, $1335; Coupe, $1235. Prices F. O. B. Detroit, revenue tax to be added.

Old Timer

Converted to Pure Bred Game

Walter Barnett of Walla Walla is another old-timer recently converted to the purebred stock game. While he has been raising stock, especially sheep, for a number of years, and has frequently topped the Portland market with his fine Hampshire lambs, born in January, he only last year decided on the purebreds. He now has 40 purebred Hampshire ewes, but plans to have 200. These replace the 1000 grades that he sold last spring. He also has 10 purebred Poland China sows, and is making a start in Shorthorns.

While he has a large mountain summer pasture, part of which he leases, he carries the purebreds on his 1400-acre ranch near Touchet. Of this 1200 acres is still native bunch grass, the rest being pasture and alfalfa land under the ditch. Due to the long growing season, the third alfalfa crop is taken off about the middle of September, thus leaving nearly a month of fine pasture.

Mr. Barnett's success in January lambing, making the big growth necessary for top May and June prices, is one of the most interesting of his many activities. Despite old sheepmen's telling him the risk of freezing is too great he has constructed a battened shed in the shape of a big square, but open on one side. A big stove is placed in there for emergency, and two men take turns watching the 1000 ewes night and day. As soon as one shows signs of lambing she and her lamb are put in one of the little square "jails." Mr Barnett finds that this not only saves a great deal of labor, but reduces the loss of lambs to practically nothing despite the coldest of weather.

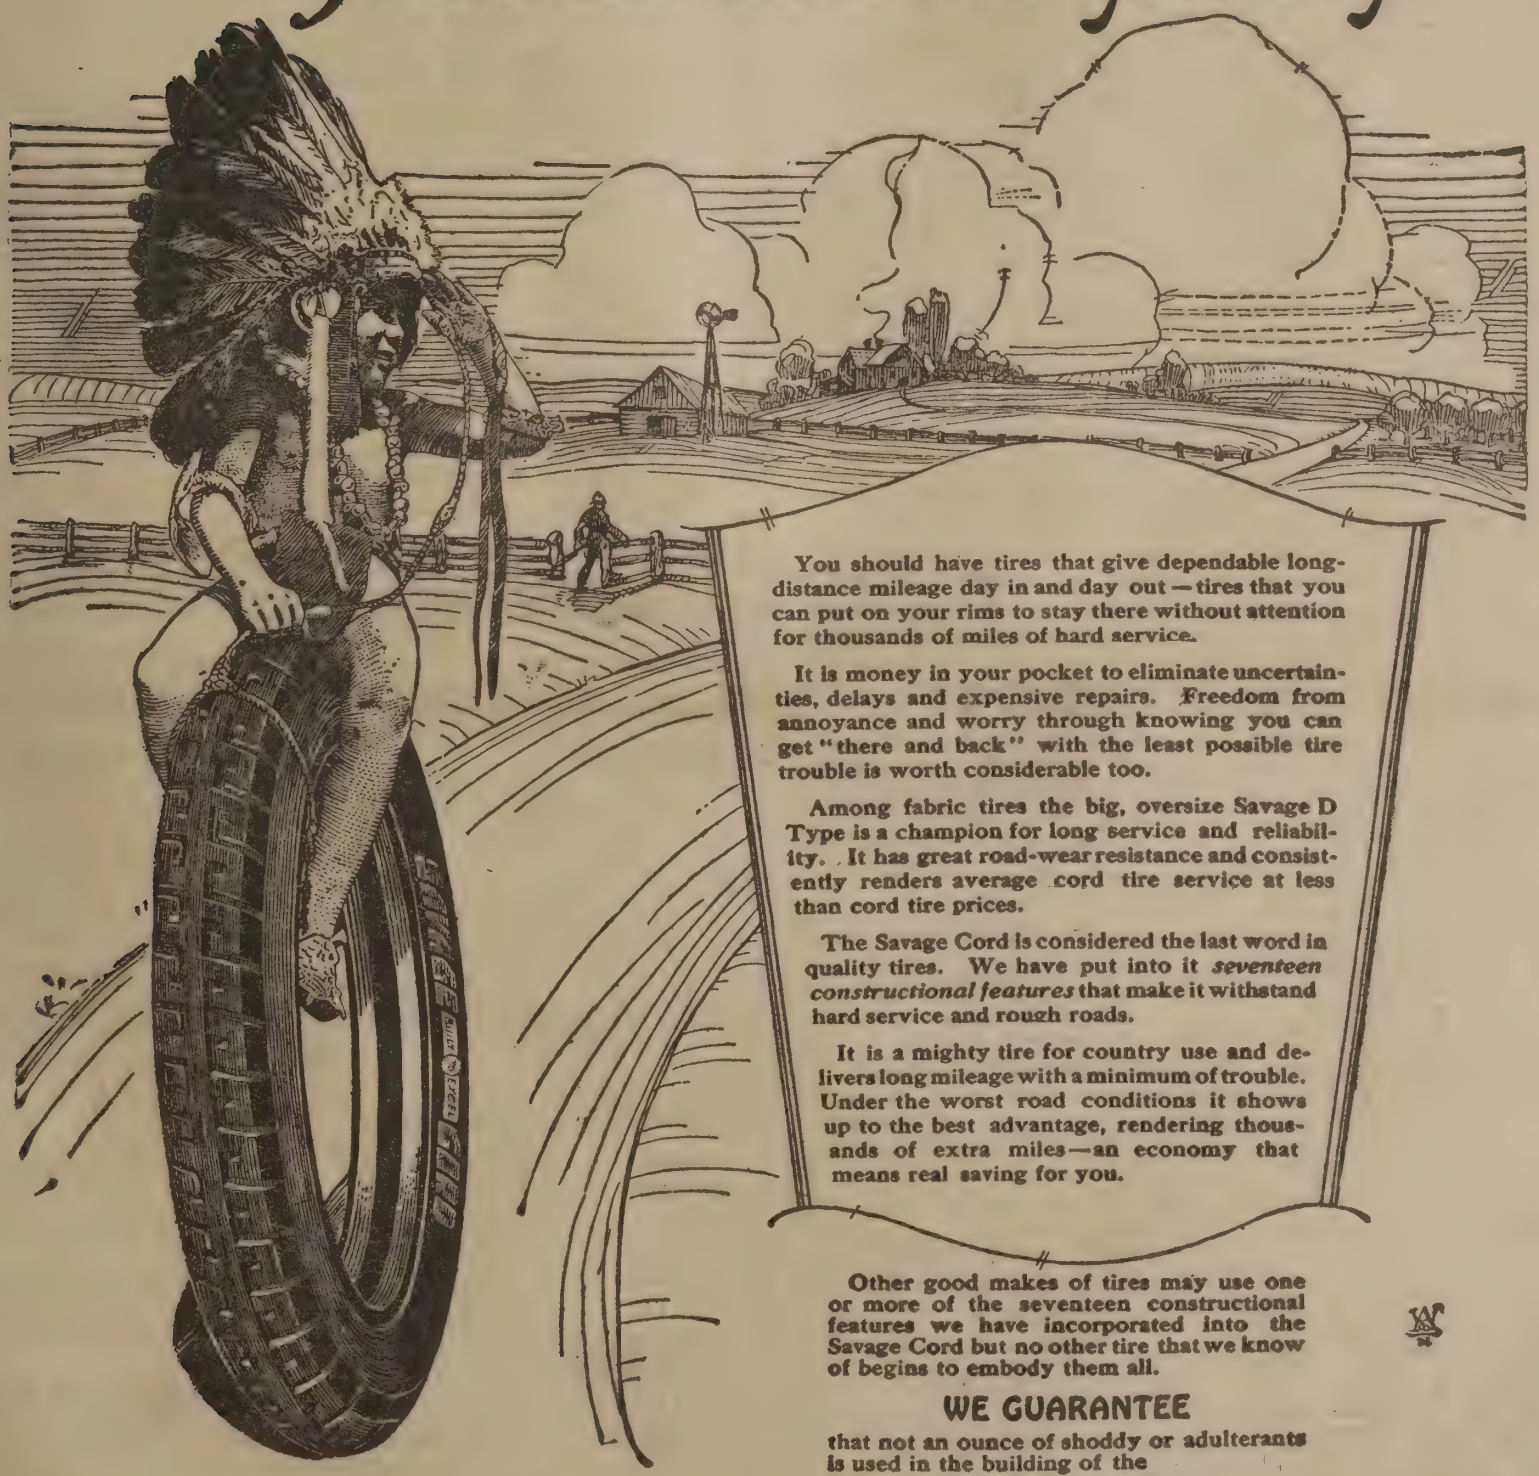
Another big advantage of this early lambing is the superior condition of the ewe over what it would be later in the spring. A fine flow of milk is assured by feeding cut alfalfa, over which is sprinkled a little corn chop.

Not a little of Mr. Barnett's success is due to the zealous loyalty of his herdsman, W. G. McDonald. "Mac" has been with him for many years and, as all the commission men from Portland to Chicago will swear, is always on the lookout for the boss' interests.

Apple Yard Opened

The opening of the new $1,500,000 Great Northern terminal at Wenatchee, known as Apple Yard, is the most important recent event to the fruit growers and shippers of the Wenatchee district. With over five miles of switching track, a 24-stall roundhouse and modern repair shops, this plant is said to be the finest on the Great Northern system west of St. Cloud, Minn. All fruit trains will be made up in these yards, which are located about two miles south of Wenatchee, and a saving of from 12 to 24 hours in handling time will be effected on every train load of apples shipped east, according to the belief of local officials.

More freight is handled out of Wenatchee than any other station on the Great Northern between Seattle and Minneapolis, according to a statement in the Wall Street Journal recently.



An average of 200 carloads of apples daily averaging four trains every 24 hours, has been forwarded from Wenatchee recently until a car shortage suddenly developed. But General Superintendent W. R. Smith states that 1500 refrigerators are immediately available for apple loading.

Just What You Want
may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

Look for
GREATER MILEAGE
from the next tire you buy

You should have tires that give dependable long-distance mileage day in and day out—tires that you can put on your rims to stay there without attention for thousands of miles of hard service.

It is money in your pocket to eliminate uncertainties, delays and expensive repairs. Freedom from annoyance and worry through knowing you can get "there and back" with the least possible tire trouble is worth considerable too.

Among fabric tires the big, oversize Savage D Type is a champion for long service and reliability. It has great road-wear resistance and consistently renders average cord tire service at less than cord tire prices.

The Savage Cord is considered the last word in quality tires. We have put into it *seventeen constructional features* that make it withstand hard service and rough roads.

It is a mighty tire for country use and delivers long mileage with a minimum of trouble. Under the worst road conditions it shows up to the best advantage, rendering thousands of extra miles—an economy that means real saving for you.

Other good makes of tires may use one or more of the seventeen constructional features we have incorporated into the Savage Cord but no other tire that we know of begins to embody them all.

WE GUARANTEE
that not an ounce of shoddy or adulterants is used in the building of the

Tuberculosis

In Many Species of Birds

Tuberculosis has been observed in many species of birds, among them the hen, turkey, pigeon, duck, goose, guinea fowl, peafowl, ostrich, parrot, canary, pheasant, sparrow and swan. Government experts have found that among wild birds the disease is most destructive to those confined in zoological gardens.

The highest mortality among domesticated birds from tuberculosis is shown in the hen. The disease is known to prevail in many countries and is widely distributed in the United States. It has spread so extensively in some states as to cause very serious losses to the poultry industry, according to the government specialists. Tuberculosis of hens is a chronic, infectious disease, characterized by the formation of tubercles or nodules and resembling tuberculosis of other animals and man. It is commonly called spotted liver, liver complaint or rheumatism. Affected birds are also described as "going light."

The insidious manner of attack, the specialists say, makes tuberculosis most difficult to combat, because in affected birds there are no visible symptoms until the disease processes are far advanced, and in the meantime the bird may be spreading the disease among others of the flock.

One of the first symptoms exhibited is gradual emaciation, which becomes especially noticeable in the breast muscles. These diminish in size until in advanced cases there is scarcely any flesh left on the breast bone. Feeling the breast region with the fingers will readily detect this wasting of the muscles. Loss of weight proceeds with emaciation and is very marked in the late stages of the disease. The appetite continues good. There is no rise in temperature, a normal range of from 106 to 108 degrees Fahrenheit being maintained until shortly before death, when the temperature drops several degrees.

Lameness in one or both legs, or drooping of one or both wings, is often observed, and may be the first symptom seen. These result from the development in the joints of the legs or wings of tubercle bacilli, which cause painful swellings.

As the disease advances, the comb, wattles, skin of the head and membranes in the mouth and about the eyes become pale. The eye itself remains bright. The feathers are ruffled. The bird grows listless, weak, moves about little and is easily caught.

Deaths in the flock occur at intervals. Affected birds may live only a short time after symptoms are noticed, or they may live for weeks. This depends to a large extent on the stage reached by the disease before the attention of the owner is attracted to the condition of the fowl. The course of tuberculosis is indefinite, however, and may be shorter in flocks where infection is widespread and consequently heavier than in mildly or newly infected flocks. Its course may run well over a year from the time the individual is infected.

Feeding Mash to Poultry

A mash composed of ground grains or their byproducts and some form of animal protein is an essential part of a ration for both growing chickens and laying hens. The reason is that birds putting on growth or producing eggs can not assimilate enough nutriment from whole or cracked grains to supply the maximum need. When the grain is ground, say specialists of the United States department of agriculture, little work is required of the gizzard, and much more of the feed can be used in making flesh or eggs.

The scratch grain part of the ration, however, is needed to give the gizzard something to do in order to keep the birds in health. For laying hens the scratch grain thrown in the litter provides an incentive to needed exercise.

It was once thought that the mash should be fed wet to produce the best results, but experiments have proved that in spite of the slightly better palatability of the wet feed, the convenience of feeding it dry overbalances any slight gain in production. Feeding it dry is now the usual method. Digestibility is not increased by wetting.

The principal objection to the wet mash is that it requires too much labor. It must be moistened, then carried to the hens once a day, and the troughs must be cleaned after each feeding. Cleanliness is absolutely essential, because indigestion and diarrhea will result from feeding in dirty troughs. On the other hand, the dry mash hopper may be filled once a week or even less frequently, and needs no further attention. Hens do not overeat of dry mash, as they sometimes do of wet feed.

Ventilation Is Vital

Just because the nights are becoming a little cooler—cold, in some localities—one should not close all the windows and shut the door of the chicken house. Hens do not object to a little cold if they are not in a draft, but they do object to stuffy quarters.

The hen uses more oxygen per pound of body weight than almost any other animal. She gets it from fresh air, and if the air is not available she simply does without this vital element in the quantities in which she needs it. She can get along on half ration of grain much better than she can on half ration of oxygen.

Likewise, the hen breathes out a large amount of moisture. If her house is shut up tightly or the ventilation poorly planned, there is sure to be an accumulation of moisture in the house in cool or cold weather. This means damp litter, damp nests and general insanitary conditions.

Most cases of roup are traceable to poor housing conditions. Roup is the direct outgrowth of colds, and colds are more often the result of too little fresh air than too much. Ever see a hen seek a high limb on a tree as a roost? She can endure much cold weather without taking cold, and roup is unknown to her. But look carefully over the flock that is "well housed" with warm quarters and these ailments are likely to be found. Well housed doesn't mean tightly housed. It means sheltered from wind and storm, but with an abundance of good, wholesome air, reasonable warmth and dry litter and ceilings.

A GOOD GREENS FOR CHICKENS.

Swiss chard has been found an excellent green feed for hens. Chard is a member of the beet family, producing tops without the enlarged root below the ground. It will grow rank on fertile, well-watered soil. The way to use it is to cut it just above the ground and throw to the hens what they need at each feeding time. Within a couple of weeks the roots have sent up a new growth of leaves equal to the original one. Thus one may begin at one end of a row, cutting a few feet each day, and coming back at the proper time for the second cutting. This system has the advantage of providing fresh, young greens for the fowls throughout the growing season.

WHEN POULTRY PAYS BEST.

In spring and summer actual cash returns are very small, and the poultryman must remember that the real profit for five months lies in what will later be produced by the growing stock. From this time on, however, both pullets and old hens should be giving good accounts of themselves.

DO IT RIGHT RIGHT NOW.

Work done today means rest tomorrow.

Help your MOULTERS MOULT

If you want your hens to moult naturally—

If you want them back on the egg job promptly—fall and winter laying—

Then you must make sure that your moulters are healthy and hungry.

They must eat lots, and be able to digest what they eat.

That's just what

Dr. Hess Poultry

PAN-A-CE-A

does for your moulting flock.

It's a tonic that begins with the appetite—improves a hen's whole system.

It has Iron that keeps the paleness away, makes the combs and wattles red—the blood rich.

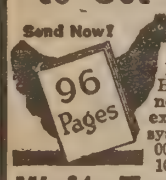
Pan-a-ce-a starts the food the egg way as soon as the moult is over.

No time lost.

No dormant egg organs after the moult, where Pan-a-ce-a is fed.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
50 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.



I spent 30 years in perfecting Pan-a-ce-a.

Don't Hatch Weak and Wobbly Chicks

With Cheap Incubators

A cheap uncertain incubator means death to chickens and profits. Remember it is not how many you hatch that counts, but how many you raise.

Queen Incubators

Hatch Strong, Healthy Chicks That Live and Grow

One of our Minnesota dealers writes: "We have sold Queen Incubators and Brooders for the last six years and they have given our customers entire satisfaction. The farmers all consider the Queen Incubator as standard and at auction sales, where it is almost impossible to get a bid of any kind on the average second hand incubator, the Queen always brings a good price, regardless of its outside appearance."

A Queen costs but little more than the cheap machine and the extra chicks that live and grow soon pay the difference. Write for Free Book.

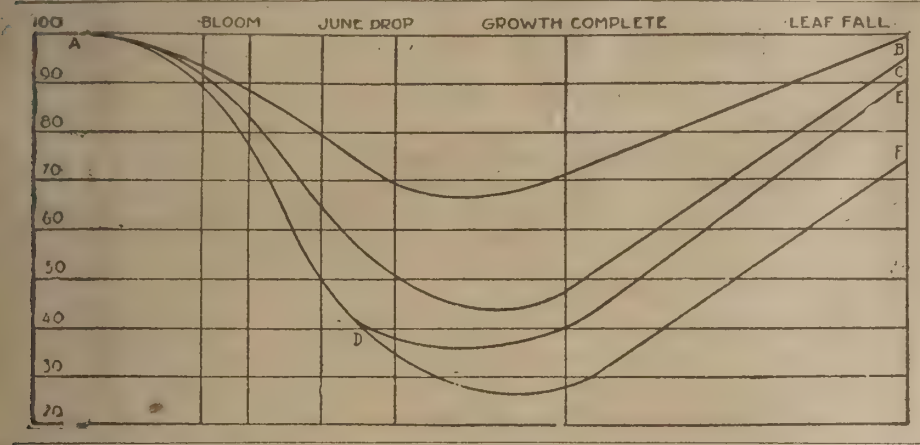
ORCHARD AND GARDEN

Apple Thinning

Fertility One Determining Factor



By PROF. O. M. MORRIS

In the first article of this series Prof. Morris discussed thinning principles as applied to different varieties of apples. In this, the second, he discusses thinning as affected by available and stored plant food for the tree. We again recommend that our readers study these articles carefully, then clip them out or file away the papers for future study and application as various of the problems influencing thinning arise throughout the ensuing season.

ARTICLE TWO.

Thinning is only one of several cultural operations that must be performed in order to have the orchard produce its maximum profit and, in order that the work be done with the best results, it is necessary to know something of the soil fertility and capacity of the trees for growth. The fruits and new growth use very rapidly the stored food material in the tree body and branches. The fertility of the soil is a very potent factor in enabling the trees to replenish this stored food supply and to gain the equilibrium necessary to be attained before wood growth can be properly developed. We see the maximum result of thinning in old trees because in their crowded condition and partially exhausted soil fertility, which commonly exists, these trees show a response to the release from an overload when thinning is done. On the young trees, which have not yet fully occupied their ground, small branches may develop clusters of fruit to a very large size. In such cases the fertility of the soil supplies more plant food material than the trees need for maintenance of a moderate rate of growth. So long as the soil fertility keeps the tree in that stage of development where the wood growth has the ascendency the necessity for thinning is reduced to the minimum and as the fertility decreases the necessity for thinning increases.

The accompanying chart on stored food shows the relative per cent of stored food in an apple tree during the growing season. The line AB shows the stored food content of a tree of bearing age that is not carrying a load of fruit. Line AC shows the stored food content of a tree carrying a medium load of fruit. Line ADE shows the stored food content of a tree carrying a full load of fruit which was thinned well at D. This would be ordinarily in the late spring. The line ADF shows the stored food content of a tree carrying an overload of fruit. No thinning was done on this tree.

The tree represented by the line AB has at the close of the growing season a good supply of stored food and is well prepared for a good start in growth next spring. The lower the stored food content of a tree the leaves show, the poorer the growth possible for it to make in the early spring. If the stored food content runs extremely low during midsummer, later fruit buds are seldom produced.

The next article in this series will discuss pruning as it influences the thinning of next year's apple crop.

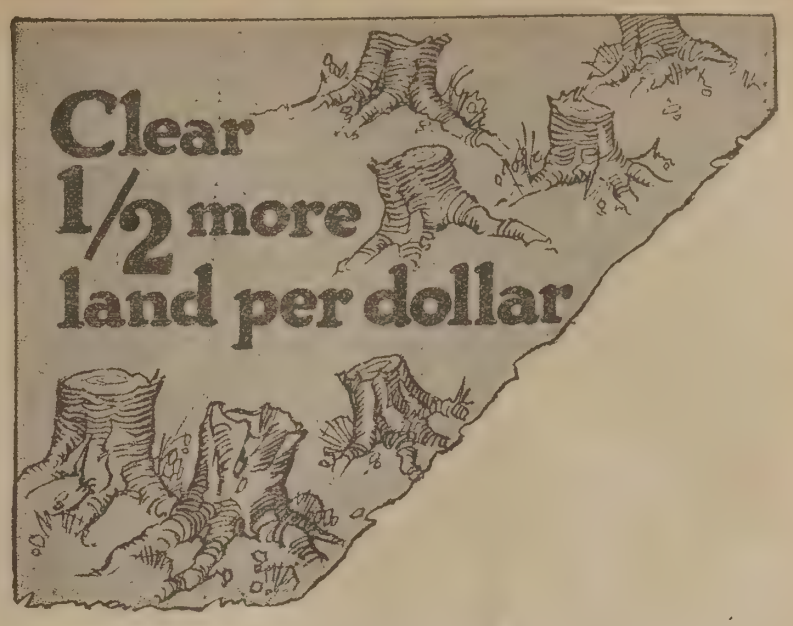
Makes Success With Raspberries

BY HELEN STURGIS.
R. F. D. No. 3, Yakima.

Raspberries can be successfully grown in a hot, dry climate. It has been proved that they are not partial to damp atmosphere, which had formerly been supposed.

Mr. and Mrs. S. M. Bayes of Yakima harvested an excellent crop of raspberries this spring. A first year crop from three acres netted them $2500 despite the fact that neighbors tried to dissuade them from planting berries as a money making venture.

Most of the raspberries grown in Yakima have consisted of a few rows in each garden that were often neglected for more important work. It has been believed that these berries could not be made to bear sufficiently well to grow them on a large scale.



Mr. and Mrs. Bayes formerly lived on the Sound and had had experience in berry culture there. They moved to Yakima and bought a tract of new land under the Tieton canal. Young trees were set out and the tedious task of waiting for them to bear was begun. They decided to crop the land and were convinced that raspberries would do well on this side of the mountains if they were properly cared for.

In the spring of 1921 the land between the trees was planted to red and black raspberries and strawberries. The plants were bought at Everson, Wash. For the red raspberries the Cuthbert variety was chosen and the 10,000 plants were set on three acres. The young apple trees were 30 feet apart, which allowed four rows of berries six feet apart to be between the rows of trees. In the rows the plants were put two feet apart.

Planting was done in the spring, and the bushes were cut back to about one and one-half feet in height. They were allowed to run during the first season and in the spring of 1922 they were trimmed to four feet, with five or six stalks left to fruit.

The black raspberries were set on three-quarters of an acre and were about a foot

(Continued on page fifteen.)

FOR what you paid for dynamite to clear an acre of stump land in 1921, now you can buy enough to clear an acre and a half.

Pacific Stumping is packed in boxes of 130 sticks. Other standard stumping powders come in boxes of 85 sticks. Pacific Stumping costs 50 cents more per box—actually 2½ cents (30%) less per stick than any other stumping powder.

Pacific Stumping will do the same work of any standard stumping powder, stick for stick, and you get ½ more sticks of Pacific Stumping for your dollar.

Pacific Stumping will not freeze in below-zero weather. You won't get a headache from handling.

Clear more land. Buy Pacific Stumping at your local dealer's. Write us for "The Development of Logged-off Lands," which gives full instructions for using explosives to clear land.

Romance of the Apple

Through All Ages Man Has Carried Fruit With Him to Ends of the Earth

By C. I. LEWIS

Through all the ages, man has gone through all sorts of hardship and privation to carry fruit with him to the ends of the earth. As a result, some races, especially in the tropics, subsist on fruit alone.

Southwest Asia and Asia Minor have been the home of most of our fruits. From that point the traders passing through Greece, Italy, through Spain, France and England, gradually introduced these fruits. With the discovery of the new world, the voyagers almost invariably carried with them plants and seed to the new land. The hardy Spanish buccaneers introduced into Florida the seed of the citrus and have made that land one of the greatest producers of high quality citrus fruits in the world. These same buccaneers, sailing down around South America, introduced into Chile the olive, walnut and other fruits which later the Spanish fathers carried from that country to southern California and laid the foundation for marvelous horticulture. In all probability, the French traders introduced apples into Canada and possibly the Snow apple formerly may have originated from that source.

Our pilgrim fathers and Virginia cavaliers brought with them trees and seed. Too often, however, the trees died and the colonies had to resort to the planting of seed. These early orchards produced fruit largely of inferior quality and the fruit was largely manufactured into cider, but from this seedling epoch came our well-known varieties of today.

The Baldwin seemed to have originated as a chance seedling in 1740 at Wilmington Mass., and was named by Colonel Baldwin in 1784. No one knows where the Spitzenburg came from except that it originated in Ulster county, New York, more than a century ago and it is undoubtedly the result of seed which was probably brought from New England and planted in that section. Our famous Yellow Newtown, sometimes known as the Albermarle Pippin, originated near a swamp on the estate of Mr. Moore in Newtown, Long island.

Benjamin Franklin received specimens of this fruit in England as early as 1759 and it was exported in fairly large quantities by 1773 to both the West Indies and to England. We know that the Grimes probably originated in West Virginia, from seed which was planted at that point and that this variety is very old is evidenced by the fact that it was offered to the trade in New Orleans as early as 1804. The Jonathan was described in Judge Buell's catalog of 1825 as originating on the farm of Philip Rick, Woodstock, Ulster county, New York. The famous Northern Spy was found in a seedling orchard at East Bloomfield, New York. It had been planted by Herman Chapin, the seed coming from Salisbury, Conn., the original trees having died before bearing but the sprouts lived and thus the wonderful variety was propagated. It was well distributed by 1847. The Rome originated on the farm of H. N. Gillett of Ohio and was shown at a convention of fruit growers as early as 1848. Without doubt the Rhode Island Greening probably originated as a seedling near Newport, R. I., at Green's End.

Some varieties like the Winesap we know little about, as regards their origin ,although the Staymen originated in 1866 at Leavenworth, Kan. The McIntosh originated in Dundas county, Ontario, and was freely propagated as early as 1870. The Wealthy, to which we owe so much to Peter Gideon, originated at Excelsior, Minn., from the seed of a cherry crab obtained in 1860 from Bangor, Maine. Had it not been for the seedling epoch in our horticultural history these varieties would never have been produced and America would have lost many valuable commercial varieties.

Probably many varieties were lost—for example, we know that the Indians took seed from the colonists in New England and planted orchards in New York and Pennsylvania. Sad it is that General Sullivan in his raids destroyed the Indian orchards he came in contact with and thereby perhaps deprived us of many valuable varieties. Mr. Chapman, known as the eccentric Johnny Apple Seed, in his wanderings down in the Ohio valley, clothed in burlap, carrying a sack of seed in one hand and a Bible in the other, blazed the trail for varieties of apples through that district. Possibly the Ben Davis group may have originated from Johnny Apple Seed distributed in the Ohio valley.

Quite a new epoch in our American pomology was the introduction of the Russian varieties. As early as 1838 we find that four Russian varieties were grown in the trial gardens at Salem, Mass., and described in the catalogs and in the "Book of Fruits," these varieties being the Red Astrakham, the Tetofsky and the Duchess and the Alexander. We know that a controversy arose later on; how Professor Buff of this state lead the fight in favor of the Russian apples, recognizing much merit in them, and they have contributed much to our American horticulture.

As the pioneers swept westward over the Rockies to the Pacific coast, we find they always carried fruit with them. Lewellyn brothers and Meek, after several trials and much privation, brought fruit to Oregon and planted some of the seed which originated the famous Black Republican and Lambert Cherry.

At a banquet in England in the early part of the last century, the ladies of the table laughingly gave the seeds of fruits to the Hudson Bay travelers who were to go to Vancouver, Wash. Some of these seeds were planted and thrived in orchards in the Vancouver district. The Mormons, as they wandered westward to Utah, always instructed their followers to bring seeds of all kinds and early established in Utah the foundation for a permanent horticulture.

Some of the work in originating the varieties I have described was probably intentional, an effort being made on the part of some to originate new varieties. The greater part of it, however, was accidental and some of our finest varieties came very nearly being destroyed. The Northern Spy had a very narrow escape. The Delicious apple perhaps narrowly escaped destruction. This variety occurred as a sprout on a Yellow Bellflower which was grated on Vermont seedlings. Suppose some stray steer had eaten and destroyed the shoot, we would not today have the wonderful Delicious apple.

Down in Florida they have a new variety of orange known as the Temple orange, which is said to have originated from the sprout of a seedling root, following a disastrous freeze at the top of the tree.

The Delicious apple represents the crowning point of achievement in the origination of American varieties. On the Pacific coast where I am very familiar with orcharding, it is not uncommon to find this variety yielding as high as 750 packed boxes per acre, whereas some of the older varieties often do not yield more than 200 boxes per acre. The high yielding varieties like Delicious, Jonathan, Winesap, Staymen and the Winter Pearmain which tend to produce annually big crops, are the varieties which are making fruit growing profitable in the west. No variety of apple of American origin ever had quicker distribution than the Delicious

Gradually, some of the older varieties are slipping by the wayside; the Baldwin has probably passed its zenith, being an irregular bearer, winter-killing frequently, and being subject to Baldwin Spot which have contributed to restrict its planting.

The future is going to see the demand for quality fruits, coupled with productiveness, vigor and good appearance. Can we now, with the later generations, show that same zeal in the improvement of our varieties and the origination of new ones? What more can we do for posterity than to bring forth beautiful, superior fruits, nuts, flowers and vegetables?

A Honey State

By GEORGE W. YORK.

Washington is a million-dollar bee and honey state. That sounds rather fishy, doesn't it? But it is true, and only a very few people even in Washington know what a "sweet state" this is.

But if the industry of beekeeping was protected the value of bees and honey in Washington could be doubled or trebled.

Scarcely any one knows that approximately $500,000 was lost in this state in the last three years, through bee diseases and spray poisoning of bees.

Not many folk know that the crop of honey is gathered by the bees at no loss of any other crop, but to the betterment of many crops, and that one of the finest food products of this state would go to waste if it was not gathered or conserved by the little busy bee.

While the value of the honey product of the bees is very great, it is not generally known that the value of bees as pollinators of fruit and other blossoms is greater than their value as honey-gatherers.

And yet, Washington spends only $2000 a year for the encouragement and protection of the bee industry.

Hundreds of tons of honey are shipped into Washington every year, but a better product could be produced within this state if the industry had the proper encouragement.

But when the value of bees to the state is considered, there is no good reason why everything within reason should not be done for the beekeeping industry.

The single fact that reliability is the first requirement in farm equipment, points straight to the Hupmobile as the farm motor car.

For years it has been known as a thoroughly trustworthy car—ready for work from sun-up to sun-down, and even long after, without babying and petting.

Such ability alone would make it a prime investment, for that ability is a tremendous saver of time and money.

But on top of it is the running economy for which the Hupmobile is equally well known—its long mileages on gas and oil and tires.

Business houses which travel large crews of salesmen, prefer the Hupmobile for its known economy and reliability.

They have experimented with cars which were lower in first cost; and they find the Hupmobile to be lower in last cost.

The Hupmobile, in short, gives better service at lower cost—and its records back us up when we say that the farmer who buys it with that expectation is going to find his expectation realized.

The Hupmobile is built by an old and well-established company, and is favorably known all over the world

Touring Car, $1150; Roadster, $1150; Roadster-Coupe, $1335; Coupe, $1635; Sedan, $1785. Cord Tires on all models. Prices F. O. B. Detroit—Revenue Tax Extra

New Method of Smut Control

Many scientific investigators, as well as farmers, believe that a much better method of controlling smut in wheat than those heretofore used has been discovered. It is the copper carbonate method of dry-treating seed. Although both bluestone and formaldehyde treatments have proved effective in preventing bunt of wheat due to seed-borne spores, both have certain disadvantages and their employment is frequently followed by injurious effects upon the crops, says State College of Washington investigators, who are convinced that the new method is better.

It has long been recognized that the use of the various bluestone formulae causes much reduction in the per cent of germination of treated wheat. Also that an after bath of bluestone-treated wheat with milk of lime greatly lessens the amount of seed injury, and the same method is effective in lessening the injury from formaldehyde.

The methods of treating grain in bluestone or formaldehyde are inconvenient. The handling of the wet sacks of grain is a disagreeable operation, while the necessity for immersing in two successive baths is an added burden. Grain treated by a wet method must also be protected from freezing.

Tried First in Australia.

In the form of a finely powdered dust copper carbonate was first tested by Darnell-Smith in New South Wales as a fungicide in the control of wheat smut. On the basis of tests conducted in 1915 and 1916 he reported in 1917 that copper carbonate dust gave better results than either formaldehyde or bluestone. The copper carbonate dust treatment caused no injury to seed or to young plants and also resulted in very substantial increases in yield. The excellent results obtained in Australia soon attracted the attention of American investigators, who reported excellent control of both bunt of wheat and smut of oats by using two ounces of copper carbonate dust per bushel, with no appreciable injury to wheat. The favorable results reported by these workers have been substantiated by the experiments at the agricultural experiment station of the State College of Washington.

Two Ounces Per Bushel.

On the basis of completed trials their present recommendation is the use of two ounces of finely powdered copper carbonate testing 50 per cent or more of metallic copper per bushel of wheat. The powder should be fine enough to pass through at least a 100-mesh sieve. The effectiveness of the treatment depends on the uniform distribution of the fine particles over the surface of the grain. Two ounces per bushel gives a complete coating, and no added protection has been afforded by using more. Work now in progress will tell whether it will be possible to use less dust per bushel and still obtain effective protection. Specific data concerning the comparative value of copper carbonate dust and the standard bluestone treatment in preventing smut from soil contamination will not be available until the end of the 1922 harvest.

The application of the copper carbonate dust may be made in a number of different ways. In the earlier experimental work the treatment was carried out by shaking the seed and the requisite amount of copper carbonate in a closed container. A barrel churn has been used with good results, while in some larger operations a small concrete mixer has been tried. A special dusting machine has been designed which is effective and also convenient, and it is expected that this or a smilar machine will come into general use.

Advantages of New Method.

The advantages of the dust treatment are so pronounced that this method of control may be expected to replace the older wet treatments with bluestone or formaldehyde, in the opinion of the experts. The important advantages of this copper carbonate dust are briefly enumerated as follows:

1. The elimination of the inconvenient and disagreeable soaking methods.
2. The convenience of being able to treat seed days, or even months, before it is needed for use, thus making possible the utilization of spare time.
3. The elimination of seed injury and retarded growth, with even an improvement in germination over that of untreated seed. This will make possible a reduction in the amount of sed used per acre and should result in a considerable annual saving as soon as the method comes to be generally practiced.
4. The elimination of danger from seeding in the dry, making it possible to seed in the "dust," rather than being obliged to wait for rain.
5. Probable increased yields due to better stands, no retarding influence of the fungicide, and better control of smut.
6. A probable increased protection from reinfection of treated seed by smutty sacks, broken smut balls or from the wind-borne spores that are generally present in our summer fallow fields.

McWhorter to Prosser

Virgil McWhorter, superintendent of the United States sheep experiment station at Dubois, Idaho, has resigned and will go into the sheep business at Prosser, Benton county, Wash., where he will be one of the members of the Triangle Sheep company.

Other member of the company are F. R. Marshall of Salt Lake City, secretary of the National Wool Growers' association, and Howard Hackedorn, head of the live stock department at the state college. They have purchased about 2400 head of sheep, part of which are from the Archie Prior herd. Plans are being laid to operate two bands during the summer and one in winter.

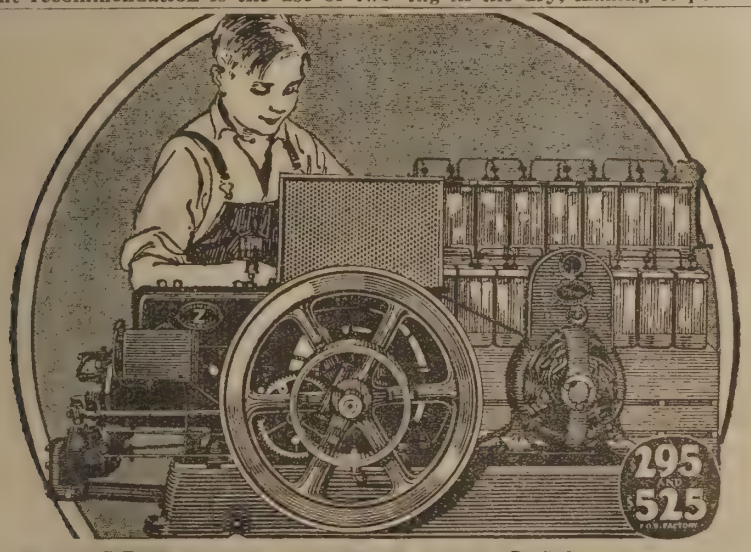
Mr. McWhorter's position at Dubois will be filled by W. A. Deueche of Boise.

Makes Success With Raspberries

(Continued from page thirteen.)

high when planted. They were put three feet apart in the rows. Otherwise they were the same as the reds.

Tieton water-users are allowed to irrigate only at specified times. On the Bayes ranch water could be had every two weeks. The soil is light volcanic ash and the land a south slope, so it can easily be understood that the cultivation to retain the moisture in the ground, could not be neglected. Mrs. Bayes and her small son with their trusty hoes are given no little credit for the success of the venture.



Red spiders which have been troubling some growers have not appeared at the Bayes place. In 1921 they sprayed the bushes with a strong tobacco solution but they have used no spray this year. It is their intention to spray with sulphur early next spring before the leaves are out.

The entire raspberry crop, with the exception of 60 crates, was sold to retail merchants in Yakima. Pickers were paid 60 and 75 cents a crate for picking the reds and 40 and 50 cents for the blacks. The higher prices were paid toward the close of the season as berries were not as plentiful. At the very last of the picking season the workers picked on shares.

Mr. and Mrs. Bayes believe they can make their berries yield splendidly for at least five years if the ground is properly fertilized. The land is new and no fertilizer has yet been used.

RAISE OWN FEEDS.

"One of the best solutions to our dairy problems is the raising of our own feeds," says A. E. Johnston of Gig Harbor, Pierce county, Washington. "There are many crops that can be planted in the fall and will grow well during the winter. We can just as well have such crops as these growing, and feed a small amount of green feed during the winter, especially when there is no silo on the place."

DOUBLE SERVICE from this SIMPLER PLANT

Here, at last, is a Home Light Plant that gives *double* the usual service, yet is entirely free from intricate concealed mechanisms. It is not only *more useful*, but also *more simple*.

The Fairbanks-Morse Plant supplies electricity for lights and electrical conveniences and engine power for a line shaft or individual machines *at the same time*. Or you can use the plant for electricity alone or for engine power alone.

Electric LIGHT

Engine POWER

Famous "Z" Engine Used

This plant consists simply of a "Z" Engine and an equally dependable generator and battery. It starts at the touch of a button. Special features insure unusually long life.

A nation-wide dealer organization assures constant maintenance of satisfactory performance from any Fairbanks-Morse Product. Learn all about this simpler, more efficient Home Light Plant. Send for interesting new booklet.

PM

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. They struggle slowly westward, meeting up with others also headed for the gold diggings. With a party of men traveling by handcart they all but starve for water on a desert, but dig a well and escape. They meet with a family by the name of Cooper, one member of which is a girl of years and manner that at once captivate young Orlando, who delights in keeping near her prairie schooner as they journey on. Once the entire party gives up the westward trip when they meet discouraged gold seekers returning, but Orlando and Hazel Cooper induce them to turn to the west again. They have many interesting experiences on the way, finally coming upon a great Indian camp. Not many days later they sighted Pike's peak, and a little later plodded into a little frontier town that has since grown to be the great city of Denver, Colorado. Here they learned that a rich gold strike had been made not far away at what was called Gregory's diggings. They mail letters to the folks back home and hurry on toward the place of the strike. At the foot of the mountains the women and children are left in camp to care for most of the supplies, while the men travel on foot into the mountains toward the diggings, which they reach the second day. Every claim is taken, so most of them proceed further and locate claims on Clear creek where they begin actual mining. The first day six of them wash out gold worth seven dollars.

CHAPTER FOURTEEN.

At Work on Clear Creek.

For several days they kept on working in the same manner. After digging up the dirt they carried it to the stream in their pans, and there separated the much dirt, gravel and sand from the little gold by washing. When first located, their claims had been the farthest up the creek. But many other miners had come in, often 30 or 40 a day, and staked out claims higher up. Now brush sheds and campfire smoke were as numerous upstream as downstream.

After several days some of the six began to complain of the slow way they had to work. Washing out a panful of dirt was a rather long, tedious process. Other miners, both above and below, were putting in sluice boxes. And Cooper's party were soon planning to do the same thing.

From time to time men came through the camp, offering to sell lumber. As yet not a sawmill could be found in these mountains. But in various places two men, using a whipsaw, were cutting lumber by hand. The log was placed on a platform, so that one man could stand below the log to saw and the other on top of it. Of course that was a slow, tiresome way of making lumber. But the sawyers received $30 a hundred feet for the planks they cut, and they could saw out more gold in that way than most of the miners were washing out.

When the lumber sellers first visited this camp the party of six had not money enough, all together, to buy more than a plank or two. But, after digging several days and washing out gold by hand, they had accumulated sufficient dust to pay for a sluice box. So, the next time the sawyer came through the camp they told him to bring them 12 planks 16 feet long. Two-thirds of them were to be 10 inches wide, the others a foot wide. They also ordered two or three additional planks, making a total bill of about $75.

It was perhaps 10 o'clock when the lumber was ordered. And late in the afternoon the sawyer arrived with it. He had their planks, as well as other planks for other miners, on the fore wheels of a wagon, with a single yoke of oxen pulling it. The rear ends of planks were dragging on the ground. That was the only practicable way of bringing the lumber down from the bench on the mountain where it had been sawed.

With these planks, and with some nails bought from a trading tent, Cooper's party, all working together, had soon constructed their sluice box. When completed it was about 60 feet long, but it had been made in sections, each 16 feet in length. Each section consisted of three planks, a foot-wide plank for the bottom and two 10-inch planks for the sides. Also the sections had been so shaped that the small end was narrow enough to fit into the wide end of another section.

Now came the putting of the sections in position and joining them together. That was not very difficult.

Though noticeably swift, from its rapid descent, the stream running down Clear creek was here scarcely a foot deep. While swifter in some places than in others, it had no pools—no deep places. And it flowed over a rock bottom. Also, the stream at its present stage did not cover all of its bed, there being some dry bottom at the edge of the water, and only a few inches higher. It was on this dry bottom that the miners prepared a place to clean up.

Beginning a sufficient distance upstream, they placed heavy stones in the edge of the water and rested the first section of their sluice box on those. The upper end of the section was a few inches under water, and the lower end, though higher from the creek bed, was still low enough for the water to run through the box and drop down. But, instead of letting it drop down, the miners fitted another section over the first section, and thus conducted the water on. In this way they led a small but swift stream out over dry bottom.

And so they kept on, adding section to section, all but the first section being supported by short benches instead of by stones. When the sluice box was finished

Sawed out more gold than most of the miners were finding.

the lower end was more than a yard above the dry part of the creek bed, yet the water was flowing through the whole box swiftly.

In addition to the sluice box, there were the long tom and the riffle box, so called. The first was about a yard long and had holes in the bottom, at one end. Through those the water, sand and smaller gravel would fall, leaving the stones and larger gravel in the long tom, from which they could be thrown out by hand.

From the sluice box the water fell into the long tom, and it strained through the bottom of the long tom into the riffle box. This last was a yard long and not so wide and was made of sheet iron. The sand and fine gravel, with the gold in it, dropped to the bottom of this box and remained there. But the water flowed out over the top. This iron box they had bought from a discouraged miner, who wanted to go away.

Across the bottom of their sluice box the miners had nailed cleats—narrow strips of wood. Those would allow the dirt and most of the gravel to be swept on by the water, but at least part of the gold would lodge against the cleats.

Carrying the dirt to the sluice box in their mining pans was too slow. So they made use of some coarse coffee sacks, which had been bought for the purpose from a grocery tent. Filling the sacks with dirt as they dug it up, they would carry them on their shoulders and empty them into the sluice box. The swift water flowing through swept the dirt away, and the stone and gravel with it. Part of the stones and gravel were strained out by the long tom, from which they could be shoveled out. What remained, mostly black sand, dropped into the riffle box.

After digging up dirt and carrying it to the sluice box all day, the miners shut off the water and cleaned up as night was coming on. This they did by scraping up, with a little iron paddle, the gold lodged against the cleats, and by washing out the sand and gravel in the riffle box. They had quicksilver with them, for use in gathering up very fine gold. But there was only coarse gold here, and they had no occasion to use their quicksilver.

After cleaning up at the end of their first day with the sluice box they found that they had only a little more than $10 worth of gold. That was rather disappointing, after all their work. But they promised themselves to do better as they dug deeper.

And they did do better. So much better that they could clean up about $15 a day, or $2.50 apiece. That was far less than they had hoped to make, though it was about as much as anybody else was cleaning up. But, expecting to do still better soon, and being hopeful of "striking it rich" at almost any minute, they toiled on.

As had been agreed at the outset, the party kept two of their number out hunting most of the time. At that they took turns, two men going out one day and two other the next. And the hunters did more than hunt. Besides their guns they carried a pick, a shovel and a pan, so that they could prospect wherever they went. Even if the six men did not do better where they were now working, there was a possibility that their prospectors would sooner or later discover better-paying dirt somewhere.

All the while a very interesting kind of life was going on here between two mountains. Men with various things to sell came from time to time, also bringing news from other camps. And often miners from these diggings, who had gone to Denver, returned with letters and papers. In such ways the men in this isolated mining camp kept in touch with the civilization they had left behind. At night, while gathered around one another's campfires, they exchanged such news as had come to them during the day.

Naturally, however, most of the miners' talk was of mining. While everybody at work here was making something, nobody was making much. On this account many were discouraged, having expected rich returns. Others, on the contrary, were cheerful and very hopeful of doing better soon. Nearly every party of miners had one or more members out prospecting every day, and they were hoping for valuable discoveries from that source.

Out in the surrounding mountains could occasionally be found a rude cabin, occupied by some men who lived by hunting and trapping. Now and then one of these trappers would visit the Clear Creek mining camp. Some came out of curiosity, perhaps, and to hear the latest news from the world they had long since forsaken. Others, having killed an elk or a bear, brought in the meat on a pack pony to sell it to the miners. Sometimes, by invitation, one of these trappers would spend a night in the camp, sleeping in a blanket or buffalo robe by somebody's campfire. Shaggy-looking fellows were they all, their hair long and their beards bushy. Even their ill-fitting clothes were often made of skins with the hair left on.

Most of these trappers were men of little or no education. But one who was different spent a night with Cooper's party. In appearance he was much like the rest of his tribe. But, except that he was ignorant of recent happenings in the world, he proved unusually intelligent. Orlando noticed that he used far better language than did most of the miners.

While sitting by their campfire he mentioned to the party of six that he had been born in St. Louis and had spent most of his life there. He seemed much interested in the place, and in what Orlando, Esau and others of the party could tell him concerning it. He spoke of men prominent in business there, and he told things about them which meant that he must have known them intimately. But he did not mention his own name; nor did he explain why he had left the city, 10 years before, and buried himself in this wilderness.

Perhaps he naturally loved a wild life and preferred, after having tried it, to live here rather than in any center of civilization. More probably he had failed in business and, being greatly discouraged, had never had the heart to try again. Also he might have been disappointed in love, or might have had family troubles, which so embittered his life that he fled to the wilderness to forget. At the same time there was a possibility that he had been guilty of some crime in the city, had deserted a wife and children, or defrauded somebody out of money, or even committed murder.

Next morning he went away, soon after breakfast, without enlightening anybody

(Continued on page eighteen.)

Bits of Fun FOR Everyone

Meeting Expenses.

"Do you have any trouble meeting expenses now?"

"Lord, no! I meet 'em everywhere I turn."

Faith.

Little Helen asked with much earnestness in her evening devotions that Boston be made the capital of Maine.

"My dearie," expostulated the shocked mother, "why did you ask that?"

"That's what I said today in examination, and I want it to be made right."

Really Much Better.

An old gentleman entered a country newspaper office and, approaching the editor, said: "I want to get copies of your paper for a week back."

The editor replied: "Hadn't you better try porous plaster?"—Ladies' Home Journal.

Discouraging Willie.

"Reggie," said her husband's wife, "I don't believe you have smoked one of those lovely cigars I gave you last Christmas."

"No, my dear, I haven't," replied the wife's husband. "As a matter of fact, I intend to keep them until our little Willie grow up and wants to learn to smoke."

Not Unlike Others.

Tommy had been playing truant from school, and had spent a long, beautiful day fishing. On his way back he met one of his young cronies, who accosted him with the usual question, "Catch anything?"

At this, Tommy, in all the consciousness of guilt, quickly responded: "Ain't been home yet."—Tit-Bits.

Opposite.

Teacher—If heat causes things to expand, what does cold do?

Willie—Makes the days shorter in the winter time."

A Tragedy of Color.

"Horrors! While mother was sleeping the baby licked all the paint——"

"Off a toy?" gasped the excited neighbor.

"No; off mother."—Country Gentleman.

What Was It?

Pat—I woke up in th' noight last noight, an' Oi cudn't go t' shlape no more at all for worryin'.

Mike—Phwat was ut worryin' ye?

Pat—Oi dunno phwat ut was. Ut was somethin' that Oi was worryin' about yistuddy, but Oi cudn't fer th' loife av me ric'lict phwat ut was!—Life.

Which Would Be Funnier?

"Don't you want to buy a bicycle to ride around your farm on?" asked the hardware clerk, as he wrapped up the nails. "They're cheap now. I can let you have a first-class one for $35."

"I'd rather put $35 in a cow," replied the farmer.

"But, think," persisted the clerk, "how foolish you'd look riding around on a cow."

"Oh, I don't know," said the farmer, stroking his chin; "no more foolish, I guess, than I would milkin' a bicycle."—Fruit Dispatch.

$35,000 WORTH CLEAR INCOME PROPERTY in Tacoma for good ranch, clear. Write owner, 3206 North 27th st., Tacoma, Wash.

Pike's Peak or Bust

(Continued from page sixteen.)

on any of these points. About the only thing he did tell was that the cabin he called home at present was three days' travel to the northwest.

But the six men he had spent a night with talked much of him afterward and speculated not a little on what they might have learned had they been permitted to read those unopened pages of his history.

When their shaft had gone down so far that the dirt and stones dug up could not be thrown out with a shovel, the six partners constructed a windlass. With this and a rope, and a box to hold the dirt, they went on with their work.

When the box had as much dirt in it as a man could conveniently carry it was wound up on the windlass and emptied into one of their sacks. And the sack a miner caught up, threw over his shoulder and bore away to the sluice box.

But not everything dug up by the miners in their shaft went to the sluice box. Much of this little, cramped valley—all of it, probably—had been made by Clear creek, and was largely composed of boulders. When dug out of the soil that embedded them those boulders and smaller stones were found to be worn very smooth. Much washing they must have undergone to round them in that way.

Those of the stones that were small enough were put into the dirt box and so drawn up. But some were too large for the dirt box, and some were too heavy to be drawn up without a stronger rope and a stronger windlass. Those it was necessary to break before they could be taken out, especially as they were too round and smooth for a rope to stay on them. From more experienced miners the party had learned how to crack the boulders.

One day, when the first of those too-large-to-handle boulders had been dug and pried out of its bed in the bottom of the shaft, Cooper, who was now digging, called up: "Boys, guess some of you had better go for a lot of pine knots!"

The men at the mouth of the shaft agreed, and two of them, both carrying dirt sacks, were soon moving away toward the mountainside, where pine trees grew. Wherever could be found a rotting pine log were pine knots. Being rich in rosin, the knots were still hard and sound after the rest of the log had decayed.

With their sacks well filled, the two men returned to the shaft. There both the knots and other kindling were let down in the dirt box to Cooper. While Copoer was piling the knots and kindling on the boulder, Orlando hurried to camp and returned with a chunk of fire. With that, when it had been lowered, the man in the shaft fired the fuel on the boulder. As soon as smoke began to rise he stepped into the box, grasped the rope and allowed Esau and Orlando to draw him up.

By this time much smoke was rising from the shaft. After watching the fire till it began to burn well, the three miners returned to camp. Givens had gone earlier, to prepare dinner. Abe Sanders and Jess Holloway were out prospecting and hunting and had carried their dinner with them.

CHAPTER FIFTEEN.

A Little Maid With Her Bottle of Gold.

After eating, the miners returned to their shaft, to find smoke and heat fogging up from its mouth, and the pine knots still burning fiercely.

Again they returned to camp, where they rested a while under their brush shed. When they came back, carrying buckets of water, a look into the shaft showed them that the fire had pretty well burnt out. Now each of the two carrying water poised their buckets carefully, then poured the water onto the hot boulder.

At once, amid the smoke and steam and hissing, could be heard a sharp cracking in the shaft. Several minutes later, when the smoke and steam had cleared, the men looked down, to see that the boulder had burst into several pieces. Givens was now lowered, and the fragments of the rock were piled into the dirt box and drawn out.

That was their first experience of the kind, but by no means the last. Again and again these miners, as well as all the others here, had to make use of fire and water to break up boulders too heavy to handle whole.

Four of the miners commonly worked at one time. One man was lowered into the shaft, where he dug up the earth and sent it out in the dirt box. Another man turned the windlass, and the other two received the dirt into their sacks and shouldered it away to the sluce box. The remaining two of the six were off, as usual, wandering over the mountains as they hunted and prospected. When the sun was low all the men at camp helped to clean up the sluice box.

Among the newcomers in the Clear Creek camp was a family that Cooper's party had some acquaintance with—the Hinksons. Rough as the road was, Mrs. Hinkson, still wearing a man's boots and a man's hat, had succeeded in driving her wagon in; and her husband and Becky had driven the milk cows and their calves. The family had established a camp, and Hinkson had staked out a claim. He and his wife were working it together, digging up dirt, carrying it to the creek in their pans and there washing it out.

Probably they did not clean up much, for they gave part of their time to other things. The woman washed clothes when she could find them to wash. Most of the miners here were not making enough to hire their washing done. They did it themselves, often by moonlight or by firelight. Also the man, who seemed to be not very strong, milked his cows and sold the milk. Every night and every morning he went up and down the strung-out camp with his tin bucket, peddling its contents to whoever cared to pay the price. Brindle was still giving milk and the party her owner was with did not have to buy. However, none of the other miners owned a milk cow; and most of them liked a little milk now and then, when they could afford it.

"I could sell a dozen times as much as I do if I had it to sell," Hinkson told the party of six late one day. He was returning with an empty bucket to his own camp, and had stopped for a few minutes to chat and swap news with the resting miners.

After Hinkson's cows were milked in the morning, they and the four oxen were placed in charge of Hinkson's 10-year-old daughter, Becky, who drove them away to wherever she could find pasture, and herded them during the day. One of the oxen had a bell on, and so had one of the cows. When milking time drew near, the child, armed with a switch, marched her little drove back to her own camp. A rude pen had been built, in which the cows and steers were kept at night and the calves during the day. The calves were turned out at night, one with a bell on; but they did not have to be herded.

A faithful, patient little herder was Becky; and as she often passed between their camp and their shaft with her charges, the six men soon became well acquainted with her.

"Won't you have some dinner with us, Becky?" Orlando said to her one day.

Her cattle were on the mountain side, beyond the creek, and the bare-footed little maid had waded the creek for a chat with the miners while they were resting. From their camp she could keep an eye on her charges, grazing a hundred feet or so higher.

"No, sir. I've done et," she answered, in her serious, matter-of-fact way. "I take my dinner in a little tin bucket that I used to tote to school, back whar we come frum—back in the states. I et up thar and left my bucket up thar." She glanced toward the mountain side. "But I had to come down to the creek to git me a drink. So I thought I'd wade across and see if you'd struck it rich yit."

"No, we hasn't struck it rich yet, Becky," Jess Holloway answered her.

"Reckon you uns is like us uns," the child remarked. "Pap says we've struck it pore. And he don't 'low we're goin' to do much better. He says milkin' pays better'n minin'. If it didn't, he 'lows the jig would be up with us."

"Do you do any milkin' yourself, Becky?" questioned Esau, after the little girl, at their invitation, had seated herself on a log in the shade.

"No, sir. That is, not much. 'Bout all I do is to hold tails for pap."

"Hold tails? How's that?" asked Orlando.

"Why, when the flies bites the cows, if I didn't hold their tails, they'd switch 'em right in pap's face, and maybe in his eyes. But I hold hard and don't let 'em."

"A tail-holder is a very useful person. Only wish I had one when I got to milk Brindle," Orlando commented with a smile.

"If your claim was close to ourn'n, I'd come down and hold her tail for you. Maybe I will anyhow, if mammy will let me."

"No, don't trouble to do that," Orlando hastened to say. "I can get through it all right without any help."

Now the child thrust her hand into what was evidently a pocket in her little homespun dress, and took out something, which she held aloft. It was a vial, yellow for nearly an inch of its length.

"Jist looky what I've got!" she cried.

"Why, you little rich girl! Where did you get all that gold?" demanded Sanders.

"Over in Gregory's gulch, while we's camped there."

"Did you wash it out?" asked Holloway.

She shook her head. "Not me. Mammy baked some bread for one of the miners. When I took it to 'im, he was washin' out a panful of dirt. And he up and says: 'Sissy, that bread smells awful good after flapjacks. You set right down thar and wait a minute. When I git through with this here pan, I'm goin' to give you the biggest piece of gold in it.' So I waited. And it was might' nigh as big as a—as a pea. And I squeezed it tight all the way back to camp. There mammy give me this little bottle to put it in. And nearly every miner that seen the bottle drapped another little piece in, till pap 'lows I've got 'most twenty dollars. Mammy don't like for me to tote it; but I love to have it to play with when I'm by myself."

"Let me see that bottle, won't you, Becky?" said Orlando.

She handed him the vial. After examining it, the young man took out a buckskin bag, untied its string, select a piece of gold from it and dropped it into the vial. Then he passed the vial on to the other miners, each of whom did the same thing.

"I ain't axin' nobody for nothin'," the little maid commented, in her quaint way, while her bottle was passing from hand to hand. "No, I ain't no beggar. But if anybody wants to drap a leetle, teeny, bitsy piece of gold into my bottle, you don't ketch me actin' up about it. I ain't a-goin' to squall like a baby gittin' its face washed."

The men laughed. "No, no need of that," Cooper assured her, after dropping in his bit of gold and corking the vial.

"Well, I've got to go. My cows and steers is strayin' away up yander. They may climb up among the clouds, whar I cain't see 'em; or up whar the bars'll kill 'em and eat 'em," she said, a few minutes later, as she sprang from her seat on the log.

"Come back and see us," Orlando called after her.

"Yes, be sure to come, Becky!" added Holloway. "Drop in on us every day if you can."

"Maybe so," she called back. She was already down the bank and wading the creek. "I'll come whenever I can. I've got lots to do."

She did return every day or two. And nobody visited the camp of the six miners who was more welcome.

For the party's hunting, Cooper and Sanders commonly went out one day, Esau and Orlando the next, and Holloway and Givens the day after.

One afternoon, their turn having come, Jess Holloway and Jeff Givens set off together. There being a shortage of meat in the camp, the pair were out for game only, their pick and pan having been left behind.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I thought I would write and tell the Circle some of my ways to make ends meet. I am 40 years old and my sister is 42 and we each have 10 healthy and hearty children. My twins are 2 years old and this is the way I make drawers for them: I take heavy stocking legs, cut off the bottom the right length, split down one side of each leg about 10 inches, and sew the top part together about four inches; then I set in a square piece for the seat, letting one point of the square run up the back seam and one point run up the front seam and one come down each leg. Then take elastic and sew to the tops stretching both the stocking and the elastic. These little drawers can be easily removed and are a great help when breaking in children to tidy habits.

For the little girls we use the little 10-pound cereal sacks the same way, only putting elastic in the bottom of the legs and turning a hem at the top into which to run the elastic.

To lengthen dresses we sometimes cut off the hem at the bottom half an inch above the hem and sew in some other cloth, selecting something that will harmonize and the effect isn't bad. On wool dresses I often sew on a strip of bright braid to cover the seam when I have had material of the same kind to lengthen with. A tuck will also hide a seam.

I, like many others, use sugar sacks, after washing and bleaching, for little girls' dresses. I dye them different colors, pink, blue and lavendar. They make up very pretty.

To keep the heels of shoes from running over or scuffing off I get a box of bob nails and drive in the side or all over the heel wherever needed and grease the shoes once in two weeks with warm tallow. MRS. R. B.

Washington.

Dear Mrs. Barland: I have often thought it would be helpful if we would have more helps in the Family Circle about dressmaking. That is, have experiences written up as to how dresses have been made of material at hand, such as combining different material into a dress. I know many of the women do these things and it would be helpful if they will tell how they did it. I am sure there is many a dress just around the corner if only the idea is received by the readers.

MRS. H. E. S.

Washington.

Dear Mrs. Barland: Since I wrote you last we have had a light hailstorm, but no damage was done. Twenty-five miles from us the hail "cleaned them out."

The grasshoppers are dying by the million; a sort of fly is stinging them. Even if God sends calamity he also sends blessings. Sometimes when things get dark and trials are thick I look away to the beautiful majestic mountains and am convinced there is a God who rules over all. MRS. K. S.

Bole, Mont.

Home Recipes

Carrot pudding: One cup grated carrots, one cup grated potatoes, one cup flour, one cup sugar, one cup raisins, one-half cup butter, one level teaspoon each of allspice, cloves, nutmeg, cinnamon and salt. Mix all together well, except the flour; put one teaspoon of soda into the flour and sift it into the other ingredients, boil in a double boiler for three hours. MRS. N. M.

Idaho.

Preserved pumpkin: Stew the pumpkin dry, that is boil it down until the bulk is greatly reduced, stirring frequently to avoid burning.

When well boiled down remove from the fire and to every three-fourths cup of pumpkin add three-fourths cup granulated sugar, one-half teaspoon of ginger, a pinch of salt and one-eighth teaspoon each of cinnamon, cloves and nutmeg. Blend thoroughly, heat to the boiling point, being careful not to burn. Seal in air-tight jars, either pints or quarts, and this will keep indefinitely.

For pie dissolve one cup of the pumpkin in one and one-half cups of scalded milk, add two well-beaten eggs, bake in a good rich crust and you have the famous New England pumpkin pie. I never peal the pumpkin, as that takes away much of the richness. MRS. ARTHUR KELLY.

Chehalis, Idaho.

Rose Powder: Gather leaves from strong smelling roses soon after the sun rises, spread them on a sieve and sprinkle with fresh water; after the water has dripped off rub the leaves fine, sift flour over them and work as you do noodles. Roll thin and dry quickly in a warm oven and while it is still warm pulversize it and sift it. Keep in closed glass jar. This is sometimes used for flavor in baking. MRS. R. Y.

Just Folks

Looking through an encyclopedia, my eye fell on the word "meeting." It quite naturally is defined as "an assemblage of people called with a view to deliberate on some specific subject or to accomplish some specific purpose."

Just following this was the word "meeting" with a more specific meaning of "the name applied by the society of 'Friends' to their various assemblages for worship or for the management of official business." The word "meeting" is applied to the usual gatherings of this religious society on several days of the week for worship, meditation and instruction. The same word is also applied to the monthly meeting which is an assembly of members from several contiguous congregations charged with making provisions for the education of children, for the admission of new members and for needed discipline.

In this last duty is included the appointment of committees to see that the rules are observed and "to settle difficulties among members by private admonition and council so as, if possible, to prevent their being brought before the meeting." Even when cases of trouble are introduced at the meeting, similar committees are appointed to settle them "informally," if possible, outside of the meeting.

In my boyhood days I remember riding with my parents along a highway in New England which was bordered by unusually prosperous farm homes. It was a delight to see the well-kept farms and farmsteads. Stopping to talk with the farmers themselves one noticed the poise the farm folks had, given to smiles and generally a happy looking people.

I am now wondering how much of this thrift and poise and happiness was due to the settlement of the troubles between neighbors when possible out of the "meetings." It appears from the above that the committees were busy settling these neighborly troubles so that they should never be brought to public attention, and even when they were brought to the attention of the meeting, committees were appointed to see if they could not be settled "informally."

"Informal" settlements, after all, are the most valuable. As soon as a troublesome matter is put on record it makes it harder to settle in a friendly way.

Probably the Friends, or Quakers, as they are sometimes called, also may have cultivated a habit of overlooking and forgetting those untoward words and actions which breed trouble when nursed. In fact, the habit of men folks and women folks among the Friends of dressing in a uniform and quaint manner probably had not a little to do with the allaying of jealousies and envyings, which play so prominent a part in heart disturbances.

The Friends always have been a small sect as regards numbers, but they have played a large part in making the world a better place for having lived in it.

What Others Say

Farm and Ranch: The rest cottage or rest room is becoming an institution in progressive towns and cities catering to the farm trade.

Ohio Farmer: We hope every one who attends any fair, county or state, at which boy and girl club members display their handiwork will take time to inquire into the feeding of the calves or pigs or chickens, or into the work required to complete the clothing or food or other clubs.

Farmers' Guide: One of the common mistakes made by those who are responsible for the program of farmers' meetings is crowding them too full.

National Stockman and Farmer: All staple foods are valuable in their place and meat is no exception even if some folks do theorize to the contrary.

Field Illustrated: People will and should, follow personal likes and dislikes in poultry keeping.

Utah Farmer: The most important unit in rural life is the family.

Successful Farming: Nothing is ever gained by shipping culls with good stuff. It lowers the price on the good stuff.

Rural New Yorker: Any apparent misfortune that will make a man stand still in the face of his troubles and think them out may be a blessing in disguise.

California Cultivator: California is not alone in having its roads pounded to pieces by overloads.

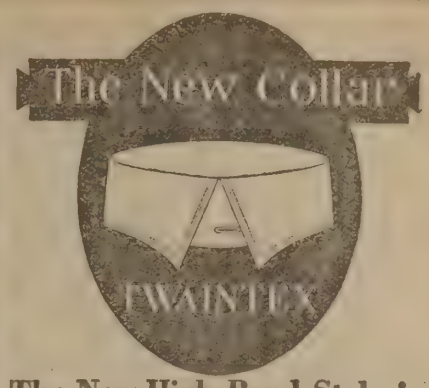
Breeders' Gazette: Not until live stock production is put on a quality basis can much progress be made in price stabilization.

Kansas City Star: The idea of concentrated selling as direct to the consumer as possible is going to live and be worked out in some practical form.

Hoard's Dairyman: If we as dairy farmers could get our products on to the market and into the consumer's mouth when its quality was at its best we could not begin to supply the demand.

Home Helps

By MRS. C. B. SMITH.



Nothing so deadens the gloss of glazed tile papers as to leave drops of moisture on them after washing. Rubbing each time with a soft, dry cloth will keep them shining for years.

Every one who uses a typewriter knows how hard it is to keep track of the eraser, which even the best operator finds occasional use for. My little son, becoming tired of hunting for mine, tied one end of a string about 15 inches long through the hole in the eraser, which is of the circular kind, and attached the other end to the pencil holder on top of the machine. It can not get lost and is easier to pick up.

If you do not own a polishing mitten for stoves, one may be made by using the sheep lining from a discarded work coat. Cut a mitten from any desired material and after sewing it up fit a palm cut from the sheep skin and sew it on, fleece side out. The side of a sheep moccasin will answer instead of a piece of the coat lining if the latter is not available.

Never place hot fruit jars on cool metal. They are less likely to break if put on a board or table. Breakage is prevented also by tipping the jar slightly and inserting a small object under one side to allow the air to pass under it. Cool air out of drafts rarely causes breakage.

HAGERSTOWN, MD.

High Points in News of the Week

The eyes of the world have been fixed on the Near Eastern situation during the last week, as for several weeks, where the British and other allied governments have been trying to avoid an actual opening of battle with the Turkish forces, which have been operating madly in Asia Minor and on the western side of the Dardanelles, the sea of Marmora and the Bosporus. The situation is acute at this writing, and, while there is just now an indication that war may be avoided, it is not impossible that hostilities between the British forces and those of the Turk nationalists will have opened before this reaches the reader.

At the close of the war the Turks found themselves driven out of southeastern Europe, being compelled to vacate Thrace, which lies on the European side of the Dardanelles, Marmora and the Bosporus, which, as shown last, constitute a narrow water passage connecting the Black sea and the Aegean sea, forming an international dividing line between Europe and Asia. Constantinople, the great Turkish capital, lying on the European side of the Bosporus, was internationalized, though still remaining distinctively a Turkish city. A narrow strip of land on each side of the Dardanelles, Marmora and the Bosporus was declared to be neutral land, like the neutral zone between France and Germany, with military activities within it denied to all nations. Also as an outgrowth of the war, the Greeks secured certain concessions in Asia Minor.

The present unpleasantness is the direct result of an uprising of Turks to drive the Greeks out of Asia Minor, which they have done successfully. The sweeping success of the Turks against the Greeks apparently has filled them with daring and renewed their ambition to regain their former power in Thrace, on the European side.

The allies have agreed that the Turks shall again possess Thrace, but have declared that the waterway between the Black sea and the Aegean (which is a tributary of the Mediterrancan) must remain freely open to all nations, never again being under Turkish control or that of any other single nation. The allies have been attempting to secure a peace conference with the Turkish leaders, but so far have failed, though it is indicated now that such conference will be held.

In the meantime, the Turks have occupied nearly all of the neutral zone on the Asiatic side of the Dardanelles, notwithstanding several "ultimatums" from the allies that they must not do so. The British troops and naval forces have been congregating in the vicinity in warlike manner, and failure of the Turks to respect the demands of the allies is practically sure to throw at least these two nations into actual war. Others are as equally sure to be drawn in, as nearly all nations are directly or indirectly interested in the situation. Some fear has been expressed that should England and Turkey declare a state of war to exist it would be the opening of a second world war.

At this writing the prospects for peaceable settlement appear brighter than at any time since the Turks ran amuck.

* * *

It is estimated that nearly 400,000 persons are in dire straights in the territory surrounding Smyrna, including neighboring islands in the Mediterranean sea, as a result of the recent destruction of that city by fire, followed by ransacking and massacring by the victorious Turks. Smyrna was a port at the east end of the Mediterranean in the hands of the Greeks, which have been driven wholesale from Asia Minor. Reports indicate that relief available is up to this time woefully inadequate to prevent the death from exposure and starvation of thousands of victims.

* * *

As a result of the Near Eastern situation King Constantine of Greece has abdicated and Prince George has assumed the throne. A revolution, involving mutiny of a large part of the Greek army that was opposed to Constantine, was about to take place in Greece.

Announcement is also made of the abdication of the sultan of Turkey in favor of the heir apparent.

* * *

Production of all coal, bituminous and anthracite, for the week ended September 30, is estimated at about 11,600,000 net tons by the geological survey in its weekly report. This was calculated to be sufficient to meet the current consumption, though probably not quite enough to allow storage for the future.

* * *

The average farm of Iowa, including buildings, live stock, machinery and the land, is worth $38,941, according to the last federal census. This is the highest average value of any state in the Union, and is more than three times the average for the country as a whole, which is $12,084. South Dakota comes second with an average of $37,837.

* * *

The New York democratic convention last week nominated former Governor A. E. Smith for governor and Dr. Royal S. Copeland for United States senator. Smith was nominated after William R. Hearst, newspaper publisher, had withdrawn from the race when it became apparent that he could not be nominated. The republican convention renominated Governor N. L. Miller and Senator W. M. Calder.

* * *

The Chicago, Milwaukee & St. Paul Railroad company has announced a cut of 7 cents per 100 pounds in the freight rate on wheat shipped from points west of Lavina, Mont., to Seattle and Tacoma for exportation. The cut is said to be the result of a desire to stimulate loading of cars for the Puget sound district so that empties will not have to be hauled west to receive lumber for eastern shipment.

* * *

It is understood that the officials of the striking railroad shopmen will appeal to the United States supreme court from the decision of the Chicago federal court in granting an injunction against the strikers prohibiting interference with the operation of trains.

Reports from a number of points tell of the formation of organizations among the new employees in the shops affected by the strike. In some instances it is reported that these workers are receiving higher wages than those fixed for the former shopmen by the United States railway labor board.

Railroad companies report success in filling positions. There have been few developments in the situation during the last week. Separate settlements have been made by several of the roads. Others, including the Great Northern and Northern Pacific, declare they are operating successfully in spite of the strike and that they will make no settlement with the strikers.

* * *

The Columbia irrigation project was indorsed by the rivers and harbors congress, in session at Everett last week. A resolution adopted set forth that the irrigation project would add several hundreds of thousands of tons of freight to the annual volume of Pacific coast harbors.

* * *

Improvement in the labor situation throughout the country, both through a reduction of unemployment and a distinct upward tendency shown by wages, was the chief economic development during September, according to the monthly survey of business conditions issued by the federal reserve board.

The volume of employment was increased during September, the board said, in consequence of the return to work of several hundred thousand coal miners, railroad shopmen and textile workers.

The period from August 15 to September 15, moreover, contained by far the largest number of wage increases reported in any month since the decline of business activity in 1920.

The most important increases occurred at copper mines, steel mills, cotton mills and in the building industry. Unskilled or semi-skilled workers received most of these advances.

* * *

Advisability of calling an international conference to consider further means of curtailing production of opium and illicit traffic in habit-forming drugs has been discussed with President Harding by Chairman Porter of the house foreign affairs committee, who said later that the president was inclined to favor the suggestion.

Illegal traffic in drugs has reached alarming proportions in the United States, Mr. Porter said. He expects to introduce after congress reconvenes a resolution requesting the state department to make representations to opium-producing countries that an agreement be reached for curtailing production and vigorously restricting sale of the product.

To Judge at Big Stock Show

Men of national reputations have been secured to do the judging at the Pacific International Live Stock show, November 4-11. In every class the man who ties the ribbons is widely known for his ability as a judge and in many cases he is noted as a breeder also. The following is the list:

Jerseys—C. S. Graves, Liberty, Mo.

Holsteins—W. S. Moscrip, Lake Elmo, Minn.

Guernseys—John E. Clark, Hardwick, Wis.

Ayrshires — (Announcement not yet made.)

Red Polled—Professor John Fitch, Kansas Agricultural college.

Shorthorns, both beef and milking—William A. Dryden, Brooklyn, Ont.

Herefords—James L. C. Painter, Roggin, Col.

Aberdeen Angus—C. W. Eckardt, Armonk, N. Y.

Fine and middle wool sheep—Professor W. C. Coffey, dean and director Minnesota Agricultural college.

Coarse wool—C. L. Hawley, Portland, Ore.

Angora goats—Not yet announced.

YAKIMA POTATO SHOW.

Plans for a big potato and corn show at Yakima in December are under way, according to County Agent A. E. Lovett.

Farm Business and Markets Outlook

(Continued from page five.)

heifers, $5@6; medium to good cows, heifers, $3.50@4.50; common cows, $1.50@2; canners, $1.50@2; bulls, $3@4; choice feeders, $5@5.50; fair to good feeders, $4@5; choice dairy calves, $3.50@9.50; prime light calves, $7@8; medium to light calves, $7@8; medium to light calves, $7@8; heavy calves, $5@7; common heavy calves, $4@5.

Hogs—Prime light, $11@11.50; smooth heavy, 200 to 300 lbs., $10@10.50; smooth heavy, 300 lbs., $9@10; rough heavy, $7@9.50; fat pigs, $11@11.25; feeder pigs, $11@11.50; stags, subject to dockage, $5@7.50.

Sheep—East-of-mountain lambs, $10@11; choice valley lambs, $10@11; medium valley lambs, $9@10; common valley lambs, $8@9; cull lambs, $7@8; light yearlings, $8@8.50; heavy yearlings, $7.50@8; light wethers, $6.50@7.50; heavy wethers, $5.50@6.50; ewes, $2@6.

Hogs—Prime mixed, $10.50@11.25; medium, $9.50@10.25; heavies, $7.50@9.25; fat pigs, $8.50@10.50; stockers and feeders, $8.50@10.

Sheep—Prime lambs, $10@10.50; fair to medium, $7@8; yearlings, $7@8; wethers, $6.50@7.50; mutton ewes, $3@6.50; feeder lambs, $5@7.

The Grain Market.

PORTLAND, Ore., Sept. 30.—Wheat—Hard white, Bluestem, Bart, $1.19; soft white, $1.10; western white, $1.09; northern spring, $1.08; hard winter, $1.07; western red, $1.04.

Grain futures: Wheat—Bluestem and Bart, October, $1.19; November, $1.18; soft, white, October, $1.10; November, $1.08; western white, October, $1.09; November, $1.08; hard winter, October, $1.07; November, $1.06; northern spring, October, $1.08; November, $1.07; western red, October, $1.04; November, $1.

Oats—No. 2, 36-pound naturals, October, November, $31.50; 36-pound clips, October, November, $31; 38-pound naturals, October, November, $32.50.

Barley—44-pound minimum, October, November, $28.50; 40-pound minimum, October, November, $28.

Corn—No. 2 eastern yellow, shipment October, November, $29; mill run, October, November, $28.50.

WALLA WALLA, Sept. 30.—Bart and Bluestem, $1.03; Club, 94c; Turkey Red, 89c.

RITZVILLE, Wash., Sept. 30.—Bart, $1.11; red, 95c; Fife, 90c.

DAVENPORT, Wash., Sept. 30.—Bluestem, $1.08; Marquis, 95c; Gold Coin, 91c.

ODESSA, Wash., Sept. 30.—Marquis, Bluestem and Bart, $1.11; Turkey Red, 94c; Jones Fife, 90c.

DAYTON, Wash., Sept. 30.—Club wheat, 92c; red, 91c.

SEATTLE, Sept. 30.—Wheat—Hard white, $1.11; soft white, western white, northern spring, $1.10; hard red winter, soft red winter, $1.09; western red, $1.07; Big Bend Bluestem, $1.25.

Hay and Feed Grain.

PORTLAND, Ore., Sept. 30.—Millfeed—Price f. o. b. mill: Mill run, ton lots, $27; middlings, $39; rolled barley, $36@38; rolled oats, $42; scratch feed, $44 per ton.

Corn—White, $36; cracked, $38 per ton.

Hay—Buying prices, f. o. b. Portland: Alfalfa, $18@18.50 per ton; cheat, $15; oats and vetch, $20; clover, $18; valley timothy, $20; eastern Oregon timothy, $20@21.

SPOKANE, Sept. 30.—Wheat—Feed wheat, $40 per ton.

Oats—$40 per ton; steam rolled, $42.

Corn—$36 per ton; cracked corn, $38 ton.

Barley—$42; steam rolled, $44.

Bran and shorts—$32 per ton.

Alfalfa, $22 ton; timothy, $24 ton; mixed hay, $22 ton.

General Produce.

PORTLAND, Ore., Sept. 30.—Butter—Cubes, extras, 41@42c lb.; prints, parchment wrapped, box lots, 48c; cartons, 49c. Butterfat, 48c, delivered station; buying price, A grade, 43c.

Eggs—Buying price: Current receipts, 37c per dozen; henneries, 43c per dozen. Jobbing prices: Front street, candled ranch, 45c; selects, 48c. Association, selects, 48c; firsts, 46c; pullets, 40c.

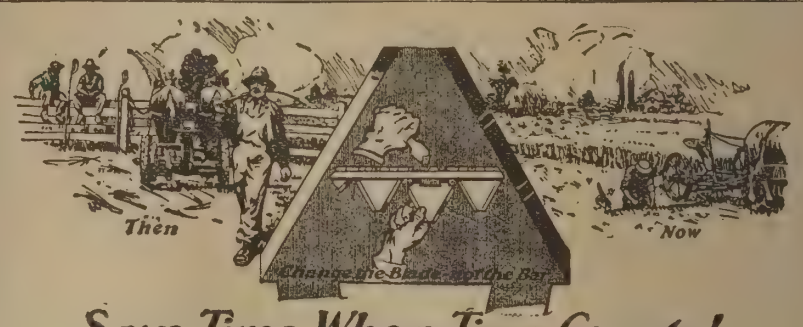
Cheese—Tillamook triplets, price to jobbers, f. o. b. Tillamook, 28c; Young Americas, 29c; longhorns, 29c pound.

Poultry—Hens, 12@22c lb.; springs, 18@22c; ducks, 20c; geese, 20c; turkeys, nominal.

Veal—Fancy, 15½@16c per pound.

Pork—Fancy, 15½c per pound.

SEATTLE, Sept. 30.—Eggs—Select local ranch, white shells, cases included, 45c per dozen; mixed color, 43c per dozen; pullets, 33c per dozen. Cases returned to shipper 1c less.



Butterfat—F. o. b. Seattle: A grade, 50c per lb.; raw milk, $2 per cwt.

Poultry—Hens, 4½ lbs. and up, 24c per lb.; over 3½ lbs. and under 4½ lbs., 16c per lb.; 3 to 3½ lbs., 12c lb.; 1922 broilers, 1 lb. and heavier, 22c per lb.; old roosters, 10@11c lb.; geese, fat, live, 16c per lb.; do fancy dressed, 24c per lb.; ducks, 3 lbs. and heavier, live, 15c per lb.; turkeys, fat, dry picked, 8 to 15 lbs., 30@33c per lb.; do live, fat, 10 to 15 lbs., 25c per lb.; squabs, large, $4.50 per dozen; pigeons, $2; guineas, $8 per dozen.

SPOKANE, Sept. 30.—Poultry—Fat hens, 17c lb.; light hens, 15c lb.; roosters, 8c lb.; spring chickens, over 2½ lbs., 14c; broilers, 1½ to 2½ lb., 16c lb.

Fresh ranch eggs—$9@10.50 case; no storage.

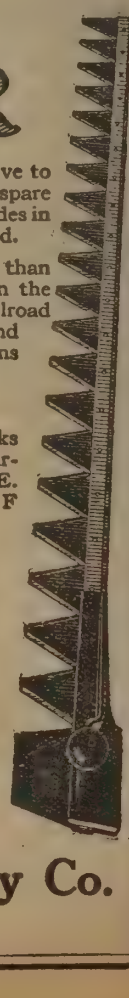
Butterfat—45c a pound.

Save Time When Time Counts!

Don't stop your mowing to go for a new knife. Don't stop to rivet up a new blade in place of a broken one. Use the

A-M-F SICKLE BAR

It has instantly removable blades. You can slip each one out in a jiffy after you've unlocked it. But nothing can shake it loose after you've locked it in with the keystone wedge — itself locked in place. Tests have proven it.



You don't lose a moment in the field. If you break or dull a blade you can replace it with a sharp blade in less than no time. You don't even have to take the knife out of the machine. It's as easy as slipping a new blade in a safety razor.

All the spares you need are a dozen blades. You don't have to tie your money in complete spare bars. And you carry the blades in your toolbox—always at hand.

The A-M-F Bar is stronger than old type bars. It is built on the truss principle—like a railroad bridge. It won't break and won't bend, but always runs free and true.

We guarantee it.

Any bar or head which breaks within a year from date of purchase will be replaced FREE. Rust-proofed by the A-M-F Intraloy Process.

Think of this! A-M-F Blades are high carbon steel—hard to damage. They hold their edge better; and you can take them out of the bar and grind them singly—clear down to the heel. It's the only way to keep mower knife cutting clean.

A-M-F Sickle Bars are made for all the modern standard mowing machines. It takes only a moment to fit one to your machine.

Ask your dealer—or write us!

SEE THE A-M-F SICKLE BAR AT YOUR STATE FAIRS

American Machine & Foundry Co.

511 Fifth Avenue, New York, N.Y.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Operations are always dreaded. Why? The natural answer is the fear of pain. I do not believe this is the real objection. My mail is filled with letters from persons who wish to know if this or that condition can not be cured without an operation, "because I am afraid to take an anaesthetic."

Dr. Copeland.

This is the reason many operations are dreaded—the fear of the anaesthetic.

I had been doing operative work for more than 20 years before I had occasion to take an anaesthetic myself. During these years, for my own patients and those of other operators, I witnessed the giving of the anaesthetic to many hundreds of persons. In spite of this experience I confess I dreadfully hated to be anaesthetized. I was as timid about it as were the many laymen I had seen submit to the ordeal for the first time.

My purpose in giving my own experience is to comfort any one who may have to take an anaesthetic. Let me assure you there is nothing painful or uncomfortable about it, except the mental disturbance. Really, you will be a little ashamed, as I was, to think you permitted yourself to be so worried about taking an anaesthetic.

There is no doubt that a generation ago methods of administering anaesthetics were very crude, and, in many instances, cruel. They used to hold the patient and force him to breathe in choking and nauseating vapor. The struggles of the patient were not pleasant to witness, and they certainly must have been accompanied by torture of mind.

Nothing like this can occur today if you have a skilled anaesthetist. He will start you off with nitrous oxide gas and switch to the chloroform or ether after you have gone to sleep. He watches you closely, limiting the quantity of anaesthetic to your absolute need.

You awaken quickly, free from nausea, except in occasional cases, and none the worse for your experience.

Don't worry any more about taking an anaesthetic.

IN A GARDEN.

Any garden blooming sweetly,
In the sunshine of God's grace,
Holds a little of his presence—
Every blossom's smiling face
Is an echo of his gladness;
Every cloud that drifts above,
Looks upon the garden kindly,
With his dear, reflected love.

Oh, a garden gives a promise
Of God's graciousness and power!
He it is who makes it flourish,
He it is who tends each flower.
God is nearer, in a garden,
Than in almost any place—
One can almost feel him, passing,
With a smile upon his face!

—Margaret E. Sangster, in the Christian Herald.

CHURCH GETS $1000 A WEEK.

Dr. George Craig Stewart of Evanston, Ill., was one of the most envied men at the recent Episcopal general convention in Portland.

Dr. Stewart is the rector of one of the finest parishes in the church. He has two clergymen as assistants. His church is in Chicago. His congregation is wealthy. More than $1000 a week is contributed for the upkeep of the church and its various activities.

WHERE WE ARE LOSERS.

Saving of time and labor are losing propositions unless done with judgment.

For $1 You Employ Scores of Workers for 5 Years

Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25 cents for 1 year.

Dorothy Loch, in Yakima county, Washington, sends in the following jokes:

Mother—Tommy, what is your little brother crying that way for? Tommy (who had taken the little fellow's cake)—I guess that's the only way he knows how to cry, ma.

A young man who lived in the country took his sweetheart some flowers. "How kind of you," said the girl, "to bring me these lovely flowers. They are so beautiful and fresh; I think there is some dew on them yet." "Yes," said the young man in great embarrassment, "there is, but I'm going to pay it off tomorrow."

Mother—Always think twice before you speak. Tommy—Gee, ma, if you always think twice before you speak you must do some swift thinking when you get goin' for pa!

Mike—I lost my dog. What am I going to do? Pat—Why don't you advertise for him? Mike—Sure, but my dog can't read advertisements.

She—Did you tell anybody about my pies? He—Oh, yes! I had to tell my physician what ailed me.

Inez Tillotson goes to the Liberty school, in Whatcom county, Washington. She says she is in the sixth grade and has good times playing. Her teacher is Mr. Stuart.

We are glad to receive a letter from Evelyn Ellis, who has never written to us before. She likes to go to school and is in the second grade this term. Evelyn is 8 years old. She lives in west Washington, near Skagit bay.

Alice Coons of Clarke county, Washington, has the same teacher this year that she had last and Alice is glad, because Miss Fitsimons is a good teacher and Alice likes her. Alice was sick for a little while, but she is better now. She has had a nice visit with her sister, who came home for a month's vacation. Alice was glad to see her.

Here is a letter from Alma Stensaa, a cousin in Snohomish county, Washington: "I am 9 years old. We have 38 children in our school. I have a pet cat. We have 70 chickens. I play with my girl friends. I am in the third grade at school. My best friends are Agnes Hasby and Leona Robb."

Edna Barrie had a nice vacation at her cousin's home in Grays Harbor this summer and is now back at school taking fifth grade work. Her teacher lives only a block from her home. Edna's friend, Florence Dobbs, was at her house when she wrote to us. Why is a woman driving a nail like lightning? Because she never strikes twice in the same place. Edna's home is near the Strait of Juan de Fuca, in northwest Washington.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOBBY COON ENTERS WRONG HOUSE.

After Unc' Billy Possum had arranged with Mr. Skimmer the Swallow, who was going south, to take a message to his family in Ol' Virginny, telling them to come join him in the Green Forest, he at once began to make preparations to receive

First of all he had to clean house.

them. Unc' Billy isn't any too fond of work. He had a lot rather that some one else should do the work for him and he is smart enough to fix it so that usually some one else does.

But getting ready to receive his family was different. No one else could arrange things to suit him. This was Unc' Billy's own job, and he was right on it every minute of the day. First of all, he had to clean house. He had been keeping bachelor's hall so long in that big hollow tree that things were not very tidy. So Unc' Billy cleaned house and while he worked he whistled and sang. Peter Rabbit, passing that way, overheard Unc' Billy singing and this was his song:

Mah o' woman is away down souf—
Come along! Come along!
Ain't nothin' sharper than the tongue in her mouf—
Come along! Come along!
She once was pretty but she ain't no mo',
But she cooks mah meals an' she sweeps mah flo',
She darns mah stockings an' she mends mah coat,
An' she knows jes' how mah chillun fer to tote,
Come along! Come along!

Mah pickaninnies am a headin' dis way—
Come along! Come along!
Daddy am a watchin' fo' 'em day by day—
Come along! Come along!
Mah ol' haid aches when Ah think ob de noise
De's boun' to be wid dem gals an' boys,
But Ah doan care if it busts in two
If de good Lord brings dem chillun troo!
Come along! Come along!

Every little while Unc' Billy Possum would sit down to rest, for he wasn't used to so much real work. But finally he got his house clean and made as comfortable as possible, and about that time he began to think how good an egg would taste. The more he thought about it the more he wanted that egg.

"It's no use talking, Ah just naturally have to have that egg," said Unc' Billy to himself, and off he started for Farmer Brown's.

Unc' Billy Possum was hardly out of sight when along came Bobby Coon. Now, Bobby Coon was absent-minded or else he was so sleepy that he didn't know what he was doing, for Bobby Coon had been out all night. Anyway, when he reached Unc' Billy Possum's hollow tree he began to climb up it just as if it were his own. He looked in at Unc' Billy's door. There was the nicest bed he had seen for a long time. He looked this way and he looked that way. Nobody was in sight. Then he looked in at Unc' Billy's door once more. That bed certainly did look soft and comfortable. Bobby Coon chuckled to himself.

"I believe I'll just see if that bed is as comfortable as it looks," said he.

And two minutes later Bobby Coon was curled up fast asleep in Unc' Billy Possum's bed.

Birthday Greetings

THURSDAY, October 5—Inez Bennett, 11 years old; Grace Ione Mains, 11; Geneva Straham, 8.

FRIDAY, October 6—Stella Cade, 9 years old; Artie James, 9; Ruth Power.

SATURDAY, October 7—Donald Cunningham, 10 years old; Thordis Fjerlie, 9; Blanche L. Gourlay, 8; Dorothy Palmer, 11.

SUNDAY, October 8—Esther Ahlf, 9 years old; Margaret Jones, 11; Ruth Stuhr, 9.

MONDAY, October 9—Frances Lobaugh, 11 years old; Isabelle Redding, 11.

TUESDAY, October 10—Marvin DeGooyer, 8 years old; Thelma Reynolds; Annie Mae Wyatt, 10.

WEDNESDAY, October 11—Sarah Houghton; Melva Hume, 9 years old; Annie Thompson, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Esther Strunk, Edrie Bradbury, Bernice Moys, Harold Thaden, Cecilia Roy, Ida May McAuley, Evelyn Wilson, Lois Engle, Gladys Cook, Mary Buntain, Helen Hoard, Mabel Baer, Willie Jones, Marie Wichert, Irma Graebener, Mary Chard, Pearl Fletcher, Merle Dennis, Elva Blankenship, Martha Floch, Hazel Digerness, Matilda French, George White, Leda Ruby Harrel, Maude Warfield, Luella Jones, Vivian Minden, Archie Hansen, Martha Caviezel, Jackson Winterstein, Fred Kissler, Martha Kissler, Anna Pflugrath, Laura Esko, Mary Louella Jenkins.

Pike's Peak or Bust

(Continued from page eighteen.)

For a good while the two hunters clambered about over the mountains. They were looking for game; and at the same time they were keeping a careful watch lest they should come upon game they were not looking for. The game they were anxious not to find was a grizzly bear.

Not many such bears were here. But some there undoubtedly were, and all the miners were much afraid of them. It was known that they were huge, fierce fellows, and that an ordinary rifle bullet would not stop one. Indeed, it was a well-attested, undoubted fact, told again and again by every camp fire, that a single grizzly had once killed five hunters of the same party, as fast as he could get to them.

"Well, Jess, s'pose we jump a bear this morning. What're we going to do?"

"That depends, Jeff. All depends on the kind of bear. If he turns out to be a black or a cinnamon, we'll try hard to pack 'im home with us; or at least the best parts of 'im. But if he proves to be a grizzly—get away, boys! No grizzlies in mine, thank you! They're too big, altogether too big, and too hard to head off. I'll let a grizly bear alone any day if he'll let me alone."

"But the ugly thing about a grizzly is that he won't let you alone, Jess. That is, if you're close to 'im. First glimpse you catch of 'im, he's charging straight at you, with his big mouth open and his little eyes full of fury. You recollect what that trapper told us—that man from St. Louis?"

"That I do—well enough. They hide in such places that they can see you before you discover them. Or maybe they scent you."

"One lovely thing about a grizzly."

"There is, eh? I'd never heard of that, Jeff. Mention it."

"Why, that big varmint cain't climb a tree. And you and I are bully-good climbers, I'm guessing. Or at least I am."

"Well, I'm a fair climber, I suppose; though I haven't had much practice at it since I was a boy, back in old Tennessee. But if a grizzly bear was charging straight at me, I have a strong conviction that I could shin up a tree trunk as fast as you or any other longlegs."

Givens laughed. "Guess a grizzly would make the slowest, laziest poke-easy hump himself like a good fellow. That's safe to gamble on. But let's hope we'll be lucky and not run afoul of a grizzly today."

"Amen to that! Only safe way to hunt a grizzly is to go out with a party, ten or fifteen or twenty strong. Then some of their bullets are well-nigh sure to reach a mortal spot. If not, all the bullets together will mighty soon lay 'im low."

At length the two hunters found themselves on a bench of the mountain. Here, in a low place, they came upon a thicket of aspens. Close around this thicket the soil was loose; and in the soil the hunters discovered tracks of numerous game animals. Among those were some bear tracks. Now both men stood with a hand on a knee, inspecting the game signs critically.

"To me this looks every bit and grain big enough for a grizzly's track," Givens said, with an uneasy glance around.

Jess turned his eyes toward what the other hunter was staring at. "Hard telling, Jeff. It's a bear track—not a doubt of that. It may have been a grizzly; or it might have been only a cinnamon. We ought to kill something here, with all these game signs. I'll tell you, Jeff. This is a good-sized thicket. Suppose you go to the right while I go to the left, and we'll meet on the far side. By being very cautious, at least one of us ought to get a shot."

(To Be Continued.)

TRAPPERS' POISON

Goes' Liquid Poison Capsules kill fur animals on spot. Seventeenth season in market. Free circulars when mentioned this paper.

News for Breeders

WINS GOLD MEDAL.

Alpha's Lady May, a Jersey in the Parker Askew herd at Montesano, recently won a gold medal from the American Jersey Cattle club for a production of 12,751 pounds of milk and 713 pounds of butterfat. She carried a calf 225 days during the test and stood in the 50-pound class for eight consecutive months. She was sired by Fernside's Stoke Pogis 3d.

Pogis Lady Alpha, the dam of Lady May, is nearly 13 years old and has a record of 640 pounds of fat. Three of her daughters have averaged over 600 pounds, which includes the gold medal cow. Lady Alpha is a strong Stoke Pogis bred animal and has produced 11 calves.

There are 14 head of cows on the Askew farm, in the upper Wynoochee valley. Practically all feeds are raised on the farm with the exception of a few concentrates. Winter wheat and vetch are grown for silage crops and red clover constitutes the hay crops.

RAISES TWO LITTERS A YEAR.

"I have had no bad results from raising two litters a year from my brood sows," remarked William Joyce of Burlington, who has a herd of 60 head of Hampshire hogs. "They are an attractive breed and are taking well among the farmers of this section. The foundation stock comes from the Cherrick farm in Oregon."

Mr. Joyce lets the brood sows run out all winter except for a few weeks during farrowing time when they are kept in small individual houses which can be moved from one pen to another. Peas and barley are the main feeds used, since they can both be raised on the farm. It is necessary, however, to buy such feeds as mill run or middlings to make the proper mixture.

Although Mr. Joyce keeps 10 head of dairy cows, he finds that it is more profitable to sell the milk and buy buttermilk.

SIRE HAS GOOD DAUGHTERS.

Sir Mercedes Sadie Vale, the 5-year-old herd bull on the Martin Treosti farm, near Snohomish, is sired by Chimacum King Korndyke Sadie Vale, and is out of Lady Cornucopia Mercedes 2d. This bull was on the show circuit for the first time last fall, winning second place at Yakima and third at the Pacific International. He has 15 daughters in the herd, some of them milking. One daughter has a testing association record of 350 pounds of butterfat as a senior yearling. Other daughters are averaging 50 pounds per day, and one over 60 pounds, on two milkings with ordinary herd care. Some of these daughters will be put on official test this fall.

HOLSTEIN SALE AT EVERETT SHOW.

The Washington State Holstein-Friesian association will hold a consignment sale of 65 registered Holsteins at the Everett Dairy and Live Stock show. The sale will take place the second day of the show, Friday, October 13, and will include many animals of the Dr. E. E. Heg herd at East Stanwood. There will also be three heifers from the Lee Brothers herd at Mount Vernon and five from Ed Hoem and A. H. Buck of Monroe. George Gue will cry the sale and George S. Bulkley of Carnation Stock farms will clerk.

ELLENSBURG COW HAS RECORD.

Another record has been made by a member of the fancy Jersey herd of Nichols & Plunkett, farmers, near Ellensburg. Manda's Empress, a 2-year-old, for May finished fourth in her class for the entire United States and was highest west of the Rocky mountains, producing 55.89 pounds of butterfat and 1109 pounds of milk. The leading cow, a Virginia animal, produced 61.53 pounds of fat, but had been milked only 30 days, compared with 186 days for Manda's Empress.

During April Manda's Empress was second in the United States in her class.

IS USING THE BROWN SWISS.

Brown Swiss cattle have not been heard of as much as some of the other breeds in Washington, but Zeo Priszner, a farmer in the Matlock district, has purchased a registered bull and is planning on breeding up his herd of grade heifers. Since much of his land is in stump pasture, he feels that it will pay to have a breed that will rustle its own feed from the native grasses with such additional pasture crops as can be furnished on the farm. He is selling cream and will feed skimmed milk to the calves and fatten them for veal.

A HERD OF DOUBLE-DECKERS.

There are 25 milking Shorthorns in the herd of 80 animals owned by N. C. Hall of Ridgefield, Clarke county. Some of these animals will milk as high as four gallons daily. The females are of the Clay family, while the herd bull, Villager Sam, is a grandson of the Imported Villager. He is a 4-year-old and shows wonderful prepotency in his offspring. Mr. Hall sells from 10 to 15 head of animals each year.

No scars—no blemishes

GOMBAULT'S CAUSTIC BALSAM does the work better than firing. Hair positively grows back natural color

JOHN KOPPLIN, Gaston, Ore.

Quality Ridge Angus
Well bred cattle for sale at all times at farmers' prices. A number of good bulls and heifers at present.
Satisfaction guaranteed.
J. A. HARRIS & SONS, Eden, Idaho.

The Guernsey Cow Effie of Hope Farm 49360 produced last year more than 8 tons milk, over 2-5 ton butter (16,398.0 pounds milk, 698.49 pounds butter fat). Her only son is for sale; 5 years old; guaranteed a breeder and free from disease. $300.
I will sell any one of her four daughters, and her two grandsons and great-grandson, calves by a grandson of Ne Plus Ultra and Galaxy's Sequel.
S. P. DAVIS, Olga, Wash.

Registered Guernsey Bull Calves
from imported and American dams. Bred for quality and production. Write for description, breeding and prices.
J. T. HARSHBERGER & SONS, Filer, Idaho.

Orchard Hill Farm Guernseys
"Home of high class Guernseys."
DR. PARK WEED WILLIS, Owner.
REDMOND, Wash.

Guernsey Bull Calf 31 tested dams average over 600 lbs. fat. Dam now on test. $150, express prepaid to your express office. Foshay Farm.
O. & M. L. VOGET, Hubbard, Ore.

Young Guernsey Bull
11 months, dam official tested, milk 9080.70; b. f. 415.04, at two years; May Rose breeding. Price $175.
J. M. MILLER, Burlington, Wash.

Young Holstein Bulls
Bessie and other best blood lines. Priced for quick sale.
JOHN BOGART, Woodland, Wash.

Holstein Bulls at Farmer Prices
Sired by son of former world's champion and out of cows that make good at the pail.
S. D. CORNELL, Grandview, Wash.

Blanchard's Herefords 167 choice purebreds, both sexes, calves or matured animals; tuberculin tested. Prices to fit times. Accredited herd. Bonnie Brae and Disturber blood lines.
WALTER BLANCHARD, R. 4, Buhl, Idaho.

Brown Swiss Stock Farm
Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.
THEO BRUGGER, Route 3, Gresham, Ore.

Young Red Polled Bulls
By the champion sire of the northwest circuit, closely related to the world champion Red Polled cow.
F. H. PORTER, Halsey, Ore.

EXPERIMENT STATION
URBANA ILL.

Like a chain—a boot is only as strong as its weakest point

Months of wear can be built into the ankle, the heel, the leg—

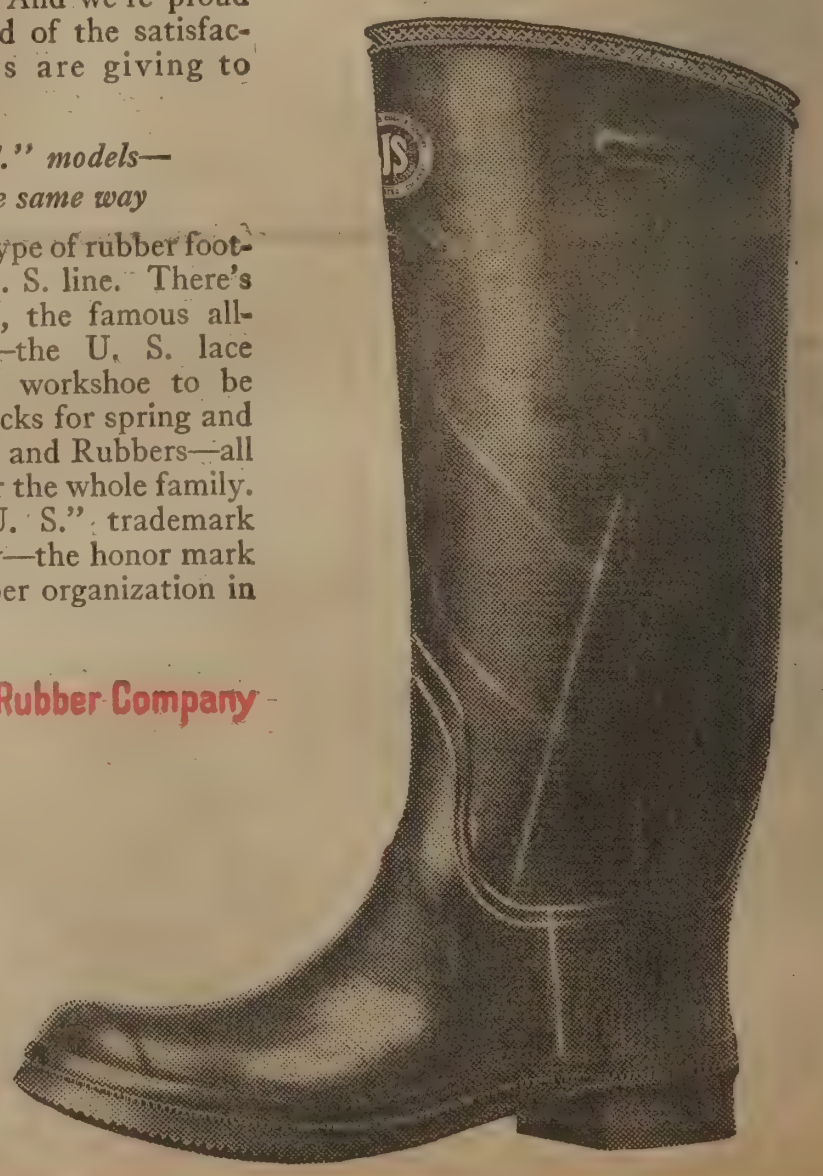
And a crack across the instep makes three-quarters of this wear wasted!

One break in a vital spot and your boots are ready for the junk pile before the other parts have really begun to wear!

There are four points where the strain is hardest—ankle, back of heel, instep, and sole. Unless the boot is properly constructed at these points it wears out quickly.

How "U. S." reinforcements insure against breaks

Into every pair of U. S. Boots at each of these four points is built the strongest kind of reinforcements—from 8 to 14 layers of fabric and tough rubber reinforce these boots at the very places that are generally the "weak spots."



No wonder they give long wear—and *uniform* wear.

We've been making rubber footwear for 75 years. We don't just "buy" rubber—we actually produce on our own plantations the finest grade that can be grown. Our factories are manned by the most experienced boot makers in the country—craftsmen who know the value of painstaking care. And we're proud of the results—and of the satisfaction U. S. Boots are giving to farmers.

Other "U. S." models—all built the same way

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. lace Bootee, a rubber workshoe to be worn over your socks for spring and fall—U. S. Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." trademark whenever you buy—the honor mark of the oldest rubber organization in the world.

Multiply Tractor Jobs

Says the tractor enthusiast: "A tractor doesn't get the colic, spavin or wind gall; it doesn't switch its tail in your face or make you holler your head off when you want it to stop!"

"Quite so," says the horse's advocate. "And a tractor doesn't know enough to stop sometimes when it ought to!"

The fact is, too many arguments have been brought forward for the exclusive use of one or the other form of power, when each has its place.

The United States department of agriculture sometime ago published the results of a study of the "Influence of the Tractor on the Use of Horses." This bulletin, No. 1093, clearly indicates that the horse and the tractor must both be used to gain the greater efficiency.

"Too many are misled by the broad statements that are circulated regarding the importance of the tractor in the matter of horse displacement and lose sight of the major advantage of the tractor, namely, its ability to do heavy work and cover the desired acreage in a shorter time than the same can be done by horses," says the bulletin.

"All reports emphasize the fact that the great advantage of the tractor lies in its ability to save time at critical seasons when time is precious and the success or failure of an entire crop hangs on the speed with which it is handled."

Facts Brought Out.

Here are a few of the principal facts brought out by the government's investigation:

1. The number of horses disposed of on 141 farms averaging 346 1-2 acres, on which tractors had been used for a year or over, was 2 1-2 per farm.

2. The average number of tillable acres per horse increased from 26 1-2 to 28 1-2 after the purchase of the tractor.

3. Nine operators out of 191 displaced horses entirely on plowing, disking and harrowing.

4. Only 16 operators allowed their horses to stand idle while the tractor was in use.

5. The principal advantage of a tractor is its ability to do heavy work in a shorter time than it can be done with horses.

This report also states: "It is noticeable that the men who have owned a machine for one year or less use it, as a rule, only for plowing and a little belt work. As a rule, the longer a machine is owned and the more experienced the operator becomes, the more operations he finds the tractor can be used for."

This is one of the most important matters in relation to the successful use of the tractor. There is considerable money tied up in a tractor, and this money should be earning all the time. We do not like to put our money in a bank and get no interest on it, but that is what we are doing with our tractor money if we let the machine lie idle several months of the year. Unquestionably the successful user of the tractor is the man who finds all manner of jobs that it can perform, thereby getting out of it the highest degree of labor efficiency possible.

Not so long ago the writer was in the machine shed of a successful farmer of the Palouse country. The tractor and the combined harvester were housed side by side. The tractor, to be sure, was unemployed, but the principle was illustrated in this: The gas engine on the combine (for operating the machinery) was lined up with the feed mill for rolling the season's supply of grain. The work could be done at odd times during the bad weather, thus making for labor efficiency of both men and engine. Had the combine not been equipped with the engine, the tractor no doubt would have been, as it should have, lined up with the feed mill for belt work.

The tractor is not merely a power machine for plowing. Where it succeeds as it should, it is used for cultivating, hauling, grinding grain, cutting hay or silage, seeding and as many other tasks as it can effectively be made to perform.

Are After Production

The Van Hoose Brothers of Wenatchee have taken Dr. J. F. Lester into partnership in caring for their herd of 20 grade Holstein and grade Jersey cows. There are two of the Jerseys that are registered and a purebred Holstein bull is used on all cows that show a predominance of that breed. The services of a purebred Jersey bull is secured in the neighborhood for the other animals.

"We are not planning on going into either breed of cattle," said Dr. Lester, "but we are breeding for milk production. We are raising all of the best heifer calves and will thus increase the size of the herd slightly."

The milk from the Van Hoose herd is cooled immediately after being milked with a stream of spring water and held at a low temperature until delivered in bottles to the city retail trade. Later on a special brand of certified milk may be put up and sold to fill a special demand.

A Big Surprise

If you are at all interested in the Raw Fur Industry, whether trapper or shipper, you will surely want to know what we have in store for you.

SUCCESSOR TO

Vol. 47. No. 15 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF October 12, 1922

For Good Farming, Attractive Country Homes and Happy Country People

There Was Something Doing Every Minute

By RALPH ERSKINE

The 23d annual Western Washington fair has passed into history and the 100,000 or more people who attended will recall the event as the best ever held at Puyallup. Some of the visitors were interested in the better babies contest, in which there were 600 of "the best babies in the world!" Others spent their time wandering about the live stock barns where some of the champions of the northwest were entered. The poultry and rabbit fanciers found plenty to interest them in the large poultry building and there was always a crowd in front of the fruit and vegetable exhibits. When the guests had tired of looking at the exhibits there were plenty of entertainment features awaiting them, either in front of the grandstand or among the concessions at one corner of the fairgrounds.

Every foot of space in both the industrial and automobile sections was filled with interesting and instructive displays and the woman's building was filled to capacity with housewives' handwork, which was enough to fill even mere man with admiration.

It was a real fair. A fair for all the family, a fair in which there was no lagging. There was something going on every minute.

Rain Fails to Wet.

There were occasional showers during the week, but the fair management was prepared for bad weather with covered passageways, so that the rain did not interfere with the day's program except to slightly curtail the attendance. The grounds are compact and every foot is utilized to the best advantage.

The live stock department brought out herds from many parts of the state and some entries came from Oregon. While this department is not as large in proportion as the other departments, W. H. Paulhamus, president and manager of the fair, made a special attempt to have as many representative herds from each breed as could be accommodated.

There were two herds of Holsteins entered, the 17 head from the Carnation stock farms and the herd from the Western State hospital at Fort Steilacoom. All of the young animals in the Carnation herd were sired by Matador Segis Walker, the herd sire. The grand champion bull was a full brother, Segis Walker Matador. The state herd made a strong fight for the grand champion female, but Hazelwood Aaggie Hartog, an aged cow in the Carnation herd, was placed at the head of the females.

Robert Tresch, a Holstein breeder of Puyallup, was the third exhibitor of the breed, but he showed only one animal.

Two Guernsey Herds.

The fawn and whites came from two of the state's better known breeders, the herd from Orchard Hill farm, owned by Dr. Park Weed Willis of Seattle and the Dr. A. McRae Smith herd of Bellingham. The latter had both grand champions. The surprise of the day came when John L. Smith, who judged the dairy classes, placed Fircrest LaFrance's Pride, a senior yearling heifer, over LaFrance of Bralee, both of the Smith herd, for the female grand champion. The older animal, although showing dry, had been placed above any of the other females in the herd and was grand champion at some of the fairs. Both champions were the produce of LaFrance of Bralee.

The animals in the Dr. Willis herd made a much better showing than a list of the champions would indicate. Chicona Hero, the 5-year-old herd bull, was a strong individual and the two yearling bulls, Glenwoods Jolly Tar and Chicona Victory, were placed first and second. These animals have been running a close race for first at all fairs where they have shown. The females shown in this herd are well bred animals and were a credit to their owner.

The herd of Sears & Little of Winlock comprised all the Jerseys except a senior yearling bull. The turnout consisted of 16 high-class animals of the St. Mawes strain. Most of the animals were young individuals which were sired by St. Mawes of Grassmere, the herd bull at the Sears farm. Diploma's Royal Boy, a junior calf, was made grand champion above some of the other bulls that had been placed champion at other fairs.

Cicely's Golden Dawn, a 2-year-old with a splendid frame and well placed udder, was made grand champion. The herd had the misfortune to lose the senior heifer calf that stood a chance for a high placing in the female classes. She contracted pneumonia and pleurisy at Yakima and died at the Puyallup fair.

The Ayrshires came from the VanTasset herd of Wenatchee and filled all classes listed. Queen Scottish Cavileer, the bull that headed the herd at the state college last year, was grand champion bull. The entire herd made a splendid addition to the show.

Good Beef Cattle.

The Herefords were represented by the show herd from the Methow Valley Live Stock company at Winthrop, Wash. There were 16 head in this herd that had just finished the circuit in Washington and attended the Oregon state fair. Their outstanding male was the herd sire, Commander Jr., that was first prize junior calf at the International in 1920. He was made grand champion at Puyallup. Lady Anabel, a senior calf, was placed at the head of the female classes.

J. D. McGuire of Tenino entered the only Shorthorns that were shown and took all prizes in the classes that were filled. Most of the young stuff in the herd is sired by the 3-year-old herd sire, Mayflower King.

The horses made a much better showing than last year. R. C. McCroskey of Garfield had the only exhibit of Clydesdales, but had the classes well filled with 14 head. His yearling stallion, Prince, an outstanding animal that has been winning heavily everywhere shown, was grand champion.

H. W. Merrit of Rosalia exhibited Shires. Martha Washington was the grand champion mare and Forester Prince, an exceptional 2-year-old, was placed at the head of the male classes.

For the Percheron there were three exhibitors: S. Mulhall of Buena, Yakima county; the Ruby Stock farms of Portland and H. W. Merrit of Rosalia, who had two head. The herd from the Ruby Stock farm included also four Belgians and two Shires, as well as the two head of Percherons. Ruby had the champion Percheron stallion and champion Belgian stallion, while Mulhall had the champion Percheron mare, Lenore. The classes were judged by George M. Wilson of Wilbur.

Good Hog Show.

There was a creditable, though comparatively small, swine show. The bacon type was well represented by the Tamworths, although it was a one-herd showing. I. J. Oder of Yakima entered his 17 head that he had shown at Yakima. One Duroc Jersey was entered with this herd which competed with the aged sow in the W. H. Turner herd, also from the Yakima valley. The sweepstakes sow of the show was one of Oder's Tamworth, while Turner showed the sweepstakes boar, a Duroc Jersey.

Poland Chinas came from the George Longknecht herd at Yakima and from J. J. Oder's farm, nine head in all. Maxein, a sow pig owned by Longknecht, was placed at the head of the female classes of Polands.

Morrill Delano, Puyallup, and L. C. Hansbury, Orting, were the exhibitors of Berkshires, each showing a few head of good animals.

R. W. Fowler of Chehalis judged the swine classes.

There was the largest exhibit of Chester Whites that has been shown at Puyallup in many years. J. A. Irwin of Tacoma exhibited 29 head, most of which were of his own breeding and traced back to the Rassmussen herd in Minnesota. W. H. Noris, the only other exhibitor of Chester Whites, had one boar in the 1 year and under 2 class.

Fruits and Vegetables.

There was no department that has made more rapid strides toward perfection than the horticultural an dvegetable division. The booths this year were made up by counties, communities and individuals. Some clever arrangements were shown and there were many of the newer varieties of fruits exhibited. One of the most attractive showings was the potato display, which was put up by a number of the Pierce county farmers with the help of L. T. Oldroyd, county agent. The trays of potatoes were labeled to indicate the varieties and a large sign emphasized the fact that good market tubers could be grown in the Puget Sound district as well as in the irrigated sections if the proper varieties are selected.

In the county booths, Skagit county took first prize, while Grays Harbor was second and Mason third. The general community exhibits were placed as follows: Puyallup Heights first, Sumner second, Alderwood Manor third and Yelm fourth.

In addition there were some commercial fruit displays, for which Puyallup Heights took first award and the Sumner district second. There were a few individual market garden displays, in which Jacob Stilling was first and the Helmond Brothers of Sumner second.

The Experiment Station Exhibit.

The western Washington experiment station had a complete exhibit showing some of the main lines being carried on at the station at Puyallup. A large variety of grains and grasses was shown and recommended for western Washington. The 24 kinds of dangerous weeds that are found in this section were shown in pots.

The necessity of spraying fruit trees and treating potatoes for diseases was demonstrated by the actual result of both practices. The fertilizer boxes gave the visitor an apportunity to examine each kind and the card on the wall told what each should be used for.

A model barrier for checking the strawberry root weevil was set up with a miniature berry patch. This is an entirely new method in Washington and will be tried by the experiment station next year.

The extension service of the state college demonstrated 11 different phases of farm and home work in booths, all of which clearly explained the objects by show cards. The departments covered were: Berry growing, potato diseases, bees, rotation of crops, dairying, poultry and home economics.

A better sires demonstration was arranged in the cattle barn, where four cows were shown that had better records than their dams as a result of using purebred sires.

The School Exhibits.

The educational building had a complete display of exhibits from all the county and city schools. The space was divided according to the size of each exhibit, the Tacoma city schools taking a large space at one side. The county schools had smaller booths on the opposite side of the building and contained practically all branches of school work. There were some very fine pieces of furniture made in the manual training classes in the larger schools and the quality of all work was more than could be asked of the students.

The commercial exhibits in the next building were many and of a varied nature. The United States bureau of public roads had set up a display which illustrated different types of roads. The forest service of the United States department of agriculture told what the service is doing and the United States biological survey had a display telling of rodent control which is being carried on in different parts of the state.

The western state hospital at Fort Steilacoom, had a large display of fancy work and other pieces which had been done by the patients. Some of this work, however, was put up for sale.

The Sweetest Department.

The bee and honey department was one of the most attractive displays. Entries came from Yakima and Oregon as well as from many of the beekeepers of the Puyallup valley. Wilfred Orley, a club member from Edgewood, gave a bee demonstration in a screened cage, to show the different steps of handling the bees. Wilfred has been working with bees for only one year.

The Edgewood Bee club put on a complete display of honey, both comb and extracted. Colonies were housed in glass frames and there were other educational features that added to the exhibit.

The Club Department.

The boys and girls' club exhibit was one of the most interesting divisions of the agricultural department. It was mainly of the two kinds of work, gardening and sewing and came from all parts of the county.

The display from Connell's Prairie Garden club won first place and the Loveland exhibit was second. Other clubs that competed for the honors were: Alderton, McMillen, Fife, Sumner, Parkland, Woodland, Marion, Crescent Valley, Puyallup and Jovita. The Thrift berry club won first prize with its display of berry bushes. The booth was one of the most attractive ones in the building.

In the sewing clubs the prizes were awarded on the individual workmanship of the different garments shown. The clubs that exhibited were: Benston, Puyallup, Marion, Woodland, Parkland,

(Continued on page fifteen.)

SOMETHING of the pleasure of entering a clean, well-kept and hospitable home greets one as he enters the gates of the Western Washington fair at Puyallup, and, despite a stress of business, no host can be more hospitable than W. H. Paulhamus, whose attractive personality pervades the whole institution.

Nowhere have I seen fair buildings more lavish with light, ventilation and walks between the lines of exhibits. Nowhere have I seen a more magnificent display of flowers that could be taken in by one sweep of the eyes than were most tastefully exhibited in a big tent. "We want a permanent building to take care of these flower exhibits," said Mr. Paulhamus.

At an expense of $400 and express charges from New York, Mr. Paulhamus provided a roomful of paintings by American masters, brought across the continent from the Metropolitan art museum.

Mr. Paulhamus is master of ceremonies at the afternoon programs and his "talks" before the grandstand lend a charm to the program that is heartily appreciated by the crowds.

These are only two or three incidents of the fair, a full report being given in this issue of The Washington Farmer by a staff representative.

The Western Washington fair is an institution that not only deserves the large patronage which it is receiving from the West Side people, but is one which East Side people will be well repaid for visiting.

E.A.S.

Won Trophy Cups

In the accompanying picture are shown Miss Selena Deno of Spokane and Harvey Norris of Goldendale, club girl and boy, who won The Washington Farmer trophy cups at the Washington state fair this year. One cup was awarded to the highest scoring girl in the canning, cooking, breadmaking or sewing contests, and another similar cup to the boy scoring highest in pigs, sheep, dairy, beef, poultry, garden, corn or potato contests. Miss Deno scored 94 points in sewing and Harvey scored 95 points in poultry.

Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Dollar Farming and Life Farming

Can grain farming, live stock farming, fruit farming and truck farming be made so attractive in the the state of Washington that more and more people will desire to get into the game and stay in the game?

Dollar work alone will never do this, nor will non-dollar work alone ever do it, for farming is both a business and a life. There are business attractions and there are life attractions in farming.

Almost any one can point out dollar attractions, even if they are not there. Only here and there is there one who can point out the life attractions, the life satisfaction in farming.

Farming has to do with life's operations—plant and animal life. You may fill a warehouse with chairs that you have made or you may fill a warehouse with grain that you have grown. The one is different from the other.

You have not been initiated into grain growing unless the growing field of grain talks to you; you have not entered into the secrets of fruit growing unless the apples on the trees are confidential with you. After you have done all else you must pet the cow to get the most milk. Something besides feed puts the most flesh on the steer.

Many years ago I was on a wheat farm in the Palouse country. The owner was a comparatively recent comer in the neighborhood. I was out in the wheat field with him. During the conversation he picked up a clod of the soil; he broke it apart and fondled it in the palm of his hand. He was talking to that soil in a language all his own. It was to him a living thing. We are finding out more and more that the productive soil is a living thing. Such intimacy with the soil has not destroyed the productiveness of that man's farm. I've noticed that he has prospered and bought other lands.

The life in farming does not necessarily destroy the dollar in farming. The two together make the farmer satisfied.

A World Yet Undeveloped

There may open up, some day, a great new field of reclamation—reclamation of a basically different type—that will make highly valuable the bogs, pine barrens and soils of other types now neglected, declares a writer in the National Geographic Magazine. There may, in his opinion, come into propagation in America's temperate latitudes new forms of field and orchard plant that will utilize the "acid" soil.

The reason that wheat and its familiar relatives, are the staple grains, that apples and our other common fruits of the temperate zone occupy our orchards, is merely that civilization began on an alkaline soil. Asia Minor, which was the birthplace of agricultural and horticultural progress, did not prove a happy home for the acid-loving species of plant life. Those grains, vegetables and fruits that flourished in its alkaline earth were, therefore, the group destined for fostering care and passed on to Europe and America. We know them today, at an advanced stage of their improvement, as forms far removed from the unprofitable weeds in which they had their beginnings.

The group of acid-loving plants is large, possibly as potentially productive, nutritious and palatable, as the alkali-lovers, though yet undeveloped. Who can say what other plant forms, of strangely alien character, our temperate zones would now be yielding if the acid soil, instead of the alkaline, had been the basis of husbandry from the beginning? Who can say what strange, what vitally novel plant life may yet occupy our waste soils if, from forms yet almost untouched by selection, we develop useful acid-preferring vegetables, fruits and grains? From acid soil, we have one staple product—the potato, native to South America, but already highly improved. Possibly other species, now neglected, have a future as potential.

Disappointed But Not Discouraged

THE FARMER shares in the disappointment of the apple growers and other farm producers and business interests of the Wenatchee district over the adverse report of the examiner for the interstate commerce commission on the construction of the Wenatchee-Southern railroad in Chelan, Kittitas and Benton counties.

Under United States law, permission to build another railroad can not be had until a certificate of public convenience and necessity has been obtained from the interstate commerce commission. It is proposed to construct a railroad from Wenatchee in a southerly direction along the west bank of the Columbia river 53 miles to Beverly Junction, on the Chicago, Milwaukee & St. Paul, and from Hanford, Benton county, in a southerly direction along the west bank of the river to a connection with the O.-W. R. & N. at a point five miles from Kennewick, a distance of 29 miles. At present Wenatchee has only one railroad outlet, the Great Northern, and the petitioners for the proposed new road represented that the Great Northern was unable to move the apple crop promptly. Therefore the need of a connection with other transcontinental lines.

But while there is disappointment over the unfavorable report of the examiner, final decision rests, after all, with the interstate commerce commission, and the fact that the examiner has rendered an adverse report is not conclusive that the commission will agree with his findings. We are glad that the promoters of the Wenatchee-Southern have not given up the fight, but declare their purpose to "leave no stone unturned to obtain a favorable decision from the commission." President Edward S. Russell is quoted as saying: "The unfavorable recommendation will make the fight harder and will cause us additional expense, as we shall have to send out attorneys to Washington, but we believe the entire community is with us in our effort to obtain greater and better transportation facilities for the district."

There are five transcontinental systems in the state of Washington—the Northern Pacific, the Great Northern, the Chicago, Milwaukee & St. Paul, the Union Pacific system and the Canadian Pacific. With the state thus gridironed with railroads, the Wenatchee district is too rich and important to be restricted to the service of a single railroad, when the building of two short links would connect it with other systems in a way that would be beneficial both to the producers and the consumers of the country.

There are now nearly 3000 cooperative buying and selling organizations in Germany.

* * *

Owing to internal troubles in Ireland the London market is reported as sustaining a serious curtailment of its supplies of bacon. One large firm, which normally supplies 6000 sides of bacon per week to London, has lost its factories in Waterford, Limerick and Cork through incendiarism, says Commercial Attache Tower, London, reporting to the department of commerce.

State Farm News

An intercounty community federation was organized at Walla Walla recently at a meeting attended by 38 representatives of 10 towns and communities of southeastern Washington and northeastern Oregon.

A. R. Gardner, Kennewick, was elected president; J. L. Wallace, Dayton, first vice president; E. L. Wheeler, Waitsburg, second vice president; A. F. Wehe, Pasco, secretary, and M. C. Zinthoe, Starbuck, treasurer.

The purpose of the organization is to bring into closer relationship, coordinate efforts and promote commercial, industrial and social welfare of its member communities and to work in harmony with all agencies for the general upbuilding and development of the Pacific northwest.

* * *

White Bluffs' first annual community stock and fruit fair was held September 29 and 30. The premium list included first and second ribbons for all kinds of stock, poultry, grain, vegetables, fruit, flowers, cookery, needlework and antiques.

* * *

Gardeners of the Walla Walla valley will experiment this year with raising of broccoli. it was stated by C. B. Auker, head of gardener's association. At Roseburg, Ore., it is being raised successfully, between 400 and 500 cars being shipped annually.

The question to be decided here is whether it can survive the winters, as it is planted in the fall. Gardeners, since the recent rains, have been planting onions and spinach, the rain having been sufficient to put the ground in condition.

* * *

Following the meeting of fruit growers in the Zillah district when 60,000 boxes of apples were signed up with the apple pool committee, the growers again met a few days later and signed 95,000 boxes more, according to word received at the farm bureau office at Yakima.

* * *

The commissioners of dike district No. 3 at Locke, in Pend Oreille county, signed a contract with the Standard Asphalt Paving company of Spokane to restore the dike at Locke, which was washed out by high water in the Pend Oreille river in the spring of 1921.

The dike will be raised to an elevation of 2050 feet above sea level, two feet higher than the crest of the 1913 flood, the highest since 1894. The break will be filled and the dike strengthened at all points. Work will be started at once.

Commissioners of the district are W. C. Cusick, Fred Metcalfe and P. H. Sullivan.

* * *

U. F. Diteman of Yakima reports that he has sold 12 carloads of feeder lambs to farmers in the lower valley who will fatten them for the Coast market.

* * *

The Northern Pacific railway has purchased three half blocks on the south edge of Yakima adjoining its tracks. The reported price is $50,000. The company plans to lay trackage, build warehouses and lease the property for industrial purposes. George T. Reid, vice president, says building may not be done until next year.

* * *

D. H. Ulrich has been appointed manager of the Stevens county farm bureau to succeed C. H. Gerkin, who resigned recently to represent a fruit marketing concern at Meyers Falls and take charge of the warehouse at that place.

* * *

John H. Hall of Portland, Ore., has filed articles of incorporation for the Yakima Southern railway, with Secretary of State J. Grant Hinkle. Other incorporators named are E. E. Lytel, Henry E. Reed and J. B. Atkinson. The corporation is capitalized at $1,000,000 and its purpose is to build a railway between Yakima and Underwood. Underwood is about 75 miles southwest of Yakima and about two miles west of White Salmon, across the Columbia river from Hood River. The proposed road will connect with the S., P. & S. at Underwood. Headquarters of the new corporation will be at Vancouver, Wash.

Thirty-eight cars of sheep were sent to market from Yakima on September 29. Shippers and number of cars were: Ballard Sheep company, 12; Yakima Sheep company, 10; Ernest Berg and George Prior, 5 each; Rowe & McGuffie, 4; H. E. Fleming, 2.

The lambs of this shipment will average 75 to 80 pounds.

* * *

About 4000 acres of fruit have been signed by growers for the new federal inspection and to cope with the additional work, says a Wenatchee report. District Inspector Nielson is putting on additional inspectors in Grant, Chelan, Douglas and Okanogan counties. Eastern buyers are reported to be giving preference to apples shipped under the federal requirements, but it is optional with the grower whether his fruit is inspected for a federal certificate.

* * *

Don M. Carr, superintendent of the Indian agency at Fort Simcoe, has received a wire from the interior department at Washington, D. C., that the department had decided on the removal of the agency to Toppenish.

* * *

The amount asked by the Lincoln county commissioners for the three road districts in that county and for the county road and bridge funds for next year is $4846 less than the amount asked in 1914 and $28,200 less than was asked for in 1920, when prices were at their highest. The amount asked for the three road districts and road and bridge fund for next year is $112,800.

Washington is to be the first state in the Union to receive the cooperation of the federal government in the eradication of tuberculosis in cattle in the state-wide area plan, it is announced by E. L. French, department of agriculture.

At a conference between officials of the state department and the federal bureau of animal industry it was found that Washington had advanced the fight against tuberculosis in animals farther than other states. Operations have been extended to every county and in each county from 50 to 90 per cent of the cattle have been tested for tuberculosis.

The state-wide area designation means that the federal government will participate on an equal basis with the state in furnishing inspectors and in payment of indemnities for cattle condemned after the tests. The new plan will result in an immediate cleanup of the state, completion of unfinished tests and obtaining and enforcing quarantine laws to bar the entry of cattle until they have been tested, said Director French.

FARM BUSINESS AND MARKETS OUTLOOK

Business activity resumed its upward trend with a rush following the settlement of the coal strike and the partial settlement of the railroad strike. The same rate of acceleration is not likely to be maintained over a long period, but moderate improvement promises to continue during the fall.

Car loadings for the week ended September 16 were the largest in nearly a year. A slight advance in money rates and a decline in the bond market indicate that more funds are being used in business development. Prices for new material, such as iron, steel, copper, lead, wool and hides have advanced.

The tide has turned in wages as shown by the outcome of the coal strike and the fact that wage increases in the last three months in all branches of employment combined have been much more numerous than wage reductions.

With wages stabilized on a level only slightly below the peak of the war period, costs of manufactured articles and services which the farmer must buy, including transportation, remain out of line with the price of farm products. On the other hand, high wages put the laboring classes in position to buy farm produce.

Prospects for the future are not universally favorable by any means. The car shortage becomes more serious each week. Where perishable goods are involved, it inevitably means hardships.

That industrial and trade activity can continue long with the farmer's income so much out of line with the income of other branches of society as at present is quite doubtful. Either prices for farm products must advance to a higher level or industrial activity will collapse within the next 12 months.

Broad Demand for Good Beef.

Prime steers reached a new top of $12.85 at Chicago last week which is the highest point since the fall of 1920.

With so many grass steers and plain shortfeds on the market, butcher cows and heifers have had insecure footing and declined 25 cents last week. Veal calves dropped 50 to 75 cents at Chicago with heavy killing classes down even more, which is the normal trend for them at this season.

Instead of 1000 to 1100 pound steers most buyers are after 750 to 900 pound weight or even lighter. Experience in recent winter feeding operations justifies the change.

New Crop Hogs Break Market.

Shoats from the spring pig crop are becoming numerous on all the leading markets and weekly receipts are certain to expand from 25 to 50 per cent in the next three months.

Demand for fresh pork is keen and both foreign and domestic buying of cured hog meats and lard maintain satisfactory breadth.

Reductions in storage holdings of both hog meats and lard during September reveal an exceptionally healthy situation.

Lamb Run Expanding.

Receipts of sheep and lambs at the seven leading markets have expanded over 50 per cent in the last six weeks, but the total last week was only about 276,000 head compared with an eight-year average for that week of 442,000 head. Prices have receded slightly, but no drastic decline is in prospect. Dressed lamb prices were affected by larger offerings, including some fresh Canadian and frozen Argentine and New Zealand lamb and by the fact that they were out of line with other meats.

Feeders are taking all the thin lambs they can find at prices above the fat lamb market.

Wool Trade Broadens.

Wool trade has broadened since the new tariff went into effect as manufacturers feel more certain over the outlook. Practically all grades of wool have changed hands at firm prices with evidence of an advancing tendency.

Withdrawals of bonded wools have not been exceptionally heavy since the new tariff went into effect. Most of these wools have already been purchased by manufacturers who will take them out as needed.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England—One-half blood, 46@47c; three-eighths blood, 43@44c; one-fourth blood, 42@43c.

Scoured basis:

Oregon—Eastern No. 1 staple, $1.25@1.28; fine and fine medium combing, $1.15@1.20; eastern clothing, $1.05@1.12; valley No. 1, $1.07 @1.10.

Territory—Fine staple choice, $1.27@1.32; one-half blood combing, $1.10@1.15; three-eighths blood combing, 88@95c; one-fourth blood combing, 77@80c.

Wheat Disappearing Fast.

Demand for wheat in the last three months failed to support prices at the early season level, but a survey of the situation shows that United States wheat has been absorbed into consumptive and export channels at a gratifying rate.

A summary of the situation for the first three months of the current wheat year and comparative figures for the corresponding period in 1921 and the 10 years, 1911 to 1920, appear in the following table:

	1922. Bushels.	1921. Bushels.	Average 1911-1920. Bushels.
Primary receipts	157,201,000	193,687,000	128,363,000
Total disappearance	142,620,000	148,958,000	100,053,000
Exports, September, 1922, est..	85,000,000	135,327,000	55,199,000

The flour production for July 1 to September 16, 1922, was 28,978,000 barrels; 1921, 31,800,000 barrels; average 1918-1920, 24,604,000 barrels.

The department of commerce estimates the crops of importing nations at 160,000,000 bushels less than last year, but this is partly offset by an increase in the rye and potato crops, and the poverty of European countries may limit their purchases. Both France and Germany are putting food regulations into effect.

The North American crop is 112,000,000 bushels more than last year, the Argentine crop is estimated unofficially at 30 per cent more than last year, and India is said to have removed the ban on exports. Australia reports some damage from dry weather, but Broomhall estimates the surplus from the new crop at 70,000,000 bushels.

Coarse Grains Firm.

Corn and oats prices have advanced about 10 cents a bushel in the last month.

Primary receipts of oats from August 1, the beginning of the oats year, to September 30, total 48,532,000 bushels compared with 61,824,000 bushels last year and an average of 65,691,000 bushels in the 10 preceding years. Demand has been practically up to normal as shown by a disappearance of 49,231,000 bushels from commercial channels compared with 33,543,000 bushels last year and a 10-year average of 51,424,000 bushels.

Cash Grain Markets.

The range of cash grain prices for the week ending October 4 was as follows:

Chicago—Wheat—No. 2 red, $1.09 1-2@1.15 3-4; No. 2 hard, $1.06 3-4@1.09; No. 3, $1.06. Corn—No. 2 mixed, 63 3-4@67 1-2c; No. 3, 63 3-4@67c; No. 2 yellow, 64@68c; No. 3, 64@67 1-4c; No. 3, 63 1-4@66 3-4c; No. 2 white, 64 @67 3-4c; No. 3, 64 1-2@67 1-4c; No. 4, 63 1-4@66 3-4c. Oats —No. 2 white, 40 1-2@43c; No. 3, 38 3-4@42 1-4c; No. 4, 36 1-2@38 1-4c. Rye—70 1-2@71 3-4c. Barley—58@66c.

Most Timothy Seed Sold.

The department of agriculture reports that fully two-thirds of the timothy seed crop had already left the hands of growers by September 12. The market is firm at present. Alfalfa seed production is about the same as last year. Clover seed prices lost part of the smart advance of last week. Reports of yields are below the expectancy of a month ago and farmers are selling less freely than when prices were $2 lower.

Chicago, per 100 pounds—Clover, $13@17; timothy, $5 @6.25.

Toledo, per bushel—Clover, $11.40; timothy, $3.15.

Sharply higher prices for feeds resulting from the war scare and car shortage have restricted the demand. Eastern buyers are indifferent and the southwest which has been the most active buyer has slowed down perceptibly. Some Canadian millfeeds are coming into the east.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $22; standard middlings, $22.50; flour middlings, $26; cottonseed meal, 36 per cent, $38.50; 43 per cent, $42.50; hominy feed, $27; gluten feed, $31.05; old process oil meal, $45; tankage, $60.

Hay Markets Firm.

Hay markets are generally reported as firm with receipts light. Demand is limited also, but may improve with colder weather. Drought in the southwest has broadened the demand from that section while the size of the alfalfa surplus in Oklahoma and Kansas was cut down by the same cause. Pastures in most sections are in good condition. Prices seem more likely to go higher than lower.

Price per ton in carlots—Chicago—No. 1 timothy, $21 @23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $20@21; No. 1 clover, $14@16; No. 1 clover mixed, 16@17; No. 1 alfalfa, $20@23; upland prairie, $17@19; midland prairie, $14@17; rye straw, $12@13; oat and wheat straw, $9@11.

Fresh Eggs Scarce.

Strictly fresh eggs are extremely scarce and are selling at a big margin over the doubtful kinds. They are almost sure to become more scarce in the next 60 days so that there is no reason to look for a lower price range. Storage eggs are being moved out rapidly, but such a movement must continue right along to dispose of the enormous stocks.

Receipts of eggs at the four leading markets during September totaled 765,753 cases compared with 852,763 cases last year. Total holdings in the United States on October 1 promise to be about 8,000,000 cases, the largest on record for the corresponding date, but a decrease of over 20 per cent from the high point two months ago.

Poultry prices are weakening, but are still comparatively high. Receipts are expanding gradually, but the September total on the four leading markets was smaller than in September last year. Demand is exceptionally broad and storage stocks did not start to increase until around October 1.

Butter Supply Is Light.

Receipts of butter at the four leading markets have been running slightly below normal for this season of the year. Demand remains keen, especially for the higher scores. The supply in the fresh arrivals has been insufficient and storage butter has been drawn upon freely so that storage stocks at the four leading cities are now smaller than they were last year. Based on this evidence storage stocks in the entire United States on October 1 are believed to be the smallest for that date in a number of years. Lower grades are easier to obtain and prices thereon have not been maintained in all cases while higher scores advanced during the past week. With withdrawals from cold storage in large volume, the price at which storage operators are willing to sell is an important factor.

Prices for 92-score fresh butter on October 4 were:

Chicago, 42 1-2c; New York, 44c; Boston, 44c; Philadelphia, 45c.

Advance in Cheese Prices.

Cheese prices advanced again last week, influenced by the strength shown at country points, the trade in some respects assuming the proportions of a boom. Sales in large blocks were not numerous, but local trade and small shipping orders were on a highly satisfactory scale on distributing markets. The amount of cheese disappearing into consumptive channels at the four leading markets during September was about 38 per cent more than in that month last year. Receipts declined last week so that it is evident that higher prices have not yet increased the pressure upon the market from the producing sections. All of the recent advance may not be maintained, but on the other hand no pronounced decline is probable. Storage stocks are being drawn upon at a moderate rate.

Prices for No. 1 American cheese on October 4 were:

Chicago—Flats, 23@24 1-2c; Twins, 22@23c; S. Daisies, 23@24c; D. Daisies, 22@23 1-4c; Young Americas, 22@23c; Longhorns, 24@25c.

Fruits and Vegetables.

Carlot shipments of potatoes are the heaviest of the year and are still increasing. The total last week appeared to be about 7900 cars compared with an average of 6467 cars in the corresponding week during the three preceding years. The crop is approximately four bushels per capita while the average crop in the preceding 20 years has been at the rate of 3.6 bushels per capita. Prices were weak at most points, but Colorado f. o. b. prices advanced to 75 to 85 cents per 100 pounds for Brown Beauties. Northern round whites are quoted at $1 to $1.10 per 100 pounds in carlots at Chicago and $1.25 to $1.55 at other midwestern markets.

The carlot apple movement is expanding steadily each week with about 5000 cars shipped in the last week in September, which is below the corresponding week last year, although larger than in 1920 and 1919. Prices upon midwestern A 2½ Jonathans are $3.50 to $5.50 per barrel in the central west with Northwestern Jonathans at $2.25 to $2.75 per box.

The Grain Market.

PORTLAND, Ore., Oct. 7.—Cash wheat Hard

(Continued on page twenty.)

Increasing Home Demand for American Farm Products

Wheat prices at Chicago and other grain market centers have been bobbing up and down, according to the war news from Constantinople. When the outlook for a peace settlement seemed gloomy the price of wheat would shoot upward, only to react with a downward movement when more pacific news came from Paris, London and Constantinople.

But, aside from the Turkish developments, the foodstuffs division of the United States department of commerce has reports which seem to justify a hope for continuing higher wheat prices. Much depends upon the total takings of wheat by importing countries for the coming year. The best data available at present indicate that these countries produced this year about 160,000,000 bushels of wheat less than last year. As they took 640,000,000 bushels of wheat last year, if we added this to the present deficiency there would be indicated a probable need of about 800,000,000 bushels, provided they consumed as much as last year. Increased rye and potato crops in a number of European countries will offset some of the demand for wheat. But, allowing for this, the importing countries should take better than 700,000,000 bushels if they can find the means to do so. But that if is a big "if." Undoubtedly the importing countries would like to buy more wheat and flour from America if they had the financial resources to do the buying.

That they will buy more is the opinion of Secretary of Commerce Hoover. According to the secretary, delayed purchases by European wheat buying countries, which will take approximately 160,000,000 bushels of wheat more this year than last, will stabilize the price of the grain in the United States.

Mr. Hoover believes that the recent transportation difficulties will probably prove to be a blessing in disguise to the wheat growers who have been unable to market their products. Farmers, he said, are prone to sell their products after threshing. Because of the low price at which the wheat has been selling, and the larger demand which is bound to come, the farmers who have held their grain will be in a much more favorable position than those who were unlucky enough to obtain transportation facilities.

The European wheat crop will be about 800,000,000 bushels, or about 160,000,000 less than last year, Mr. Hoover said. Buying has been very slow from overseas, as is usually the case, and the demand will probably come all at once, he declared.

Another controlling factor will be the supply of wheat in the exporting countries. The final estimate of the Argentine government for the 1921-22 wheat harvest is 180,640,700 bushels, according to a cable just received by the department of agriculture from its agricultural commissioner at Buenos Aires. If this estimate should be borne out, the Argentine crop this year will be about 10,000,000 bushels more than that of last year.

Turning to our own food exports, it is found that the most notable increase in August was in wheat shipments—33,703,000 bushels, valued at $42,404,000, as compared with shipments of 14,952,000 bushels in July. But, notwithstanding this increase in August over July exports, August exports this year are much less than August exports in 1921, when we sent abroad 58,536,000 bushels of wheat, or nearly 25,000,000 bushels more than were exported in this August.

However, the general trend of our exports of food products indicates that the war-ridden European countries are getting back more and more on a production basis. Exports of dairy products, for instance, were only $1,641,000 in August this year, as compared with $4,082,000 worth in August of last year. There was a falling off also in exports of bacon, hams and shoulders, lard and other meat products.

Comparing the eight months ended August, 1922, with the corresponding eight months of 1921, we find a heavy slump in the value of our exports of breadstuffs were worth only $341,340,000, as compared with $575,052,000 in the same period of last year.

On the same basis of comparison, our total exports of meat products fell from $117,650,000 the first eight months in 1921 to $88,782,000 in the first eight months of this year, while our exports of dairy products fell from $29,549,000 to $18,317,000.

It is apparent that the American farm producers must now put greater dependence on the home markets and less on foreign demand. When conditions are prosperous and labor is fully employed in all industries, the consumptive demand of the American population increases enormously. There are cheerful signs that we are coming into a fairly long period of prosperity and increased purchasing power among the consuming masses. If that expectation is realized it will offset the diminishing purchasing power of foreign countries. Our own people will consume more of our products, and we shall have a smaller surplus to sell abroad.

Upon this comprehensive survey of world market conditions there is no reason to expect a return, or an approximate return, of war-time prices for agricultural products. There is reason, though, to expect that a marked improvement in the home demand will bring prices which, on the whole, will be fairly remunerative for our various agricultural products.

Farm Contribution to Industry

By GILBERT GUSLER

Out of the 15 leading manufacturing industries in the United States at the time of the last census 10 are directly or indirectly dependent upon agriculture for the raw material they use. Likewise, the farmer is dependent upon them for a market for part of his product.

The list, together with the total value of the product of each industry for 1919, is as follows:

Slaughtering and meat packing, wholesale	$3,714,340,000
Iron and steel, steel works and rolling mills	2,812,775,000
Automobiles	2,387,833,000
Foundry and machine shop products	2,321,129,000
Flour mill and grist mill products	2,193,129,000
Cotton goods	1,877,919,000
Shipbuilding, steel	1,454,116,000
Bread and other bakery products	1,406,145,000
Lumber and timber products	1,400,000,000
Cars and general shop construction and repairs by steam railroad companies	1,277,584,000
Clothing, women's	1,184,099,000
Clothing, men's	1,158,007,000
Boots and shoes	1,149,560,000
Rubber goods, not elsewhere specified	980,070,000
Leather, tanned, curried and finished	928,584,000

BUILDING UP JERSEY HERD.

There are 16 grade Jerseys at the B. Hanson farm at Falls City, King county, and a registered bull is being used to increase the production of the offspring. The milk from the cows is separated and the cream sold, while the milk is kept on the farm and fed to the pigs. Fifty Chester Whites are kept during the summer and fattened for the fall market. Practically all of the pigs are raised on the farm and grains are grown for feeding. Mr. Hanson has developed a retail trade that takes practically all of the products from his farm as they are produced.

HARROWS HIS WINTER WHEAT.

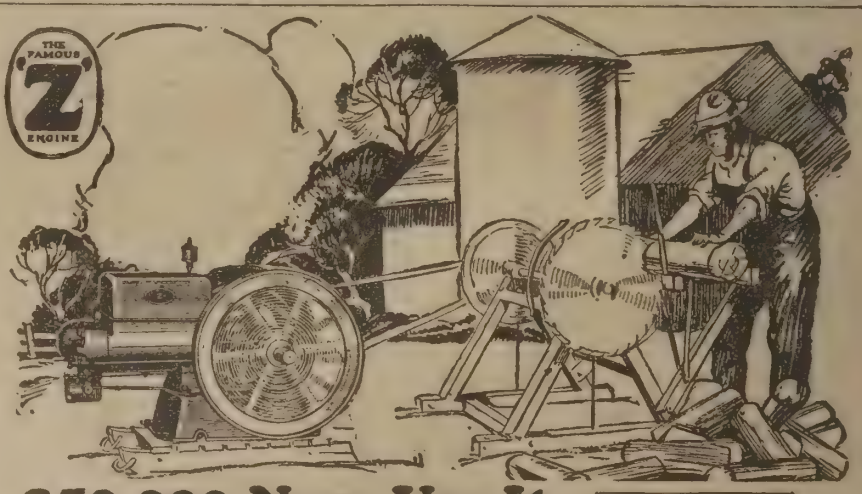
J. L. Handcock of Coupeville, Island county, Wash., is working half of the 210 acres which he and Carl Dean operate on a partnership plan. Mr. Handcock usually grows a crop of wheat and one year received a medal with a production of 81.21 bushels to the acre. Second award, however, was only a part of a bushel below his figure. Mr. Handcock is certain that he can beat this record with a properly seeded wheat crop and a good season. Mr. Handcock believes in harrowing his winter wheat in the spring to break up the soil and kill weeds.

A Partner for the Boys, the Women, and for the Man Who Calls Himself Head of the House

INTERNATIONAL—the popular kerosene engine, is as faithful and willing a helper as you can find in a life-time of searching. One that neither grumbles nor shirks but just chugs away all day and night, if need be, and doesn't ask for over-time pay.

An engine that pleases the boy and the hired man because it does the pumping and keeps the tank filled with clean, fresh water when the weather is hottest and the stock most in need of water.

An engine that pleases the women folks—by taking the hard work out of wash day and by running the churn, cream separator, etc.



An engine that the family likes because it saws wood, grinds feed, shells corn, runs the fanning mill, and handles a dozen other jobs. It does these easier, faster, and better than you can do them by hand.

The smaller sizes, the powerful 1½ and 3-horse power engines, are the most popular for many of these jobs. If you need more power, the International 6 or 10 horse power sizes will supply plenty of it.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
CHICAGO U S A

93 Branch Houses and 15,000 Dealers in the United States

350,000 Now Use It

The simple, dependable Fairbanks-Morse "Z" Engine has taken much of the drudgery out of the work on more than 350,000 farms. Don't waste your own time and strength on blistering, back-breaking jobs that this engine can do quicker and easier. At present low prices, it is the cheapest "hired help" you can get.

The magneto equipt 1½ H. P., 3 H. P., and 6 H. P. are *real* kerosene engines, but operate equally well on gasoline. Simple, high tension oscillating magneto produces hot spark, starting engine quickly. Throttling governor assures steady speed. Prices, F. O. B. factory:

1½ H.P.-$71.00 3 H.P.-$105.00 6 H.P.-$168.00

Other "Z" Engines up to 20 H. P.

Write us for complete details. See the engines at your dealer's.

The new "Z" 1½ H.P. battery equipt uses gasoline alone. Has high tension battery ignition, hit and miss governor and balanced safety fly wheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value

Interesting stories from three of our oldest customers

"I received my first Montgomery Ward price list in 1872, and I became a customer almost immediately. The catalogue has been coming regularly ever since, and I have been doing business with Montgomery Ward & Co. practically all of that time.

"I wish to state, that in all of those years there has never been any occasion to make a complaint or to return any goods we have ordered from Montgomery Ward & Co."

William McCandless, Sloan, Iowa
A Customer Since 1872

For fifty years, ever since Montgomery Ward & Co. was started, Mrs. Merrick has taken a keen interest in its development.

"I have been a customer from the first.

"I have always had the most courteous treatment from you," she said. "I believe that much of your success has been due to your unfailing policy of fair dealing."

Mrs. Emma E. Merrick, Malcolm, Iowa
A Customer Since 1872

Mr. Beatty is a real pioneer. He is the only man now doing business in Helena who came to Montana in 1862. He served under General Johnson in Utah (1857-8). He finally settled in Winston, Montana.

"I have traded with Montgomery Ward & Co. for 45 years," he said, "and I have never found anything wrong that has not been satisfactorily settled. If you continue to deal as fairly with your customers as you have in the past you will surely prosper."

Mr. George Beatty, Winston, Montana
A Customer Since 1877

Millions Buy from this Book on Faith in the Name "Montgomery Ward"

This book is saving many millions of dollars for the American people.

Is it saving money for *you* and for *your* family? Are you taking *full advantage* of your opportunity?

This book—our Golden Jubilee Catalogue—celebrates our 50th Anniversary by offering you the lowest prices possible on everything for the Home, the Farm and the Family.

It is filled with bargains—with merchandise of high quality. And every price is a Money Saving price for you.

For Fifty Years Montgomery Ward & Co. have earnestly worked to serve the American people.

Today millions of people are buying from this book on faith in the name "Montgomery Ward."

And it is our policy to keep faith with our customers. It is our policy to sell only serviceable goods, to serve you promptly—always to offer you a saving—and to deal with you always in the full spirit of the Golden Rule.

Montgomery Ward & Co. begins its second half-century of business existence. Yet today it is filled with the spirit of youth; alert, looking ahead, improving its service, filling orders quicker, and offering lower and lower prices.

To buy from this Golden Jubilee Catalogue is to be guaranteed a definite saving and entire satisfaction—and back of this guarantee is the reputation of Fifty Years of fair dealing.

Buy from this book. Fill all your needs from this book. Consult it daily to find the right price, the lowest price for dependable, reliable goods of standard quality.

LIVESTOCK AND DAIRY

Fall Freshening

When the Cow Needs Proper Care

By A. B. NYSTROM.

Fall cows as a general rule produce more milk and are more profitable than those that freshen in the spring. The reason for this is that the stimulation to produce milk immediately following calving keeps the cow at high production during the winter months or while on barn feeding and later in the lactation period, when a drop in flow is expected, there is an added stimulation caused by green grass, so that actually a high production in the milk flow is maintained for several months more.

The secret of high yearly production lies in giving the cow a good start. If the dairyman uses his powers of observation he will see that those cows that start the year in poor flesh, or that are out of condition for a while just following freshening, never make as good a record as those that are well conditioned.

It is natural for a cow to lay on extra fat while dry. Indeed that is one reason for having her dry. Such cows are sure to make a good account of themselves, provided they are properly fed after calving. Feeding heavily just previous to and just following the time of parturition is sure to spell failure. The safest way is to cut down in the feed about two weeks before the due date and feed lightly of laxative feeds, such as a few roots, bran, ground oats and a little oil meal. Clover or alfalfa hay should be the main part of the roughage ration.

Just about two days before calving feed no oats and only a small amount of bran. Give plenty of water and if the weather is cold take the chill off the water before offering it to the cow. This practice might well be continued for four days after calving.

If delivery of the calf has been normal it will be safe to begin increasing the ration a week after freshening. Care should be taken to make the increase gradual, never feeding more than the cow will clean up. It is better for the first month, and in the case of extra heavy producers, for several months, to have the cow looking for more feed after she has consumed all she is going to get. Overfeeding in the early stages is often what causes the cows to drop in milk production, and once they drop, they will never get back to where they were.

Another way to keep up the flow is to provide clean stalls. These should be heavily bedded if the cows are kept in at night. Cows that are left in the barnyard at night should be provided with a shelter from rain and a clean place to lie down. It is unreasonable to expect a cow to produce their best if they must wade in mud and mire night after night and only have an opportunity to lie down while in the barn at milking time.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES—ARTICLE IX.

Floating Colon.

This portion of the digestive tube extends from the great colon to the anus and all of the material extruded from the body must pass this portion. One must keep in mind also that the great colon, which has a diameter of from four to 10 inches, is followed by this portion which has a diameter of but three inches and that the material in the great colon must therefore be separated into quantities small enough to pass through this smaller tube, and that if this does not occur and great masses attempt to pass out through the floating colon there is danger that they may become lodged here and unable to make the passage. In fact this very frequently happens, especially when the food materials in the great colon are of the tough or sticky nature.

The above, which constitutes an impaction of the floating colon, is quite common in horses and especially at certain times of the year when the food is of the right kind to produce it. The most common offending food is not the manger-fed hay, but rather the pasture weeds that animals eat from choice or necessity. There are several kinds that are especially offensive. The so-called pepper-grass is one of the worst. Horses like this weed and will eat large quantities when it can be found in their pasture, especially when the pasture is short. It commonly grows abundantly in the lower ground and may be found green after most other grasses have dried up, and for this reason it is popular with them. The commonly known china-lettuce is another very dangerous weed upon which horses so commonly feed in the summer fallow. This weed, in addition to being woody and tough, contains a gluey, sticky substance that has a decided tendency to seal the tangled masses together and this makes it almost impossible to soak it up with water and get it out in this way. Green alfalfa pasture is dangerous for the same reason and green wheat has also caused the same condition. Of the dry feeds, pea-straw is probably the worst offender and I have seen a great number of horses killed as a result of impaction of the floating colon from this feed alone. When it is mixed with other kinds of hay the danger is reduced, but I would not recommend it alone for a horse feed under any circumstances. It may be fed to the cattle with much less danger.

Your veterinarian will likely surmise the cause of the trouble when he is told the history of the illness and the fact that the horses have been feeding upon weeds of various kinds, and if this is not sufficient evidence he will make the diagnosis certain by a rectal examination, as it is almost always possible to feel the mass through the wall of the bowel. Sometimes it is close enough to the anus that it may be touched with the hand and removed by breaking it up with the fingers. These cases are rare, however, and are usually not so easily handled.

One must keep in mind that when this condition exists there is no movement of the bowel at all as nothing can pass this mass, and for this reason it is not to be wondered at that the animal bloats, as the gas that naturally forms within the bowel can not escape and must collect and distend the bowel and the abdomen. This is one of the most serious consequences and results in death very soon in some cases. When this condition is found and bloating has occurred it is necessary for the veterinarian to remove the gas by tapping the bowel and removing the gas artificially, as he can not open the natural tube in time to save the animal's life, and all this time the animal is in great pain.

The one way to keep sound, perfect teeth

THE only way to keep the priceless blessing of sound, perfect teeth is to eat the kind of food that supplies them not only with proper nourishment but gives them work to do. Grape-Nuts not only induces thorough mastication, but also supplies the lime and other elements required for building firm tooth structure.

This wholesome, healthful cereal food is made from whole wheat flour and malted barley. All the nutriment of these splendid grains, including the vital mineral elements so often lacking in so-called "refined" foods, is retained.

A delicious, appetizing dish, Grape-Nuts, with cream or good milk, provides complete nourishment for body, bone and nerves, in readily digestible form.

332,921 pounds of grease wool, 35,648,032 pounds of scoured wool, 16,629,680 pounds of pulled wool, 23,346,363 pounds of tops, and 8,328,283 pounds of noils. Dealers held 176,857,999 pounds and manufacturers 197,652,634 pounds. Of the total quantity reported, 54.8 per cent was foreign wool, and 45.2 per cent was of domestic production. The supply of half-blood and fine wool is said to compare favorably with that of quarter and three-eighths blood.

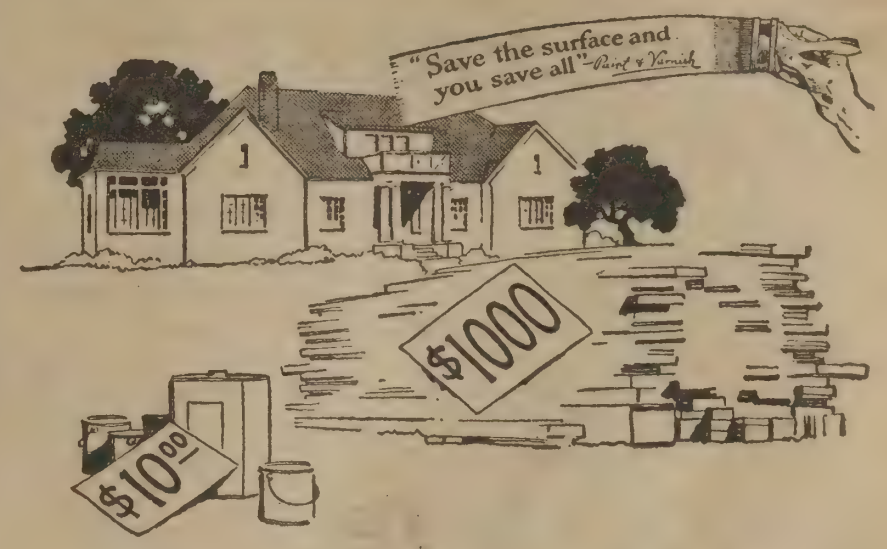
The distribution by selections of stocks held by manufacturers was: New England 116,664,493 pounds, middle Atlantic 87,009,512 pounds, Pacific coast 2,773,443 pounds, all other sections 18,544,333 pounds. Holdings of dealers, according to markets were: Boston 108,167,907 pounds, Chicago 10,833,492 pounds, New York 6,854,977 pounds, Philadelphia 24,039,626 pounds, Portland 2,849,854 pounds, St. Louis 12,416,061 pounds San Francisco 1,849,948 pounds, other cities 14,091,633 pounds.

How to Tan Hides

Will you kindly tell me how to tan hides, such as calf and goat hides, with the hair on? SUBSCRIBER.

Auburn, Wash.

The care of hides includes skinning, curing and tanning. As a rule, the first step in skinning an animal is to make a cut along the under side from chin to tip of tail, and from each foot along the inner side of the leg excepting beavers, the pelts of which are sent to market flat, are slit across beneath the tail from heel to heel, the skin being reversed as the body is withdrawn, says a circular issued by the bureau of biological survey of the U. S. department of agriculture. The tail and base of the ears should be skinned out.



Fresh skins should be divested of loose fat and muscle and then either tanned at once or cured so as to be kept without deterioration until a convenient time for tanning arrives. They are cured by being stretched free of wrinkles, flesh side exposed, and left in a cool, shady, airy place. In moist atmospheres, or where haste is imperative, the flesh side may be covered with a layer of salt and the skin be folded, hair side out, into a compact bundle, which should be opened and refolded two or three times during the first two days to insure salt action in every part. Flat skins may be stretche by pinning them out on floor or frame, but in any case there should always be a circulation of air on both sides. Pelts of fur animals are dried, flesh side out, after being drawn over pieces of board shaped so as to stretch them uniformly. Mole skins, as an exception, are pinned out flat to dry, like beaver hides. Wolf, fox, lynx, and widl cat pelts are taken from the boards and turned fur side out before they are fully dried. Other kinds of pelts go to market flesh side out.

Skins may be tanned either with the hair on or off, as desired. Hair can be removed from hides by soaking them in tepid water made alkaline by lye or lime, until the hair comes out readily. Before they are put through the tanning process they should be washed to free them from the alkaline solution.

The following recipe for a tanning liquor is in common use: To each gallon of water add one quart of salt and one-half ounce of sulphuric acid. This mixture should not be kept in a metal container. Thin skins are tanned by this liquor in one day; heavy skins must remain in it longer. They may remain in it indefinitely without harm. When removed from this liquor, they are washed several times in soapy water, wrung as dry as possible, and rubbed on the flesh side with a cake of hard soap. They are then folded in the middle, lengthwise over a line, hair side out, and left to dry. When both surfaces are barely dry, and the interior is still moist, they are laid over a smooth rounded board and scraped on the flesh side with the edge of a worn flat file, or a similar blunt-edged tool. In this way an inner layer of fat is removed and the skins become nearly white in color. They are then stretched, rubbed, and twisted until quite dry. If parts of the skin are still hard and stiff, the soaping, drying and stretching process is repeated until the entire skin is soft. Fresh butter, or other animal fat, worked into skins while warm, and then worked out again in dry hardwood sawdust, or extracted by a hasty bath in gasoline increases their softness.

A BULLY BULL CLUB.

The Winlock Bully Calf club was unique in that it is the only calf club in the United States composed entirely of bull owners. Five boys make up the club and three of them were in the money in the open senior calf class, standing second, third and fourth. In the club class the boys were judged on the improvement made since May, when the club was formed. Floyd Morton's calf, that stood at the top, is not only a smooth, typy calf, but its improvement since starting has been remarkable. The members of the club, Floyd Morton, William Rinta, Eino Laakso, Charles Rinka and Archie Laakso, each made good scores in Jersey cow judging.

Check the Cost

Know How Much You Save by Painting Now to Save Repairs

COMPARE the price of lumber and repairs with paint. They will show you how expensive it is to let buildings rot or equipment rust for lack of the protection of paint.

Hundreds of thousands of dollars worth of valuable buildings and equipment are wasting away at a rapid rate, because they have not been painted when they needed it. Paint now. Save repairs.

The utmost economy from paint results from the use of a high quality product at the time it is needed. The best paint spreads easily—it saves labor cost. It covers a larger area per gallon than "cheap" paint.

But most important, the best paint serves many years longer than "cheap" paint.

It's economy, then, to paint when your property needs it—without delay—and to use the best paint.

The best paints are scientific in formula and preparation. We've made them for 73 years—to meet the weather conditions in the West.

The best materials—PIONEER WHITE LEAD, pure linseed oil, pure zinc, and pure colors—are combined in Fuller's Paints in scientifically exact proportion with long-time skill.

House Paint: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured—32 colors.

Barn and Roof Paint: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality—6 colors.

Floor Paint: Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

Implement Paints: Fuller's Pacific Wagon Paint, adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish—7 colors.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

Advice on Painting FREE

If you want to do your own work and get the best results, ask our Specification Department for *free advice*.

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

Just Freight Rates

Are Vital to Farming Industry of the Country

In a recent address before a massmeeting of farmers and business men at the fair grounds, Davenport, Iowa, Secretary of Agriculture Wallace discussed the agricultural situation and the agricultural legislation enacted by congress. He referred particularly to freight rates on agricultural products, and said in part:

One of the heavy burdens which the farmer has been forced to carry at a time when he was least able to carry it has been the large increase in freight rates.

H. C. Wallace.

In 1920 freight rates on many of the more important farm crops were almost double what they were before the war. These increased rates not only imposed a grievous financial burden, but in many cases narrowed the market for crops which were not worth enough to carry the freight rate to distant markets.

At the same time the increased rates on the things the farmer had to buy added to his cost of living and the cost of production by just that much. Had prices of farm crops remained at the 1919 and early 1920 levels the higher freight rates could have been paid without inconvenience.

A freight rate of 25 cents a bushel when corn is selling for $1.75 a bushel is not a serious matter, but a 25-cent rate on 50-cent corn is ruination.

During 1921 the influence of the administration was exerted in every proper way to bring about a reduction in freight rates on farm crops, and a number of important reductions were secured. Rates are still altogether too high, however, with relation to the selling value of crops, and further substantial reductions must come in the near future.

This railroad question is exceedingly complex and difficult. When the federal government took over the roads it was on the agreement that in addition to proper maintenance they should be assured of earnings equal to the average of the three years, June 30, 1914, to June 30, 1917. Costs of operation were increasing steadily and the government advanced both passenger and freight rates. But materials, and especially wages, continued to advance, the latter with government assent and even encouragement. Iniquitous working agreements and shop rules which greatly reduced labor output were accepted. The result was that railroad costs of operation increased far more than railroad receipts.

During this period practically everything shipped was selling at a price high enough to have carried a correspondingly high freight rate.

Good business administration would have provided for railroad income during those prosperous times large enough to meet the government contract and would thus have saved the hundreds of millions which the government afterward had to pay. Also it should have made it possible for a prompt reduction in rates when the prices of farm crops made it necessary.

The urgent demand by farmers for large reductions in freight rates have led some people to think that if the farmers could have their way they would put rates so low that the roads could not possibly operate. Nothing could be further from the truth. The farmer is almost wholly dependent on the railroad for the movement of his surplus crops and live stock. Much agricultural freight is perishable and must have expedited movement. The farmer, therefore, has a direct interest in efficient railroad operation and knows that the roads must be permitted to charge enough to cover all proper costs of operation and enough in addition to give a fair return upon the money invested and thus keep capital in the business. Neither does the farmer want government operation of the railroads. He had enough of that in his three years' experience to satisfy him for all time. He will never forget the losses, both direct and indirect, which he suffered because he could not ship when his stuff was ready for market, and because of bad service.

Nevertheless, freight rates on farm crops and live stock must come down. With present prices for his crops and with probable prices for the next year or so the farmer simply can not afford to pay the present rates. They are out of all proportion to the pay he gets for what he grows.

The distortion between the freight revenue received by the railroads and the prices for the principal farm crops in the year 1921 can be illustrated in this way:

In 1913 the average amount the railroads received for hauling a ton of freight one mile would buy 1.4 bushels of corn in Iowa; in 1921 the revenue received by the railroads for hauling a ton of freight one mile would buy 3.1 bushels of corn in Iowa.

In 1913 this revenue per ton mile would buy one bushel of wheat in North Dakota; in 1921 1.1 bushel.

In 1913 6.1 pounds of cotton in Texas; in 1921 10.5 pounds.

In 1913 10 pounds of hogs in Nebraska; in 1921 18 pounds.

In 1913 1 bushel of potatoes in New York; in 1921 1.5 bushel.

In 1913 14 pounds of sheep in Wyoming; in 1921 22 pounds.

In 1913 2.1 bushels of oats in Illinois; in 1921 3.9 bushels.

In 1913 3.1 pounds of butter in Missouri; in 1921 4 pounds.

It would not be fair to assume from what I have just said that the increased purchasing power of the freight revenue represented profit to the railroad. On the contrary, railroad cost of operation increased even more rapidly than railroad receipts. Apparently the largest item in the increased cost of railroad operation was composed of the advanced wages given railroad employees. It is interesting to compare the purchasing power of the average yearly earnings of railroad employees in the year 1921, expressed in terms of farm products. Taking the average yearly earnings of railroad employees, we find that in 1913 the yearly wage would buy 1492 bushels of corn in Iowa and in 1921 4112 bushels.

It would buy 1028 bushels of wheat in North Dakota in 1913; in 1921 1466 bushels.

In 1913 it would buy 6449 pounds of cotton in Texas, and in 1921 13,934 pounds.

It would buy in 1913 102 hundredweight of hogs in Nebraska, and in 1921 237 hundredweight.

It would buy 148 hundredweight of sheep in Wyoming in 1913, and in 1921 296 hundredweight.

In 1913 it would buy 1087 bushels of potatoes in New York; in 1921 1916 bushels.

In 1913 2174 bushels of oats in Illinois; in 1921 5109 bushels.

In 1913 3309 pounds of butter in Missouri; in 1921 5285 pounds.

A hopeful sign which points toward the possibility of reductions in railroad rates is the gradual reduction in the part wages contribute to the total operating cost. Apparently the railroads are making steady progress in the reduction of these costs, and should, therefore, be able soon to make substantial reductions in freight rates on farm products.

In considering the matter of freight rates of agricultural products there are two things which should always be kept in mind.

First, that the cost of transportation is essentially a part of the cost of production, so far as agriculture is concerned, and any increase in transportation costs must come out of the price the farmer receives. In this the farmer is at a disadvantage with the manufacturer, the jobber or the retailer, al lof whom as a rule are able to add increased transportation costs to the price they get from the buyer and who are, therefore, interested not so much in the freight charge proper, but in being assured that the freight charge, whatever it may be, places them at no disadvantage in meeting competitors.

Second, our business and industrial life has been built up on a system of relatively low railroad rates for agricultural crops, designed to encourage their movement over long distances to industrial and business centers. A sudden reversal of this theory of rate making results in great economic injustice, from which the farmers are suffering now, and if persisted in will keep us in a state of confusion and agricultural and business uncertainty for a prolonged period.

The increase in freight rates by the horizontal method, having little regard to the character of the product and to the economic effect upon the business of the nation, is wrong in principle and can not be continued without baneful results to agriculture.

Freight rates on farm products must be brought down without impairing in any way the efficiency of the transportation service.

The Cover Page

On the cover page of this week's issue of The Washington Farmer is a picture of Dorothy McKenzie, daughter of Mr. and Mrs. Roy McKenzie of Yelm, Thurston county. Dorothy is posed with a purebred Buff Orpington rooster, one of the many purebred of various kinds on the McKenzie place. At the present time the McKenzies are raising Indian Runner ducks, Toulouse geese and purebred Rhode Island Red chickens. The farm on which they are living was purchased a year ago, since which time they have been busily engaged in converting it into a comfortable home. Roy McKenzie and his brother George are farming also the farm of their father, J. A. McKenzie, who recently purchased a small tractor to enable them to get the crops in more quickly.

"Best for Alfalfa"

TEXAS GULF SULPHUR

(*Identify the genuine by this trademark*)

A better sulphur at a better price direct from the mines of the Texas Gulf Sulphur Co., the world's largest producers of sulphur. In order to fully serve the alfalfa growers in this territory we have established a warehouse in Portland, Oregon, from which we will make quick shipments of the genuine Texas Gulf Sulphur in any quantity. You will find the product, the price and the service right in every respect. No matter where you have been securing sulphur in the past you will find it greatly to your advantage to place your order with us this season.

Contains 99½% Pure Sulphur

Packed in 100 lb. Burlap Bags

Your Choice of Three Forms:—

Crude Sulphur—

Lump sulphur, 99½% pure, for those who prefer to do the grinding.
In bulk or 150 lb. bags

Flour Sulphur—

Ground to extreme fineness, ready for immediate application to the soil. This product is so finely ground that it is in every respect equal to special brands for which high prices are commonly charged.
In 100 lb. burlap bags

Inoculated Sulphur—

An exclusive Texas Gulf product. Specially ground flour sulphur inoculated with sure-acting oxidizing bacteria which make the sulphur quickly available for plant food. As commercial sulphur is apt to be inert in the soil and its full effects are usually not noted until the second season, we advise the use of Texas Gulf Inoculated Sulphur where quick action is needed, and especially for late applications. In any event, test it on an acre or two this season and compare results.
In 100 lb. burlap bags

Consult your County Agent

We will gladly cooperate with him and with you in handling club orders. Naturally, you can save money by joining with your neighbors and making up a carload order.

Wire us at our expense—now!

Send us a night letter, *charges collect*, tonight. Tell us your alfalfa acreage, the kind and amount of sulphur you will require, the name and address of your county agent or dealer. Address as below. We will promptly quote prices which will delight you.

Our Sulphur Booklet and other helpful literature mailed free on request

TEXAS GULF SULPHUR CO.
41 E. 42nd St., New York City

Farms Need Factories

Agriculture and Manufacturing Must Go Hand in Hand

By E. C. JOHNSON,
Dean College of Agriculture and Director of Experiment Station, W. S. C.

Encouragement of manufacturing by means of water power and the use of products from our farms and forests, and the employment of every possible means to lower freight rates and encourage transportation by shipping in order that there might be better markets for farm products and manufactured goods, is urged. The farmers of the northwest need markets beyond anything else. They are wonderful producers, but markets are often lacking. Markets mean people who can buy; people within striking distance; people so near or rates so low that freights will not prohibit consumption or demand. They mean short hauls or low freight for long hauls. They mean a large population or cheap transportation by sea and land. If we can improve and increase our markets by building a large population in the west, which ultimately will be done, and if we can improve them by lowering the costs of transportation, we will enlarge the opportunity for the development of our agricultural and other natural resources more than by any other means.

In working for an increase in population we must remember that agriculture and other productive industries must go hand in hand. When we promote reclamation by irrigation or by the clearing of logged-off lands and when we promote a better agriculture, as we should do, we should at the same time promote the manufacturing industry by the use of water power for the utilization of products of farm, forest and mine. We should manufacture cloth from our own wool, dress our own beef and mutton, make furniture and build machinery from our own lumber, make harness and leather goods from the hides of our stock and manufacture a multitude of other articles from the raw products of our state and with the use of water power now wasted.

Coincident with the work for a larger population and the development of agriculture and manufacturing we should guard the natural resources which are ours. The attention of the entire state should be directed to the conservation of forests and of natural reforestation by fire control systems and fire control regulations, to the development of our agricultural possibilities, to the utilization of water power for manufacturing purposes and the lowering of the costs of transportation.

To accomplish these purposes the greatest team work is necessary, team work on the part of our state government, our state institutions and our citizens' organizations of every kind. In this program the chambers of commerce found in almost every town of any size can have a very large part.

By Helping Build Up the Home Town You Benefit Yourself

Cases are on record where thriving towns have been literally wiped off the map by the destructive forces of nature—floods, fires, earthquakes, cyclones and volcanic eruptions—while in other cases the change in economic conditions such as the abandonment of railways, mills and mines has made once prosperous villages voiceless and deserted.

Few there are who will deny that blotting out the community near which they live would be a calamity in every sense of the word. Being "near town" means strong church advantages, good schools, good roads, easy communication with the outside world, and adequate shopping and marketing facilities.

Yet it should be considered that these advantages and, indeed the very existence of the town itself, are made possible and maintained by the business interests of the community of which the retail store is the outstanding factor.

When doing your buying you will, of course, give careful consideration to quality, service and price. Once you have done so and find that the local dealer gives you as good a proposition as the outsider, it stands to reason that the above facts should tip the scales in favor of the home store.

Offer $80,000 in Premiums

More than $80,000 in cash premiums will be awarded at the Pacific International Live Stock exposition next month, and many trophies, cups and medals have been offered. Seven stakes of $1000 each will be awarded in the horse show events.

An international dairymaid's contest in which the blue ribbon experts of many states and from Canadian points will compete in a three-day relay tournament, is a novel feature. The expert dairymaids are being assembled through the granges of the country to compete for honors and cash pries of $50, $40, $30, $20 and $10. The milking contest will be a special feature.

The milkmaid's contest will be open to all and entries will be welcomed at Pacific International headquarters, 211 Northwestern Bank building.

WILL SELL HIGH-CLASS JERSEYS.

Gwendola Rosaire, with an official record of 919 pounds of fat, is one of the cows that will be sold in the Pacific International Jersey sale at Portland next month. She is one of 10 that will be consigned by N. C. Sorensen of Chehalis, Wash. His offering will include a son of Mr. Sorensen's other gold medal cow. Harry West, breeder and importer, of Scappoose, Ore., will consign about 10 head, part of them register of merit cows, part young stuff and all close up Island breeding. C. F. Bates of Salem, Ore., will consign the first prize 2-year-old of the Oregon state fair. This heifer is on test and is reported to be producing over 50 pounds of fat per month. Others will be daughters of Gamboge April King, the only direct son of Gamboge Knight in the northwest. E. A. Rhoten of Salem and C. D. Minton of Portland are in charge of the sale.

Northwest Market Service

Senator McNary, chairman of the senate joint committee of agriculture and appropriations, conferred recently with Secretary of Agriculture Wallace and promised that he would exert every effort to secure the enactment of legislation for the extension of the market news service to the Pacific northwest. This will be done within the next few months, if congress will approve an appropriation of $500,000 to be carried in the next agricultural appropriation bill.

Spokane, it is said, would be considered for the location of an office in Washington, because of the fact that that is the center for both a large fruit and vegetable growing region as well as the shipping point for much live stock.

It was also learned from the department of agriculture that plans call for the opening of a branch of the bureau of crop estimates in Portland, to be devoted especially to a market news service on the live stock industry.

WENATCHEE APPLE SHIPMENTS.

Wenatchee apple shipments to date are sligtly in excess of 2000 cars. Only about 500 empty cars are available for apple shipments in this territory and very few are being received. District Inspector Neilson estimates that total crop of the district at 13,400 cars, but other authorities believe he is about 1500 cars too high. Many of the lower grade apples will not be shipped and others will be lost through lack of cars. Already shippers are making formal written requests for cars as a basis for damage suits in case no cars are furnished. Fewer outside laborers are being employed in the orchards this year than usual. On account of the low prices prevailing and the large loss from worms and hail, orchardists can not afford to hire their work done, so they are doing it themselves, getting better results and saving money.

ORDERED SOLD ARMY GOODS

Thousands of dollars' worth of Surplus Army and Navy goods have been shipped to us direct from the war department bases and depots to be distributed direct to the public, at less than the Actual Cost of the Raw Material. Send in your mail order. Satisfaction guaranteed or purchase price refunded. WRITE FOR BIG, NEW, ILLUSTRATED PRICE LIST FREE.

U. S. ARMY COTTON BREECHES
Regulation issue. Reclaimed No. 1 condition. Sizes 26 to 34 only. Suitable for men and women. Now 98c

U. S. Army O. D. Wool Breeches—Reclaimed No. 1; sizes 28 to 36. Now $1.95

O. D. Regulation U. S. Army Shirts—Pure wool. Bosom lined. Double elbows. Each shirt has government label. Sizes 15 to 19. Now $2.95

O. D. Regulation U. S. Army Long Pants—Pure wool. Reclaimed No. 1. Sizes 28 to 34 only. Now $2.45

PURE WOOL O. D. BREECHES
Government issue. All sizes (new). Now $3.95

Khaki Whipcord Pants—A wonderful work trouser, light and strong. Sizes 29 to 36 (new). Now $1.89

U. S. ARMY WOOL COATS
All wool army blouses. O. D. serge, lined. Sizes 32 to 38 only. An exceptionally fine coat for work. Reclaimed No. 1 condition. Now 98c

U. S. Army Wool Coats (as explained above). Brand new. Sizes 36 to 44. Extra special $1.95

PONCHOS
Genuine government poncho, absolutely waterproof. Are used in the army as capes. Can also be used as a pup tent and as automobile covers, etc. Extra special price $1.25

GENUINE U. S. ARMY FIELD SHOES
Plain or cap toe, without the hobnails. Now $4.45

French Shoes, with hobnails and iron ring on heel. Now $3.95

CADET SHOES
Cadet Shoes (made with ballart tongue). All sizes. Now..... $2.69

Regulation Russet Army Dress Shoes—Munson last. Now $4.95

UNDERWEAR
Wool two-piece underwear. All sizes. Now, garment 98c

Pure Wool Army Underwear—Sweater neck. New garment $1.45

Extra Fine Pure Wool, 100 Per Cent Union Suits—(All sizes). Gray. Now $3.95

50 Per Cent Wool Union Suits in O. D. or gray. All sizes. Now $3.45

A Wonderful Union Suit—Wool. Now $2.29

BLANKETS
O. D. Government Pure Wool Blankets — (Reclaimed.) Now $2.75

Government Blankets, O. D. Pure wool, 72x84. Now $3.90

Extra Heavy Wool Blankets (Double). Gray. Special (now) $4.95

Fancy Blankets, in all colors. Can also be used as auto robes. Now $3.95

KHAKI HANDKERCHIEFS
Now 9c

White, red or blue handkerchiefs. Now 5c

O. D. FLANNEL SHIRTS
A wonderful work shirt (All sizes.) Now $2.45

HICKORY SHIRTS
14 to 17 only. Now 98c

Jersey Gloves Now 23c

U. S. Navy Middie Blouses—Navy blue. Now $3.95

U. S. ARMY CAMPAIGN HATS
6¾ to 7⅜. Reclaimed. Now 98c

ARMY SHOE LACES
Now Pair 2c

O. D. ARMY SOX
Now 14c

U. S. NAVY PEA JACKETS
Regulation. All sizes. Now $9.85

Army O. D. Mackinaw Coats. New. Now $7.45

O. D. Army Mackinaw Coats. Reclaimed. Now $4.95

ARMY JERKINS
A genuine leather coat without the sleeves. O. D. wool, lined. 32 inches long. Sizes 36 to 46. Now.... $4.95

SWEATERS
Pure wool sweaters. Roll collar, in maroon, khaki and combination colors of blue and gold, black and orange, etc. Sizes 36 to 46. Now $5.49

SHOES
Genuine U. S. army garrison shoes. Reinforced French back stay, double sole. Russet color. Sizes 6 to 11. Now..... $5.45

Officers' Dress Shoes—Plain toe. Cordovan dark chocolate. Sizes 5½ to 11. Now $4.95

Heavy Work Shoes—All sizes. Now $3.45

EXTRA HEAVY PURE WOOL BLANKETS
in gray and white, blue and other colors. (Double). Now $7.65

EXTRA HEAVY COTTON UNION SUITS
Silver gray. (All sizes). Now $1.29

BLUE CHAMBRAY WORK SHIRTS
14 to 17. Now 69c

KHAKI SHIRTS
(All sizes). Now 98c

Pure wool navy sox in heavy weight. Now 39c

GENUINE GOAT HAIR SOX
Pure wool Now 39c

U. S. ARMY RAINCOATS
made with double cape back. New. (All sizes). $6.95

MEN'S WORK SOX
(Gray). (Brown mixed). Now 11c

GENUINE LEATHER PUTTEES
In strap, loop or spring. All sizes. Now $4.45
(To get size measure around calf of leg).

CANVAS GLOVES
Leather palm. Now 23c

O. D. WOOL SPIRAL WRAP LEGGINGS
Reclaimed. Now 49c

Pure Wool Spiral Wrap Leggings. Now 95c

Sweaters
Pure wool sleeveless sweaters. Long yarn. O. D. Now $1.49

O. D. Pure Wool Yarn Sleeveless Sweater, extra heavy double, reversible. Now $2.39

O. D. and Green Sleeveless Sweaters. (All sizes). Now 98c

HEAVY MULESKIN LEATHER WORK GLOVES
All sizes. Now 43c

GENUINE GOVERNMENT WORK GLOVES
Horsehide. Now 98c

U. S. ARMY BLACK RUBBER COMBS
Now 10c

POULTRY AND RABBITS

Poultry Problems

By W. D. BUCHANAN,
Poultry Specialist, State College of Washington.

SOFT-SHELLED EGGS.

What is short in the ration when soft shells appear on the dropping board each morning and all the eggs have well-formed and hard shells? Why so many double-yolk eggs (three to five) each day from 100 pullets? Why the occasional brown shell from the O. A. C. S. C. W. L.? What is short in the ration when they pick each other's combs? H. H. S.
Elma, Wash.

Soft-shelled eggs on the dropping boards and so many double-yolked eggs would indicate that the pullets are slightly out of condition. I would advise giving them a little sour milk to drink, plenty of exercise and plenty of green feed. A little bone meal in the mash might help.

The O. A. C. Leghorns sometimes produce brown or tinted eggs because the strain was originally produced from Leghorns and Barred Rocks. Picking combs probably indicates crowding, lack of fresh air or lack of something to do.

GETTING RID OF LICE.

What is the most practical way to get rid of and prevent chicken lice in a large flock of 2000 hens? Also what is considered a fair average number of eggs a year per hen in a flock of this size of White Leghorns or Plymouth Rocks?
Clarkston, Wash. R. D. W.

The most practical way in hot weather is to dip the hens in a solution made by dissolving one ounce of sodium fluoride in one gallon of water. It would require about 30 gallons of the solution to dip the 2000 hens. In cool weather it is best to powder the hens, using about nine very small pinches of the sodium fluoride to each bird. This will take about four pounds for the 2000 hens. Leghorns are not likely to be very lousy if a good dust bath is provided. Under present conditions an average of 175 eggs for the Leghorns and 160 for the Rocks would be considered good in a flock of that size.

CAUSE OF EGG EATING.

Our last year's pullets have commenced to eat eggs. Please tell us the cause or the lack of food that causes this.
College Place, Wash. MRS. G. S.

Chickens are fond of eggs and will always eat them if they are broken. The trouble sometimes starts from limited nest room or from using nests without sufficient bedding. Anything that causes an egg to break may start the habit. A lack of ash in the form of shell or granulated bone or a lack of protein in the form of milk, meat scrap or fish meal, might cause them to crave eggs.

HATCHING TURKEY EGGS.

Can turkey eggs be hatched in an incubator, and how warm should it be kept?
Yakima, Wash. AN OLD READER.

Turkey eggs can be hatched in an incubator, although most growers prefer a chicken or turkey hen. The temperature should be 102 degrees with bulb of thermometer on level with top of egg. Some breeders raise temperature to 103 degrees on third and fourth weeks.

CHICKS DIE IN SHELL.

What caused so many of my chickens to be dead in the eggs? They seemed to be nearly matured, but unable to get out of the shells. Some had parts of the shells stuck to them after they got out and if the shell was removed it caused a rupture. What causes the scale on chicken's legs and can it be removed?
Colton, Wash. A. J. R.

The chief cause for chickens dying in the shell is a lack of vigor in the parent stock. This lack of vigor may be traced to inbreeding, lack of exercise, lack of fresh air, etc. The cause is sometimes due to a lack of moisture, if the chicks are hatched in a machine or under a hen in midsummer. The scale on chickens' legs is caused by a little mite that breeds in filth, and is then transmitted from bird to bird. It can be removed by washing two or three times a week with a solution of coal oil and lard, three parts oil to one of lard.

FEEDING SUNFLOWER SEED.

I note a discussion in The Washington Farmer on protein feeds. It says that a straight sunflower seed is too rich in protein. That sounds reasonable on paper, but in practice sunflower seed does produce an abundance of eggs. I have not been able to get scratch feed or wheat for some time on account of shipping conditions. I had about 1000 sunflower heads, and gathered them and scattered them in the scratch pen. The chickens eat all they want. I keep plenty of burnt bone and shell and turn them out about two hours in the evening to graze on the lawn and garden. I have 12 hens and get seven and eight eggs a day at present. How about the protein theory?
Oroville, Wash. C. F. K.

I have had no part in the discussion to which you refer. Sunflower seed carries 16.3 per cent crude protein, 29.9 per cent nitrogen-free extract, 21.4 per cent crude fiber and 21.2 fat. It has a nutritive ratio of 1:44, which would be ideal for egg production if it were not for the excessively high fiber content. The ideal fiber content for chickens is 3.5 per cent.

Concrete Poultry House

By W. D. BUCHANAN

I wish to know if poultry houses built of concrete in a dry climate will be too cold or damp in winter. Will paint or tar on surface of walls prevent dampness or mites and lice from staying in the walls and on roosts? G. A. B.
Lantz, Wash.

A concrete poultry house will be neither cold nor damp if it is well ventilated, and well cured before chickens are put in. Tar will tend to prevent dampness, but it is not equal to fresh air. Lice stay on the chickens, not on the roost or walls. Mites are likely to stay on the roosts or roost supports in any building, but may be exterminated with a good oil spray. The chief objection to a concrete house is the cost.

Plan Accredited Hatchery

There are 14 poultry breeders in the vicinity of Shelton, Mason county, who anticipate the establishment of the first accredited hatchery in the state. The hatchery will be located at Shelton, and will be operated by some one who understands the hatching of chicks, and who will buy the eggs from the different breeders, all of whom will have their flock inspected and passed on by some poultry expert appointed for this work by the state college.

Plans are being perfected to allow for the establishment of accredited hatcheries wherever desired throughout the state, but as yet this is the first one to announce its intention of operating for the coming spring.

A GOOD SIGN.

Per capita consumption of eggs in the United States is increasing somewhat faster than the population, and this is well from the standpoint both of the produce and of the consumer. Eggs are even more valuable than milk, when it comes to tissue building.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

How Pretty Teeth

affect the smile—teeth freed from film

See what one week will do

The open smile comes naturally when there are pretty teeth to show. But dingy teeth are kept concealed.

The difference lies in film. That is what stains and discolors. That is what hides the tooth luster. Let us show you, by a ten-day test, how millions now fight that film.

Why teeth are dim

Your teeth are coated with a viscous film. You can feel it now. It clings to teeth, gets between the teeth and stays.

No ordinary tooth paste can effectively combat it. The tooth brush, therefore, leaves much of it intact.

That film is what discolors, not the teeth. It often forms the basis of a dingy coat. Millions of teeth are clouded in that way.

The tooth attacks

Film also holds food substance which ferments and form acids. It holds the acids in contact with the teeth to cause decay.

Germs constantly breed in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film, and very few people escape them.

Must be combated

Dental science has long been seeking a daily film combatant. In late years two effective methods have been found. Authorities have proved them by many careful tests. Now leading dentists nearly all the world over are urging their daily use.

A new-day tooth paste has been perfected, made to comply with modern requirements. The name is Pepsodent. These two great film combatants are embodied in it.

It goes further

Other effects are now considered essential. Pepsodent is made to bring them all.

It multiplies the salivary flow. It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth, so they will not remain and form acids.

It multiplies the alkalinity of the saliva. That is Nature's neutralizer for acids which cause decay.

Thus every application gives these tooth-protecting forces multiplied effect.

These things mean whiter, cleaner, safer teeth. They mean natural mouth conditions, better tooth protection. This ten-day test will convince you by what you see and feel. Make it for your own sake, then decide what is best.

Pepsodent PAT. OFF. REG. U.S.

The New-Day Dentifrice

Endorsed by modern authorities and now advised by leading dentists almost the world over. Used by careful people of some forty races. All druggists supply the large tubes.

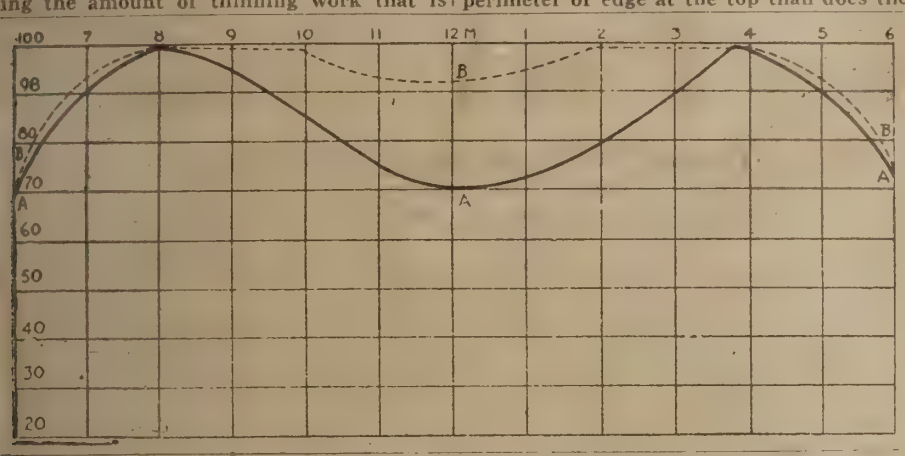
ORCHARD AND GARDEN

Apple Thinning

Judicious Pruning Plays Big Part



By PROF. O. M. MORRIS

This is the last of this series of articles by Prof. Morris on thinning. It discusses the importance of pruning as it affects thinning. Again we recommend that our readers study these articles carefully and keep them for reference from time to time throughout the year. The orchard is right now beginning the production of the 1923 apple crop. What you do now, this winter, and early next spring determines to a large degree the crop you will have.—Editor.

ARTICLE THREE.

Pruning is an orchard practice that is often of very great importance in modifying the amount of thinning work that is necessary to be done. When neglect of pruning permits the tree top to become thick increased thinning is a necessity, but by constant cutting out and removal of over-dense growth the maximum opportunity for all of the top to make its maximum growth will be maintained and the minimum necessity for thinning exist. This thought can be carried farther than in actual pruning of the individual trees. In the thinning of close-planted orchards it will be found to be equally true. Too thick tree planting is necessitating heavy thinning and also preventing the trees from developing the maximum size of fruit desired.

The inner part of the tree top may grow and produce valuable fruit if exposed to partial sunlight or to the direct rays of the sun for a part of the day. The activity of foliage in food digestion does not increase in direct proportion to the intensity of direct sunlight it receives. During the middle part of the day in our bright sunshine districts the light after about 9 o'clock becomes so bright that growth and digestice activity is actually inhibited or hindered. Trees so pruned that during the middle of the day part of the direct rays would shine through make the maximum amount of stored food. This explains why the pruning to a medium open top permits the production of satisfactory fruit from center to circumference. The tree that is pruned to form a very dense outer perimeter does not produce markedly better fruit at its outer perimeter or edge at the top than does the tree pruned in the more open style.

In the accompanying chart on food manufactured by apple leaves in sunlight, the solid line A represents the rate or the per cent of efficiency in food digestion of the apple leaves fully exposed to the direct rays of the sun for a day in midsummer. The broken line B represents the same by the foliage of apple trees, the top of which is open so that about 10 per cent of the direct rays of the sun pass through the top and reach the growth beneath.

Trees set far enough apart for the sunshine to reach the growth on all sides and open enough in the top to admit of plenty of light produce the best crop of fruit.

The table showing the number of square inches of land required to produce an apple is inserted here to impress upon the fruit grower the necessity for giving the tree and the soil the best opportunity possible to work at the maximum if they are to produce the largest crops. A lot of wasted energy in the tree and soil will tend very strongly to the holding of the production below the profitable limits.

Table showing the number of square inches of land required to produce one apple of the 138 size:

No. boxes per acre.	No. square inches per apple.
300	175 2-3
600	87 3-4
1000	52 2-3

Orchard Questions

By PROFESSOR O. M. MORRIS, Head Department of Horticulture, Washington State College.

Will you give me a remedy for radish and onion worms? What can I do for leaf curl on tomatoes? Is there a remedy for blight on melons? I have had a great many muskmelons, but they turn yellow and fall off. MRS. A. M.

Lacota Beach, Wash.

There is no sure, well-known method of preventing the root maggot working in radishes and onions. Protecting the beds by mosquito netting and similar cover to prevent the access of the fly which is the parent of the maggot is a successful method, but not always practical.

The leaf curl on tomatoes may be caused by two or three different things. We generally believe that the most common cause of leaf curl on the tomato is root diseases of plant, and that can not be checked after it once starts, but giving the plant a good, vigorous start, starting on land that has not been in tomatoes or potatoes the previous year, will to a large extent help in avoiding the trouble. Pulling the affected plants is generally advised, although not known to be effective in preventing the spread of the disease.

The blight mentioned on muskmelons may be due to drought, or to the lack of insects for cross pollination. Insects are necessary to carry the pollen from the staminate to the pistilate blossoms. If your melons reach the size of an inch or so in diameter before falling, your trouble is not due to the lack of insect activity. Spraying will have no effect whatever on

Wherever you are, on highway or boulevard, look for the signature of the clinging, long-wearing Goodyear All-Weather Tread

THE TREAD THAT WRITES "GOOD WEAR"

Spread before men's eyes, on the roads of all the world, is the record of Goodyear popularity.

You will find it on city pavements, in country lanes, on mountain passes and in the trails of far places.

In clear, familiar characters the All-Weather Tread has written it there.

And with it, it has written also a story of extremely efficient service.

No one can look at that deep, clean-cut Goodyear imprint and not realize what great traction and security it affords.

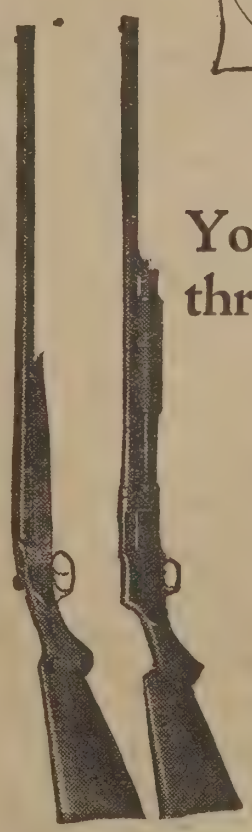
No one, seeing it far-scattered over the earth, can mistake in what overwhelming regard the Goodyear Tire is held.

Only a tire that consistently delivers profound satisfaction to its users can win and hold such regard.

Only a tire that gives great and economical mileage, and performs reliably always, can deliver such satisfaction.

When you buy tires, buy the tire that through its excellence has won more users than any other kind.

Buy the tire with the tread that writes "Good Wear."



Goodyear Means Good Wear

GOODYEAR

Target work with Stevens No. 414 Armory model rifle. Retail price, including tax, $23.50.

Model 335 Stevens double-barrel shotgun. Retail price, including tax, $32.40. Other models $19.50 to $36.00.

Model 520 Stevens repeating shotgun—Stevens made the first hammerless repeaters. Retail price, including tax, $43.50.

You economize three ways on a Stevens

Accuracy—When a Stevens barrel is bored or drilled, the final reaming cuts away *less than one-half of a thousandth of an inch.* A slow method—but when finished a Stevens barrel is *accurate.*

Endurance—And a Stevens will continue to shoot true. Stevens guns are fitted so they can't shoot loose. Take a Stevens double-barrel shotgun—each barrel and its lug are of one piece—solid steel. Take a Stevens single barrel shotgun—the fore-end exerts a pressure which prevents barrel from loosening on the hinge-joint. These guns will *never* shoot loose.

Price—Remember this: when you buy a Stevens you get the last word in accuracy; a gun that will last a lifetime; and at an exceptionally low price. Ask at your dealer's or write for the interesting catalog describing in detail our complete line. Address:

Fruit Exposition

To Be Held in Seattle Nov. 11-19

The second annual Pacific Northwest Fruit Exposition will be held November 11-19 at the Bell street terminal at Seattle. This is the same location that was used last year, but additional space has been arranged for on the lower floor of the building for commercial and other displays.

The change in date brings the event earlier in the season when more of the soft fruits will be in shape for exhibition. There will be less interference with other dates at this time of the year and the management is assured of a good attendance.

Mrs. Winnie Braden, general manager of the exposition, has already received a large number of both district and county entries and the space is expected to be filled to overflowing. There are also a large number of individual exhibitors, some coming from British Columbia and Oregon points.

The women's department will be managed by Miss Maud Wilson of the State College Extension service. Exhibits of canned goods have been promised from many parts of the state and the interest in this division promises to be very keen.

The Western Washington Potato Growers' association has been given space for exhibiting their many varieties of western grown tubers. The visitors will have an opportunity to sample the different varieties which will be cooked in many ways by some of the women's clubs. The growers are determined to demonstrate that one need not go to another section of the state for good potatoes.

Boys' and girls' club work has also been planned and Miss Almina White, assistant state club leader, will stage a canning demonstration by one of the club canning teams.

A list of judges is given below which is not entirely complete. Others are to be added at a later date:

O. M. Morris, professor of horticulture at the state college; W. S. Brown of the Oregon Agricultural college; C. C. Vincent of the University of Idaho; M. L. Dean of Wenatchee, and T. D. Fuke of Walla Walla.

Report on Crops

Crops generally suffered loss in prospective production during September, but the harvests will be larger than they were last year except in the case of corn, sugar beets and a few minor crops.

Preliminary estimates of production announced by the department of agriculture showed a reduction, as compared with a month ago, of 25,000,000 bushels of oats, 21,000,000 bushels of corn, 8,000,000 bushels of spring wheat, 5,000,000 bushels of white potatoes, 2,800,000 bushels of sweet potatoes and 2,900,000 bushels of apples. There were increases, however, in the forecasts of barley, buckwheat, rice and beans.

Nebraska's corn crop suffered most, showing a reduction of about 13,000,000 bushels from a month ago. The reduction in Illinois was about 12,000,000 bushels, in Missouri 7,000,000 bushels and in Kansas 1,000,000 bushels.

The spring wheat crop was estimated by the department at 268,314,000 bushels, compared with the forecast issued a month ago of a crop amounting to 277,000,000 bushels.

Preliminary estimates for some crops and forecasts based on conditions October 1 for others were announced as follows:

Fall wheat, preliminary, 810,123,000 bushels.
Corn, forecast 2,853,399,000. 78.4 normal
Oats, preliminary, 1,229,774,000.
Barley, preliminary, 196,431,000.
Buckwheat, forecast, 14,051,000, 83.8 normal.
White potatoes, forecast, 105,490,000, 77.3 normal.
Flaxseed, forecast, 11,725,000, 82.6 normal.

Fix Apple Yield.

Peaches, forecast, 56,125,000.
Apples, forecast, 203,667,000.
Sugar beets (tons), forecast, 5,070,000, 85.1 normal.
Grain sorghums, forecast, 95,840,000, 64 normal.
Beans, preliminary, 13,013,000.
Sweet potatoes, 79 normal.

Washington State Crop Report.

Washington has only three-quarters of an apple crop this fall, as compared with ordinary years, according to the federal crop report for October, made public Monday by G. S. Ray, statistician. The total Washington crop this year is estimated at 23,175,000. Last year the state produced 29,062,000 bushels.

"The decrease in apple estimate is due to severe 'worm' damage, which occurred in the orchards around Wenatchee, in many localities throughout the Yakima valley and in the White Salmon district," says the report.

The potato crop will be only 79 per cent of normal, but the total production will be greater this year than last. The Washington crop is estimated at 8,579,000 bushels; the production in 1921 was 7,425,000 bushels.

Spring wheat in Washington hos made but little more than half a crop, according to the report. The average for the state is estimated at 9.2 bushels per acre. The total production for the state is estimated at 10,500,000, as compared with 17,205,000 bushels in 1921.

The oats crop for Washington is estimated at 7,676,000 bushels, as compared with 10,500,000 bushels in 1921.

Shows Difference

Between Good Cows and Poor Ones

An interesting cow testing demonstration was put on by the state college extension service at the Whatcom county fair at Lynden. There were four cows placed on exhibition which came from the herd of J. A. Porter & Sons of Custer, Whatcom county. The entire herd has been in the Whatcom County Cow Testing association for three years, and all figures quoted are taken from the association records.

The records of the following four cows were made in the last year, ending September, 1922: Ruth, age 7, produced 525 pounds of fat at a cost of $71, making a profit of $155 above cost of feed. Blanch, age 4, produced 401 pounds of fat, which cost $51, yielding a profit of $123. Agnes, a 7-year-old cow, has a record of 396 pounds of fat with a feed cost of $153 and a profit of $119. Peg, another 4-year-old, produced only 253 pounds of fat, which cost $43 and returned only $69.

This shows very clearly the contrast between good producers and poor producers. From their general appearance there was very little difference in the animals except with one cow that had a very exceptional udder development. The figures given indicate clearly the necessity of testing in order to know exactly what each cow is returning above the cost of feed. While a few pounds difference of butterfat per day seemingly is of little importance, it may be much to the cow's credit if she can produce this fat at a smaller cost.

The state college extension service, through the help of H. B. Carroll Jr., county agent, is planning on establishing one of the largest cow testing associations in Whatcom county. While they plan on using but one tester, he will be able to handle from 1000 to 1500 cows if this number can be signed up. All the calculating of records will be done at Pullman, and the books returned to the owner at the end of the year. The plans are being made to avoid any advertising of records, but rather to keep them for the benefit of the dairyman himself, who will be able to increase his production by knowing what each cow is doing.

Unite Two Shows

Plans are under way looking toward the merging of the Spokane Interstate fair and the Western Royal Live Stock show. Heretofore the Interstate fair has been held early in September and the Western Royal late in October. If the two are united it is probable that the date will be fixed for early in October.

No change in the plans for the Western Royal this month are being made. The show will be held in Spokane this year, beginning Saturday, October 28, and closmost of the animals shown will be shipped to Portland for the Pacific International. ing Thursday, November 2, after which

To Pool Potato Crop

A. E. Skidmore, county project leader in potatoes, has made the following announcement to all farm bureau members in Stevens county regarding the sale of their 1922 crop of potatoes:

The sale of the 1922 crop will be placed in the hands of a committee of five, the membership of which is as follows: G. M. Jamieson of Rice will represent the entire Columbia river country from Meyers Falls south; C. H. Dotts of Northport, the Columbia river country from Meyers Falls north. The Colville valley country from Addy south will be represented by some one chosen by the Chewelah farm bureau, this member not being named at the present time. The Colville valley country from Addy north to Meyers Falls will be represented by A. E. Skidmore, who will act as chairman of the committee, and the county at large will be represented by D. H. Ulrich, manager of the Stevens county farm bureau.

It is the plan to pool the 1922 crop in a pool whose tenure of life will be for one year only.

HOLD FAIR AT CHENEY.

The first annual Cheney Agricultural fair, under the auspices of the commercial club and directed by the agricultural committee, held its final session October 7, at the Cheney high school. The free-for-all stock judging contest, made up of farmers of the community, was won by T. T. Land, R. M. Watson and E. F. Collier. Second were the Smith-Hughes vocational students of the high school, Clarence Staniker, Frances Keuhl and Clayton Ryan, and third, boys and girls' club winners, Lester Hartley, Paul Cordill and Ted Wynestra. Judges were C. M. Hubbard, state live stock specialist, and John L. Smith of Spokane. John Mans, Four Lakes, won first prize for excellence and variety of vegetables, and Joe Alling second.

Boys' Judging Contest

The boys' judging contest was a part of the school work at the Whatcom county fair at Lynden. There were five teams from five of the high schools, which are carrying on Smith-Hughes classes. The boys were asked to judge a class of aged Jerseys, a class of aged Guernseys, and a group of Berkshire hogs.

The judging was supervised by Don G. Magruder, extension dairy specialist of the state college. Placing of the teams, together with the members of each team, are as follows:

Lynden, first, Clifton Axling, Leonard Woseman and Louis Zweegman; Sumas, second, Glen Tyler, Clarence White and Fred Smith; Ferndale, third, Clarence Westerlund, Richard Harrison and Roy Viroman; Nooksack, fourth, Howard Kinley, Cecil Dunlap and Otto Sorenson; Meridian, fifth, Clarence Willard, Lee Smith and Albert Holz.

BERRIES ON DRAINED LAND.

J. B. Rose of Bellevue, in King county last spring drained a tract of about seven-eighths of an acre of land. His first crop from it was 480 crates of Marshall strawberries. This was at the rate of about 540 crates to the acre, and indicates the possibilities in better crops through proper drainage.

RENEW OAKESDALE FAIR.

Boasting of a two-day attendance of more than 7000, with a total individual exhibit count of 2000, the Oakesdale live stock and farm produce fair closed October 7, after its first annual farm exhibit in nine years. There was a particularly fine display in cattle and hogs, much purebred stuff being exhibited. Judges from Washington State college and the University of Idaho made the awards. Since 1913 the exhibit was not made for war reasons, but it is now expected to make it an annual event again.

Dividend checks from the American Telephone and Telegraph Company are received quarterly by more than 200,000 telephone users.

Owned by those it serves

Less than fifty years ago an application was made for a patent which created the possibility of speech between distant points. It was the culmination of years of study, research and experiment. It suggested a new aid in commerce and domestic life; a new tie to bind the people together. But it was only a suggestion—a dream.

To make that dream come true required the creation of an organization unlike any other. It demanded a kind of scientific knowledge that was yet to be formulated, as well as a type of equipment still to be devised. And it necessitated the financial and moral support of many communities.

Out of this situation grew the Bell System, bringing not only a new public service, but a new democracy of public service ownership—a democracy that now has more than 200,000 stockholders—a partnership of the rank and file who use telephone service and the rank and file employed in that service. The American Telephone and Telegraph Company exists to serve the people and is owned directly by the people—controlled not by one, but controlled by all.

Evolution is going on. Each year the ownership is more widespread. Each year the various processes of the service are performed more efficiently and economically. Each year new lines and extensions are constructed. The responsibility of the management is to provide the best possible telephone service at the lowest possible cost and to provide new facilities with the growth of demand. To do these things requires equipment, men and money.

The rates must furnish a net return sufficient to induce you to become a stockholder, or to retain your stock if you already are one; after paying wages sufficient to attract and retain capable men and women in the service. They must adequately support and extend the structure of communication.

These are considerations for the interest of all—public, stockholders, employees.

Want Bee Inspector

The two main honey producing sections of the state, Yakima valley and the Puget sound district, are making an attempt to work together in the establishment of a market quality product as well as to maintain a uniform price. Miss Helen Steiner of Auburn was appointed secretary of the Peninsular Beekeepers' association at their last meeting in July. The association went on record as favoring the appointment of a bee inspector who could spend his entire time in the field, thus giving A. B. Slocum an opportunity to spend his entire time at the state college, where he is needed in the interest of the beekeepers of the state.

The bee industry in the state has reached a total of $3,000,000 and the beekeepers are making an attempt to keep it all in the state by educating the public to demand home-grown honey.

There Was Something Doing

(Continued from page three.)

Fife, Loveland, Alderton and Mountain View.

Perhaps no other department was more representative of the Puyallup valley and adjacent country than was the poultry show. Some of the entries came from Oregon and one was from the New England states. The Barred Rocks were stronger than any other breed, while the competition in the White Leghorns was closer than it has ever been in the past. They came largely from commercial flocks where breeding pens are kept for the purpose of raising their own stock.

There were some good individuals and pens in the Rhode Island Red classes which came from many parts of the Puget sound district. The Brown Leghorns probably ranked next, while the Wyandottes were placed down the list only on account of the lack of numbers.

The class of White Crested Black Polish and Hamburgs were the best that has been shown at Puyallup in the last 20 years, according to Fred A. Johnson of Tacoma, who was superintendent of the department. William Coats had been secured to do the judging, but was unable to be present, so the work was done by Harry Collier and Frank Breed of Puyallup.

There were 200 of the best rabbits in the northwest shown in the poultry building under the supervision of G. A. Marshall of Parkland. Some of the entries came from Vancouver, B. C., while the greater number came from rabbitries in the Puget sound district and one came from Goldendale. The largest class was the New Zealand Reds, which were very good in quality. The Blue Flemish Giants were also large in numbers, while the other colors in the Flemish Giants were also well represented by many of the local breeders.

"There was a good improvement in the quality of all the entries," said Mr. Marshall, "and especially in the New Zealand Red classes. The Blue Flemish Giants are making rapid strides and are bringing out some wonderful animals. The entries in the Himalayan, American Blues, Black Siberians, Checkered Giants and Silver Tips added much to the variety and made a very good show."

John Neeham of Seattle judged all the classes.

The Puyallup fair has always put on a wonderful display of flowers and the last few years has called for a special tent to house the display. The season at this time of the year is ideal for showing some of the dahlias that are grown in large numbers in western Washington. The flower show this year had some of the most wonderful collections of seasonal cut flowers and shrubbery displays. This department is considered a valuable asset to the fair and it always attracts much attention from the visitors.

Orchard Questions

(Continued from page thirteen.)

the pollination problem, and if your fruits are falling because of drought conditions it will not be of any particular value there. It may, however, be used to some extent in preventing the spread of the blight. Spraying with Bordeaux mixture has been recommended and has proven successful in some localities. The trouble is not general enough to have caused any very serious trouble. Extremely cold nights are sometimes the cause of the dropping of the fruits.

What would be the best crop to sow to turn under this fall? I had kale in mind. I would also like to sow again on this fall plowing to turn under in the spring.

Lacota Beach, Wash. MRS. A. M.

If you are seeking for some crop to use to plow under to improve garden or annual crop soil, I think you can have much better returns from field peas or vetch than from the kale. The kale will give as large amount of green material, but will not increase the fertility of the land nearly as rapidly as will the field peas or vetch. The crop turned under in the fall will be of more value to your crop production next year than the crop turned under in the spring. Oftentimes, however, you can grow a crop like winter or hairy vetch on the land during the winter and turn it under in the spring and make a gain that could not be gained if you do not have a crop that will grow during the winter.

STEVENS COUNTY STOCKMEN.

T. C. Bell, Colville, has been elected president for the fifth time of the Stevens County Live Stock association. Harvey T. Skeels, Addy, was reelected vice president. Other officers and committees include: Dr. K. G. McKay, W. W. Campbell, Frank Habein, James Crawford and E. G. Kohlsteadt. The latter was elected president of the Stevens County Shorthorn association and Dr. Kenneth G. McKay was elected secretary-treasurer.

How much Rain do your Shingles absorb?

Shingles that become easily rain-soaked are poor roof protection. Damp, unhealthful farm houses and buildings are the result. And besides, the rain-soaked shingles warp and crack when the sun comes out.

Shingle roofs, to give you the excellent protective service of which they are capable, should receive preservative treatment. ORONITE SHINGLE OIL not only helps keep out moisture, but penetrates the wood fibre sufficiently to retard evaporation of natural oils — a source of life and strength to shingles. A tight, well-laid roof will give full protection when treated with ORONITE SHINGLE OIL.

If you want to mix it with colors, our nearest agent will supply you with formulas. ORONITE SHINGLE OIL is easily applied to roofs or side shingled walls.

SHINGLE OIL

Most Boots Don't Wear Out--They "Crack Out"

WHEN you discard a pair of leather shoes it is probably the soles that are gone, or they're worn out in some other way.

Ordinary rubber boots are different, and especially on the farm where footwear is subjected to the chemicals of the barnyard. The surface of the boot first becomes honeycombed with minute cracks that are visible only when the rubber is bent. These cracks gradually grow in size. Finally the water and the mire get in.

Gold Seal boots are crack proof. They were first made back in the '70s to withstand the gruelling wear of miners and fishermen. We make them from pure virgin rubber that has never been used. We vulcanize them by a special process. We put extra reinforcements where the strain comes.

We make the red sole "Manure" boots to resist the acids and the alkalies of the farm.

Gold Seal boots outwear ordinary boots. You will find them in good stores everywhere in the northwest. Farmers who are out 'o' doors a great deal in the winter time wear Gold Seal oiled clothing, too. Always look for the Genuine Gold Seal label.

Only one Gold Seal label—it's round, and gold colored.

We are the original and only

Goodyear Rubber Co.

Portland and San Francisco.

No connection with any other firm using the name "Goodyear."

Goodyear

GOLD SEAL BOOTS

Authorized since the '70's to use the name of Charles Goodyear, inventor of vulcanizing.

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. They struggle slowly westward, meeting up with others also headed for the gold diggings. With a party of men traveling by handcart they all but starve for water on a desert, but dig a well and escape. They meet with a family by the name of Cooper, one member of which is a girl of years and manner that at once captivate young Orlando, who delights in keeping near her prairie schooner as they journey on. Once the entire party gives up the westward trip when they meet discouraged gold seekers returning, but Orlando and Hazel Cooper induce them to turn to the west again. They have many interesting experiences on the way, finally coming upon a great Indian camp. Not many days later they sighted Pike's peak, and a little later plodded into a little frontier town that has since grown to be the great city of Denver, Colorado. Here they learned that a rich gold strike had been made not far away at what was called Gregory's diggings. They mail letters to the folks back home and hurry on toward the place of the strike. At the foot of the mountains the women and children are left in camp to care for most of the supplies, while the men travel on foot into the mountains toward the diggings, which they reach the second day. Every claim is taken, so most of them proceed further and locate claims on Clear creek where they begin actual mining. The first day six of them wash out gold worth $7. Later they built a sluice box and increased their output to $15 or $20. Each day two of the six go hunting to supply game and prospect for better gold diggings. The hunters one day discover bear tracks, and, though fearful of running afoul a grizzly, they hope to get a shot at one of some variety and be able to take home a good supply of meat.

CHAPTER FIFTEEN—(Continued.)

Givens looked almost frightened. "No, no! Let's stick together, Jess! One fellow hasn't any business rambling around here by himself. Even a cinnamon bear might be an ugly customer to tackle. And a man not much used to hunting big game would be nearly dead sure to take the 'buck aguer' and miss the first shot."

"Is some danger of that. All right, then. Together we stay if you say so. Guess maybe a pair of guns would be better than one, in a tight scrape."

Now the two hunters, keeping together, moved slowly around the thicket. After circling it till they had returned to their starting point, they got up courage to push their way through it, the bushes being not very close together. But, numerous though the game tracks were everywhere, the hunters found no game among the aspens. After that they wandered on.

Not far beyond the thicket they noticed a cliff in front of them. While nearing the cliff, they discovered a ravine, or dry watercourse, at its foot. Some peculiar noises that they heard, coming from the ravine, caused them to approach on tiptoe. What they discovered surprised them greatly.

The rocky cliff made the far bank of the ravine. The near bank was five or six feet high, and its top overhung. Under the overhanging bank, it now appeared evident, was a lick; and several mountain sheep were licking there. So far under the bank were their heads that only their hips could be seen from where the hunters had paused.

The unexpected sight of so much big game, almost within reach, left the two men gasping with astonishment. They looked at each other, and then at that row of hips again. Both realized that there was little likelihood of their killing anything by shooting the game in the hips. They could wound an animal or two, doubtless, but not so as to keep them from escaping.

Again the two hunters glanced at each other, questioningly. "Guess we'll have to scare 'em out before we can shoot," whispered Jess.

Givens nodded. "But how?" his lips inquired.

Now they put their heads together and whispered. After agreeing upon a plan, both nervously cocked their guns. A not very large stone was lying in front of Jess. Drawing back his foot, he kicked the stone over the bank. Both men fully expected the sheep to scatter, some running up the ravine and others down in it. So both, with cocked guns in hand sprang forward to the edge of the bank.

But it was the unexpected that happened. Instead of scattering to the right and to the left, all the licking sheep suddenly leaped upward and over the bank. And every one leaped with all his might.

Both men had intended to shoot, and did shoot. Or at least their guns went off. But both were struck and knocked down, the long Jeff sprawling flat on his back. How Jess fell he never quite knew.

By the time the astounded hunters could get upon their feet and grab up the guns they had dropped, the fleeing wild sheep were just disappearing along the mountain side. Now the two, after brushing the dirt from their clothes, looked at each other and grinned—grinned "sheepishly," as Jess always declared when relating the experience.

"What did you hit, Jeff"?

"That cliff over there, I'm thinking. Didn't your gun go off? Thought I heard two shots."

"Guess you did. My gun certainly went off somehow. I recollect that. But for the life of me I can't tell whether I shot, or the gun was discharged when that battering ram knocked me down."

"We had our fingers on the triggers, Jess; and when those wild brutes jumped right into our faces, we just couldn't help pulling the triggers."

"Well, anyhow, we're two loads of ammunition poorer and not a bite of meat to show for it. Rather sorry sort of hunting that is, seems to me like, Jeff."

"Right you are, Jess. And we've got to do better, or there won't be any meat for supper at our diggings.

Now the two tramped on over the mountains and finally reached camp, just at dusk, carrying a half-grown deer. But of all their hunting adventures in the Rockies, there was none that they would remember longer than their experience with the mountain sheep.

CHAPTER SIXTEEN.

Dangerous Neighbors and a Salted Claim.

While eating supper, they learned that they had some new neighbors, or were soon to have. Three new miners had just come in, and were about to buy the claim adjoining theirs up the creek.

The present owner, a man named Mason, had been working his claim alone, and at no small disadvantage. For that reason, and because of the sorry profits, he was discouraged and wanted to return to his home. As he had already informed his neighbors, he had a wife and several children in Indiana. By toiling early and late, he had been able to clean up dust to the value of a hundred and fifty or sixty dollars. The newcomers seemed favorably impressed with Mason's claim, and had already agreed to pay him $300 for it.

Next morning early Mason came down to tell the six partners good-bye. He had already received his $300 in gold dust, and was ready to set out for the states. Before locating here he had sold a claim over in Gregory's gulch for $250. So he now had about $700 in gold to carry back to Indiana with him.

"How do you expect to travel?" inquired Esau.

"Why, I've got a wagon and team down yonder at the foot of the mountains. That is, if some thief hain't run off with 'em. Reckon I'll find somebody to cross the plains with. Wouldn't like to make the trip alone."

And Givens answered: "There'll be scads of people rolling in that direction about this time, I imagine."

When Mason started, two of the miners who had bought him out accompanied him. The other man of the newcomers remained on his claim, and could be seen doing some work.

After eating his supper, Sanders strolled up to have a chat with the lone miner, mainly to show a neighborly interest in him.

On returning to his own camp, not many minutes later, the visitor said: "That fellow don't seem to care much for company. In fact, he's got a sulky look, and you can hardly squeeze a word out of 'im. And there's an ugly-looking old dog there, with about the same kind of a disposition. The brute kept eyeing me all the time, in a sneaking sort of a way, as if he was thinking how he would like to try his teeth on me."

How Jess fell he never quite knew.

"Did the other two men go to Denver?" asked Cooper.

"No; only as far as Gregory's diggings, that fellow said. They expect to get back tomorrow. They went to help Mason carry his camping outfit, and to fetch over some things of theirs that they left in the gulch."

It was late the following day when the two absent miners returned to their claim. One of them, who gave his name as Jeeters, told Cooper that they had accompanied Mason as far as Gregory's diggings, and had there seen him started, in a wagon, on his way to Denver. Jeeters and his partner had brought back the things they had gone for.

But they had also brought something else with them from Gregory's gulch. And that was a jug of whisky.

Not one of the party of six was a drinker. It was mainly for that reason that Sanders had joined them, leaving his former partners, most of whom were prone to visit the liquor tents too often. Hence, to their nearest neighbors, the jug of whisky did not recommend the newcomers very highly. Also their language and general appearance were against them. So profane were they, at times, that the air around them reeked with brimstone. Or at least Givens expressed the opinion that it did.

For a day or two, till the jug was empty, Jeeters and his partners devoted most of their time to that. When their whisky was gone, they could be seen digging up dirt and washing it out at the creek. The three remained on their own claim. And partly because they seemed to prefer to be left alone, and partly because of that savage dog of theirs, the other miners seldom exchanged any words with them.

More gold seekers were coming in constantly. Here on Clear creek claims were changing hands every day. Hence it came about that, before Cooper's party were aware of what was happening, Jeeters and the two men with him had sold their claim and gone. Four new miners, the purchasers, had taken possession of the claim.

As the latest owners were of better appearance than the doubtful three, and had no savage dog to frighten visitors away, all their neighbors were well pleased with the change.

Having no liquor jug, the newcomers fell vigorously to work. But after supper, on their first day, one of them came down to talk with Cooper and his partners.

"Say, how much can you boys wash out in a day here?" he wanted to know.

It was Cooper who answered: "Since we've got our sluice box rigged up, we average about an ounce altogether—$16. A little more than $2.50 apiece."

"That all? But our claim has been pannin' out better'n that?"

"As far as we know, yours hasn't paid as well. Mason, the man who staked out the claim, and who did most of the work on it, always insisted that he wasn't averaging as much as each of us averaged."

"Then—I wonder." The surprised visitor sat gazing into the fire. "From the way everything looks now, me and my pardners has had a lot of shenanigan worked on us."

"How's that?" inquired Sanders.

"Why we was told we could wash out $8 or $10 apiece on our claim—the claim we bought."

"And did you believe that yarn?" asked Givens.

"We did. We shorely did. But not till we thought we had good evidence of it. They let us wash out panful after panful of dirt for ourselves. And we cleaned up at least half a dollar for every panful. On that showin' we planked down $600 for the claim—A $150 apiece."

"Six hundred dollars. You newcomers must be made of money!" exclaimed Holloway. "Jeeters and his bunch bought it for only $300 a week or so before. And we all thought——"

"They did! Why Jeeters declared to us that they'd paid $500 for it!"

Here Givens spoke: "Mason told us $300, just a few minutes before he left here. He thought he was lucky to have got that; and we all thought so, too."

"Jeeters told us their claim hadn't been so very rich, when they bought it. But they'd started a shaft, and had struck better-payin' dirt."

"And how do you find it now? Have you cleaned up half a dollar a panful today?" questioned Esau.

"At first we did. But only for a few panfuls. Since then it's been pannin' out mighty slim. That's what brung me over here—to have a talk with you fellers."

"What do you think?" Orlando asked.

Their visitor laughed. But there was not much amusement in his laughter. "For my part, I ain't doin' much thinkin'. Got past that. I know now. I'm dead shore me and my pardners has been mighty bad humbugged. Whole business was just—just a bare-faced swindle. Our claim was—was——"

"Was salted?" suggested Sanders.

The visitor nodded. "That's what. We've planked down $600 for a claim worth about a hundred."

The man soon returned to his own camp. Next morning Cooper and Sanders went up to inspect the suspicious claim. And the conclusion they and the owners reached was that most of the gold washed out by the present owners had been put into the dirt by Jeeters and his partners.

The new owners kept at work; but all were much disgusted. Having no sluice box, the best they could wash out with their pans was about a dollar a day for each man. Naturally they speculated as to what had become of the swindlers. But it seemed useless to follow them.

Before long came more startling news. A miner who had visited Gregory's diggings brought it back with him.

Some prospectors, while wandering over the mountains between the two camps, had happened upon a dead man. And in one pocket of his clothes they had found a letter addressed to somebody named Mason. If the letter was the dead man's own, as seemed probable, that was his name. That he had been slain was very evident. There was a bullet hole in the back of his head

When the report that one of their number had been murdered had spread through the Clear creek camp, as it very soon did, no little excitement sprang up. The bearer of the news had seen the body, which had been carried on a litter to Gregory's diggings. But, the face having been disfigured somewhat by birds or animals of prey, he had not been able to identify it certainly. He had promised to send over some men who knew Mason well, from having worked near him.

An indignation meeting was held straightway. At that meeting four miners were chosen to visit Gregory's gulch and try to identify the body. Two of those were from the next claim above Mason's;

Pike's Peak or Bust

(Continued from page sixteen.)

the others from the next claim below—Cooper and Orlando Medford.

Having armed themselves, the four men set out at once. On arriving at Gregory's gulch, they viewed the body. And not one of them had any doubt that it was the remains of the man they had known in the Clear creek camp. Now another indignation meeting was held, several hundred miners being present.

At this meeting all the visitors from Clear creek declared their conviction that the men who had bought Mason's claim had murdered him. Indeed, everything considered, it now seemed probable that they had planned to murder him before they bought the claim. Otherwise they would not have planked down so much for it. It was also known that Jeeters and his partners, or three men and a dog of the same description, had passed through Gregory's gulch soon after Mason's claim had been salted and sold again. Now the miners decided to send a party on to Denver, in the hope of capturing the fugitives. In the party went the four men from Cedar creek, who might be needed to identify the murderers.

On arriving at the edge of the plains, the party divided. Most of them hurried on to Denver, to see what they could learn there. The others began a search along the foot of the mountains, in the hope of finding out what had become of Mason's wagon and team.

While doing that, Cooper and Orlando seized a chance to visit Cooper's family in their camp. The family was well, and things were moving along as smoothly as could be expected. The visit was all too short for the younger man; but he managed to have a pleasant little chat with Hazel alone.

A number of camps along here were given up to herding miners' teams. After numerous fruitless inquiries, Cooper and his party located the man with whom Mason had left his wagon and team. But it was only to be told that Mason had been there and taken them away.

On being assured that such a thing was impossible, and given the reason, the man acknowledged that he himself had been up in the mountains prospecting at the time. His son, a half-grown young fellow, had been herding the oxen, and had delivered them and Mason's wagon to the man who called for them. In some confusion, the boy admitted that he had never seen Mason. He had only taken it for granted that the man who came for the wagon and team, and who gave his name as Mason, was the real owner.

But the young ox herder supplied further information. Two other men were in company with the supposed Mason. And when the boy had described the three men and their ugly dog as well as he could the miners from Clear creek knew them to be Jeeters and his partners.

"Now that the scoundrels have got possession of Mason's traveling layout, they're probably far on their way toward the states," Cooper remarked.

"Maybe so; maybe so not. Let's make a bee line for Denver now. If the other boys hain't already got track of the scoundrels there, maybe all of us together can," said another man.

A few minutes later they were on the road. On reaching that fast-expanding town, they learned that the rest of their party had not yet accomplished anything; perhaps for the reason that they had inquired for three foot travelers. Armed with the information that the rogues were in a wagon, the party made further inquiries.

And their perseverance was at length rewarded. As Cooper had suspected, Mason's wagon and team had started back across the plains a few days before. But Mason's murderers had not traveled with it. Instead of that, they had sold the wagon and oxen to some miners who wanted to return home. The last that could be learned of Jeeters and his followers was when they, each with a pack, and attended by their ugly dog, were headed due west toward the mountains.

"They're pointed toward some other diggings, is my guess," was Cooper's opinion.

"Either that, or they've struck out through the mountains, prospectin' on their own hook," another member of the party said. "Whatever they've done or wherever they've went, they'll be ketched up with sooner or later. You can bet your last spoonful of dust on that. And when they're in our hands, then will come a rope and a limb."

As there was nothing else that could be done, the whole party now started back to Gregory's diggings. At the foot of the mountains the others kept on; but Cooper and Orlando spent part of a day and a night in Cooper's camp. To the younger man especially, the brief visit was very pleasant while it lasted. It gave him a chance to see the object of his infatuation again and to talk with her. His stay was all too short, and he was heartily sorry when the time came, next morning, for him and Hazel's father to travel on. Each of them carried some flour on his back as he went.

The end of their day's tramping found them at Gregory's gulch. After a night spent there, they pushed ahead to Clear creek and their own claims.

For several days Mason's murderer was the principal topic of conversation in the camp. There was general indignation, and everybody knew that if the murderers should be captured a rope would end their evil careers speedily. But Jeeters and his partners in crime were not captured; nor was it known that any human being had caught a glimpse of them since they had left Denver for the mountains. It was now commonly believed that, goaded on by the fear of justice which haunts every murderer, sleeping or walking, they had buried themselves deep in the wilds. When they emerged, it would probably be at some of the settlements in Utah, or maybe in California.

After a time the excitement over the matter subsided, and affairs in the Clear creek camp went on as before.

In spite of many high hopes, none of the miners here could wash out, on an average, more than two or three dollars a day. Some, disappointed over not getting rich, as they had expected, sold their claims and sluice boxes for whatever they could obtain for them, and wandered away. But others came in to take their places, and there were always several hundred gold seekers strung up and down this narrow gorge between two mountains.

But for the hunting and fishing and prospecting, the miners here must have found life very monotonous. Besides scouring the surrounding country for game, they could now pick many wild strawberries on the mountainsides. Those they gathered gladly; and they either ate them raw, or made a rude kind of pie, or cobbler, of them. However eaten, the wild fruit served to vary an otherwise monotonous diet. And so did the mountain trout jerked out of the waters of Clear creek.

From about the end of June rain fell in the mountains every day. There was never more than a brief shower, which came down not long after noon. It was understood that most of these showers were confined to the mountains, the weather being more or less dry out in the plains country. And there was a saying in the mining camps that it could rain in your lap without wetting your head.

One day Orlando and Esau, who happened to be out hunting and prospecting at the usual shower time, watched a cloud gather against the mountain side scarcely a stone's throw below them. Soon they heard thunder rumbling and crashing in the clouds and saw pale lightnings flashing. But where they themselves stood the sky showed only a bright blue overhead and the sun was shining dazzlingly. After the shower had rained itself out, the two prospectors went on toward camp.

To shelter themselves from these daily wettings, most of the miners had only brush sheds. A few, who had brought in their wives and children, had their camp sheds covered with wagon sheets or tents. But most of them, greatly disappointed over the amount of gold their claims were panning out, preferred to submit to a daily drenching rather than spend time and gold dust preparing more comfortable quarters.

Even if any of them had expected to remain here long, it would have been a waste of time and money to erect a house of any value. The mountains bordering the creek were very close together; and when winter came, and snow fell deep on the mountain sides, snowslides would bury any kind of a structure that might be built here, as well as anybody rash enough to be living in it. As snow might begin to fall any day from the middle of September on, the period of the miners' stay could not be long.

The party of six, as well as most of the claim holders near them, could still wash out from a dollar to three dollars apiece a day. But all of them had located here in the hope of "striking it rich," and that inside of a few months. So, naturally such a coming down did violence to their feelings.

Though they spoke sometimes of going away, the Hinkson family were still on their claim, and still working it. The man was not very strong, and his wife seemed to be doing most of the digging, as well as most of the washing out of the dirt. However, their cows were still giving milk, and the man still found ready sale for it, when he went up and down the camp with his buckets.

Faithful little Becky kept up her herding. And she did not fail to visit Cooper's party from time to time. More than once, when she and her little drove happened to be close by, she took refuge under their shed when the showers came on.

"What do you do when you're caught out in the rain?" Orlando asked her one day. She, as well as all of the miners in camp, had been driven to shelter by the usual downpour. They were sitting on logs, under the corner of the brush shed which was reinforced by Esau's two-piece tent. It was dry there.

"Oh, all sorts of things. Sometimes I sneak under a rock or a log or stand under a leanin' tree. When I can't find any of them, I do like the cows and the oxens does. I jest stand and take it."

"But don't you get pretty wet?"

"Don't I, though! Wringin' wet. Wet as a dishrag. But when the sun shines out I mighty soon dry."

"Seems to me you ought to have your clothes changed when you git wet," Esau remarked.

"What's the use? They dry on me jest as quick as they would hangin' on a limb. And I don't mind. That is, not much. After this, though, reckon maybe I'll drive down to water jest before shower time; and then I won't drive back till the rain's over. That won't do much good, though, unless I come here. Most of them thar bresh camps leaks like a—like a sifter."

"Well, you're always welcome to come here, Becky. We've got a dry corner to our shed," Orlando told her.

"That's what I'll do. I'll water here at your claim every day, and then I'll be handy."

As a rule the miners in the Clear Creek camp were remarkably healthy. But at one time an epidemic of flu ran through the camp, attacking many, and keeping them from their work for a day or two. The only remedy used was a very simple one; drinking water with parched flour in it. Perhaps the trouble would have passed away of itself; for the epidemic soon ran its course.

After that, however, came an occasional case of what was known as mountain fever. As there were neither doctors nor medicine here, those so attacked, if able to travel at all, were taken by their friends to Gregory's Gulch, or even as far as Denver. Both of these places had been improving with wonderful rapidity, and now had some pretty good buildings in them. Doctors and medicines could be found there.

One day Hinkson failed to appear on his

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle: You are always so good about responding to my requests that I am sure you will do so again and I want you to put on your thinking caps. We want to have a nice interesting circle during the winter months and I want to hear from you as to any particular subject you would like to find discussed there.

You will want to know something of each other, as to what has been done to make a bit of money during the summer; you will want to know something about labor saving devices worked out by the sisters. You will enjoy letters from women of the circle who live away across the United States, for we have quite a number who do. Write and tell the sort of summer you have had.

I told you a few weeks ago about the greatest ship in the world. Would you like to have a few inches of space given to telling of many of the greatest things achieved by man?

When you write of your homes tell us about the number of rooms you have, how you make them look nice and what you use to do it. Tell us of the part of your housework you dislike the most and why you dislike it. Tell what you like best to do. Do you "just hate" to wash dishes? If you do, tell us how you go at it and all about it.

I know you are busy now and will be till the fall work is done, but be thinking about it and as you get time sit down and have nice little visits with me for the benefit of our many thousand readers.

I would like some letters about what you fill the children's dinner pails with. Please don't wait too long to tell us about that, as now is the time when the women want to know. Your friend,

ALICE W. BARLAND.

This letter came a long time ago:

Dear Mrs. Barland: I have two things in my kitchen that are great helps to me. One is a little piece of white oilcloth tacked to the wall, easily cleaned each day. Onto it each day I pin a quotation, anything that comes to my mind, and the things needed from town as I think of them. I find this a great help.

The other thing is a mirror. We mothers are busy, I know. I am sending off our children to school with lunches, but mothers, just stop a bit and look in the glass and see yourself as others see you. Then a pan of hot water, a comb and brush, a little face cream and a powder puff and notice the difference. Then each into that bottom drawer and get clean apron. By the clock you have lost little time, but as you return to your work there will be a song on your lips and you will feel much refreshed and will soon make up the time.

The pay comes when John and the children come in and tell you that you look like "that old sweetheart of mine" and from the high school children, "Oh, dumsy, but you look peachy!" And if no one should say a word the glass has told you.—Mrs. W. A. F., Ill.

Here is a girl who wrote me a long time ago and asked me about things, but gave no name or address. So she has had to wait a long time:

My Dear Mrs. Barland: I am a young reader of THE FARMER, only 16 years old, and have wanted to write to you for sometime, but have not been sure of your address.

I do not approve of the way young girls comb their hair in fans and ear puffs. Style. I have been urged to bob my hair, to look nice and not altogether out of style. I have been urged to bob my hair but I will not do that if it never grows any longer. It is only 14 inches, very heavy and seems healthy and oily enough. But it will not grow longer. I wash it every two weeks and give it a good shampoo.

I live on a ranch in the summer time and our nearest neighbor is five miles away. I read a letter in THE FARMER last summer from a girl who signed herself L. P. and I would like to write to her. —A Reader of THE FARMER.

My Dear Young Girl: About your hair growing long, will say that not every one has long hair. If yours is heavy and in a healthy condition and doesn't come out you can do it up very prettily by combing it back and making three little coils just at the base of your neck. If it is very straight put it up once or twice a week on some sort of curlers and leave it loose and fluffy when you comb it back. If it is becoming to you to part it, do that.

If I knew your address I could give you the address of L. P., but I can not give it through the paper.

Thank you for the big wedding cake recipe, it will appear in the home recipes.

— A. W. BARLAND.

Dear Mrs. Barland: I am very much interested in the circle and can not commend you too highly for the interesting and useful things you make known to us farmers' wives, especially those of us who are so isolated.

I want to tell about the handiest of all scrapers for kitchen utensils. It is the broad bladed putty knife. It has a very comfortable handle and is not nearly so insanitary and hard to clean as the wire dish cleaner and scraper combined.—B. F., Wash.

Dear Mrs. Barland: I was interested in the letter of the mother who had the little 5-year-old daughter who was so full of mischief. I wish to tell her that I had just such trouble with my older children between the ages of 4 and 7. I found after living in close contact with a good kindergarten teacher what the trouble was.

The little brains of the children are always at work and their hands must be doing something. I supplied my younger children with kindergarten work when they became tired of their regular play. I seated them at the table in high chairs and gave them just one kind to do each day so they didn't grow tired of any of it.

They would make dozens of yards of paper chains. I took rye or wheat straws and cut them into 1½-inch lengths, then cut round or square pieces of bright colored paper or cardboard 3-4 inches in diameter and they would string yards of them with a long darning needle.

Soak dry peas so that toothpicks can be inserted, break some in half and little beds, tables and chairs can be made, according to the ability of the mother.

Heavy wall paper can be cut into diamonds and squares eight inches in diameter and slits cut for bright paper to be woven through and make lovely paper mats. Some paper baskets can be cut all shapes.

There is clay molding, if one can afford to buy the kindergarten clay, and it is wonderful how many little things the little ones can make with it.

Take a large piece of cardboard and help them to cut out cows, chickens, pigs, boys, girls, houses, papas and mammas all they wish to cut out, then with a touch of paste they can make what my children used to call a "home."

There are so many ways to keep them busy, and remember the time isn't thrown away. Teach them to thread their own needles and tie the knots. Always have a box of colored crayons for the little ones and keep each sort of work separate and teach them to put away the things when through, neatly in the proper box.

Last, but not least, don't fail to have a place somewhere in the house where their work can be displayed in an artistic manner. Just observe how much pride they take in showing what they have done. No matter how crude it may be, be sure to praise it. If you will take notice you will see that the children who have had this sort of help at home will forge ahead of the children who have not had such practice when they are sent to school.

I trust this may be of some help to the young mothers and I beg of them to give it a trial at any rate.—Mrs. L. G., Wash.

(I would add to these suggestions which are so good one other, that children will cut out pictures by the hour out of newspapers and catalogues and little blunt pointed scissors can be had at the 10-cent stores. A. W. B.)

A MIXED NATIONALITY.

The census of 1910 showed a foreign-born population of 13,515,886, out of a total population of 91,972,266. Foreign-born persons and those born of double foreign parentage then amounted, together, to 28.7 per cent of our population. In 1920 the number of those of foreign birth had slightly decreased, being 12,498,334, out of an increased total population of 105,710,620. When George Washington became president the population had been little increased from abroad for a hundred years. It was, far more than that of today, an English-speaking populace, in spite of economic conditions making for regional isolation.

Pickle Recipes

Take two dozen green peppers and extract the seeds by making a slit on the side or cutting a round piece from the stem end, making of it a little cover which can be replaced when the pepper is filled and may be held in place with a toothpick. This will keep the peppers whole.

Pour a strong brine over the peppers and let them stand 24 hours, then take them from the brine and drain and soak them in clear water for a day and a night. Pour off this water, scald some vinegar into which put a small piece of alum and pour over the peppers and let them stand for three days. Prepare a stuffing of two hard heads of white cabbage chopped fine, seasoned slightly with salt and a cup of white mustard seed; mix well and stuff the peppers hard and full. Fasten on the covers, place them in a stone jar and pour over spiced vinegar scalding hot and cover tightly.

Peppers made this way are good and look so pretty, green or a beautiful red. I kept mine nearly a year just in a glass jar with a common cover. I found that peppers stuffed from the stem ends are easy to handle, do not break when stuffing. I didn't use the pins, but placed them carefully in a wide-mouthed jar, arranging them standing on end and supporting each other with the "cover" laid on the top. MRS. E. M'C.

Idaho.

Mustard Pickles.

Two quarts each of green tomatoes and cucumbers, two bunches of celery, two quarts of small onions, two cauliflowers, three quarts vinegar, five cups sugar, one cup of salt, one quart of water, two cups flour, two tablespoons of turmeric powder, one small spoon of dry mustard, one can prepared mustard. Put all together except the flour in preserving kettle with water enough to cover and cook until tender, then add the flour mixed smooth in water and allow to boil up till it thickens and remove and put in bottles and seal.—Mrs. W. R. L.

Cucumber Relish.

Twelve large cucumbers, three large onions, a little salt, two cups vinegar, one cup sugar, one tablespoon of mustard seed, one teaspoon each of celery seed, ground pepper and turmeric powder. Peel and slice the cucumbers and onions, sprinkle the salt over them and let stand over night; in morning drain them well and put into a granite pan with the vinegar and all other ingredients, bring to a boiling point then bottle and seal while hot. Do not use ground mustard.—Mrs. L. S. H., Idaho.

"The Sunshine of the Night"

High Points in News of the Week

The United States department of justice has ruled that the prohibition amendment and the Volstead enforcement act applies on American-owned ocean-going vessels as well as on American soil. As a result Attorney General Daugherty has ruled that all vessels are prohibited from having liquor on board. The ruling is applied to the three-mile limit along the coast and to the high seas as well. It also applies to foreign-owned vessels coming into American waters and transacting business in American ports. On and after October 14 neither foreign nor United States vessels will be permitted to bring liquor into the American three-mile limit. Both Attorney General Daugherty and Chairman Lasker of the American shipping board predict court action to determine their power to apply the American prohibition law to foreign ships entering American ports. It is apparently the plan of the department of justice to board all ships entering the three-mile zone and place under lock and later confiscate all liquor on board. Heretofore little attention has been paid to the prohibition laws by the ships operators, it having been generally accepted by them that the prohibition law applied only on land.

* * *

Terms of an armistice were agreed upon between the allies and the Turks last week pending the outcome of a conference which it is hoped will settle the controversy between Turkey and England, France and Italy. The conference has been in progress three or four days, but up to this writing complete agreement has not been reached. The allies have agreed to permit Turkey to again enter and control Thrace on the European side of the Dardanelles, the sea of Marmora and the Bosphorus. While they are willing to permit the Turks to take immediate possession of Thrace in a peaceable manner they insist that military occupation shall not take place for 30 days. On the other hand the Turkish leaders insist on immediate military possession.

Following the conclusion of the war, when the Turks were expelled from Thrace it was largely settled by Greeks. Greece is now insisting that the allies refuse to permit Turkish entrance to Thrace and even suggests that the Greek army will attempt to prevent Turkish occupation even if agreed upon by the allies.

* * *

It has been officially stated that 83 railroads, operating approximately 65,000 miles of trackage, have settled the strike with their striking shopmen. They have reemployed about 125,000 of the strikers. Many of the other roads declare that they are operating successfully with new help employed since the strike was called, together with individual members of shopcrafts who have returned to work. President B. M. Jewell of the shopcraft federation justifies the individual settlement with these 84 roads on three grounds: That it effects a split in the association of railway executives; that it results in an agreement forming a basis for other settlement and that it puts 125,000 men to work, thus enabling them to assist in financing those who remain on strike on the other roads.

* * *

The United States department of justice has started suit against the Dayton Airplane company of Dayton, Ohio, seeking to recover $2,408,000 at 6 per cent interest since June, 1919, alleging this amount to have been fraudulently paid to the company by government officers during the war. This is one case growing out of a recent movement in the department of justice looking toward the prosecution of war-time profiteers. Congress sometime ago made a special appropriation for financing this prosecution and Attorney General Daugherty created within his department a special division for handling the matter.

* * *

About 9,600,000 tons of coal were mined last week, a little less than the previous week. The government geological survey calculates that the present output, notwithstanding the settlement of the strike, is insufficient to allow the country to build up its depleted stocks and at the same time provide for current consumption.

* * *

Since the fire that practically destroyed the Greek port of Smyrna, on the coast of Asia Minor, three weeks ago, 220,000 refugees have embarked for various places of relief and safety. American naval forces and relief workers have cared for 180,000 of these refugees.

* * *

Railway officials announce that the total number of persons killed in railway accidents of every kind in 1921 was 5996. This is the smallest number in any year since 1889. Of this number 1702 were killed where highways cross railroads.

* * *

A survey of the building industry in the United States for the present year results in an estimate that the year will see the expenditure of about $5,000,000,000 in building. About one-third of this is dwellings, the remaining two-thirds being industrial buildings, office buildings, hotels and schools. It is calculated that $610,000,000 is being expended in the construction of school buildings.

* * *

A telephone message from San Francisco to London is reported to be the latest achievement in long distance conversation. The message was transmitted by means of the long distance telephone lines and radio service. While it was very limited in its success, it is declared that words spoken in San Francisco were heard in London.

An airplane with two aviators aboard remained in the air continuously at San Diego, Cal., last week for 35 hours. This is the longest flight from the standpoint of time in the air on record.

* * *

The American Farm Bureau federation of the western states, meting at Salt Lake City last week, passed resolutions favoring the early passage of the Smith-McNary reclamation bill, the adoption of the amortization plan of payment of deliquent water charges, the adoption of a national policy of reclamation service and the early development of the Muscle Shoals nitrate project.

* * *

During the week ended September 23 the railroads of the country loaded and handled 973,291 cars of freight. The number of cars equaled 96 per cent of the greatest number ever reported in one week, which was reached during October, 1920. There was nevertheless a car shortage reported, shippers having ordered over 107,000 cars more than could be supplied.

"The nation has everything to gain, nothing to lose, by recognizing the Russian soviet, and I will start a fight for it at the next congressional session," Senator Borah of Idaho declared in a recent address.

* * *

"The actual help given farmers through the loans made by the war finance corporation does not begin to measure the help which came through this agency," said Secretary Wallace of the department of agriculture recently. "Immediately the act was passed which enlarged its powers, a feeling of renewed confidence swept through the country. Money became easier to obtain. A more liberal policy on farm loans was generally adopted. The sacrificing of grain and live stock was checked and the hope of farmers was renewed.

"The story of the service rendered by this agency serves to illustrate the importance of taking the affirmative rather than the negative view in times of difficulty. There were many people who were disposed to accept the disastrous break in farm prices as inevitable and impossible to relieve by government action."

Just Folks

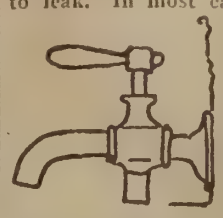
During one summer vacation of my school days I worked on my uncle's farm. He was not habituated to the more or less nominal courtesies of urban life. He even resented many of these verbal courtesies as mere flummery. He told me as much one day. I have forgotten the incident which brought forth his criticism. Perhaps it was when I thanked him for handing me a pitchfork on a load of hay.

"You don't have to thank me for what I ought to do," said he. "It is part of your business to ask it and part of my business to grant it; that is not something to be thanked for."

At the time and for years afterward, whenever the incident came into my mind, I thought of my uncle as being ignorant of good manners; of saying those things because he did not know any better. I am now wondering if there was not something vital and fundamental in my uncle's attitude of mind.

Is justice and a square deal as deserving of thanks as mercy and good will, and do we not take the bloom off mercy and good will when we use the same words in recognition of deeds of justice?

The square deal is occupying altogether too much of the space in our mind. There are other things at least as worthy of our thoughts as the idea of justice.



Justice and the square deal seem to be necessary evils in human life. They must be considered and fought for, and have been considered and fought for through bloody days in the past, but in the long run they are makeshifts.

Mercy is greater than justice. Genuine good will surpasses the square deal.

It is not the highest type of man nor the highest type of society that exacts the pound of flesh. In short, the golden rule was not founded on justice and the square deal. E.A.S.

Be Fair With the Faucet

Don't blame the faucet when it begins to leak. In most cases the gaskets have served their full time or have been abused by those who use the faucet. Why turn the faucet off twice as hard as is necessary to stop the water flow? The rubber or composition gaskets or plunger heads lose their pliability much earlier when undue pressure is placed upon them. Also they tend to stick after being shut off tightly, resulting in a break of the surface when again turned on. To be sure, these parts must be renewed occasionally, regardless of the care with which the faucet is used, but leaks will be much less frequent if unnecessary shut-off pressure is avoided.

New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hopper-cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

LIGHT WEIGHT 4 H. P.

For all power jobs up to 5 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

CUSHMAN MOTOR WORKS
415 E. Ash Street. Portland, Ore.

STATEMENT OF THE OWNERSHIP, MANagement, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for October 1, 1922.

State of Washington, county of Spokane, ss:

Before me, a notary public, in and for the state and county aforesaid, personally appeared W. H. Cowles, who, having been duly sworn according to law, deposes and says that he is the president of The Washington Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation,) etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ...; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Cowles Publishing Company (a corporation), Spokane, Washington; W. H. Cowles, Spokane, Washington; H. C. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder of security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Every child has occasions when there are "patches" in the throat. Immediately mother is worried for fear the trouble may prove to be diphtheria.

Dr. Copeland.

It is too bad there should be any reason for worry of this sort. Diphtheria can be made just as rare a disease as smallpox.

Do you realize that 50 years ago there were 32 deaths from smallpox in every 100,000 of the population? Such a state of affairs, if it existed today, would mean that with the present population of New York city there would be nearly 2000 deaths every year from this loathsome disease. A thousand deaths would be the annual tribute of Chicago to this enemy of mankind.

Thanks to the protection afforded by vaccination, there has not been a death from smallpox in New York city in 10 years. Undoubtedly Chicago and every other American city is equally fortunate.

There is just as effective a means of protection against diphtheria. If you have a child under your care make sure he is safe from this disease. This may be done by having the Schick test made, which consists of the painless injection of a minute drop of fluid under the skin. If there is a reaction the child should be inoculated with the preventive vaccine.

The tonsil is not a solid mass of tissue with its even surface covered by an unbroken layer of mucous membrane. On the contrary, the surface of the tonsil is very much broken. There are pockets or "crypts" dipping down into the substance of the tonsil. Some of these depressions are remarkably deep, possibly one-quarter of an inch or more.

You can see that, as these pockets are like the pockets in clothing, especially like children's pockets, they are apt to be filled with something or other. The consillar pockets are filled with mucus and food debris.

The crypts make splendid culture tubes. The jelly-like contents, kept warm by the unfailing heat of the throat, offer a suitable soil for the growth and multiplication of germs.

Your child gets wet or chilled while he is skating, he stays too much in the house, he spends his Saturday in a musty or dusty museum, library, basement or attic, instead of in the open air, he overeats the wrong kind of food, he becomes constipated from some cause—the next thing is an attack of tonsilitis.

What I have said about the causes of tonsilitis in children is equally true of the causes of tonsilitis in adults. Exposure, too much indoor life, too little exercise and indulgence in many dietary errors will lower your resistance so that you become the easy victim of the watchful germs lurking in the hidden recesses of your tonsils.

Don't blame your tonsils. Correct your manner of living, and be in daily trim to resist disease.

An Improvement.

Doctor—You cough with much greater ease this morning.

Patient—I ought to; I have been practicing all night.—Medical Pickwick.

An Insinuation.

"I was told," he said, "in my early youth, that if I didn't quit smoking cigarettes I'd be feeble-minded when I grew up."

"Well," answered she, "why didn't you quit?"

Don't Be Uneasy.

The mistress—Really, Justine, you are wearing very pretty silk stockings. The maid—Don't be uneasy, madam; I got these at my last situation.—London Opinion.

Fisherman's Wit.

Owner—Here, what are you doing? Don't you know you're not allowed to take fish out of this water?

Angler (three hours without a catch)—I'm not taking them out. I'm feeding them.

Explained.

"What is your regular business?" asked the judge of the man who had just been convicted of selling a gold brick to an unsuspecting citizen of New York city, which is the only place they can be sold nowadays.

"Your honor," answered the man, "being honest is my regular trade, and I was on my vacation."—Farm Life.

Discovers New Heating Device Which Burns 95% Air

Did you ever think of burning air in order to heat your home or do your cooking? I now have a new invention which gives you three times the heat of coal or wood—yet burns 95 per cent air and only 5 per cent oil.

Thousands of housewives, happy to be free from the drudgery of coal and wood, are enthusiastic about this amazing new invention. Not only does this invention, the Oliver Oil-Gas Burner—free them from the dirt and muss of heating and cooking the old way but it saves them the expense and worry of coal and wood at this time.

The device sets right into the firebox of any stove or furnace. It is entirely safe and requires no adjustment. Just a turn of a little valve and the housewife instantly has as much or as little heat as she wants—three times the heat of coal or wood when she needs it in coldest weather. And in the hot summer this invention does away with the dreaded sweltering kitchen. I want every woman to have the use of my invention. If you will write to me personally, E. M. Oliver, 2121-J Oliver bldg., St. Louis, Mo., you will receive an attractive booklet FREE that tells all about it. I am now making a special Low Price Offer, including a thirty-day Free Trial, and am also looking for good, live distributors. I will tell you how to earn $500 a month if you are interested and request my sales plans.—Adv.

This is the first letter Florence Dobbs of Jefferson county, Washington, has ever written to us. She wouldn't have known about the Corner if Edna Barrie had not told her about it. Florence and Edna are both in the same grade at school and have the same teacher. They are good friends. Florence is 9. January 22, 1923, she will be 10.

Edith Hunter has a kitten, a doll and three rabbits. Kitty's name is Little White Foot. Edith also writes about a contest in her Sunday school class and about her school work. She is in the third grade this term. The Hunter home is not far from Eloika lake, in eastern Washington. There are three girls and a boy in the family.

In her second letter to us, Hazel Digerness tells us about her lovely vacation. We'll let her tell you in her own words: "We have been camping for three weeks out by Hood canal. We went fishing and dug clams and went in bathing. My birthday was yesterday. I was 12 years old. I got a pair of gloves and a string of beads and a toothbrush and two dress-pins." Hazel's home is in Kitsap county (Wash.) and her letter was written August 21.

Birthday Greetings

THURSDAY, October 12—Esther Bohnet, 10 years old; Madeline Ellis, 10; Edgar Lund, 11; Kenneth Strong, 11.

FRIDAY, October 13—Geneva Bushnell, 8 years old.

SATURDAY, October 14—Maxine Miller, 10 years old; William Steele, 9.

SUNDAY, October 15—Frank Cornwell Jr., 10 years old.

TUESDAY, October 17—Albert Edwards, 11 years old; Kenneth Farnsworth, 11.

WEDNESDAY, October 18—Margaret Anderson, 8 years old; Margaret Cerenzia, 11; Keith Weston, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Amanda Nickel, Gerrit J. Polinder, Dorothy Galbraith, Fred Lewis Jenkins, Claude Baskett, Gayle Axtell, Edna Barrie, Florence Dobbs, Edith Hunter, Alma Stensaa, Alice Coons, Anneta Shepardson, Elva Blankenship, Martha Floch, Ida Comstock, Alice Halsted.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOBBY COON IS WAKED UP.

Dey's a coming, dey's a coming, dey's a coming mighty soon,
But dey can't come soon enough fo' me!
Dey's a coming, dey's a coming at de turning ob de moon,
Whar Ah waits in mah ol' holler tree!

Unc' Billy Possum was singing to himself as he slowly trudged home from Farmer Brown's henhouse. He was feeling very good, very good indeed, was Unc' Billy Possum. No one appreciates strict-

"Ah guess Mistah Coon done made a mistake."

ly fresh eggs more than Unc' Billy does, and waiting for him in Farmer Brown's henhouse he had found more than he could eat. Now his stomach was full, his house had been cleaned and put to rights, ready for his family when they should arrive from Ol' Virginny, and now he had nothing to do but wait for them. So he trudged along and sang in a funny cracked voice.

Presently he came to his big hollow tree and started to climb up to the door of his house. Half way up he broke off short in the middle of his song. He sat down on a convenient branch, put one ear against the trunk of the tree and listened. Then he put the other ear against the tree and listened. There certainly was a funny noise, and it seemed to come from right inside his hollow tree. Unc' Billy turned and looked up at his doorway, scratching his head thoughtfully with one hand.

"Mah goodness" said Unc' Billy, "it certainly sounds like there was somebody in mah house!"

Then very softly Unc' Billy crept up to his doorway and peeped in. It was dark inside so that Unc' Billy could see little else than his nice, freshly made comfortable bed was all mussed up. But if he couldn't see he could hear. Oh, yes, indeed, Unc' Billy could hear perfectly well, and what he heard was a snore! There was somebody in Unc' Billy's bed!

"Mah goodness! mah goodness!" exclaimed Unc' Billy Possum, and his two sharp eyes began to snap. Then he stuck his head in at the door and shouted:

"Hi yo' alls! What yo' doing in mah house?"

The only answer was another snore. Unc' Billy waited a minute. Then he put his head in once more.

"Yo' better come out of mah house, Mistah Who-ever-yo'-are, before Ah comes in and puts yo' out!" shouted Unc' Billy.

The only answer was a snore louder than before. Then Unc' Billy quite lost his temper. Some one who had no business there was in his house! He didn't know who it was, and he didn't care. They were going to come out or he would know why not. Unc' Billy gritted his teeth and in he went.

My, my, my! Such a rumpus as there was right away in that hollow tree; Peter Rabbit happened to be coming along that way and heard it. Peter stopped and gazed at the hollow tree, his eyes and mouth wide open. Such a snarling and growling! Then out of the doorway began to fly leaves and moss. They were part of Unc' Billy's bed. Then Peter saw a big ringed tail hanging out of the doorway. No one possessed a tail like that but Bobby Coon.

In a minute Bobby followed his tail, hastily backing down the tree. Then Unc' Billy's sharp little old face appeared i the doorway. Unc' Billy looked down a Peter Rabbit and grinned.

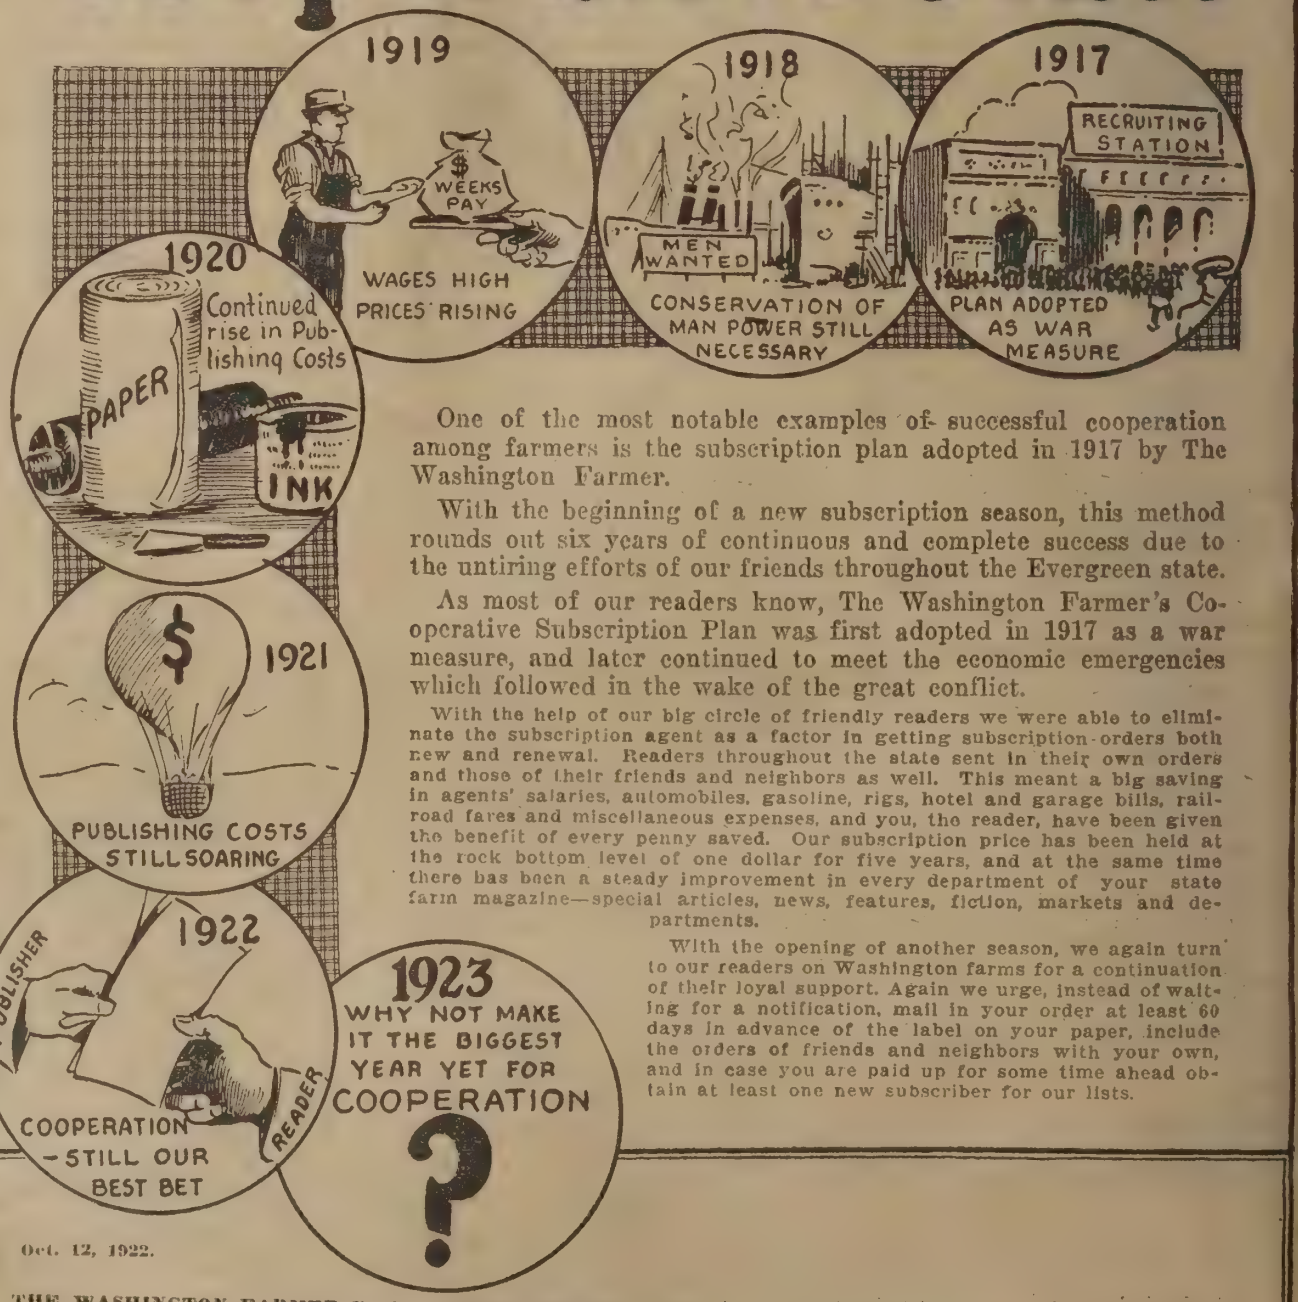
"Ah guess Mistah Coon done made mistake when he went to bed in ma house," said he.

And Bobby Coon sheepishly admitte that he did. (Copyright by T. W. Bu gess.)

Pike's Peak or Bust

(Continued from page eighteen.)

milk-peddling round. But, a little later hi wife was seen coming with the same ti buckets her husband had been accustome to carry.



"My old man, he's been tuck sick," sh said in reply to Cooper's inquiry.

"Do you know what's the matter wit 'im?"

"No, I don't. But he has fever all th time. I'm mightily afeared that thar moun tain fever has got a-holt uv 'im. If it has it'll go mighty hard with the pore feller I reckon. He never has been very stout nohow. That's how come I have to tak the lead so much in managin' things."

(To be continued.)

Six Years of Success For Farmers' Cooperative Plan

One of the most notable examples of successful cooperation among farmers is the subscription plan adopted in 1917 by The Washington Farmer.

With the beginning of a new subscription season, this method rounds out six years of continuous and complete success due to the untiring efforts of our friends throughout the Evergreen state.

As most of our readers know, The Washington Farmer's Cooperative Subscription Plan was first adopted in 1917 as a war measure, and later continued to meet the economic emergencies which followed in the wake of the great conflict.

With the help of our big circle of friendly readers we were able to eliminate the subscription agent as a factor in getting subscription orders both new and renewal. Readers throughout the state sent in their own orders and those of their friends and neighbors as well. This meant a big saving in agents' salaries, automobiles, gasoline, rigs, hotel and garage bills, railroad fares and miscellaneous expenses, and you, the reader, have been given the benefit of every penny saved. Our subscription price has been held at the rock bottom level of one dollar for five years, and at the same time there has been a steady improvement in every department of your state farm magazine—special articles, news, features, fiction, markets and departments.

With the opening of another season, we again turn to our readers on Washington farms for a continuation of their loyal support. Again we urge, instead of waiting for a notification, mail in your order at least 60 days in advance of the label on your paper, include the orders of friends and neighbors with your own, and in case you are paid up for some time ahead obtain at least one new subscriber for our lists.

Oct. 12, 1922.

THE WASHINGTON FARMER, Review Building, Spokane, Wash. .....1922.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to THE WASHINGTON FARMER.

(Rate: $1 for five years; 50c for three years; 25c for one year. In Canada 1c a copy extra.)

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

Corn for Seed

The best of seed corn is selected from e field instead of from the bin as is ten done, according to Leonard Hegner, crop specialist of the state college.

"Corn of a definite type should be selected for seed. If a smooth corn is anted, select for that type and keep nsistently after the one type. It will rk out better in the crop to grow a iform type and consistent effort for a mber of years shows up very disctly.

"When the crop is selected from the ld, the vigor of the plant, the marity of the corn, how the ear is set on e stalk and the type of ears and kernels ay all be lined up together. If this is ne from the bin, there is no way of tellg what kind of a plant produced a cern kind of ear.

"A few points to be kept in mind when aking the selection for seed purposes is e vigor of the stalk. It is important to lect from vigorous stalks. A type of rn is wanted that matures in good ason and while largeness of growth and ze of ear is desirable the point of marity must govern. The taller the stalk e later it is in maturing. Corn should ot carry the ears too high, for it means late maturing variety.

"Do not select for the number of ears the stalk. It is better to have one od ear on a stalk than two small ones."

An Agricultural Council

Several branches of industry directly lated to farming are represented in the ierce county agricultural council, which as organized a few months ago. Meetgs are held at frequent intervals. It is ie purpose to promote general agriculre for the good of the whole community. At each meeting a round table scussion is held.

Members of the council are: Charles W. rton, president; L. T. Oldroyd, county gricultural agent, secretary; W. H. Paulahus, president of the Puyallup and umner Berry Growers' association, Ed C. rton, Sumner, president of the Washingon Berry Growers' association; N. I. oodreau, president of the Valley Fruit rowers' union; R. E. Darling, manager ierce county branch of the Washington ooperative Egg and Poultry association; arney Reid, manager of the Pierce Coun Dairymen's association; Fred Chamberin, representing the Washington state range; Frank Ross, president of the enninsular Beekeepers' association; omer Tinker, banker of Tacoma; P. M. nider, banker of Puyallup; E. F. Gregory, icoma Chamber of Commerce; E. M. arper, commercial secretary Pierce ounty Farm bureau, and Mr. Sanders of ie poultry feed association.

Cooperation Again Sustained

The validity of a marketing contract tween a producer and a cooperative sociation of which he is a member, reuiring such producer to sell his products rough the association, was again susined last month, this time in the case of the Pacific County Dairymen's association against A. R. Templin, a member of the association. The Pierce county association is a unit of the United Dairy Associations of Washington. The action was brought against Mr. Templin to prevent his selling milk products to other persons than the association. Judge W. O. Chapman ruled that, under the cooperative marketing law as passed by the last legislature, the contract between the association and a member was valid and binding in all respects. He also cited the case in which the Washington Cranberry Growers' association was awarded a like decision by the state supreme court compelling one of its members to market through the association under similar contract. In part his decision reads:

"While holding firmly that any contract creating a monopoly, restraining trade, limiting production and controlling price would be void and unenforceable, the contract in this case is not shown to be of such character, under the interpretation of a similar contract by the supreme court of this state in Washington Cranberry Growers' association vs. A. B. Moore, Washington Decisions, volume 17, page 317, where they held the cranberry growers' association was entitled to injunctive relief against one of its members selling berries to other parties."

Have Ayrshire Bull Club

Clallam county has a bull club, with only three members, but there are approximately 75 cows owned by the members. The bull Chinook Peter Pan Ben, an Ayrshire, is a 3-year-old, sired by Willomoor Peter Pan 11th. He was bred by the state college and was purchased in April, 1921, for the three herds in the vicinity of Port Angeles.

Chinook Peter Pan Ben.

The club members are Orin Babcock, Jensen Brothers and Melford Eacrett. The bull is kept two months at each farm and is taken in a truck from one herd to another. In this way the expense for feed and shelter is equally divided and all have the use of a high-class bull at one-third of the cost that would have been necessary if each man had purchased a herd sire of his own.

ADDS TO HIS RIBBONS.

Chicona Lover Bold, the herd sire on the Wallace & Fordyce Guernsey farm at Sunnyside, is this year not only retaining laurels previouly wons in the show ring, but is adding to them. Against strong competition he was senior and grand champion at the state fair at Yakima in September. As heretofore he will give the judges food for thought at the winter shows if the Wallace & Fordyce herd completes the circuit.

PIG CLUB BOYS.

Pig club boys worsted the men in the swine judging contest staged on the Duroc Jersey tour held in the Sunnyside and Grandview districts recently. There were 23 in the party making the tour and of these there were seven boys. The judging was conducted at the S. D. Cornell place, near Grandview, and at the H. W. Turner place, near Sunnyside. Every one on the tour participated in the judging and the boys did by far the better judging, County Agent A. E. Lovett reports. These boys were members of the Sunnyside Pig club.

RAISES ALFALFA IN ROWS.

C. A. Warren of Vancouver, Wash., breeder of Chester White hogs, is trying out a plan of raising alfalfa in rows 24 inches apart. When planted in this manner the plants make luxuriant growth and weeds can be kept down easily. This crop is cut and fed to the brood sows in order to furnish green feed.

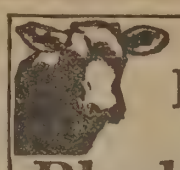
More Money From Hogs!

Free Book on Sanitary Improvements Shows How to Prevent Loss from Disease and get larger Profits

Healthy hogs are the real money hogs. And they don't just "happen." Healthy hogs are the result of healthy surroundings. Treat your hogs right and they will pay you more.

Cholera, white scours, pneumonia and worms are developments directly due to unsanitary surroundings.

Prevent disease and save feed by providing your hogs with clean, warm, comfortable quarters.



Our book, "Concrete on the Hog Farm" tells how to build permanent, sanitary improvements. Some of the subjects covered in this book are—Hoghouses, Feeding floors, Hog Wallows, Troughs, Waterers, Corncribs, Dipping Vats, Brine Tanks, etc.

Plan your improvements NOW. Send for this Free Book and know how to save on replacements and how to build for all time. Address office nearest you.

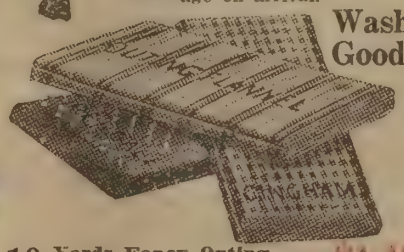
Heavy weight flat knit union suits of select long fiber cotton, in popular Jaeger or gray Random color. Heavily brushed fleece lining. Wrists and ankles are elastic knit. Sizes 34 to 46 chest. Buy a year's supply today. **Order Jaeger color by No. 52C1279. Random color by No. 52C1280. Send no money. Pay 99c and postage on arrival.**

Boys' flat knit union suits of fine quality cotton. Sizes 24 to 32 for 3 to 16 years. Order by No. 52C1358. Send no money. Pay 79c and postage on arrival.



All Silk PlushCoat

$9.98

Where else did you ever hear of an all silk plush coat with fur collar at our price? It is a stunning model, cut on fur coat lines, full 36 inches long with self material belt and turn-back cuffs and deep collar. The lining is durable twill, and every detail of the coat has been carefully worked out. Misses' sizes 16 to 20; women's, 34 to 44. **Order by No. 52E5843. Send no money. Pay $9.98 and postage on arrival.**

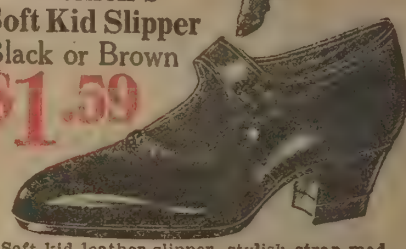
Wash Goods

10 Yards Fancy Outing Flannel $1.49

Ideal weight for undergarments. In fancy stripes, checks and plaids, white grounds with pink, blue or tan designs. 27-in. width. State pattern and color. **Order by No. 52F-3423. Send no money. Pay $1.49 for 10 yards and postage on arrival.**

10 Yards 36-inch Percale, only $1.49

Very choice patterns in fast colors. In white, gray, Calcutta and Indigo blue with neat stripes or dots. State color and pattern. **Order by No. 52F3406. Send no money. Pay $1.49 and postage.**



10 Yards 36-inch Challis, only $1.59

Persian and floral patterns. Predominating colors; navy, pink, red, tan, green and blue grounds. **Order by No. 52F3404. Send no money. Pay $1.59 and postage for 10 yards on arrival. State color.**

Women's Soft Kid Slipper

Black or Brown

$1.59

Soft kid leather slipper, stylish strap model with two buttons. Medium round toe. Cushion insoles. Medium rubber heels. Solid leather soles. A bargain at our slashed prices. Sizes 2½ to 8. Wide widths. **Order black by No. 52A228. Order brown by No. 52A229. Send no money. Pay $1.59 and postage on arrival. Always mention size.**

WOMEN'S BLACK KID HI-CUT

Send for this handsome shoe in black kid or calf leather. Note the medium toes with pretty imitation perforated tips, the perforation around vamp and on lace stays. Very popular model and really a sensational bargain now. Durable, flexible soles. Sizes 2½ to 8. Wide widths.

$1.98

Give Size

Order black kid by No. 52A122. Pay $1.98 and postage on arrival. Order black calf by No. 52A476. Pay $1.98 and postage on arrival.

Be Sure to Give Size.

Order by No. 52A733. Send no money. Pay $1.98 and postage on arrival. Order big boys' sizes 1 to 5½ by No. 52A564. Price $1.89. Order little boys' sizes 9 to 13½ by No. 52A565. Price $1.79. Pay bargain price.

Women's Comfort Oxfords or Hi-Cut SHOES

$1.79

Every woman should get a pair of these sensible broad toe shoes at this amazing price. Uppers of soft kid-finish leather, solid oak leather soles, low rubber heels, comfort cushioned insoles. Sizes 2½ to 8. **Order oxford by No. 52A233. Order high shoe by No. 52A262. Send no money Pay $1.79 and postage on arrival**

Be Sure to Mention Size.

Women's Popular Stitchdown Dark Brown Oxfords

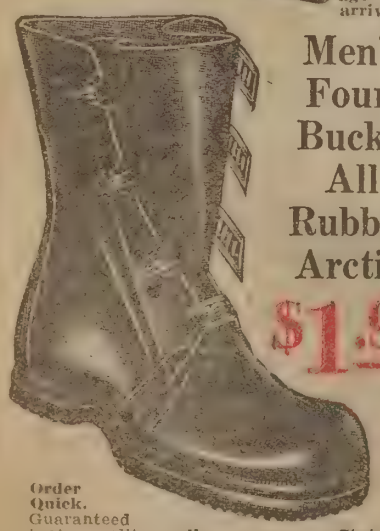
$1.98

Give Size

Classy stitchdown Oxford for women. Wonderfully comfortable and stylish. Uppers of dark mahogany leather. Smooth leather insoles. Flexible stitched-down oak outsoles. Low rubber heels. Sizes 2½ to 8. Wide widths. **Order by No. 52A268. Send no money. Pay only $1.98 and postage on arrival.**

Patent Leather Oxford

$1.93



Give Size

Women's black patent leather oxford, with imitation shield tip and medallion, perforated vamp, imitation circular foxing and lace stay perforated. Medium rubber heel and medium narrow toe. Sizes 2½ to 8. **Order patent leather by No. 52A64. Pay $1.98 and postage on arrival.**

Men's Four-Buckle All Rubber Arctics

$1.98

Order Quick. Guaranteed best quality, all rubber, 4-buckle hi-cut arctic for men. Made with double thick soles and seams reinforced. Snow-excluding tongue. Furnished in men's sizes 7 to 12. Wide widths. Sensational value. Send quick. **Order by No. 52A990. Send no money. Pay $1.98 and postage on arrival.** State size

MEN'S SPECIAL

Hip Boots

Men's pure gum hip boots; friction lined; heavy corrugated sole and heel; guaranteed first quality. Made of the very best rubber. Usually retailed at $5. Be sure to order your pair while this great saving offer lasts. Sizes 7 to 12. Wide widths. No half sizes. **Order by No. 52A949.**

$2.79

Give Size.

Men's and Boys' Heavy Leather Work Shoes

Order men's sizes 6 to 11 by No. 52A-758. Pay $1.98 and postage on arrival.

$1.98

State Size.

Wonderful work shoe for men and boys. Has soft, strong uppers. **Order boys' sizes 1 to 5½ by No. 52A554. Pay $1.89 and postage on arrival. Order boys' sizes 9 to 13 by No. 52A-555. Pay $1.79 and postage on arrival.**

MEN'S and Boys' Hi-Cut BLUCHER

Double oak soles, sewed and nailed; bellows tongue. Roomy last. **Order big boys' sizes 1 to 5½ by No. 52A570. Price $2.48. Order small boys' sizes, 9 to 13½ by No. 52A571. Price**

$1.98 Up

State size.

Same style, 9-in. hi-cut for men. Sizes 6 to 12. Wide widths. **Order by No. 52A769. Send no money. Pay $2.98 and postage on arrival.**

Why Should We Import So Much Foreign Cheese?---Page 7

Wheat Yields

Are Bigger by Four-Year Rotation

Growing only one crop of wheat every four years, in a corn, oats, wheat, clover rotation, without the use of fertilizers, provided the greatest increase in the yield of wheat in a series of experiments conducted 25 years by the University of Missouri, according to M. F. Miller, professor of soils.

Four plots of wheat lay side by side. No. 1 was planted to wheat every year the last 25 years. There was no manure or other fertilizer. The average yield was 9 1-2 bushels an acre.

Plot No. 2 was planted to wheat every year, but was given a heavy application of manure each year. The yield virtually was doubled, being 18.1 bushels, and showing the value of manure as a fertilizer for wheat.

No. 3, however, was the most interesting. A 4-year-old rotation of corn, oats, wheat and clover was grown. The yield of wheat was 23.6 bushels an acre, a substantial increase over the heavily manured plot. The soil was the same, the seeding, the preparation, the variety, the manner of handling—everything was the same as the wheat grown on No. 1, except the crops on land on which it was grown had, throughout the 25 years, been rotated. The result of that rotation had been to increase the yield from 9 1-2 bushels an acre to 23.6 bushels an acre.

On No. 4, where the crop rotation outlined was followed and manure applied heavily in addition the yield was increased almost three bushels, being 26 1-2 bushels an acre.

These yields are the average for the entire 25 years. They are the basis for the statements of Professor Miller that crop rotation is more valuable, in increasing yields, than the application of manure. That doesn't mean Professor Miller would neglect the application of manure. On the contrary, he strongly urges it. But the limited supply of manure is no excuse for low wheat yields, he points out.

Dairying Needs Men

Appointment of a dozen 1922 graduates of the dairy department at the state college of Washington to positions with dairy farms and manufacturers and calls for 10 more than could not be filled, indicate that the dairy industry of Washington offers excellent opportunity for the young man who will prepare himself, says Professor E. V. Ellington, head of the dairy department.

The Pioneer Alpine Dairy of Everett has just made James Bylling of Snohomish foreman. Bylling was active in the Dairy club at the college.

Another Everett organization, the Maple Leaf Dairy Milk Distributing plant, has employed Soren Christensen of South Bellingham, who was also a member of the Dairy club and of the All-Ag. club.

Robert Patrick of Seattle, assistant buttermaker for Swift & Co. in that city, was president of the Dairy club last year, and a member of the dairy judging team and the All-Ag. club. He has thus earned his appointment with one of the largest buttermaking firms in the west.

Rudie Oltman of Bellingham is to have charge this year of vocational agriculture instruction at the Elma high school. He was president of the Dairy club; twice a member of the dairy stock judging teams and successively secretary, treasurer and president of the All-Ag. club.

Donald Saunders of Marysville is now in charge of the Snohomish County Cow Testing association, one of the most progressive in Washington. He served first as secretary and then as vice president of the Saddle and Sirloin club, an organization to bring students into closer contact with breeders and stockmen of the state. He was also a member of the stock judging team.

At Chehalis the Shady Grove herd of purebred Jerseys is being managed now by Merle W. Means of Monroe, president of the Snohomish County club; a member of the dairy stock judging team, the Dairy club and the All-Ag. club.

William T. Putnam Jr. of Lake Cushman is developing his own herd of high class purebred Jersey cattle. Last year he was secretary and treasurer of the Dairy club, a member of the dairy products judging team. He also belonged to the All-Ag. club and was a member of the dairy cattle judging team.

Fred S. Martin, Penawawa, has been made county agricultural agent for Wahkiakum county.

Sheep on Logged-Off Land

Henry Boyd of Port Angeles has 26 Cotswold sheep on his farm near town and believes that he can make more profit from 10 sheep than from one cow and there are not so many chores to attend to. Most of his pasture is on logged-off land and the sheep do much in keeping the land cleared until the stumps can be removed for cultivation.

The herd ram is from the W. M. Shrunk farm at Redmond, Ore. The ewes also are registered animals and two were shown at the county fair at Port Angeles. Last year Mr. Boyd had nearly 100 head of ewes, which were pastured on 25 acres. This was too many for one man to handle in connection with a farm, according to Mr. Boyd's methods, and he sold off all but the registered ewes.

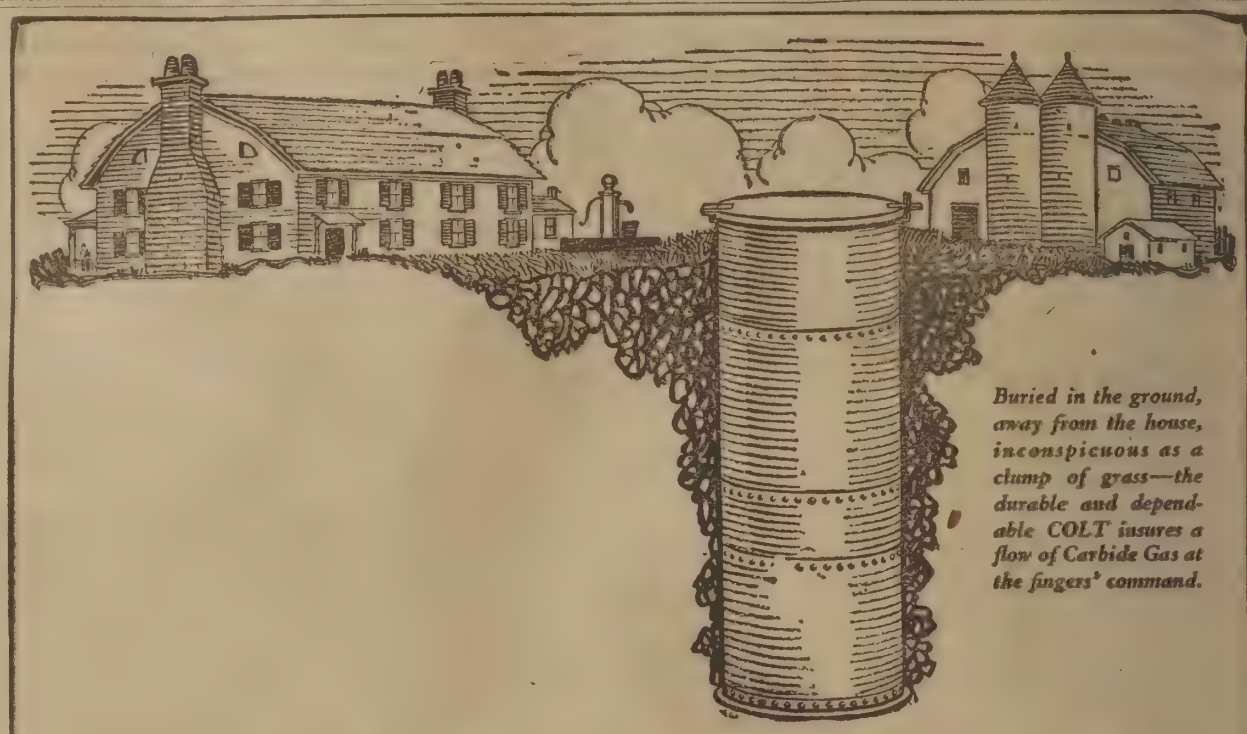
One of the worst enemies to sheep in that district is the wild cat, which inhabits the mountainous districts near by. They are being got rid of by means of dogs and traps and the trouble should not be a serious one.

Spokane County Fights T. B.

The campaign for tuberculosis eradication in Spokane county under the supervision of County Agent O. V. Patton has progressed faster and more completely than was expected. Ninety-nine per cent of the cattle in the northern half of the county have been tested, with less than 1-10 of 1 per cent being found affected with tuberculosis.

The test of cattle is made free of all charge to the farmer, the following agencies cooperating: County agricultural agent, United States bureau of animal industry, state department of agriculture, Inland Empire Dairy Producers' association and the Spokane Milk Distributors.

At the present time there are only 29 counties in the United States which have had a complete test and recognized as tuberculosis-free areas, and only 178 counties which are working for similar recognition. The average per cent of cattle reacting to the tuberculosis test in the United States is 3 9-10 per cent.



Farmers in Spokane county may make application to O. V. Patton, county agent, stating the number of animals to be tested above 6 months of age, giving location of farm by section, township and range, with directions how to reach place from nearest town.

Send for this free book. It describes the benefits of Agricultural Gypsum. Try some this fall on your alfalfa, clover and other legumes. Watch the result.

When answering ads, please don't fail to mention this paper.

Buried in the ground, away from the house, inconspicuous as a clump of grass—the durable and dependable COLT insures a flow of Carbide Gas at the fingers' command.

Plant a COLT "Gas Well" on your farm NOW!

The months of short days and long nights are on their way.

Six months of evenings to be passed indoors await you!

Will they be lighted by the dim, eye-straining flame of a lamp—or the soft, friendly brilliance of *real* light—CARBIDE GAS LIGHT?

Act *NOW* for *real* light! Get a COLT Lighting and Cooking Plant—generate this wonderful Carbide Gas.

Hundreds of farmers are preparing this month for bright, cheery evenings by installing COLTS. This is the great planting season for COLTS. More are being installed this Autumn than in any other season. Don't risk disappointment—order your COLT *now*, before Winter closes in.

The Health Light for Reading

Carbide Gas Light is *pure white* in color—not *yellow*. Looks exactly like sunlight—restful and soothing to the eyes. Read or sew under it for hours—no eye weariness. The most beautiful as well as the most healthful of artificial lights.

Comes to you at the twist of fingers. Turn a little igniter. . . . . on goes the light! You use no matches.

Carbide Gas for cooking, too—*an added feature of the COLT.* Your wife will certainly appreciate this.

How is the gas made? The COLT does this automatically—mixes Carbide with water.

Study Lighting Plant Costs. Result: You'll Install a Colt

Easy to install—within reach of all. No continual replacement of parts, no adjusting or tinkering necessary, no service required—simplicity itself. The most economical system all the way thru. Comes from Factory to Farm. Sold direct by COLT solicitors—no distributors or dealers to take a profit.

Send Postcard for Full Story

You want *good* light—you want it installed now. Write for full particulars—*then act for BETTER LIGHT!*

For Good Farming, Attractive Country Homes and Happy Country People

Western Royal Will Open Winter Show Season

The Western Royal Live Stock show is what its name implies—a live stock show, a royal live stock show, a royal live stock show held in the west. This year it is to be a more royal show than in any previous years of its history, notwithstanding the fact that for a time there was uncertainty as to its being held this year.

Next year it may not be held as an early winter show. It may be made a late fall show instead, coordinated with the live stock feature of the Spokane Interstate fair. This is what friends of both affairs are now working on. But next year is not interferring with the management of this year's show, and it is just possible that the event on the Spokane show grounds October 28-November 2 this year will be so successful that it can not logically be consolidated with the earlier fair, though the general sentiment now seems to be to combine the two and put on an agricultural event second to none in the west.

The Western Royal has one outstanding advantage among the many that have made it a great show: It is held downtown. People in any part of the city of Spokane can ride the street car to within two blocks of the entrance. Country folks coming in to do a bit of shopping and visiting and see the big show can put up at the plainest or the swellest hotels, according to their choice, without getting out of sound of the familiar voices of the barnyard. The show will again be held under the elevated tracks of the Union Pacific and the Milwaukee railroad systems within two blocks of the business heart of the city.

Wise Men From the East.

In olden times, it is recorded, wise men came from the east, and history is about to repeat itself in part. Wise men are coming from the east to the Western Royal with some of their best cattle to compete with the product of western ranches and ranges. They are coming because they are wise men.

J. Huston McCroskey, president of the show, has just returned from the east, where he attended the National dairy show and talked Western Royal with easterners who exhibited there. Partially as a result of his visit, and partially as a result of efforts of the Pacific International management, a solid trainload of the notable herds that attended the show at Minneapolis are booked for both these big western events.

The Western Royal and the Pacific International are cooperators. The former closes its doors two days before the latter opens its, thus enabling exhibitors at Spokane to ship straight to Portland and take part in the show that climaxes the season. California, the state noted as the cooperative pioneer, also participates. It holds its big show at San Francisco so as to close five days before the Western Royal opens. That explains why several herds of cattle and hogs are coming from California to Spokane, after which they will go to Portland.

In addition to three or four eastern states that will show out here this year, Washington, Oregon, Idaho, Montana, California, Canada and probably Utah, Wyoming and Colorado will be represented.

Dairy Cattle a Feature.

Notwithstanding the fact that a goodly share of the world record dairy cattle are owned in the Pacific northwest, there is still a lingering feeling in the minds of many that this is a beef cattle country. It is, but it is also a great dairy country, and even were there no outstanding dairy cattle coming from the east the milk-producing breeds would make up a tremendous show at both Spokane and Portland. As it is, it is believed that the greatest dairy cattle shows in the history of the Pacific coast are scheduled.

Taurus Rex 4th, which will be crowned king of the Western Royal during the show, will this year be a dairy animal Last year a beef bull was crowned.

Great as will be the dairy show, it can hardly eclipse the show of beef, in the opinion of J. T. O'Brien, manager. Already sufficient entries in the three great beef breeds—Shorthorn, Hereford, Aberdeen Angus—are on the books to make the show outstanding. There are always strong shows of the Shorthorns and Herefords. This year there will be the greatest show of the black Aberdeen Angus in the history of the northwest. In addition to full strings from the herds of Congdon & Battles and J. A. Scollard, the McGregor herd from Canada, one of the most noted on the continent; the Davis herd from Nevada and the Newman Lake ranch herd of Moab, Wash., will compete, with other smaller representations.

Sheep will include flocks from most of the western states and Canada. Hogs are coming from California, Idaho, Montana, Oregon and Washington.

Horses will represent all the leading breeds popular in the west, especially draft breeds. Indications are that Shires will predominate, with Percherons a close second and a good showing of Belgians.

In addition to the actual live stock display, there will be numerous educational features. The purebred will not have a monopoly. The scrub is to be present to give the general public an opportunity to compare him with his improved cousin. Folks in town are interested, because it will suggest the way they will ultimately get better beef and pork and mutton. The farmer is interested because it will suggested to him how he can furnish the city family the better kinds of meat and make a better profit doing it.

Entertainment Is Planned.

Thirty musically inclined cowboys will furnish brass band music throughout the show. Motion pictures, some educational and some just for entertainment, will be shown, and various entertainment features will be presented afternoons and evenings.

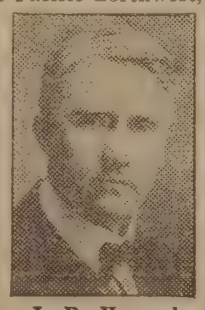
At least two public sales will be held. The Hereford breeders are planning a consignment sale and the two Hercules Baby Beef clubs will sell half of their 40 Shorthorn steers. The other 20 will be taken to Portland and sold at the Pacific International. At the latter show both the Hereford and Shorthorn men will hold sales, while a number of dairy cattle sales and possibly a hog sale will be held.

Support Land Reclamation

Two Big Farm Organizations Are Behind Western Projects

The importance of land reclamation is becoming more and more apparent to leaders throughout the entire country.

C. S. Barrett



There has just been held in Salt Lake City a regional conference of farm bureaus of 10 western states.

Speaking to these state farm bureau leaders, James R Howard, president of the American Farm Bureau federation, pointed out that the expanding population of the country will make the utilization of unreclaimed land necessary in the near future. He promised if the western states could agree among themselves upon a comprehensive reclamation plan, devoid of selfish sectional interests, that the National Farm Bureau federation could be counted on for support.

Following this comes the news from Washington, D. C., that the committee on reclamation of the national board of farm organizations has decided that Charles S. Barrett, chairman of the board and president of the National Farmers' union organization, should leave as early as possible for the northwest to get further data with regard to the Columbia Basin project.

Already the national board of farm organizations has put itself behind the Columbia Basin project, and the purpose of Chairman Barrett's visit will be to fortify the board with additional information to be presented to members of the house when the Poindexter bill, appropriating $100,000 to investigate the project, comes up at the next regular session of congress in December.

A. A. Elmore, as chairman of the committee, presided at the meeting at Washington which decided to send Mr. Barrett to the northwest. Mr. Elmore is now financial manager of the national board of farm organizations and is well known as a farm leader in the Pacific northwest, having been for some years president of the Washington State Farmers' union.

J. R. Howard

This indorsement of the Columbia basin project and the pronounced action of the national board in sending Mr. Barret across the continent to get further facts is no doubt largely due to the influence of Mr Elmore.

The committee which took this important action adopted the following resolutions:

"The national board of farm organizations recognizes that irrigation is one of the paramount issues and questions of the west.

"The national board wishes it understood that it stands squarely behind a sane, sensible and economical policy for the reclamation of arid and semi-arid lands of the west.

"And, whereas, a condition has been brought to our attention of a certain section in Washington between Spokane and the Columbia river known as the Columbia river basin, where it appears from our information that the farmers in this region are greatly in need of water for irrigation purposes, and since we understand it is the intention of our chairman, Mr. C. S. Barrett, to visit this section in his work as president of the farmers' union, therefore, be it

"Resolved, That we ask Mr. Barrett, as the representative of the national board of farm organizations, to make such investigations regarding reclamation for this particular section as he deems proper and to lend such assistance as in his judgment would be wise and beneficial to the farmers of that state."

Hogs Give Us One-Tenth of Our Dollars

"You represent one of the greatest industries of the nation," said Henry C. Wallace, secretary of the department of agriculture, in a recent address before the National Swine Growers' association. "Upon the skill and art and science with which you conduct your breeding operations the welfare and growth of the great swine industry depends. You and the men who have gone before you have molded the animal form, not only to satisfy the eye of the lover of good live stock and to satisfy the taste of the epicure, but to meet the needs of commerce. You are artists whose materials are not the colors and brushes and canvas of the painter, nor the clay and marble and tools of the sculptor, but living flesh and blood, molded and shaped in conformity with the divine laws of heredity. Working with unseen forces, year after year, you finally produce in living form the ideal which your brain conceived. You give to the unborn animal the color and form and size, and shape of the nose, and pitch of the ear, and curl of the tail, which satisfies your sense of the beautiful as well as of the useful. You change the form as needs require, adding to it or taking from it, producing more fat or more lean, more bacon or more lard, larger hams or smaller hams, as the changing character and supply of feed or the changing tastes of the consumer make necessary. In short, you furnish the seed which is needed year by year to produce the great swine crop, which plays such an essential part in our domestic economy and in our foreign trade.

Our annual hog crop represents about 10 per cent of the total value of our agricultural production, and from 10 to 12 per cent of the total value of our agricultural exports. If we exclude cotton, our pork exports constitute about 20 per cent of our total agricultural exports. During the time of the great world crisis in 1918 our pork exports grew to almost one-third. In our domestic economy swine not only provide a considerable percentage of our agricultural income, but pork and pork products have always constituted one of the most important items in the family menu. For many years the per capita consumption of pork and lard has exceeded that of any other meat product.

No great meat-eating nation ever suffered famine from crop failure. Our live stock furnishes the greatest storage plant for our grains and grasses. Our hog crop represents a great national plant for refining many foods not suitable for human consumption; a great national condensing factory which condenses more than one-third of our corn crop, in addition to a large amount of our grasses, into a highly palatable, concentrated food product; a great national storage reservoir in which huge quantities of grains and grasses are stored up for future use, food reserves, the importance of which few people realize, and, in addition, our hog crop serves as a shock absorber for the variation in production of our corn crop, year by year, thus ironing out the inequalities of corn prices. During the last year and a half our hogs have paid for the corn they ate about twice the price per bushel which the corn could be sold for on the grain market.

The rather wide fluctuations in prices of hogs from year to year are bad, both for the producer and the consumer. If prices could be more nearly stabilized so that the producer could have more assurance of a reasonable profit year after year he could afford to produce hogs more cheaply than under present conditions, and the consumer would benefit with him. One reason for these widely fluctuating prices is lack of knowledge of the number of hogs in the country from year to year. Our statistics have not been as full and reliable as we would like. During the last 18 months we have given especial attention to this matter. We have greatly strengthened our statistical organization and we are hoping very soon to be able to keep hog producers informed regularly of the number of hogs that are being grown, as well as of conditions which are likely to influence demand.

On the economic side we are making very careful studies into the cost of production and the cost of marketing, as well as better methods of marketing. Included in our marketing studies are investigations into the foreign markets for hog products. We have men overseas who are studying these foreign markets and trying to promote an enlarged consumption of our pork. We are trying to learn why it is that American bacon does not sell as high in the English market as bacon of some other countries, and are trying to help our own people make such changes as are necessary, whether in breeding or in curing. We are watching closely the changes in the demand of the consumer and shall promptly place in the possession of our own packers everything we can learn which will be of help to them in meeting foreign competition and satisfying the tastes of foreign consumers.

100 Per Cent Record

The Connell's Prairie Garden club is one of the most active clubs in Pierce county, according to Miss Hulda B. Hainke, the county club leader. There are 11 members in the club and their holdings are not limited to gardens. In addition to the three acres of garden there are 12 cows and heifers, 64 rabbits and one mule. There are some of the boys as well as the girls that can put up fruit and there are 250 quarts and 38 glasses of jelly which have been put up by the members during the summer.

The club is one of the few that has handed in a 100 per cent record for the year. Walter Vandermark, one of the members, has done more work with his garden than with any other branch of work and has succeeded in propagating some new varieties of flowers as well as potatoes. He introduced the Connell's Prairie dahlia and a new kind of coxcomb, both of which originated in his own garden.

Members of the Connell's Prairie club are as follows: Evert Bjordal, Louis Imhof, Victor Imhof, Bessie McIntosh, Clara Rohde, Willie Schodde, Fredde Schoddy, Herman Schodde, Alice Tillotson, Walter Vandermark and Kathleen McMannus.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

There to Answer Questions

Those who attended the Western Washington fair at Puyallup and went through the agricultural building, could not help but stop and admire the display of fruits and vegetables exhibited by the Mason county people.

It was not only the size of the grapes and the quality of the vegetables that held one's interest, but the manner as well in which the booth was attended by two members of the Shelton commercial club. These men were relieved from time to time by other men from the county, but their main thought was to tell the visitors everything they wanted to know about Mason county. The questions asked most frequently were: "Where is Mason county?" "What kind of grapes are those?" and "Will they grow that large in other counties?"

True, the attractiveness of the booth was partly the cause of so much interest, but it was plain to be seen that the two men who were on hand to answer all questions, were kept busy all hours of the day and put in a good word for their community.

As to $3,750,000 in Additional Taxes

It is conceded by the advocates of initiative measure No. 46, or the 30-10 school plan, that it will increase state taxation $10 per school child, or $3,750,000 per year on a basis of 375,000 children of school age, as estimated by the state department of education.

This additional sum in taxes must be raised from the property owners in the state. Farm land must pay its full share, as farm lands can not be hidden from the assessor's visit. Every citizen, whether he owns land or property or not, must pay his share. Merchants and manufacturers and those engaged in commerce of all kinds will pass the tax on to the people in general.

There is no doubt at all that if the 30-10 school plan becomes a law this $3,750,000 per year must be raised by taxation.

Those who advocate the 30-10 plan contend that the additional sum raised by the state at large will reduce school district levies. On the other hand, those who have made state taxation a study declare that the actual indisputable fact is that the school district levies for 1920 under the 20-10 plan exceeded those for 1919 under the 10-10 plan by $3,792,805.44. The total increase in state school, county school and school district taxes the first year after the starting of the 20-10 amounted to $7,579,481.21. Reduced to an average daily attendance basis the district levies in 1919 were $63.06, and in 1920, $74.58.

The 30-10 school plan reduces the maximum current expense levies of local districts from 20 to 17 mills, and it is claimed that this of itself will reduce the amount raised by school districts.

But it has been ascertained that in 1922 85 per cent of the districts levied less than 17 mills under the present law, and a large number even less than 10 mills, so the so-called curb, if it worked at all, would be effective in only 15 per cent of the school districts in the state.

If one is to indulge in suppositions of what school districts may do, and we are to judge the future by the past, it would seem more probable that with the additional money from the state the school district levies would be increased in far more cases than they would be decreased.

Is an additional state tax of $3,750,000 per year for school purposes justified at this time?

If the 30-10 school plan becomes a law, these additional millions must be raised. Any rebates which may come from reduced district levies are a doubtful quantity. Are these the days when certainty should give way to doubt at the polls?

At another time we will discuss the so-called "equalization" feature of the 30-10 school plan.

The Banker and the Calf Club

Not long ago in this state an 11-year-old boy, who as a member of a calf club had borrowed the money from a local bank to pay the first installment on a $100 heifer calf at three or four months of age, sold the heifer in a public sale. He had taken all the care of her, and boyishly estimated the actual cost of raising her at $25. It may have been more, but he won $20 in prizes on the calf at the local fair last fall and had this to apply on the cost account. In the meantime, of course, he had enjoyed all the advantages of club membership and training under the county agricultural agent and a well-known breeder of the community who acted as club leader. He and 10 other boys had met regularly to discuss type, pedigrees, feeding and care of animals, and they learned something about parliamentary procedure in club meetings, and about business dealings with the bank as well. The heifer sold for $230 at 16 months.

Was this an answer to the banker of the same county who asserted at a gathering of pure breeders on the evening before the sale that in his opinion this business of loaning considerable sums of money to immature boys and girls for investment in purebred live stock is being carried too far; that when he was a boy he had to earn the money which he used; and that he feared the consequences of establishing in the minds of today's youth the concept of easy credit? Or is it possible that the bankers of Jefferson county, of Clallam county, of Whatcom, Skagit and Snohomish counties, of Kittitas, Yakima, Spokane and Walla Walla counties, are all wrong in granting liberal terms to serious-minded youngsters for live stock purchases, and that this banker is right? Does it mean nothing that boys and girls all over the state are paying their first club debts and becoming established customers of the banks in live stock enterprises of considerable magnitude? The Washington Farmer thinks not.

Bankers tell us that in making loans the moral hazard is given more serious consideration than the financial one. Club boys and girls make good moral risks—bankers never yet have lost through loaning to them. And many bankers confess that they have loaned to boys and girls whose fathers could not obtain similar sums. The fathers' names are on the notes, as a matter of law, but it's the youngsters' signatures that count in most cases.

The Way to Reduce Taxes

The only effective way to reduce taxes is to cut public expenditures. Schemes without number have been advanced to shift the tax burden. These schemes have always provided for the creation of new sources of revenue and new sources of revenue have always meant more money, not less, for public expenditure.

The only proper solution of the tax problem lies in cutting public expenditures to a level consistent with good business management.

State Farm News

L. G. Colyn of Onalaska, T. P. Snively, J. E. Stines and S. H. Olsen of Chehalis and E. F. Hilborn of Centralia were named a committee to report a definite plan of organization of a cooperative organization of fruit and berry growers of Lewis and adjoining counties at a meeting of growers held at the citizens' clubrooms in Chehalis September 29.

Dan W. Bush was chairman and Glen Reid secretary. Upward of 100 acres of berries were pledged as a starter toward making the new organization a success. It is planned to work out a cooperative central selling arrangement to handle the fruit from the district, working in conjunction with other cooperative growers' organizations in the state.

* * *

The contract for grading, declining and graveling 12.21 miles of the North Bank highway between Underwood and Lyle, Klickitat county, has been let to K. L. Goulter & Sons of Ilwaco for $334,135.

* * *

Jack Richardson of Monitor, Chelan county, has a Delicious tree in his orchard that has been yielding an exceptionally beautiful red apple. The Delicious is normally a striped red variety.

This Delicious tree is 11 years old. The apples have always been solid red since the tree came into bearing. The apples mature earlier than on the common Delicious trees in the same block.

* * *

Three purebred bulls were bought in Island county durduring the month of August through the assistance of County Agent W. W. Henry. This makes 28 purebred sires purchased in this county since January 1.

* * *

Fifty thousand pelts, mainly from Alaska and Siberia, were sold at Tacoma recently at the regular fur auction and buyers from various parts of the country—and one from Germany—paid $150,000 for the lot. Muskrat and mink furs were about 15 per cent lower since July, but marten showed an advance in price. The demand of the buyers for beaver, red, blue, cross and white fox and ermine was keen and prices were well sustained.

* * *

To supply the needs of Spokane for all purposes, 12,677 gallons of milk, produced by 6593 cows, are required daily, according to figures compiled by the city health office.

* * *

The Pend Oreille county fair, which was held at Dalkena last month, showed improvement in the quality of exhibits over other years, especially in the poultry, vegetables and fruits, according to County Agriculturist E. E. Hupp. The exhibit rooms were filled to capacity.

The judges, from Washington State college, were Professor R. T. Smith, live stock; N. C. Donaldson, farm products, and Miss Maude Wilson, cooking, canning and sewing.

Mrs. Elsie Linder, age 65, gave a demonstration of carding and spinning wool. She also has sweaters, sox and other garments which she knitted from wool she prepared.

* * *

The Yakima county commissioners have disposed of a drainage bond issue of $77.500 to Carstens & Earles of Seattle, whose bid was $101.05 on the hundred.

* * *

County Agricultural Agent Henry J. Plumb, realizing the value of the potato industry of Stevens county, particularly seed production, has for the last three years put up a prize of $25 to be given to the farmer exhibiting the best half bushel of seed potatoes of the four standard varieties, Netted Gem, Carman, Earliest of All and Early Ohio.

This prize was taken in 1920 by Fred Thoni of Addy; in 1921 by G. C. Lorenz, Colville. in 1922 by Franklin Brothers, Colville. These are all representative potato growers of Stevens county and much interested in producing a high-class article.

* * *

Steinhardt & Kelly, New York city, are taking practically all winter pears grown in the White Salmon and the Underwood districts. Eleven cars were shipped up to the first of October.

* * *

The biggest crowd that ever attended the Cowlitz county fair at Woodland thronged the fairgrounds September 30, when large numbers of Kalama, Kelso and Castle Rock people attended.

First prize for the best individual exhibit went to E. R. Goerig of Woodland, whose displays of home-grown vegetables and fruits, comprising several hundred varieties, have won this prize ever since the fair started. The Kramer display from Ariel took second prize and that of Sherman Vogel of Kelso third prize. The Woodland grange booth took first prize among the grange booths, with Castle Rock grange second and Kalama grange third.

* * *

The 15 Filipino students at the State College of Washington, Pullman, have organized a club. Each man has contributed $10 to a loan fund for any of their number who should find himself short of money during the second semester. Casiano Limod Baliwag was elected president.

* * *

Governor Hart, James Allen, state highway commissioner, and C. L. Babcock, state treasurer, October 3 opened bids on the Yakima-Ellensburg link of the Inland Empire highway, 20.51 miles, known as the river grade. Grant Smith & Co., Seattle, was awarded the contract for $556,739. It is understood that money on hand from the federal government and that appropriated by the legislature makes something like $750,000 that can be used for this road, and it is said the highway commission will probably gravel the road as well as grade it.

* * *

Pacific county is planning one central fair and a committee is already at work raising money to buy seven acres of land on the paved boulevard between South Bend and Raymond for use as county fairgrounds.

* * *

Business was suspended in Centralia and Tenino for the afternoon on September 29 while the two cities were celebrating the completion of paving on the Pacific highway between Grand Mound and Tenino.

* * *

At Wilbur, Lincoln county, 50 out-of-town pupils in the grades and high school are taking advantage of the hot lunches served by the school. The pupils bring lunches, but in addition are served with soup, a hot vegetable or cocoa at a cost of about 10 cents a week for each.

FARM BUSINESS AND MARKETS OUTLOOK

That general business and trade face gradual improvement and expansion in coming months is the consensus of opinion of financial prophets. Many regard this swing of the cycle as "secondary inflation," but the "inflation" is apt to be a much milder form than the rank and file of the public associate with the term. Partly because of this mildness all industries will not be affected uniformly as is already evident in the recent building boom, and the activity of automobile makers while farmers are laboring under a tremendous handicap of low prices for their products.

Farmers are concerned more immediately in the maintenance of fairly profitable prices for live stock, dairy products and eggs during the week and by higher prices for wheat, corn and oats, partly an outgrowth of car shortage. Sales of grain from the farm apparently are up to normal. The car situation may slowly improve after October which is often a peak month in freight movement. Railroads now report fewer cars in need of repair than on July 1, when the strike of shopmen began.

Cattle Movement at High Tide.

The fall beef harvest is in full swing in all sections and cattle supply is the heaviest of the season. Only in 1917 and 1918 were receipts at leading markets as heavy at this period as they have been in the last two weeks.

Under a meager supply at Chicago and marked scarcity or complete absence at other points, daily advances featured the market for prime and choice steers, the top reaching $12.90, a gain of 45 cents for the week, and the highest since December, 1920. The market was a two-way affair once more with low grades at 25 to 50 cents decline for the week, westerns going to killers as low as $6.25.

The market for choice and prime steers is charting an independent course and may go higher or lower, depending on just how scarce they become. The demand for them will continue strong, at least until holiday needs are satisfied early in December.

Danger Signal in Feeder Movement.

Final figures for all markets are not yet at hand, but shipments of stocker and feeder cattle to the country in September evidently established a new record for that month. August showed the same situation. Purchases last week were largest of the season and, in view of the temper of the country, October also may see a new record hung up.

With a prospect of a big hog crop and an abundance of poultry, meat trade channels may become clogged during the winter.

Hog Movement at Record Level.

Receipts of hogs continue at a record level for the corresponding season. Eleven markets received approximately 500,000 head last week, compared with a 10-year average for that week of 382,000 head.

Domestic consumption of hog meats and lard is more satisfactory than the export outlet, although the latter has improved.

Lamb Mart Has a Setback.

Receipts of western lambs expanded last week, according to expectancy, but the combined run of sheep and lambs at seven markets was only two-thirds of normal for the season. The increase in the last two weeks has been sufficient to take the wire edge off the dressed lamb trade, with prices quoted from $1 to $4 lower in the east.

Feeders may not lose much on the purchases made in the last few weeks, but it is doubtful if they will make much. Speculators have reaped a rich haul through contracting lambs early in the season.

Heavy horses were in demand last week. Choice kinds were bought at Chicago to go to New England as high as $275, while plain sorts went to loggers at a range of $175 to $220. Coal mines took pit horses up to $190.

The wool market was strong last week, with prices slightly higher. Mills are buying more freely and all cheap offerings in seaboard markets are snapped up. Interest is increasing in combing wools, especially.

Foreign markets are strong, with prices trending upward, due mostly to British and Continental buying.

Decrease in Europe's Wheat Crop.

The latest report of the department of agriculture places the wheat crop of Europe, exclusive of Russia, at 985,650,080 bushels, compared with 1,238,000,000 bushels last year and a five-year pre-war average of 1,275,157,000 bushels. France has 27 per cent less than last year and Germany 35 per cent less. The shortage is much greater than any previous compilation has shown.

The department of agriculture also estimates world production for 1920 at 3,012,000,000 bushels, compared with 3,049,000,000 bushels last year. Counting the carryover of 180,000,000 bushels this year, compared with 224,000,000 bushels last year, the total supply would be 3,192,000,000 bushels, compared with 3,274,000,000 bushels a year ago.

The foregoing statistics give the wheat situation more strength than it has appeared to have heretofore.

Congestion of shipping facilities, both in the United States and Canada, however, is dominating the price trend in wheat. Up to this time importing countries have been disposed to run on light stocks and draw on North America as needed, but the transportation tieup is putting that plan awry, as the wheat is not being cleared fast enough to take care of needs. On passage stocks have been reduced to 40,144,000 bushels, which is less than three weeks' supply for importing countries, and British wheat and flour stocks are about half as large as last year. Wheat at Liverpool has advanced more than in the United States. Inability to obtain cheaper Canadian wheat as fast as needed has revived buying of United States wheat via the Gulf.

Small Changes in Crop Estimates.

The October forecasts of the department of agriculture made but small changes in crop yields as a rule. Spring wheat was placed at 268,314,000 bushels, a decline of 8,351,000 bushels in September. Total wheat production was placed at 810,123,000 bushels. Of the spring wheat in Minnesota, the Dakotas and Montana, 78,016,000 bushels were durum.

The corn crop declined less than expected, the yield being forecast at 2,853,000,000, or 227,000,000 bushels less than last year. The oats crop estimated was 1,229,774,000 bushels, or 169,000,000 bushels more than a year ago. The barley crop is estimated at 196,431,000 bushels, or 44,000,000 bushels more than last year. Flax is 11,725,000 bushels, or 3613 bushels more than a year ago.

World Rye Crop Not Excessive.

Although the United States and Canada together have the largest rye crop they have ever grown in any one year, the European crop is small in practically all countries with the exception of Poland. The combined yield of North America and fifteen European countries, for which comparable figures are obtainable, is only 717,254,000 bushels, compared with 711,098,000 bushels last year, and an average of 792,314,000 bushels for 1909-1913.

The range of cash prices for the week ending October 11 was as follows:

CHICAGO.—Wheat—No. 2 red, $1.15@1.18 3-4; No. 2, $1.13@1.18; No. 2 hard, $1.09 3-4@1.11 1-2; No. 3, $1.09@1.10 1-2. Corn—No 2 mixed, 66 1-2@68 1-4c; No. 3, 66@67c; No. 4, 65 3-4@67c; No. 2 yellow, 66 1-2@69c; No. 3, 66@68 1-2c; No. 4, 65 1-2@67 1-4c; No. 2 white, 66 3-4@68 1-2c; No. 3, 66 1-8@68c; No. 4, 65 1-2@67 1-4c. Oats—No. 2 white, 40@43 1-2c; No. 3, 39@41 3-4c; No. 4, 38 1-2@41c. Rye—77c. Barley—59@69c.

Clover and timothy prices are holding up well. Reports of clover yields from many sections are disappointing and the big timothy seed movement is over.

CHICAGO.—Per bushel—Clover, $14.50@19 Timothy, $5@6.25.

TOLEDO.—Per 100 pounds—Clover, $11.75@12.25; Timothy, $3.25.

The feed market has subsided, as demand is light and offerings have increased. Export buying is a minor factor. Wheat feed production is at a high level. This year's production of cottonseed meal and linseed meal is expected to run 25 per cent higher than last year.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $23; standard middlings, $24; flour middlings, $26; cottonseed meal, 36 per cent, $39; 43 per cent, $43; hominy feed, $26.50; gluten feed, $32.35; old process oil meal, $48; tankage, $60.

Hay Market Firm.

Both receipts of hay at the leading markets and country offerings are light. Dealers' stocks are moderate also. Prices are firm, as demand is improving. Car shortage is restricting the movement to some extent.

Prices per ton in carlots: Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $21@22; No. 1 clover, $14@16; No. 1 clover mixed, $16@17; upland prairie, $17@19; midland prairie, $14@17; rye straw $12@13; oats and wheat straw, $9@11.

Egg Surplus Disappearing Fast.

The preliminary report on cold storage holdings of eggs on October 1 was 7,902,000 cases, compared with 6,275,000 cases last year and a five-year average of 5,926,000 cases. The reduction during October amounted to 1,704,000 cases, the largest on record for that month. The five-year average October decrease is 867,000 cases. Prices continued to advance last week.

Poultry prices are declining with still lower levels not improbable. Buying for storage is getting under way, although the season is starting nearly a month later than usual.

Storage Butter Regulating Prices.

The volume of storage butter seems to be the chief factor in regulating butter prices at the present time. Current receipts are insufficient and storage operators are offering just enough to sustain the market or maintain a slight upward trend.

Butter is disappearing into consumption at an unusually rapid rate.

Prices for 92 score fresh butter on October 11 were: Chicago, 43 1-2c; New York, 45c; Boston, 45c; Philadelphia, 45c; San Francisco exchange quotation, 58c.

Broad consuming demand for cheese is sustaining the market. Prices were firm last week, with a fairly active trade reported on the leading distributing markets.

Prices on No. 1 American cheese on October 11 were: CHICAGO.—Flats, 24 1-2c; Twins, 23@23 1-4c; S. Daisies, 23 1-2@24 1-4c; D. Daisies, 23@24c; square prints, 26 1-2c; Longhorns, 24 1-2@25c.

Fruits and Vegetables.

The potato market sagged last week, although the carlot movement from producing sections declined. Such shipments were not above normal for this season of the year, but since this is the period in which marketings usually reach high point the pressure is still heavy.

Prices at Nebraska and Idaho shipping points range around 50 cents a hundred pounds in wagonloads.

The carlot apple movement is around 1000 cars daily, which is about normal or a little above. Storage buying is under way, as it is believed that the supply, especially of late keepers, is not so excessive as it appeared early in the season. Grimes Goldens are quoted at $4 to $4.50 and Jonathans at $4 to $5 a barrel in the Chicago market. Northwestern extra fancy boxed Jonathans are bringing $2.50 to $2.85 in the same market.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Oct. 14.—Cattle—Choice steers, $6.50@7.50; medium to good steers, $5.75@6 50; fair to medium steers, $5.25@5.75; common to fair steers, $3.75@5.25; choice heifers, $5@5.25; choice cows and heifers, $4.50@5; medium to good cows and heifers, $350@4.50; common cows, $1.50@2; canners, $1.50@2; bulls $4@4.50; choice feeders, $5@5.50; fair to good feeders, $4@5; choice dairy calves, $8.50@9.50; prime light calves, $8.50@9.50; medium to light calves, $7.50@8.50; heavy calves, $5@7.

Hogs—Prime light, $10.25@10.75; smooth, heavy, 250 to 300 pounds, $9.50@10; smooth, heavy, 300 pounds up, $9@9.50; rough, heavy, $7@8.50; fat pigs, $10@10.50; feeder pigs, $10@10.75; stags, subject to dockage $5@7.

Sheep—East of mountain lambs, $10@11; choice valley lambs, $9.50@10.50; medium valley lambs, $8.50@9.50; common valley lambs, $7.50@8.50; cull lambs, $6.50@7.50; light yearlings, $8@8.50; heavy yearlings, $8@8.50; light wethers, $6.50@7.50; heavy wethers, $5.50@6; ewes, $2@6.

SPOKANE, Oct. 14.—Cattle—Prime steers, $6.25@7; good to choice steers, $5@6; medium to good steers, $4.50@5; fair to medium steers, $4@4.50; common to fair steers, $3@4; choice cows and heifers $5@5.50; good to choice cows and heifers, $4@5; medium to good cows and heifers, $3.50@4; fair to medium cows and heifers, $2.50@3.50; canners, $1.50@2.50; bulls, $2.75@4.50; light veal calves, $7@8.50; heavy veal calves, $5@7.50; stockers and feeders, $3.50@5.

Hogs—Prime mixed, $10.50@10.85; medium, $9.50@10.50; heavies, $7.50@9.85; fat pigs, $9.25@10.25; stockers and feeders, $9@9.75.

The sheep market was entirely without an offering and nothing reported in transit for this market. The market on lambs has been good up until the latter part of the week, when a slight falling off in prices was noticed. Butcher ewes were also affected and a like decline reported.

The Grain Market.

PORTLAND, Ore., Oct. 14.—Wheat—Hard white, Bluestem, Bart $1.24; soft white, western white, $1.14; northern spring, $1.14; hard winter, $1.12; western red, $1.09.

Grain futures: Wheat—Bluestem and Bart, October, November, $1.24; soft white, western white, October, $1.14; November, $1.13; hard winter, October, $1.12; November, $1.10; northern spring, October $1.14; November, $1.12; western red, October, $1.09; November, $1.06.

Oats—No. 2, 36-pound naturals, October, November, $34; 36-pound clips, October, November, $32.50; 38-pound naturals, October, November, $35.50.

Barley—Forty-four-pound minimum, October, November, $30.50; 40-pound minimum, October, November, $30.

Corn—No. 2 eastern yellow shipment, October, November, $31; No. 3 eastern yellow shipment, November, $30.

SEATTLE, Oct. 14.—Hard white, soft white, western white, hard red winter, soft red winter, northern spring, $1.14; western red, $1.11; Big Bend, Bluestem, $1.25.

DAVENPORT, Wash., Oct. 14.—Bluestem, $1.09; Marquis, 93c; Gold Coin, 91c.

POMEROY, Wash., Oct. 14.—Turkey red and hybrid, 95c.

WALLA WALLA, Oct. 14.—Bluestem and Bart, $1.08; Club, 98c; Turkey red, 93c.

RITZVILLE, Wash., Oct. 14.—Bart, $1.15; red, 98c; Fife, 96c.

ODESSA, Wash., Oct. 14.—Bluestem and Bart, $1.14; Marquis, $1.03; Turkey red, 97c; Jones Fife, 92c.

DAYTON, Wash., Oct. 14.—Club wheat, $1; red, 97c.

Hay and Feed Grain.

PORTLAND, Ore., Oct. 14.—Millfeed—Price f. o. b. mill: Mill run, ton lots, $29; middlings, $41; rolled barley, $36@38; rolled oats, $42; scratch feed, $43 per ton.

Corn—White, $36; cracked, $38 per ton.

Hay—Buying prices f. o. b. Portland: Alfalfa, $18@18.50 per ton; cheat, $15; oats and vetch, $20; clover, $18; valley timothy, $20; eastern Oregon timothy, $20@21.

SPOKANE, Oct. 14.—Wheat—Feed wheat, $40 ton.

(Continued on page twenty-four.)

Range of Live Stock Prices, Week Ending Oct. 11

CATTLE.	Chicago.	Spokane.	Portland.	N. S. Lake.

Snohomish County Stages Livestock Show

By RALPH ERSKINE

In order to put on a real dairy show in a real dairy county, the three county breed associations with a united effort held their first annual Snohomish County Dairy and Live Stock exposition at Everett on October 12, 13 and 14 and it was extended until the night of the 15th. The organization which was responsible for the success of the show was the Snohomish County Breeders' association, a combination of the county Guernsey, Holstein and Jersey clubs.

Since there were no buildings that are spacious enough to house the 140 head that came in on the first call for entries the management rented six large circus tents and erected them at the city ball park on the outskirts of town. The arrangements of the tents were in a double line, one on each side of the grounds, which allowed ample room in the center for the judging ring and the concessions.

While dairy stock were the main exhibits there were also a number of hogs in the swine division, which was included by special request of the dairymen. As a result of the liberal premiums offered there were four of main breed of hogs shown, being fairly representative of the herds in the county.

Calf Club Members.

The Snohomish county boys' and girls' calf club members were also invited by special premiums and the opportunity to enter a judging contest. County agent W. D. Love was able to get the entire membership to show their animals and they came from three different parts of the county: Stanwood, Silvana and Snohomish.

The poultry breeders of the community asked to be included, which request was granted at the last minute and they were given one of the large tents for their coops of crowing and cackling birds. A milk goat department was added and the classes were filled by M. P. Eggus of Woodenville, who showed 17 head of his does and bucks.

The entertainment feature was given over to Captain J. McCleave of Victoria, B. C., who brought his performing and jumping horses. The daily performances were staged in front of the large grandstand, one in the afternoon and the other at night. The greater part of the crowd, however, were much interested in the judging of the cattle. W. T. McDonald, commissioner of agriculture at Victoria, B. C., judged the classes and was asked to give his reasons for the placings for the benefit of the onlookers.

Officers of the show were: Dr. H. K. Stockwell, president; C. H. Grewe, secretary; C. H. Krassin, assistant secretary. T. C. Simmons, manager of the show, was responsible for much of the success of the event. Both he and Mr. Krassin spent much time and effort getting the grounds ready and the entries ready in time for the opening day. The members of the board of directors also put in some good licks getting the show in readiness. They are: Fred J. Vetter, John Patty, Dr. E. E. Heg, Don McRae, Ed Hoem, A. J. Robinson, J. E. Wrage, Herman Steffen and W. D. Love.

Turnout of Guernseys.

There was a good turnout of Guernseys on the grounds although the greater number came from two breeders from other counties. There are many breeders of the fawn and white cattle throughout the county, but there are many herds which are just getting started in the purebred game and there are a still larger number of herds that have grade animals, headed by registered bulls. Two of the purebred herd owners, however, were tied up with work at home and could not enter their cattle.

The herd from the Dr. A. McRae Smith farm near Bellingham, showed in competition with the Orchard Hill farm animals of Redmond, and those from the H. J. Weiser farm of Everett. J. D. Barker of Snohomish entered an aged bull, which was from the Dr. H. A. Wright herd on Lopez island. Other single entries were made by E. C. Entzminger of Arlington and John Patty of Gold Bar.

The junior and grand champion bull was Fircrest La France's Rival, a senior calf in the herd. The calf is a son of the grand champion cow, La France of Bralee, the 5-year-old that has been winning heavily wherever shown.

Jersey Winnings.

The Jerseys were from the Midfields farm at Chehalis. There were 15 head in all, a large part of which were young animals. The two outstanding winnings were the grand champions, both being chosen from the junior classes. Fussy's Fern Noble, a junior yearling with an extremely typy Jersey head and even topline, was made the junior and grand champion. He is out of Sailor's Lucy of S. B., one of the cows in the Harry West herd in Oregon. The grand champion female was Midfields Cicily Winkle, a junior calf of exceptional type and quality. She was sired by Imported Fussy Fern's Noble and has been undefeated in her class at seven shows this fall. The senior champion bull was Champion of Midfields, a 3-year-old bull with an abundance of type quality and substance. Curtis Rose, a 4-year-old cow, was the senior champion only because of the exceptional showing made by the younger animal.

Black and Whites.

In the tent where the black and whites were quartered, the visitor could readily see that this breed was favored to a great extent throughout the county. There was only one herd from out of the county and that was from just across the line in King county, and the Carnation animals are as well known to the people of Snohomish county as to the King county folks.

The balance of the show was from seven local breeders who brought out some of their best females and there were a few herd bulls. Dr. H. K. Stockwell of Monroe entered seven head of females from the Tualco Valley farm and a yearling bull. Dykstra & Wynstra of Everett showed four heifers and a cow in milk. Herman Steffen of Monroe brought out six of his splendid herd, including the herd bull. There were 11 of the purebreds from the Martin Treosti herd at Snohomish. He also exhibited his herd bull, a son of Chimacum King Korndyke Sadie Vale, of the Bishop herd. Ed Hoem of Snohomish entered seven head of cows and heifers while C. W. Krassin, a neighbor, brought out three of his best individuals. Henry Heg exhibited eight head from the herd at East Stanwood, which is known as belonging to Dr. E. E. Heg and Sons. The death of Dr. Heg, which occurred the week before the show, threw a damper on the showing of this splendid herd.

Carnation Stock farms had both of the grand champions. Colantha Matador Delma, a senior calf, was the junior and grand champion bull, while Matador Oregon Machthilde, was made senior and grand champion female. The surprise of the day, however, came when Sir Mercedes of Sadie Vale, the aged bull owned by Martin Theosti was placed at the head of the class over Segis Walker Matator, the Carnation animal that was grand champion at Puyallup. Carnation Matador Christmas, a junior yearling heifer in the Carnation herd, was the junior champion female.

While the Carnation herd won many of the first placings, there was some keen competition for the seconds and thirds and some of the smaller breeders who came out deserve more credit than is shown by the above list of the champions.

The Carnation cup, offered for the best dairy cow shown on the grounds, went to La France of Bralee of the Dr. A. McRae Smith herd. The Carnation herd, however, did not compete for this prize. The Carnation herd won the $25 prize for the best display.

Ayrshire Classes.

The Ayrshire classes were filled by the E. W. Van Tassel herd from Wenatchee. The senior champion bull was Queen Scottish Cavalier, a son of the senior champion female, Glengary's Scottish Queen. The grand champion bull was a senior calf, Roy of Wenatchee. Wenatchee Cherry, a junior heifer calf, was the junior and grand champion female.

Although there were no competitors in this breed, there were some hard classes to place and Mr. McDonald had no easy task in making the decisions.

There were nine calves entered by the members of the Snohomish boys' and girls' calf club, and some of the animals made a good showing in the open classes. The Stillaguamish club boys were: Leland Grissim, Swend Larson, Lief Brue and Harvey Galbraith. Those from the Silvana club were: William Jackson and Elmer Larson. Norman Morgan of Snohomish, who is just under club age, entered one animal and expects to be doing regular club work next year.

Four Breeds of Swine.

The swine division consisted of four breeds and was representative of the herds that are found throughout the county. There were eight head of Hampshires from the Tualco Valley Stock farm, owned by Dr. H. K. Stockwell of Monroe. The nine Chester Whites included two sows with litters and were shown by Arthur M. Wade of Marysville. The Durocs had the largest number of any breed, 14 head in all. They came from the A. Turley farm at Monroe. There was a Poland China boar shown by E. Brotz of Monroe.

Since all of the breeds were shown by single exhibitors there was not competition between breeds and each herd took all awards in the classes filled.

George S. Bulkley of Seattle judged the classes.

The Poultry Show.

The poultry show was by no means a one-breed show. In fact it was almost a toss-up between five of the leading breeds as to number of birds entered. If any breed could be named first it would probably be the Rhode Island Whites. The Rhode Island Reds were not far behind the Whites and the Barred Plymouth Rocks were also well represented, as were the White Leghorns and the Black Minorcas.

There was also a good turnout of many of the other breeds and there were some good waterfowl entered. The show was managed by Andrew Eckstrom and H. B. Stubbs, the superintendents, who had only a short time to get the coops ready and the birds entered. There was, however, a strong demand for a show of this kind since there were more than 150 entries that had to be turned away because of the shortage of space.

The following list of exhibitors of poultry show that the greater part of the birds entered are from local breeders.

J. F. Zimmerler, Everett; Arthur M. Wade, Marysville; G. W. King, Everett; A. A. Weeks, Everett; L. R. Barns, Everett; H. B. Stubbs of the Paramount Poultry farm, Everett; A. Hollings, Seattle; G. Rolstra, Everett; C. W. Brewster, Everett; P. W. Haries, Edmonds; G. Esch, Everett; A. Marcuson, Everett; H. L. Wilder, Everett; R. L. Burk, Snohomish; A. Eckstrom, Everett; Carl Carpenter, Machias; J. C. Chitty, Everett; Mrs. A. A. Alfredson, Hartford; Harry Hoffman, Arlington; J. L. Horrow, Everett; J. E. Travis, Pinehurst; H. C. Harrop, Seattle; Ed Severson, Everett; Roy Greenhalgh, Everett; Arthur Johnson, Snohomish; A. L. Tenny, Everett; W. F. Sheets, Alderwood Manor, and R. C. Simpson of Seattle.

Shut the Gate With Paint

Painting should have been done earlier, but in most localities the weather man has been good to those of us who have neglected this fall to protect our property. There are thousands and thousands of little gates standing wide open on most of our places. They are tiny gates, but large enough to admit water into the plow beams, the wagon wheel hubs, the walls of the machine shop and most other wooden articles on the farm. And once water makes its entrance it starts trouble. The first thing we know the wooden parts of our machinery and buildings will be showing signs of deterioration and then some day when we most want them to be safe and sound and strong we will find a difficult repair job necessary. The same is true in considerable degree with iron parts—more so in some cases. Water is the daddy of rust, and rust is the greatest enemy of iron implements.

Paint would shut the gates and keep out this destructive element. It is no use to shut the gate after the horse has been stolen, but it is a good plan to shut it before the thief arrives. Look over the premises today and see if there is not a lot of these little gates that should be shut with a good coat of waterproof paint.

WILL SELL HOLSTEINS.

S. W. Shoemaker, proprietor of the Garfield Stock farm near Garfield, Whitman county, has announced a sale of purebred Holsteins at the farm on Wednesday, October 25, with Colonels Gue and Cranke on the block and in the ring, respectively. The sale will include seven granddaughters of King of the Pontiacs.

Tieton Community Fair

The second annual Tieton community fair in Yakima county, which opened October 12, covered a wider scope than last year and many of its departments were considerably extended. As a consequence of the forward stride made this season C. K. Garey, chairman of the general fair committee, says that it is the committee's ambition to erect an adequate building for use next year to house the exhibits and display their products to better advantage.

There was keen competition in the apple exhibits. The same height of color and perfection of fruit was shown this year as was shown last year. There were from a dozen to over 20 entries in each of the main standard varieties.

In the farm crops and vegetable department a dry land exhibit by H. W. Henry, J. B. Burk and J. C. Perkins was a prominent feature and excellent products of all kinds were shown. The potatoes competed with those grown under irrigation, and squashes and pumpkins, plenty big enough, were on exhibition. W. F. Weimar had a fine garden display to show what can be done with a little attention.

Chickens, ducks, geese and turkeys are well represented. The exhibit was housed in a large tent. The auto display was particularly fine.

Mrs. J. M. Cox had charge of the juvenile department and she was especially proud of the fine canning display made by the canning club, which she sponsored this summer and which won a couple of ribbons at the state fair.

Another interesting feature was the baby clinic, in charge of Mrs. J. A. Cadwallader.

DON'T BREAK A LEG.

Put eave troughs on the buildings, especially over the doors. It will avoid falls on the ice this winter.

Irrigate!

Without cost for pumping or the necessity of building long and expensive gravity ditches or flumes.

HILL Hydraulic Rams

use the power in the water supplied to them to pump part of this water to any higher level. They work automatically, require no oil, need no attention. If you have running water in stream, ditch or spring you can pump part of it the elevation or point desired.

Built in twelve sizes to fit requirements for small home water supply, to large units for irrigation.

Write for free catalog, R 1, for home supply. R 2, for irrigation.

We Are Eating Too Much Foreign Cheese

In recent years the United States has been an importer of cheese. In the year ended June 30, 1922, 34,271,000 pounds were imported, compared with 16,585,000 pounds in the preceding year. Italy, Argentina, Swizerland, France and The Netherlands have been the principal outside sources. Exports in the last fiscal year were 7,471,000 pounds and 10,826,000 pounds in the preceding year. The permanent tariff bill, which places a duty of at least 5 cents a pound, but in no case less than 25 per cent ad valorem on imported cheese, is expected to reduce the volume of imports materially.

Cheese production in the United States has been increased in the last two years—a result of the inevitable tendency of hard times to force the farmers to depend upon the cow—but the increase has been much less than in the field of buttermaking.

Cheese can be made on the farm, but for the most part it is a factory proposition, while farm buttermaking is a more simple matter. Creameries and cream stations are much more widely and thickly disseminated so that an addition to the supply of milk or cream for butter production is readily absorbed. Cheese ripening, furthermore, has certain climatic limitations which confine it to the northern states or the higher altitudes for the most part, while butter production is easily possible in all arable sections of the United States.

Receipts at Market Increase.

The best current barometer of the volume of cheese production is found in weekly receipts at the five leading markets, Chicago, New York, Boston, Philadelphia and San Francisco. Summing these up over a sufficiently long period in order to eliminate weekly fluctuations will show the general drift. Receipts of cheese at these points in the first 38 weeks of 1922 and comparative figures for the corresponding period in the three preceding years are: 1922, 147,428,000 pounds; 1921, 137,703,000 pounds; 1920, 124,771,000 pounds; 1919, 145,369,000 pounds.

Production in 1922 as measured in this way, is running practically unchanged, compared with 1919, but shows an increase of 18 per cent over 1920. Butter production by the same method of measurement shows an increase of 27 per cent over 1920.

Consumption of cheese also has increased. Adding total receipts from January 1 to September 23, 1922, at the five leading markets to the cold storage holdings at those points on January 1 and subtracting from this total supply the storage holdings at the end of the period gives a rough measure of the amount of cheese disappearing into consumptive channels in the interval. The "disappearance' in the first 38 weeks of each of the last four years has been as follows: 1922, 138,480,000 pounds; 1921, 132,969,000 pounds; 1920, 126,089,000 pounds; 1919, 125,277,000 pounds.

This method of analysis is not mathematically exact because of duplications in receipts due to intermarket movements.

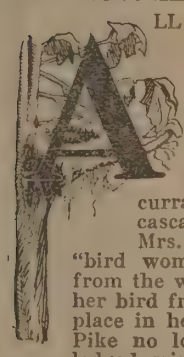
It's Made to Eat.

It is highly significant that compared with the average of the three preceding years the increase in consumption in 1922 has practically kept pace with the increase in production.

Storage holdings at the beginning of the current year were below the average of the three preceding years. They continued in this position until shortly after the storing season started—it came a month to six weeks earlier than usual this year—then they exceeded the average for a time. The season in which storage stocks accumulate came to an end a month sooner than usual and at present storage stocks are about as far below the three-year average as they were on the first of January.

Lower prices partly explain the increase in cheese consumption but improved industrial conditions have been an important factor. Betterment in the agricultural situation in the south also has been giving aid and comfort to the cheese market.

Thus far, there has been no overproduction of cheese as a result of the increase which has taken place in the last 24 months, as consumption has expanded proportionately. Nor is overproduction at an early date probable, since cheese factories can not be built over night and time is required to produce a dairy cow. Further improvement in industrial and agricultural conditions should expand the domestic market for cheese. Although the outlook for the cheese producer and the dairymen who produce milk for cheese factories can be described as reasonably bright.



Winter is the period of light production, naturally, and June is the high month. Fluctuations in receipts from week to week are much more marked than is the case with butter.

The middle of May has been the turning point in storage stocks on the average in the three years, 1919 to 1922, and the last weeks of September have marked the finish of the accumulation period.

AVOID PIG RHEUMATISM.

Can you wonder that the pigs do not thrive when they are compelled to sleep in wet, cold quarters? Give them a dry pen, at least dry, warm beds of straw.

Food for the Birds

ALL around the Pike home, on Hillcrest way at Yakima, there are planted native shrubs and trees that abound in food for the birds. Mountain ash, syringa, spirea, snowberry, high bush cranberry, wild cherry, sumach, wild currant, elderberry, dogwood, cascara—all are there. For Mrs. Granville Ross Pike, the "bird woman," was wont to bring from the wilds the favorite foods of her bird friends, and to give them a place in her beautiful garden. Mrs. Pike no longer sits at the deep-ledged window where she used to take delight in her gay little feathered pensioners. But the same thoughtful bounty greets them today as when the gentle patroness of winging things inhabited the spot.

There are pictures, taken with a camera she used to operate, that attest the intimate terms on which Mrs. Pike existed with her birds. One shows a bold little chickadee who, curious to say, after literally stuffing himself on her Christmas banquet spread for him, had hopped upon a pair of scales, where his weight is registered in the picture. Mrs. Pike operated the camera by means of a cord extension to the shutter.

The beautiful cedar waxwing lights in the tallest boughs of the old cherry. From there, if the coast is clear, he swoops upon the bush cranberry and, hanging to the twigs, eats of the berry, keeping a feverish lookout. The flicker, so nicely exacting in his ideas of a nest, has been known to abandon his own good beginning for the well constructed nest Mrs. Pike had provided. Even the shy hermit thrush has built in her gracious garden.

Mr. Pike, who maintains today the winter's spread for the blithe little brothers of song, is as much interested in them as was his late wife. He is also a student of religion and meditates a book on the subject, already in outline. He is an orchardist in the region as well.

Want Crops for Rotation

"We are strongly in need of more cultivated crops in this district in order to furnish a rotation crop for our grain," says Carl Dean of Coupeville, Island county, who has a large wheat and dairy farm a short distance south of town. "Such crops as potatoes, squash or corn would afford an opportunity to keep down weeds and have the land in readiness for hay and grain crops the following season.

"Field peas have done well in this section and will produce from 10 to 15 sacks to the acre when planted alone. Wheat, however, is considered the most convenient crop to grow because it generally produces 60 bushels to the acre and sometimes more, and in most cases can be seeded at the fall. Wheat and vetch is often used as a hay crop, and the stock are very fond of it."

Mr. Dean is trying out a field of Hubbard squash for the fall market, and expects them to be good as a rotation crop. That requires less work than do many of the other cultivated crops.

Makes poor cows good and good cows better

LILLY'S DAIRY FEED is based on the findings of experts who studied the results of different formulas in the cases of thousands of animals. Therefore it is a thoroughly scientific formula.

Lilly's Dairy Feed is mill-mixed and absolutely standardized. Therefore it is always the same, always dependable.

Lilly's Dairy Feed positively makes poor cows good and good cows better. Our capacity is taxed to the utmost to supply the demand.

Feed Lilly's Golden Dairy Feed and watch results. It "puts milk in the pail and cream in the milk."

FOR CALVES—a milk equivalent at a fraction of milk cost

Millions of calves are killed at birth because it does not pay to raise them on their mother's milk. LILLY'S CALF MEAL is a perfect equivalent for butter fat, at a fraction of the cost.

Says John Lindbeck, R. F. D. Kent, Route No. 2: "I bought a ton of your Golden Dairy Feed and wish to state it is the finest feed I ever fed. Every one of my cows showed considerable gain in milk. I would pay $20 per ton more for your dairy feed than mill run. I bought two tons more of your feed today."

Mrs. Robert McCleary, Arlington, Wash., bought for $5 a calf one week old and raised her wholly on Lilly's Calf Meal. At two years of age she was giving 30 pounds of milk daily.

Wheat Consumption Increases; Production Per Capita Increases

Per capita consumption of wheat in this country has been increasing steadily during the last 80 years at least. This has been due partly to great improvement in milling processes, which make bread more attractive; to increasing prosperity, which enables more people to eat white bread, and to an increasing proportion of our population in cities.

It is certain that city dwellers consume more wheat per capita than do those who live in villages and in the country. This probably is due in part to the lack of gardens in cities and in part to the comparative cheapness of bread and the further fact that no cooking is required. The proportion of the total population living in cities is increasing rapidly, which is a factor in the present and future trend of wheat consumption.

Per capita consumption increased from 2.8 bushels, the average of 1839 and 1849, to 4.9 bushels as the average from 1875 to 1884, and 5.6 bushels as the average from 1905 to 1914. This rising trend, interrupted by the World war, doubtless now has been resumed. How much longer will it continue? In some countries of Europe, especially Belgium and France, per capita consumption has risen to about eight bushels of wheat annually.

With increasing population, increasing per capita consumption and decreasing per capita production, there is a steadily increasing demand for our wheat at home. In comparatively a few years, if present trends continue, we shall be eating all that we produce. Of course, production can and will be increased if the prices paid for wheat will make such an increase profitable. The greatly increased wheat production during the war, occurring under the stimulus of very high prices and of patriotism, was partly at the expense of well-balanced rotations and other principles of sound farming. As wheat prices become better in future, production can be increased through the use of more fertilizer and the farming of less productive land. As production and consumption tend to become equal new sources of supply must be sought in order to feed the increasing population. The needed supply may be grown at home or imported from Canada, Argentina and other countries where lands and labor are cheaper than in the United States.

Per capita production has reached its maximum and is slowly declining, while per capita consumption slowly rises.

CARSTAIRS PRAIRIE PROJECT.

The proposed Carstairs Prairie irrigation project in Mason county has been examined by D. A. Scott of the department of conservation and irrigation, who found that there were 600 to 1000 acres of good gravelly soil with a gravity flow of water in adequate quantity from Bingman creek. A soil survey has been made by the state college and it finds that it would be suitable for small fruits, grains and grasses.

The department experts believe that 600 acres can be developed at a cost not to exceed $30 per acre. If 1000 acres were developed the cost would be reduced to about $20 per acre.

FREIGHT AS MUCH AS PRICE.

Eastern buyers who are taking the fruit from peach orchards in the vicinity of Palisades, Col., point out that the cost of moving the fruit to market is as much as the price of the peaches here, packed and loaded on board cars.

This is the Stove Polish YOU Should Use

It's different from others because more care is taken in the making and the materials used are of higher grade.

BLACK SILK STOVE POLISH

makes a brilliant, silky polish that does not rub off or dust off and the shine lasts four times as long as ordinary stove polish.

Used by dealers on sample stoves and for exhibition work.

All we ask is a trial. If you don't find it the best stove polish you ever used your dealer is authorized to refund your money.

Sold by hardware and grocery dealers.

Home Water System

By PROFESSOR L. J. SMITH,
Head of Department of Agricultural Engineering, Washington State College.

We are putting in a home water syste and would like to know if we put in an attic tank of 200 gallons would we have to do any extra bracing and would there be pressure enough for sink and bath when we have only a nine-foot ceiling?
Granger, Wash. J. L. R.

I would advise you to put your 200-gallon tank directly over some good-sized partition between the rooms below. This will brace it and carry the load. You probably would build a round tank for storing the water. In any case, it should have a shallow pan underneath to catch any dripping in case the outside of the tank sweats or in case any leakage develops. A pipe should run from this dripping pan to the eaves trough or on the outside of the house, where it would be noticed in case dripping developed. It would also be a good idea to put two four-by-fours across your ceiling joists to carry the tank. In this way you can stretch your pressure over a good many of the joists, which would keep the tank more even.

I do not think you would have any difficulty from lack of pressure at the sink or bath or faucets. I would suggest, however, that you use one size larger tap or faucet and pipe for your connection. This will make the water run more readily and you will have no difficulty because of the fact that the tank is only 10 or 11 feet above the bungalow floor level.

Making Wood Charcoal

By W. D. BUCHANAN.

I would like some information regarding the making and sale of wood charcoal. What is the best method of burning the wood into charcoal. Where can there be found a market for such a plant and at what price per sack? Does wood have to be seasoned before it can be burned? Is there any market for charcoal made from fir and hemlock timber?
Snohomish, Wash. H. C. B.

The above is somewhat out of my line, but will say that the best method is to have a brick kiln where the wood can be burned without blazing. It can also be burned by digging a pit about three feet deep in clay soil, piling it full of wood, covering with clay to keep out the air, but leaving a ventilator at one end and a draft at the other to get it started. Any good feed concern will buy the product if it is well graded. Wood does not have to be seasoned. There is a market for charcoal made from fir and hemlock, although hardwood charcoal is preferred.

Fit

Why Billy Buster Shoes are kind to boys' growing feet They take the shocks, scuffs, wear and tear—and smile for more. But that's only half the story of Billy Buster Shoes. They are more than successful foot-armor. Boys' growing feet—thousands of them—were studied while working and playing in various type shoes. The exact causes for chaffing, premature holes in stockings and lame feet were located. Then Billy Buster Shoes were built on the principles thus discovered. Feet that walk in these shoes are comfortable. Boys who wear them are freed of foot trouble. Now Billy Buster Shoes are known by tens of thousands of boys and their parents for their kindness to growing feet as well as their ability to "rough it." They have purchased their first pairs of Billy Buster Shoes years ago and now know the name "Billy Buster" as an accurate guide to shoe wear, fit and dollars-and-cents economy. If your regular shoe man is out of stock, we gladly will tell you where they may be obtained. For your protection, Billy Buster is stamped across the sole of the genuine.

Billy Buster

"BIG VALUE SHOES FOR BOYS"

Fire in the Hay!

Storing Uncured Feed Dangerous

"Many destructive fires have been caused by spontaneous combustion of hay," says the Farmer's Bulletin No. 904, in discussing the prevention and control of fire on the farm. Clover and alfalfa hay are said to be especially subject to ignition of this kind. The first cutting of alfalfa seems to be the most dangerous. If it has had rain or dew on it or if the shocks are not cured thoroughly when it is put up, the moisture will cause fermentation which may produce sufficient heat to start a fire. The fire always starts in a part of the mow or stack at some distance from the surface but it can not continue long without oxygen from the outside. It may cease without ever having come to the surface. Its presence may be detected by a peculiar sooty odor or by smoke, irritating to the eyes. It may occur any time from a few days to several weeks after the hay is put up.

There is little danger from this source if the hay is properly cured. Spontaneous combustion has been known to take place in damp fodder or straw, and bins of grain and feed are also said to be dangerous in this regard if not thoroughly dry.

Cloth, waste and sawdust or any other inflammable material saturated with oil are even more subject to spontaneous ignition than hay. Such oils unite with oxygen when exposed to the air and heat is thereby produced. The accumulation of such materials should be guarded against. Oiled cloths or dust cloths used in the house and oily waste or bags used in the garage or machine shop should always be kept in metal containers with air-tight metal covers.

Utilize Wild Flowers

A large percentage of the surplus honey of western Washington comes from white clover and red raspberry blooms, while the logged-off lands furnish a good quality of honey from the fire weed, according to J. W. Peterson of the Edgewood district of Pierce county, who has about 60 stands of bees.

"There are many spring plants that contribute to the building up of the colonies, such as willows, maples, dandelions, plums, cherries and apples. The bees do not store up their surplus from these blossoms, but they build the foundation for the honey crop that is to follow."

Mr. Peterson told of the many acres of wild flowers that could easily be utilized if there were more bees in the logged-off districts. In fact, there are more kinds of blooms than one would suppose could be utilized by the bees and Mr. Peterson has already listed nearly 75 different kinds, and there are perhaps that many more.

Mr. Peterson has hit upon a plan to place his honey before the people in a way that will make them appreciate a high-class product. One of the Tacoma grocers helped him arrange a display in one of his show windows.

"In the center we placed a one-frame observatory hive of Italian bees," said Mr. Peterson. "On one side of this a like hive with no bees, but a full depth frame of well-sealed honey, and labeled it, explaining that it was just as it came from the hive ready to be extracted. On the other side of the bees we placed another, containing a comb after the honey had been taken from it.

"Around these hives were arranged glass jars holding pints, quarts, and some tall jars holding about 18 ounces, also some sections of comb honey. Above all we placed a large card calling attention to the fact that this honey is not strained honey, but extracted by the most modern and sanitary methods. The location of this window was prominent and the display attracted no little attention."

Both the storekeeper and Mr. Peterson were well pleased with the exhibit, since it caused an increase in the sale of honey, both in the comb and extracted. Mr Peterson reports a fairly good honey crop this year, considering that the season was not the best. He had 30 colonies this spring, and extracted nearly a ton of honey, and increased his bees to 60 colonies.

One-Day Schools

A series of one-day schools for women who are interested in bettering the household exhibits at their county and community fairs was conducted in the state of Washington during July and August by Miss Maud Wilson, state home demonstrator leader, and Miss Sutherland, extension clothing specialist. These schools were held at 14 centers in 10 counties. Four hundred and twenty-five women and girls, representing 70 communities, attended the schools. The women brought articles to use as practice work in judging.

Many of the articles were brought by sewing, cooking and canning club members, who weren't a bit behind their mothers when it came to skill in cookery and needlework or in the ease with which they grasped the principles of judging. At Hanford, in Benton county, two boys, members of the cooking club, brought a delicious lemon pie and crisp sugar cookies as their part of the display.

Miss Wilson and Miss Sutherland had score cards for everybody. "A score for everything, and everything judged by its score" seemed to be their motto. The score cards prepared by the state college are conveniently arranged with clear and complete explanations of each point. They are printed on small cards with a hole in the top, for convenience in attaching to articles scored.

This series of schools was only the beginning of this work. Each person who attended is expected to make use of the helps she received. Club girls will apply them in preparing their contest exhibits. Fair committee members will be able to arrange their exhibits more attractively and systematically, while those who plan to compete for premiums will apply the points received to the choice and preparation of their own entries. Almost every woman took extra score cards for her neighbors who could not come to the school. A great many came as representatives of rural women's clubs and planned to give talks on judging at their club meetings.

Dairy Herd on Fruit Farm

That a dairy herd is a paying undertaking in connection with a fruit ranch, even if one makes only expenses for the first few years, is the opinion of P. T. Kayse, who has a 20-acre hay and fruit farm on the reservation at Parker. While the orchard will evidently be the main project on the farm, Mr. Kayse is developing a Guernsey herd with nine females and the use of a purebred bull owned by a neighbor. Part of the females are registered animals, and Mr. Kayse expects to build up a purebred herd in due course of time.

"There is nothing better than a dairy farm for building up the land," said Mr. Kayse, "and we find that the two kinds of work do not interefere greatly, except for certain times during the harvesting season. We are keeping all of our heifers as well as the registered calves, and expect to have some fairly good milch cows in a few years.

"We have had to rent some land for the raising of hay and other crops because it is considered dangerous to feed hay from the orchard because of the spray which covers it. There are some who still cut the alfalfa from an orchard, but it is considered poor practice, since the soil usually needs all the humus and fertility it can get. We find it better to have a separate field for the growing of hay, since it also affords some pasture in the late fall and winter months."

What Testing Reveals

A very striking incident showing the value of cow testing was brought out by Louis Zweegman, who is doing the testing and taking care of the Leonard Koole herd of grade Guernseys near Lynden. He calculates that keeping the milk records, testing the milk and figuring up the totals at the end of the year take only four hours a month for a small herd and the returns are many fold.

"It does not pay to be without a record book, nor to try to guess at which cows are making the highest production," he said. "We found one cow that was making a yearly production of 441 pounds of fat, at a cost of 16 1-2 cents per pound of fat, giving a net return of $74. Another cow gave only 241 pounds of fat, with a net profit of $44. We tried feeding the latter cow heavier on grain, but she would not respond, so we cut her feed down to a point where she was making the best returns for her feed. This could not have been discovered by any other means than testing."

TO INDUCE LAYING.

When the birds are 5½ months old and you really want them to start laying, cut down the sprouted oats from 5 pounds to 3½ for every 100 birds, and start feeding grain and mash, in balanced proportions.

LIVESTOCK AND DAIRY

Starting With Calves

The American Hereford Breeders' association believes that for the average individual it is a good plan to start into the purebred live stock game with calves rather than with mature animals. While the advice is given with special reference to the white faces, the principles appear equally adapted to those who select other breeds of cattle. Advantages of starting with calves are given as follows:

1. A modest investment enables one to get started. Calves, of course, may be purchased for less money than mature stock.

2. Beginners unfamiliar with methods of handling purebreds can start with calves, grow them out, and thus gain valuable knowledge and experience before the cattle reach the producing age.

3. There is less risk of disease with young stock than with old stock. Tuberculosis, abortion and other dread bovine diseases are not so apt to attack calves.

4. Calves may be shipped, fed and handled at less expense than mature stock, and require less space and equipment.

Selection of calves for the founding of purebred herds and for seed stock should be made from well bred herds known to produce a high quality of cattle. The character of the seed stock you select determines the quality of offspring that will follow.

Gives Boys a Start

W. J. Morris of Lynden, a breeder of Berkshire hogs, has adopted a novel plan of placing his pigs on different farms in the neighborhood. Last year he placed six sow pigs with as many boys who wished to take an animal and care for her until the litter of pigs came and then return the sow and one pig, keeping the rest of the litter as his own property or vice versa.

Mr. Morris gives the boys their choice of the sow or all but one of the litter for the care and feed and feels that there is but little difference in the choice. In either case the sow gets better attention and more milk than if she were to remain in the herd where milk is not so plentiful. The boys agree to give the sow the best of care and not to have her bred until she is 9 months old. The boar service is furnished by Mr. Morris, who has the privilege of selecting the boar to be used.

All of the boys who have taken pigs on the above plan have been more than satisfied with their results.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES. ARTICLE X.

Floating Colon (Continued.)

If the gas which has collected in the bowel is not removed the animal suffers very severely and soon begins to absorb the gas into the system and when this occurs there is little hope of recovery, as the gas is very poisonous, and if any considerable amount is so absorbed the chances of recovery are slight unless the action is stopped immediately and the gas removed artificially.

I have purposely discussed the effect of the gas absorption in this article, since it occurs so frequently when the floating colon is involved, but the effect upon the system is the same if, for any reason, the gas is present and can not escape as fast as it is formed. Of course, when the amount of gas is small there may be very little absorption and it remains for it to accumulate in sufficient quantities to become under some pressure before the danger of poisoning is great. A little bloating is, therefore, not dangerous, but it must be carefully watched to see that it does not suddenly increase in amount and cause serious trouble before aid can be obtained. Any bloating is the sign of a digestive trouble that should not be neglected.

When the floating colon is impacted the most effective treatment is through the rectum as a general thing, since medicines that have to travel the entire length of the digestive tube to reach the place have to go a great distance and are, therefore, slow to act and besides in most of these cases there is sufficient quantity of fluid just ahead of the obstructing mass and no more is necessary. It, therefore, remains for a system of treatment to succeed that will soften the mass, if such can be done. Rectal injections are very commonly of value and do aid in softening the offending mass if it is not too far forward within the tube. Very great caution must be exercised not to injure the wall of the bowel in giving the enema. The water must not be too hot and must not contain any irritating substance, nor can it be used safely with a common rubber hose, as the end is so harsh and rough that the wall of the bowel is very certain to be injured unless the end of the tube is covered to prevent the above accident. The hand may be introduced with the tube and held over the end to protect the wall of the bowel.

The solution that had best be used may be made by rubbing hand soap into warm water until a good soapy solution is made. Laundry soap is too caustic to be used in this way and may irritate the lining of the bowel. It is an advantage to have the animal stand with the fore feet lower than the hind, as it causes the fluids to flow forward and find their way farther into the bowel; then, too, they are not so liable to expel the fluid when in this position.

Mistakes are common when the matter of enemas is approached, as some men feel that the more water that is injected the better, but the fluid that is immediately expelled is of practically no value. It is the water that is retained that does the good, so if a pailful of water is given and retained it may do ever so much more good than a tubful given and expelled at once.

In cases of digestive impactions some are of the opinion that some startling and drastic drug like croton oil should be given, as they think that it may do the wonderful feat of causing the removal of the offending mass. In fact, however, this kind of treatment should never be advised unless possibly it is a case of life and death, and when it is used it is always death, so why try it? It is much safer to use a somewhat slower, but much more dependable method and I would never recommend the use of the drastic acting drugs.

When gas is troublesome it is well to give drugs that have a tendency to reduce the fermentive changes that are the cause of the gas formation. Small doses of lysol or creolin are usually available and, while slow in action, are as satisfactory as most home remedies.

For purgatives in cases of impaction of the floating colon the same may be used as recommended for the great colon.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

Securing Good Seed

The great number of people engaged in poultry raising and dairying are ataching added importance to mangels and kale as winter forage crops, says M. E. McCollam, agronomist, western Washington experiment station. It is quite desirable to get large yields of these crops from small acreages because of the expense incidental to their culture.

The use of poor seed means a very appreciable loss, since it results in either a poor stand or a large percentage of scrubby and misshapen plants. To be sure of good seed, and to have the opportunity of improving the crop with very little extra labor are advantages which home seed production offers.

The experience of this station in growing kale seed and mangel seed has been quite satisfactory, and it is offered in the hope that more farmers will interest themselves in the matter.

Kale—Seed is produced during the second year of growth. The best plants should be marked for seed production. Desirable characteristics to look for when choosing seed plants are large size, great leaf surface, branched stalk and ability to retain lower leaves. All these good points should be held in mind when plants are being chosen, since the development of one characteristic, such as large size, without the other characteristic would not be very desirable.

When the seed plants are chosen they may be left in the field, or if they are in the way of field operations they may be transplanted in the early spring to a convenient place. Stakes are placed at each plant so that the plant may be tied and given support to prevent breaking or falling down. In selecting a place for the seed plants to grow it is also well to have in mind that kale crosses readily with other related plants, such as cabbage, mustard, etc., when each are blooming at the same time, and a place as far from the blooms of these other plants as possible should be chosen.

Seed is usually ripe in August, and at that time the seed stalks are cut or broken off, bundled together and placed on a large piece of muslin or canvas. Upon this they are exposed to the sun for a few hours, or longer if there are many green pods to dry out. Harvesting the seed stalks should not be delayed until the pods begin to pop open and scatter the seed. After drying in the sun the seed may be beaten out upon the canvas with a flail or club.

The seed may contain considerable moisture, and if it is not thoroughly dry before putting away in a container it may become moldy. Before putting the seed away it is best to spread it out on a table or floor for several days to allow it to dry out and cure.

One plant will usually produce about four ounces of seed, at least, thus four to six seed plants will be more than ample for any one except those who grow a very large acreage of kale.

Mangels—Mangel seed grown on the station has always proved to be more vigorous, to produce better stands and to outyield purchased seed.

Like kale, the mangel produces seed the second year. It is necessary to select roots, store these over winter in a dry place where they will not freeze, and set them out again in the spring for seed production.

Large, smooth, well-shaped mangels, solid and without forked roots, are desirable for seed production. Care in topping the mangels to be used for seed should be exercised so as not to cut off or destroy the crown, since this will affect the number of seed stalks produced. One root will usually produce about six ounces of seed. It is a good plan to select a greater number of roots than is actually needed for seed, to compensate for any losses which may occur over winter in storage.

The selected roots may be set out in the spring during April. They are placed in the ground on a slant, deep enough so that the crown is covered with an inch or two of soil. A well-drained soil is quite essential. Usually it is desirable to stake up the seed stalks to prevent breaking, but if the roots are planted about two feet apart the stalks will stand up very well and staking may not be necessary.

The seed stalks are harvested and bundled in small bundles before the seed starts to shatter. These bundles are then hung up in a dry place for several days and allowed to dry and cure. The bundles may then be beaten with a flail and the seed gathered. A screen with round perforations a little larger than the mangel seeds is very useful to separate any trash or pieces of stalk from the seed. Leaving the seed spread out in a thin layer on a table or floor for curing will prevent molding when it is put away.

Inspect Chinese Eggs

The following letter from E. F. Benson, formerly Washington state commissioner of agriculture, will be read with interest. Mr. Benson is now manager of the department of immigration and industry for the Northern Pacific Railway company:

"To the Editor of THE FARMER: I noticed in THE FARMER of August 17, page 7, a brief reference to Chinese eggs. I enclose herewith a letter of mine on that subject, published in the monthly news letter from Olympia, November-December, 1920. You probably saw this at the time, but it contains some information that I have not seen elsewhere and I thought might be of some interest to you. The point I make is that the American poultrymen's protection against Chinese eggs does not lie in a protective tariff as much as in sanitary regulations, and it is imperative that Chinese factories be under American supervision if their product is to be sold in this country. I doubt very much if we will ever make much progress based on the argument that the Chinese hens are not kept in as sanitary conditions as the American hens. We all know that a hen is a scavenger, anyway, and if there is any filth they will get it; and it doesn't appeal to me as being a very good argument tending to increase the egg consumption in the United States to try to point out that the egg inside the shell may be inherently bad if produced under some conditions.

"The importation of shell eggs from China should, I think' be restricted to the cooler period of the year, when the eggs

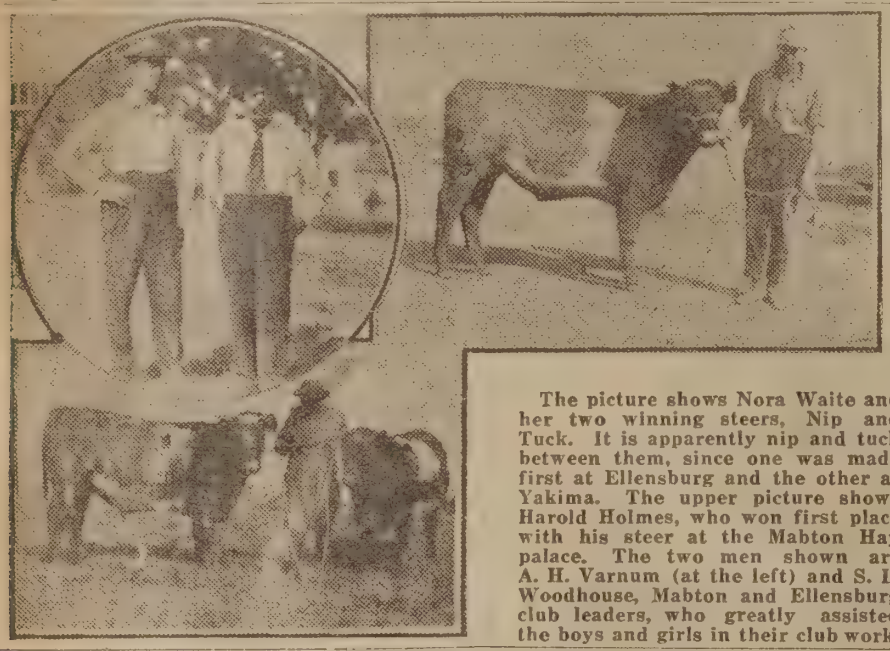
Two Baby Beef Clubs Compete

Early last spring two baby beef clubs were organized under the regular boys and girls' club division of the state college extension service. The clubs were both started to demonstrate the use of roughage on the farms and to get the young folks interested in the raising of high-class farm animals. Frank M. Rothrock of the Hercules Shorthorn farm, Sprague, furnished the steers, which were from grade beef cows and sired by registered bulls. Each boy or girl signed a note for the payment for his two animals and agreed to show them at the local county fair and again at the Western Royal Live Stock show at Spokane, where half of them are to be sold, the balance to be taken to the Pacific International at Portland and shown and sold.

Yakima and Kittitas counties were selected for the two clubs and one was started in the vicinity of Mabton and the other in the Ellensburg district. There were eight boys and girls in one club and 11 in the other; each member took two animals. Trips were planned from time to time during the summer and the members given instructions on feeding and care of their animals. When the time came, each club was ready for his local fair and it was a hard matter to pick out the best animals from the lot.

The Kittitas Hercules Baby Beef club has eight members, all living in the neighborhood of Ellensburg. S. L. Woodhouse acted as their local club leader and gave the members valuable assistance during the summer. When the animals were shown at the Kittitas county fair at Ellensburg, Nora Waite had both the champion steer and the champion pair of steers. In fact the three girls in the club, Nora Waite, Meta Bennett and Jessie Woodhouse, were among the first five places in the awards.



The other club, the Mabton Hercules Baby Beef club, exhibited their calves at the Mabton Hay palace the same week, which was just prior to the state fair at Yakima, but they did not enter the animals to be judged as pairs. Harold Holmes won first at this show and his brother, Fred, won second and third.

The next week there were nine animals from each club that were brought to the state fair, some of which wer eentered in the open classes. The order of their placing was interesting, since it was the first time since being taken up by the members that so many of the animals had been shown together.

Nora Waite took first and third with her champion pair and Fred Schlien of Mabton won second place. William Wadron of Ellensburg won fourth place, while Harold Holmes, who was first at Mabton, was given fifth place. Harvey Varnum came seventh and Fred Schlien's other steer was given eighth place. Meta Bennett's second animal won ninth and Chester Schlien ranked 10th.

The club members as well as a number of onlookers were interested to see how the animals were changed from their first placing at the county fair. Nora Waite's steer, Tuck, was first at Ellensburg, but it was the other animal, Nip, that was set at the head of the list at Yakima. Similarly, Fred Schlien won over his brother, who took first at Mabton. Other changes which occurred emphasized to the youngsters what every experienced stockman knows, that there are no two judges that see an animal in exactly the same light.

The club members are planning on a still better showing at the Western Royal October 28-November 2. Each club member will probably sell one of his animals at one fair and hold the other for the Portland show if he can make arrangements to attend both.

The picture shows Nora Waite and her two winning steers, Nip and Tuck. It is apparently nip and tuck between them, since one was made first at Ellensburg and the other at Yakima. The upper picture shows Harold Holmes, who won first place with his steer at the Mabton Hay palace. The two men shown are A. H. Varnum (at the left) and S. L. Woodhouse, Mabton and Ellensburg club leaders, who greatly assisted the boys and girls in their club work.

Potato Show at Spokane

Plans are rapidly being perfected for the second annual Pacific Northwest Potato Show and Growers' conference, to be held at Spokane, November 21 to 24.

The exhibition this year will be staged under the auspices of the agricultural bureau of the Spokane Chamber of Commerce uniting with the Pacific Northwest Potato Growers' association.

It has been decided to feature only two classes. Class A will include certified seed potatoes and class B commercial potatoes.

E. R. Bennett of Boise is secretary of the show and W. P. Romans, Chamber of Commerce building, Spokane, is general manager.

BANK BOOSTS PIG CLUBS.

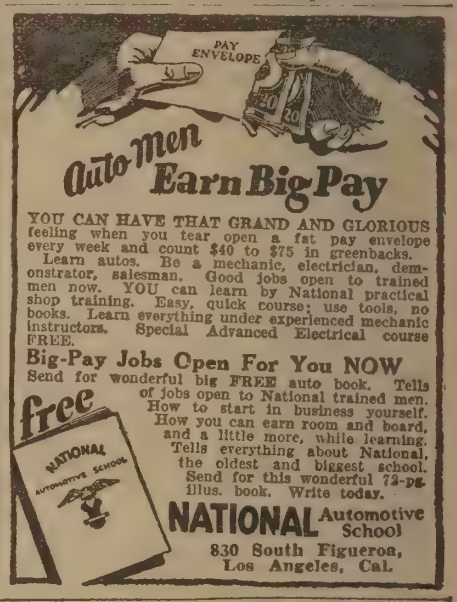
Thirteen embryonic swine breeders of all shades of preference participated in the distribution of nearly $75 in prize money paid by the Security State bank of Chehalis has added stimulus to pig club contests at the Southwest Washington fair this year. Prizes totaling $100 were offered, but there were only 13 contestants and not all the money was used. The contest was open only to Lewis county boys and girls and was promoted by H. F. Alexander, a farmer, of Chehalis, who is an officer in the bank and who has taken unusual interest in club work. It is interesting to note that in spite of this extra inducement to good work with pigs, a Grays Harbor county contestant, rather than one from Lewis county, won the district club contest. Ralph Detering was the proud winner of the $20 first prize, and Wilfred Painter and Helen Medlicott each won $10 for the next best showing. The four next in rank were Vernon Smith, Raymond Reynolds, Daniel Cheney and Keith Lawton, who won $5 each, and Lafy Schmidt, Alfred White, Lester Halverson, Everal Chowning and Orin Svinth each won $2.50. Floyd Forth "drew down" $1. The contest was close, the winner scoring 76, the next two 75 and none of the first 10 less than 70.

Mason County Fair

The 12th annual Mason county fair, which closed October 1, witnessed one of the most successful years in its history. The attendance was good in spite of the bad weather which occurred during the week. The exhibits came largely from the Agate, Skokomish, Matlock, Dayton, Lake Cushman, Shelton Valley, Oakland Bay and Hartstine communities. The live stock department was a big part of the fair and the better babies contest was equally attractive for those who had an entry. There was also a good poultry show and the concessions had their place.

The Shelton-Mason County Commercial club entertained visiting commercial club members from Olympia and other points at a dinner at the Shelton hotel Saturday night, to celebrate the opening of the pavement between Olympia and Shelton, and these visitors were also guests of the fair.

A new building which was constructed to house the grange and community exhibits proved inadequate, but the displays attracted much attention and admiration. Agate grange won the silver cup for the third time, which entitles it to permanent ownership. W. T. Putnam of Lake Cushman put on a complete farm exhibit which was worthy of special mention. The best was chosen from these exhibits to make a county exhibit to send to the Puyallup fair.



The Mason county fair enjoys a unique position. It is an agricultural fair in a county where farmers pay about 5 per cent of the taxes. All the exhibits are from within the county. No entry fees are charged, stock is transported on trucks to and from the fair and cared for while there at county expenses and liberal prizes are offered in all departments.

This fair brings out a fine spirit of cooperation among the residents of the county. Much credit is due Miss Rose Fredson, president of the woman's auxiliary, and H. E. Drew, county agent, for putting this fair over and making it a success.

ADVERTISE THE APPLE.

The Eat Wenatchee Apples, Inc., an organization formed to boost "the big red apple," has started a campaign of advertising in all big market cities by means of newspapers, billboards and magazines. The latter will feature a table of the prize apples, Delicious, Winesaps, Jonathans, Rome Beauties, Winter Bananas and Stayman Winesaps.

Forty boxes of these prize apples have been shipped to St. Paul for exhibition at the food and household exposition.

For the Woman Who Drives Her Own Car

THOUSANDS of women who are driving Overland Sedans wonder how they ever got along without them. Everything about an Overland Sedan is remarkably simple. The driver's seat is comfortable. The gears shift easily. Steering becomes second nature.

Built with scrupulous care, the Overland Sedan is a car to be proud of—the upholstery is rich and inviting, the cushions deep and resilient, the seats roomy and comfortable. The body hangs like a hammock on the patented Triplex Spring Suspension—road shocks are banished. 25 miles to a gallon is common experience. Tire mileage is surprisingly high. For the woman on the farm the Overland Sedan is without question "the greatest motor car value in America."

"Overland, Always a Good Investment, Now the Greatest Automobile Value in America"

What's the Latest Style in Meats?

A former speaker of the house of representatives, himself rather ponderous, once declared that "no gentleman ever weighs over 200 pounds."

In determining values in the live stock market weight varies in importance from the inconsequential to a factor at times transcending even quality and finish.

For a century the drift of market preference has been toward lighter and lighter cattle, hogs and sheep. The tallowy mountains which formerly constituted the standard of perfection in beef production have been superseded by the tidy yearling. The lardy leviathans which walked to market in the days when Cincinnati, then the chief packing center, was known as "Porkopolis," have given way to the "regulation lights" weighing 160 to 190 pounds. Fashion likewise has turned from the heavy wether to the 80-pound lamb.

The smaller carcass is less wasteful, both for the retailers and the consumer, and the smaller sized retail cuts are a better fit for the purse and for the average family size of the present day. Being from younger animals as a rule than the heavier carcass, all parts are comparatively tender. From the producer's standpoint, there is economy also in production for sale at a younger age, but such a factor does not induce the market to pay a higher price.

While the general rule is that lighter weights have the preference, there are exceptions and the amount of discount, if any, on heavyweights varies greatly at different times. While the rank and file of consumers want the cuts from lighter carcasses, the hotel, restaurant, dining car and steamboat trade requires a more or less constant supply of heavy beef. Likewise a few heavy wethers can be sold. These outlets are easily glutted, however, and if a few too many arrive they must be sold at a sacrifice. On the other hand, since this trade is rather fastidious, scarcity will place such animals at a premium.

Heavy steers, which mean those weighing 1350 or over, generally are in their heyday during the late summer and fall months. Such cattle can only be produced by a long period on feed. Feeders must be purchased during the fall or early winter and fed a full grain ration for five or six months. When the busy season on farms arrives along with hot weather and fly time, during which cattle do not gain well, most feeders order cars. Only a few are carried beyond this period so that they can virtually command their own price. For the same reason fat yearlings also are apt to be scarce at that season so that the actual premium on weighty steers over yearlings is not apt to exceed 50 cents per 100 pounds at the outside.

Winter is the chief cattle feeding season. Feed lots throughout the corn belt are filled during the late fall and the cattle fattened on whatever feed is available. Almost invariably the result is an excess of heavy finished steers during the spring months, which must be sold at a discount.

Once in a while exceptions occur. The disappointing cattle market in the first half of 1921 led many feeders to hold on through the summer, hoping the market would recover and enable them to avoid losses. Marketing these cattle was not completed till December. Last fall more light feeders were taken out than normally, so that heavy fat steers were not at as great disadvantage as usual during the last spring.

It follows that the purchase of light feeders during the fall months to be fattened for the spring market is desirable. On the other hand, producers of stockers and feeders will find weight more of an asset during the fall than at other seasons of the year.

In the calf market weight is an exceedingly prominent factor in determining values. Speaking broadly, the well finished calf seven weeks old weighing 150 pounds is most desirable. Slightly lighter weights do not ship well, especially in cold weather, they are apt to be less muscular; and still lighter weights running down below 100 pounds may not meet inspection requirements as to age. Heavy calves get beyond the real "veal" age at about 225 pounds, when they sometimes are called "heavy killing calves," and sell far under prime veals, no matter how well finished they are. Tastes differ here, as the southern and the western markets take more kindly to heavy calves than the middle west and the east, where most vealers are dairy bred.

Before the day of lard substitutes heavy hogs sometimes sold at a distinct premium in the winter because they have a slightly higher dressing percentage than light hogs and the product from both sold at about the same price. In recent years the demand for fresh pork and for bacon has expanded so that hogs weighing 160 to 190 pounds which produce the cuts which have sold at a premium most of the time. During November, December and January, light hogs from spring farrow are always abundant so that the general average of light hog prices has fallen below the average of heavy hogs even though choice light hogs were selling at the top of the market. The premium on lights is most marked in the summer months when such hogs are scarce and the bulk of the supply consists of fat sows and heavy barrows.

The public insists upon the lamb weighing 80 pounds or thereabouts because of the more desirable sized roasts and chops and also for assurance that it is getting lamb. New lambs, in load lots, exceed this figure very much until the late winter and spring, when the feeding season is on. Discrimination against excessive weight is rather sharp, begins when averages run above 85 pounds and may easily amount to $1 per 100 pounds for lambs which are 15 pounds too heavy.

The nearer yearlings come to the specified weight for lambs the better they are substituted for lamb in the dressed trade. Wethers and ewes also sell much better if they do not scale over 100 pounds.

Organizing Beef Club

A beef club is being organized in the Wiley City district of the Yakima valley. According to the plan, farmers entering the club will furnish, each in rotation, a steer a week, and the different cuts will be rotated among the members of the club so that by the time that each has furnished a steer each member will have sampled all the different cuts from as many different steers. One man is to do the butchering. It is thought that 25 men will go into the club.

Stump Puller only $10 down

Easy to own the famous KIRSTIN One-Man Stump Puller. Pays for itself as you use it. You, alone, without extra help can pull big stumps—easier, quicker, cheaper!

Kirstin Stump Puller

Weighs less, costs less! Greater power, more speed, stronger—cheapest and so easiest to use. Made in both One-Man and Horse Power styles, all sizes.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

On the Morning You Find Your Battery Dead!

Like every other motorist, you sooner or later have this experience: Some morning you throw open the garage doors, climb into the car, step confidently on the button—*and nothing happens!* Your battery has died in the night.

But why be resentful toward the battery? Rather, dig out the facts and conclusions about batteries you have "filed" in the back of your brain for just such an emergency. You'll probably find they run like this:

"My battery *does* have a hard life. I *do* need the strongest battery I can buy. The Willard Threaded Rubber Battery *does* give longer continuous service at less cost per month and per mile. The use of Willard Threaded Rubber Batteries as standard original equipment by 202 makers is *overwhelming* evidence of quality. On these grounds I have decided the only battery for me is the Willard Threaded Rubber Battery!"

Having once decided, are you going to let expediency, price, or last-minute weakness swerve you when your battery suddenly dies and immediate action is needed? Or are you going to fix that decision *now* with rivets driven through and clinched on the other side?

LET'S GO!

News for Breeders

MADE GOOD INVESTMENT.

"I never made a better investment than when I shipped one of our best cows about 800 miles to be bred to a Langwater bull," said J. O. Johnson, a breeder of registered and grade Guernseys near Sumas, Whatcom county. "We got a fine bull calf from her and he is now the herd sire. We have had some excellent calves from him and he has improved the production of the herd. We tried milking the herd three times a day for six months and it made a difference in the production, but we dropped back to twice a day when the grass became short. The grade cows in the herd will average as high as 450 pounds on good feed and there are some of the purebreds that will make between 600 and 700 pounds." Mr. Johnson has one of the largest herds of Guernseys in the county. There are 60 head in the entire herd and there is a good bunch of heifers coming on.

LOSES HIS CLUB CALF.

Stanley Plaster of Ferndale, one of the members of the Hub Guernsey Calf club, had the misfortune to lose his calf, Hillsdale Goldie May, a junior yearling heifer, by infection which started by a rope injury. The heifer was from the Dr. A. McRae Smith herd at Lynden and Stanley has spoken for a full sister of Goldie which he will keep as his club calf.

AVERAGE 400 POUNDS OF FAT.

Nels Jordal and Son of Ferndale are known as purebred Jersey breeders and have shown their herd at the county fair for the last 10 years. The herd was started with the Eminent and Golden Fern's Lad stock, there being 17 head of direct descendants from this foundation in the herd at the present time.

Two Waikiki heifers have been added to the herd and one has been making an exceptional record of 500 pounds of fat with her first calf. This, however, is a private record. Another one of the heifers in the Jordal herd is Sunlight's Golden Model, a senior yearling whose sire is a half brother to Vive la France.

The nine head that are milking at the present time have come through the year with a herd average of 400 pounds of fat, which is also a private record. For pasture the herd is run on 45 acres of uncleared land which affords good feed at least six months of the year. For hay crops, Mr. Jordal uses red clover on the upland meadows and has found kale and mangles to be a valuable green feed.

CRESTLAND BOB WINS.

Herewith is shown a snapshot of Crestland Bob, an outstanding 2-year-old Berkshire boar owned by the Simonson Hog company at Buena, Wash. He was

awarded the senior and grand championship at the Washington state fair this year.

NEW GUERNSEY HERDS.

Foundations for several new Guernsey herds in the district around Goldendale, Wash., were laid at the northwest breeders' sale in Portland this summer by members of an association which is using a purebred community bull of Langwater breeding, Fawndale Mariner by name and a product of the Wallace & Fordyce farm at Outlook, Wash. Members purchased their first females at this sale. W. E. Hornbrook and H. D. Roberts each bought a heifer consigned by Henry Schick of Buhl, Idaho, both sired by Imp. Meredith of Mountain View, and both out of imported dams. M. O. Dayton paid $230 for a strongly bred Langwater heifer and D. Admiral $300 for a bred heifer sired by Glenwood King of Edgemoor, making a total of $1045 invested by four of the six association members.

WINS JERSEY HONOR.

Sultan's Olga Boy is one of the outstanding Jerseys in the Ericson Brothers herd near Yakima. So good is this aged bull that he has added several blue and

purple ribbons to his winnings this season. He was senior and grand champion at the Washington state fair.

HOLSTEIN SALE DISAPPOINTS.

The consignment sale of registered Holsteins which was held at the state fairgrounds on Wednesday, September 20, under the auspices of the Washington State Holstein-Freisian association resulted in the disposal of 50 out of the 70 animals consigned. Although the top animal brought $320 and was sold to Daniel Beardsley of Yakima, the average was low. Nineteen of the animals were withdrawn from the sale. Governor Hart was present and bought two animals to add to the state herd at Fort Steilacoom. The majority of the sales, however, were to local breeders, while Ralph Tuttle of Walla Walla purchased three head. George A. Gue cried the sale and was assisted by Robert Koostra of Tolt. George S. Bulkley, acting secretary of the Washington State Holstein-Freisian association, acted as clerk.

A HERD OF GOOD CHESTERS.

While Chester Whites are not the most common grade of hogs found in western Washington, C. A. Warren has a herd at Vancouver which is a credit to the community. At present there are four sows and the herd boar. At other times a much larger number of brood sows are kept through the winter. The herd boar, a 2-year-old, is sired by the Ed. Shoels herd, Albany, Ore., and is out of one of Mr. Warren's own brood sows. He is a good animal and shows true Chester White type. The sows averaged nine pigs to the litter this spring.

RAMS SELL WELL.

Fifty-two purebred Hampshire ram lambs averaged a little more than $31 at the second annual Kittitas County Hampshire association sale, held at Ellensburg, early in September. This was regarded as a good figure as most of the rams go to the range.

The following is the list of principal purchasers with the number of head bought: Robert Blastock, Fily, Idaho, 22 head; Coffin & Son, Yakima, Wash., 9; Archie Prior, Yakima, Wash., 6; Prosser Sheep Co. (J. F. Sears), Yakima, 6; K. C. Kohle, Ellensburg, 2; Ed Forguer, Granger, 2; Charles Luver, Ellensburg, 2.

The sheepmen present were impressed with the size and bone carried by the majority of the rams. Two facts were demonstrated in connection with the sale: First, that quality counts and is paid for by the purchasers; second, that the big, husky, well-grown lamb sells at a prebetter ram sale in 1923.

mium. Range ram buyers and breeders alike are looking forward to a bigger and

CHIMACUM BULL ASSOCIATION.

First of the 12 members of the Chimacum Bull association to realize on the services of their Todd sire is Tom Yarr, one of whose junior 2-year-olds recently dropped a calf by this bull and subsequently made 21 pounds in seven days. The bull will not be 2 years old until December, but about 40 cows are in calf to him and half that number will freshen this fall. He is a son of Sir Korndyke Ormsby Piebe and Cascade Blossom, former world champion 305-day milk producer.

SELL FOUR REGISTERED JERSEYS.

Four registered Jerseys were sold to the Matson farm at Vancouver, B. C., by John R. Martin and E. L. Brewer of Satsop. Mr. Martin sold three head of cows for a total of $2150 while the animal from the Brewer herd brought $500. This makes a total of $2650 for the four head.

MEADOW BROOK FARM AYRSHIRES

Herd is now headed by Willowmoor Sentinel 23d, whose sire is Willowmoor Sentinel, only son of former world record cow Serranton Dora 2d, on the dam's side. Willowmoor Sentinel 23d is equally well bred, being out of that widely known world record cow, Carsten's Eveline, the best breeding cow of the day, who is also the dam of Willowmoor Miss Carsten, the champion living two-year-old, who is said by good judges to be the best individual living, and who is valued by owner at $25,000. I have some nice young stock of this breeding ready to ship.

POULTRY AND RABBITS

Winter Coming

Many a farm gets few eggs in winter because the conditions under which the hens are housed and fed are poor, as well as because of lack of laying characteristics in the birds themselves. The best hen will be a poor layer if her feed and care are poor. No doubt, she will lay more eggs than will the scrub hen, but that is no excuse for giving her poor treatment.

If the poultry house is not already prepared for the cold and wet season, right now is the time to put it in order. In doing so, one should remember a few fundamental principles.

The hen uses a great deal of oxygen. Probably no other animal of her size requires as much. This means that she must have fresh air.

Likewise, she breathes off a great deal of moisture. This moisture must be supplied in the form of drink, and provisions must be made for letting it out of the hen house. Otherwise the walls and ceilings become damp and clammy.

Both these facts mean one thing and mean it emphatically—good ventilation.

But in ventilating, do not permit drafts to blow upon the hens. Probably the best method of providing fresh air is to have three sides of the house closed tightly, leaving the fourth side open. This will admit plenty of fresh air and at the same time prevent the undesirable draft.

Make that side of the house open that faces away from the prevailing storm winds and toward the winter sun if possible. Sunlight is the best of all disinfectants. In the damp season of the year every bit of sunlight should be utilized for the warmth of the birds and the drying and sweetening of the henhouse.

It is well to have the house screened in, with duck or other semi-transparent cloth curtain that may be dropped when it becomes too stormy or cold to justify free access to the open.

In front of this open side where the light is good is the best place for the scratching floor. Be sure that it is a good floor. Do not have cracks in it that will permit the fine part of the litter and some of the grain to drop through and form an insanitary, decaying mass under the building. Build the floor up off the ground far enough to insure against dampness from the soil and against surface water running in when it rains or when the snow melts.

Do everything possible to keep the house dry—floor, walls, ceiling. Dampness is a great enemy of hens. Many diseases are contracted because of it.

Be sure not to have the hen overwarm. Colds come from too warm quarters more often than from too cold.

Provide a watering system that will insure plenty of water, not too cold, throughout the winter days. Fresh water and plenty of it is one of the cheapest poultry "feeds" and conditioners. Arrange it so that the birds can not make it foul. Keep it clean; keep it fresh; keep the ice off of and out of it.

And then, clean the house regularly and often. If it smells unclean to you when you go in in the morning, you may be sure that it is unclean. If the odor in it is unpleasant to you, it is certain that it is not only unpleasant, but unhealthful to the hens.

If you want eggs, give the hens a chance to lay them. If they expend all their energy trying to overcome adverse conditions of feeding or housing, they have no energy left with which to produce eggs.

Inspect Chinese Eggs

(Continued from page eleven.)

could be gathered and shipped under conditions that would most likely leave them in fairly good condition at this end. It is a cinch eggs can't be very fresh when gathered along the Chinese coast and river points, then shipped two weeks across the Pacific afterwards. It seems to me, therefore, that the shell eggs do not constitute the big egg menace which the egg product business does constitute for the American poultry raiser. E. F. BENSON."

The Monthly News Letter, to which Mr. Benson refers, is published by the Washington state department of agriculture. Its issue for November-December, 1920, contained a letter of Mr. Benson's, written during his tour of the orient. In this letter Mr. Benson says the most remarkable thing about China that he saw was the small number of hens in a place, three or four being the rule, sometimes two or three, seldom over six. Yet these few hens in a place produced in 1917 poultry and eggs to the value of $462,000,000, the eggs alone being valued at $262,000,000. The poultry and fresh and frozen eggs exported that year from China was 12,000,000 tael, being worth a little more than our $1.

There are large foreign concerns operating egg product factories in China. One factory at Hankow has a capacity for handling 90 tons of eggs a day, and another factory at Nanking was nearly as large. Two large factories are located at Shanghai for frozen and dried eggs and shell eggs. One of them has a capacity of over 1,000,000 eggs a day. There was a factory at Tsingtao and one at Tientsin. There are some hundreds of native factories and their total output greatly exceeds the total output of all the foreign factories.

Visiting one of these large factories, Mr. Benson found that the care shown in the place visited by him to put out a clean and sanitary product suggested the danger that may lie in the output of a less careful concern, and especially the small native factories.

The average Hankow eggs are only a little over half the size of our "standard" eggs. The factories always buy eggs by the pound. The six principal factories at Hankow have a daily capacity of 251,000 pounds of dried eggs or about 16,000,000 eggs.

The egg exports from China are:

1. Shell eggs—which must be refrigerated and well handled to compete with our eggs.
2. Frozen eggs—wholes, whites and yolks.
3. Dried eggs—wholes, whites and yolks.

Mr. Benson says that it seems plain to him that the Chinese egg products should be excluded from all markets of the United States until every factory is inspected by some competent person and each case or package stamped and certified as being fully up to the requirements of the United States department of agriculture. He believes such inspectors should probably report to and be under the United States consul of the district in which the factory is located, but should be appointed by the United States department of agriculture.

When he suggested this inspection to several persons, each one said:

"It would not work in the orient."

"Then the egg product shouldn't be allowed on the markets of the United States," was Mr. Benson's comment in reply.

Making it Easy for you to choose the Right Load

MOST every man who hunts at all has days when somehow he doesn't seem to get the game he feels his shooting deserves.

Perhaps he didn't choose the *right load.*

With some *3000 different* combinations of powder and shot in loaded shells—how could he be expected to?

Little wonder that sportsmen and dealers alike, from one end of the country to the other, welcomed the *New Remington Game Loads.*

Here at last was *common-sense* applied to Shotgun loads.

Specific loads for *specific* game.

The *right* amount of powder, the *right* size and quantity of shot.

Today you can go to any of more than 100,000 Remington dealers—tell him *what game* you are going after—and get the *specific* load made by Remington to bag it.

* *

The New Remington Game Loads are designed by Remington, made by Remington, guaranteed by Remington and backed by Remington reputation. They are furnished exclusively in "Nitro Club" Wetproof—made by the *exclusive and patented* Remington Wetproof Process.

They cover every shooting requirement.

The New Remington Game Loads

12 gauge Loads for—Duck, Heavy Duck, Brant, Goose, Quail, Grouse, Rabbit, Squirrel, Snipe, Dove, Trap-Shooting.

16 gauge Loads for—Duck, Rabbit, Squirrel, Grouse, Quail, Snipe.

20 gauge Loads for—Duck, Heavy Duck, Rabbit, Squirrel, Grouse, Quail, Snipe.

IMPORTANT—Note the special *Heavy Duck Load* in 12 and 20 gauge.—The 20 gauge is for the man who shoots the new Remington 20 gauge Repeating Pump Gun.—This new Remington 20 gauge Heavy Duck Load Shell is 2¾ *inches long.* Gives uniform pattern with great driving and hitting power. A real *man's* load.

ORCHARD AND GARDEN

Care of Himalaya Blackberries

By O. M. MORRIS, Head Department of Horticulture, Washington State College.

Could you inform me how to take care of Himalaya blackberries, how to train them and when and how to prune them? Also how many stocks should I leave to the hill? C. J. C.
Vancouver, Wash.

The Himalaya blackberry is a very strong growing plant and naturally best results will be obtained by setting the plants about 16 to 18 feet apart in the row and the rows about six or eight feet apart. The plants should be trained on a four wire trelis. Leave about 8 to 15 canes per hill. Train them four in each direction along the trellis. The best form of trellis consists of posts, placed about every 30 to 36 feet, with cross-arms, to which are attached wires, about No. 9 in gauge. These cross-arms support two wires about 12 to 15 inches apart and equal from the ground. Cross stake supports are placed on these wires and the canes are simply woven above and below these cross-arms. The young shoots are usually kept on the lower wires about two or two and one-half feet from the ground, and the fruiting canes are kept on two wires similarly placed about two feet above the lower wires.

The pruning work should be done practically the same as for all of the blackberry family. The old blackberry canes are cut away each year and the young shoots of the last season's growth are placed on the top wires for fruiting. Some summer pruning in the form of cutting away the wide branches that develop is necessary, and can be done two or three times during the summer with very good results.

Cherries for Canning

By C. C. VINCENT

I have 40 acres of land in western Washington and want to set out 100 canning cherry trees. Would you advise me which kind of trees would be best for this purpose? Should I get them all of one kind or two or three different kinds? I also want to set out 100 crabapple trees for making jelly. What trees would be best for that purpose? J. P. E.
Quartzburg, Idaho.

If there is a cannery in the vicinity where your land is located then it might be advisable for you to plant rather extensively to pie cherries, such as the English Morello. The English Morello is a very poor shipping cherry and therefore, if you do not have access to a cannery, it would not be advisable to plant this particular sort. Sweet cherries for canning are the Royal Anne, Bing and Lambert. The Royal Anne is used more generally for this purpose than the Bing and Lambert. The last two named varieties are very firm and of dark color and are grown quite extensively for shipping. At the present time very few canneries are using the Bing, although many housewives prefer this variety to the Royal Anne for canning. If you plant the sweet cherries it will be necessary to use the Long Stemmed Waterhouse or the Black Tartarian as a pollinizer as the three above-named varieties are intersterile. One tree in 10 would be sufficient for pollination.

Possibly the Hyslop and Transcendent crabapples are the best varieties to grow for jelly making.

Northwest for Bees

By GEORGE W. YORK.

A Californian who claims to be the "largest shipper of bees by the pound in the world" recently took a trip lasting two months through northern California, Oregon, Washington, Idaho, Montana, Wyoming and Nevada, and has this to say upon his return, in a letter to the writer dated September 17, 1922:

"From what I saw of the northwest in general I believe it is a much better bee country than the south, from a honey-producing standpoint."

Having been a resident of the northwest for 10 years, and noting reports of beekeepers operating in the states mentioned, I believe my correspondent is correct.

There is any amount of honey still going to waste every year in the territory referred to for lack of bees to gather the nectar from the myriads of blossoms that "waste their sweetness" through evaporation.

If there is one industry above another that should be encouraged in every possible way through legislation and otherwise, I think that industry is beekeeping. I know of no other line of effort that will yield such great returns from so small an investment. I think the only reason why legislators do not vote all necessary financial assistance is from a lack of understanding the needs, and also from such a limited familiarity with the importance of honey bees in their relation to pollenization of fruit and other blossoms, which, when properly aided by the visits of honey bees, results in largely increased crops.

The northwest is rapidly coming to be the "fruit basket" of the United States, if not of the world. And, as this fruitful condition is bound to grow, naturally the bee industry should keep pace with it. So more and more will the northwest be the beekeepers' paradise.

Cabbage Aphis Attacks Rape

By E. G. SCHAFER, Department of Farm Crops, Washington State College.

Will you kindly give me the information on planting fall rape for hog pasture? What kind would you suggest as best for this vicinity? What time of year should it be planted? F. W. L.
Lamont, Wash.

Rape is best adapted to a cool growing season, and largest yields are obtained in moist, rich soils. It is generally planted in the spring, except in districts having mild winters. It is a biennial plant and may be planted in the fall where it will survive the winter. In the south fall sowing is said to be most satisfactory.

Dwarf Essex rape is a variety most generally used. Rape, in common with other plants of the cabbage type, is frequently attacked by the cabbage aphis. This insect occurs so generally that it practically prevents the successful production of rape in eastern Washington.

PRIZES FOR CLUB WORK.

Nearly $750,000 in prize money is being offered to boys and girls in club work this year in the United States. This is exclusive of the Smith-Lever funds appropriated by the government and matched by the states to conduct the work.

PIKE'S PEAK OR BUST

By LEWIS B MILLER

Copyright 1021

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. They struggle slowly westward, meeting up with others also headed for the gold diggings. With a party of men traveling by handcart they all but starve for water on a desert, but dig a well and escape. They meet with a family by the name of Cooper, one member of which is a girl of years and manner that at once captivate young Orlando, who delights in keeping near her prairie schooner as they journey on. Once the entire party gives up the westward trip when they meet discouraged gold seekers returning, but Orlando and Hazel Cooper induce them to turn to the west again. They have many interesting experiences on the way, finally coming upon a great Indian camp. Not many days later they sighted Pike's peak, and a little later plodded into a little frontier town that has since grown to be the great city of Denver, Colorado. Here they learned that a rich gold strike had been made not far away at what was called Gregory's diggings. They mail letters to the folks back home and hurry on toward the place of the strike. At the foot of the mountains the women and children are left in camp to care for most of the supplies, while the men travel on foot into the mountains toward the diggings, which they reach the second day. Every claim is taken, so most of them proceed further and locate claims on Clear creek where they begin actual mining. The first day six of them wash out gold worth $7. Later they built a sluice box and increased their output to $15 or $20. One day it is learned that Mason, who has the claim next to them, has sold it to three new miners for $300 in gold dust and expects to return to his family in Indiana. When Mason started the next morning, two of the new miners accompanied him as far as Gregory's diggings. Next day they returned to their claim with a jug of whisky. Claims on Clear creek were changing hands every day and before the Cooper party were aware of what was happening, the three had sold their claim and gone. Four new miners took possession of the claim and soon made friends with the Cooper party. After a few days' work they find that they can not wash out $8 or $10 apiece as the claim was represented and they concluded that the claim was salted, as they had paid $600 for it. Before long a miner from Gregory's diggings brings the news that two prospectors had found a dead man between the two camps. The body was later identified as that of Mason. Upon investigation they find that Mason's wagon and team had been taken by the doubtful trio and sold to some miners who wished to return home. At Denver they learned that the trio had left for the mountains, and it would be useless to try to follow them.

CHAPTER SEVENTEEN.

The Clear Creek Camp Stampedes.

"Some of us will be up a little later, to see if there's anything we can do for i'm," Cooper called after the woman, as she passed on to deliver her milk.

When supper was over, three or the party walked up to the Hinkson camp. After talking with the sick man they agreed that he was probably entering a long spell of the fever. They and others, taking turns, sat up with him during the night. When morning came he was no better, and they proposed to send to Gregory's Gulch for a doctor. But the sick man's wife thought it better to move her whole family over to the gulch.

"With him sick abed, I cain't do nothin' at minin' here," she told them. "And me and Becky can sell our milk to the miners over thar as well as we can here. That'll make us a livin', I 'low."

"All right, Mrs. Hinkson. That might be best," Cooper told her. "We'll take care of your claim, and see that nobody jumps it. Or we'll sell it for you, just as you choose."

"Reckon maybe it would be better for us to sell out, if we can."

"Then we'll try hard to sell the claim for you. What price must we name?"

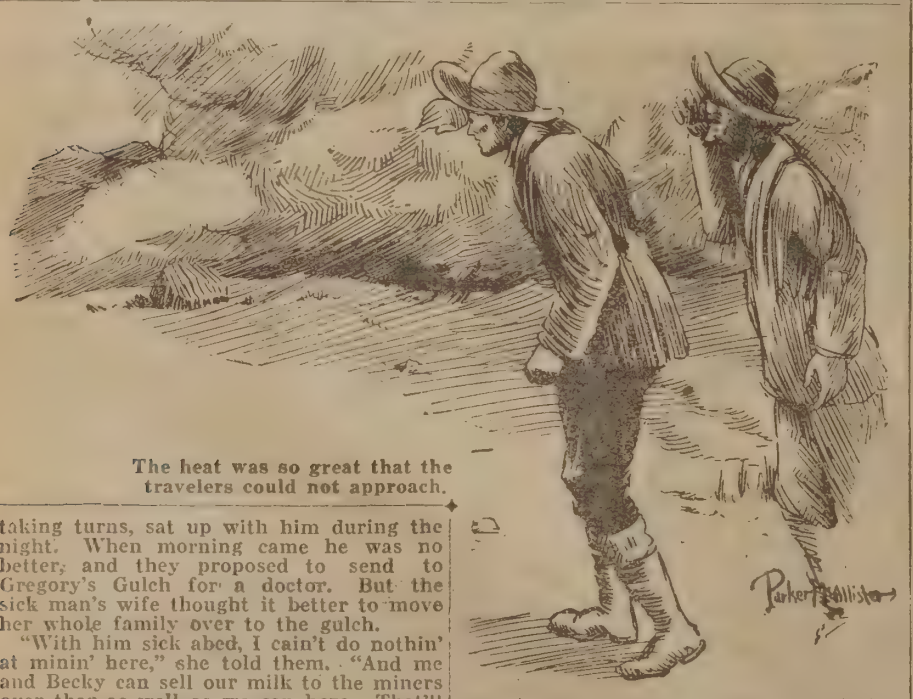
After she had talked with her husband and others it was agreed that the claim ought to bring $200. But an hour later, when some newcomers arrived, they washed out a few panfuls of dirt and offered $150 for it. Several of the miners insisted upon holding for a better price. But the woman consulted her husband again, and they together decided to accept the offer. It was fortunate for them that they did, as everybody admitted a few days later.

Soon the wagon was on its way. Jess Holloway and Orlando Medford accompanied the family. As usual, the woman persisted in driving her own team, Holloway walked by the wagon, or rode in it, to look after the sick man. But Orlando tramped along behind, he and Becky driving the cows and calves. Again and again he urged the girl to ride in the wagon, but she always refused.

"These here cows knows me, and they don't know you," she told him. "If I was to leave 'em alone with a stranger they might act up. So I 'low it's better for me to help drive."

"All right. Just as you say, little Becky girl. Must confess I don't like to have cows 'actin' up' around me."

When the party arrived at Gregory's Gulch, the two young miners selected a camping place and helped the family to establish a camp. The spot chosen was just beyond the edge of the mining camp, so that Becky could find pasture for her cows. Afterward Orlando summoned a doctor, and he and Jess spoke to several miners who had families here, who promised to see that the sick man and his family lacked for nothing. Those things attended to, the two men returned to the Clear Creek diggings.



Less than a week later some news reached this camp which produced very prompt and very surprising results.

A Mexican pack train that arrived with flour and meal for sale reported the recent discovery of some very rich diggings. The place was in the southeast corner of South Park, and almost due west from Pike's Peak. So rich were the new diggings, it was reported, that miners already there were washing out an ounce of gold a day for each man.

Sixteen dollars a day that was. And it was far better than most of the men were doing in the rich mines of Gregory's diggings. Nearly all the miners here had been disappointed over arriving too late to get claims in Gregory's Gulch. Their mining on Clear Creek being unprofitable, they resolved to be in good time at those new diggings.

At once the stampede began. And before the day ended it was complete. As often happened in these mining camps, when once the moving impulse set in, it swept everything before it. Here not one man announced his determination to stay.

That was unfortunate, for many reasons. Claims which might have sold for $150 the day before were now utterly worthless.

The heat was so great that the travelers could not approach.

Also the sluice boxes, long toms and riffle boxes, being too heavy to move, would have to be abandoned.

Like all the others, Cooper and his partners were quickly preparing to abandon their claims and start for the new diggings. Some would have preferred to travel straight through from here. But Cooper wanted to visit his family first, and the whole six would have to return to Cooper's camp for supplies.

Just after dinner Brindle was saddled, and what she would carry was packed on her. The rest of the party's things were loaded on the cart. Now two of the men buckled on their harness, one stood between the shafts, two others seized a rope and one got behind to push, and away they went.

As they were passing out of the narrow gorge, Orlando, who was behind, pushing the cart, turned his head and gazed back. He was thinking of the weeks he had spent there, and of the many new and strange experiences that had come to him there as a miner. And he wondered, vaguely, if he would ever see that abandoned camp again.

The road was rough, and it was after noon when the party entered Gregory's Gulch. For dinner they stopped near the Hinkson's camp. They found the sick man neither better nor worse, apparently, and the family were getting along reasonably well—better than in the Clear Creek camp. Becky was now selling the milk. For some reason, perhaps because of her father's sickness, or her own quaint little, old-womanish ways, she was receiving more money for it than the man had received.

An hour or two only the party spent here, most of it among the busy sluice boxes. By this time there was no doubt of the richness of these diggings, and numerous improvements, many of a substantial character, were fast being made.

Why Risk Your Health?

THE path of the coffee or tea drinker is beset with dangers to health and comfort. These dangers lurk in the irritant, caffeine, which is the active principle of both coffee and tea.

For those who enjoy a well-made cup of coffee or tea, but find that it makes them nervous, wakeful and irritable, there's satisfaction and freedom from discomfort in delicious Postum—the table beverage of no regrets.

Its fragrant aroma and rich, full-bodied flavor are delightful. Postum is made from roasted wheat and contains no caffeine, nor any other harmful ingredient whatsoever.

Order from your Grocer TODAY!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

TO EXCHANGE—Real Estate 705

1300-ACRE GRAIN AND STOCK RANCH; trade for small dairy or fruit ranch. H 8, Oregon Farmer, Spokane.

Pike's Peak or Bust

(Continued from page twenty.)

After returning to camp, the party took leave of the sick man and his family, then traveled on.

Night overtook them in the mountains, and they camped by the trail. But early morning found them moving again. The trail had recently been changed, and for the better. Instead of passing over a high mountain, where the wagons going down had to drag trees, it now followed a gloomy canyon, between rock walls hundreds of feet high, and along a swift, noisy stream. At one place it led through what had recently been a pine forest. But a fire which had broken out had left only the blackened remains of half-burnt trees.

It was high noon when the six men, moving at a brisk gait, emerged from the mountains. Half an hour later they made their appearance at the place where the Cooper family was in camp.

Only the remainder of the day was spent here. But a very delightful piece of a day it proved to Orlando, who would have been glad to linger a month. For to him matters had reached such a stage that this camp at the foot of the mountains was the center of the earth. If the truth must be told, his thoughts were here far more than in his Illinois home. It was not that he cared for his home less, but he cared for this wilderness camp more.

However, if his party were to reach the new diggings in time to stake out good claims it was all-important that they get started in that direction as soon as possible. Like the other miners, Orlando had come to this wild region in the hope of digging much gold out of the mountains. As yet he had found only a little of it, and of even that the greater part had had to go for food, the lumber for their sluice box, and similar costly things—everything was costly out here—which they could not well do without. Now, more than ever before in his life, he was eager to have something of his own, and to do something that would prove him capable of performing a man's share of the world's work.

Up to this time the party had expected to go by way of Pike's Peak. From there a pass through the mountains leads into South Park. By that route they could take their supplies, or most of them, on Sanders' cart. But, when morning came, so eager were they to reach the new diggings that they decided to travel as straight across the mountains as a compass could guide them. They had no pack horse, but Brindle, better in some respects, would carry part of their supplies. For the rest, each of the six partners would go with a good-sized pack strapped to his own back.

The sun had not yet risen when the men said goodby to Mrs. Cooper and her children, then tramped away. It took Orlando far longer than anybody else to say goodby to Hazel. So the other five were half a mile on their way before he and Brindle started. By urging the cow to a faster gait than usual, he overtook his party just as they were turning into the mountains.

For mountain climbing, Brindle had been supplied with some additional harness. A breast strap of buffalo hide would keep the pack saddle and pack from slipping back, and breeching, around her hams, would keep them from shipping forward onto her neck and over her head.

After getting well into the mountains the six partners, now traveling alone, found themselves in the wildest country they had ever yet seen. With the exception of a game path now and then, there was no trail of any kind. But they had a map and a compass, and knew in what direction they wanted to go. They found an abundance of game, and would have no trouble providing themselves with meat, of which they carried very little in their packs. They had some fear of Indians, for it was known that the mountain tribes were at least unfriendly, and might be actually hostile. But as each man of the party had a gun on his shoulder and a six-shooter at his belt, with plenty of ammunition, they hoped to be able to take care of themselves if attacked.

The first night overtook them in a pine forest. They camped in a mountain gorge, and on a steep mountainside. Not many yards below them was a torrent, whose roar echoed from the mountains that shut it in. They had hoped to find a better camping place, but darkness had overtaken them here. The pine needles, being perhaps a foot deep, had made the traveling both slow and hard.

Those same pine needles made it dangerous to light a campfire, and the travelers had to content themselves with a dark camp. For supper they managed to get along with dried buffalo meat. Brindle, after being unsaddled, was hobbled and belled, and then turned loose to forage for her supper.

But the thing that would cause the travelers to recall this night long after other nights were forgotten was the trouble they had sleeping. The mountainside was so steep and the pine needles proved so slippery that the six men had scarcely lain down when they began to slide, a few inches at a time.

"Bet a dollar I take a scoot before morning, and land kersplash in that blasted creek!" growled long Jeff Givens, the grumbler of the party.

"Is a little danger of that," admitted Esau. "This stuff we've spread down our blankets on has got a funny way of slippin' and slidin' over itself. You slip every time you move, and then every time you don't move."

"Get you a tree, boys! Hunt the upper side of a tree That's the way I've done!" called out Orlando.

"Too dark in these thick woods to find trees," somebody answered.

But two or three did grope about till they felt tree trunks, against which they managed to brace themselves. At least one slept with a leg on each side of a rough pine trunk. The others found themselves several feet farther down the mountain when morning came than they had been when they fell asleep.

Breakfast here was out of the question, and the party prepared to travel on the first minute they could see. But they were delayed the greater part of an hour, hunting for Brindle. That thrifty brute had kept browsing till she found a grassy place, a few hundred yards around the mountain. There she had first filled herself with grass, and then lain down in it. And she lay so quietly that her bell made no sound till she happened to turn her head to lick herself.

Now she was quickly brought back to camp, where her saddle and pack were fastened on. Then every man strapped on his own pack, buckled on his six-shooter and shouldered his gun, and they began to climb the mountain again.

It was two or three hours later when they emerged from the forest and the roughest of the mountains, and found a good camping place. There they ate their breakfast; and, in order to give their pack cow plenty of time, they also ate their dinner there. After that they got ready and moved on once more.

As the six wanderers made their way across the mountains, day after day, they finally began to notice smoke ahead. But they tramped a good many miles—almost a whole day—before finding themselves near the smoke. They had fully expected to look upon a forest fire. But great was their surprise to see little or no timber in the burning country. Smoke was issuing from the ground in many places. Evidently something beneath the earth's surface was burning. And not only was there much smoke rising from an extensive tract of country, but the heat was so great that the travelers could not approach close enough to investigate the strange subterranean fire.

The burning district being directly in their course, they had to turn aside and pass around it. They camped for night not a great distance off, and most of the party approached the smoking ground to see if they could solve the mystery. But the heat drove them back again, and they returned to camp no wiser than they had left it.

(Being eager to reach the new diggings, the party of six, who were gold seekers rather than scientists, never learned what was burning there. But the state geologist of Colorado, to

Protect Your Precious Teeth

In stormy weather your family is protected by rubber clothes and boots to prevent colds and other diseases.

In good weather or bad, the enamel of your teeth (the protective outer covering) needs to be cared for against the constant attack of decay. Mothers and school teachers should see that the teeth are brushed at least twice a day with a safe dental cream, to remove food particles in which the harmful decay germs breed.

The U. S. Public Health Service says that a dental cream should not contain grit. Harsh grit in a dentifrice may damage the precious protective enamel. You can be sure of a *safe* and sensible, non-gritty, drugless dental cream, suitable for *all* the family, when you buy Colgate's Ribbon Dental Cream.

COLGATE'S

Cleans Teeth the Right Way

"Washes" and Polishes—
Doesn't Scratch or Scour

Colgate's contains a specially prepared fine chalk. It has no harsh grit, no strong drugs or chemicals. The refreshing, delicious flavor makes tooth brushing a pleasure.

More dentists recommend Colgate's Ribbon Dental Cream than any other dentifrice. Since 1806 Colgate has made reliable products which every farm family likes.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I have been reading THE FARMER for seven or eight years and am interested in the Family Circle and especially the good cooking recipes.

I have had much experience cooking in hotels and camps when I was younger and will give you here a recipe for bread starter which never fails. This yeast never sours if kept in a cool place.

To start it, after peeling, boil three large or four small potatoes until done, mash very fine, add 1 cup granulated sugar, 1-4 cup salt, 2 cakes of yeast foam previously dissolved in a little lukewarm water; stir altogether thoroughly in an earthen crock and add 2 quarts of warm water. Make this at noon the day before baking, then cover and let stand until morning. Stir it well then dip out about a pint for a start next baking; put it in a glass jar well scalded first, and cover closely and stand away in a cool place till you need it for your next baking.

To set your bread add flour to the remainder of your starter till it has the consistency of common cake batter, beat it well and set it to rise in a warm place, not too near the stove. By the time breakfast is over and dishes washed it will be ready to mix. Add sufficient flour to make a stiff, smooth dough, knead well and let rise a couple of hours, knead down again, let it get light again and then mold into loaves. Allow them to rise to double their size and put into a medium hot oven and bake steadily for an hour or longer if the loaves are large, about one and one-quarter hours. You will have sweet, well flavored bread.

When baking day comes next time proceed just as you did before only do not use any yeast cakes but prepare your potatoes, sugar, salt and water and then put in the "starter" which you had put away in your glass jar.

This never makes as good bread at first starting as later and grows better with age. After using it six months or a year if it seems to rise a little slower add half a yeast cake to the starter.

MRS. A. C., Oregon.

Winter Vegetables

By MISS H. L. LYNAN.

Sweet Potatoes, Fancy Style—Boil the potatoes until tender, let stand in the water a few minutes, then pour off the water and let them steam a few minutes. Add two tablespoonfuls of butter and let heat well, sprinkle with a little brown sugar and a little powdered cinnamon and let brown in the oven.

Baked Pumpkin.—Cut the pumpkin in pieces for serving, remove the seeds and string portion, brush with molasses, season with salt, pepper and a few grains of red pepper; bake until soft, add one tablespoonful of butter and serve in the shell. Garnish with sprigs of parsley.

Squash Croquettes.—Beat up one egg until light, add one-half cupful of milk, a pinch of salt, a few grains of red pepper, sift in one cupful of flour, add one tablespoonful of olive oil and one cupful of stewed squash. Mix until smooth and glossy and drop by spoonfuls into smoking hot fat. Fry eight minutes or until a golden brown, drain on white paper and serve hot.

Carrots and Rice.—Two medium-sized carrots, boiled and chopped fine, and one cupful of boiled rice. Place alternate layers in a buttered casserole and pour over all a sauce made of one and one-half cupfuls of milk, one tablespoonful of flour, one tablespoonful of butter, a pinch of salt, dash of pepper and one-half teaspoonful of kitrhen bousquet. Put buttered bread crumbs on top and bake in hot oven 20 minutes.

Women's Dress

The effects of color in woman's dress is taken up in a bulletin by Lila Morris O'Neale of the household art department of the Oregon Agricultural college. The following is an extract from the bulletin:

Effect of Colors on Apparent Size:

1. Colors like fire, yellows, reds, pinks and oranges are said to "advance." They throw the figure into sharp relief against the usual backgrounds and because it becomes conspicuous, it seems larger.

2. Colors like air, sky and water, those with blue predominating, are "retiring" colors. These melt into the background and the figure seems to be smaller because of the lack of contrast with the background.

Effect of Colors on the Complexion:

1. They should be in harmony with coloring of hair, eyes and complexion, which are in natural harmony with each other.

2. Light tints make one's own coloring seem darker by contrast; dark shades seem to absorb the color in face and eyes, making it paler. For this reason, a light collar on a dress or suit, or lighter hat facing is almost always an aid to one's appearance.

3. Extremely sallow or very dark, florid complexions are emphasized by pale colors near them. Transparent collars of organdie, lawn, georgette crepe, are pleasing transitions in such cases.

4. Contrasts, when the colors are bright, may be most unbecoming.

What Colors to Combine:

1. Subdued, grayed colors may be brightened by bits of embroidery, ribbons or linings of gay silks.

2. Any colors may be put together if kept dark and dull, and also any which are light and pale. In either case no one color asserts itself.

3. Study the magazine covers and printed silks for hints. A dull or a pale group of colors almost always contains a small spot of bright contrast. Try matching these hues with silks if you are planning embroidery, noticing the relative proportions which make the effect pleasing. Often the colors used seem unusual in combination until you recognize their likeness by their neighboring positions in the color circle.

Family Circle Girls

Dear Girls of the Family Circle: I learn from your letters that you girls have many perplexing questions which arise to trouble and confuse you. I would like you to write to me freely and fully and let us talk over things together, the same as your mothers and I have done. I believe we will all enjoy it and will be mutually benefited. Be sure to give your name and address when you write. I may never want to publish the name, but for many reasons I can serve you better if I know who you are and where you live.

I will give you a letter here that came just the other day:

"Dear Mrs. Barland: I have never written to the Family Circle, but have been reading the letters tonight and thought to pass the time by writing. I am the only one of the children at home. There are six of us girls. I will be 17 years old in November, have light brown, bobbed hair and grey eyes and weigh about 120 pounds.

"Do you think it all right for a young girl to keep company with a young man about five years older than herself and for both to be sincerely in love?

"Do you think the millinery trade a good one for a girl to study who has never had a chance to attend high school and who didn't quite finish the eighth grade?

"When a girl sees her young man friend coming down the street and she knows he doesn't intend to stop just then, is it proper for her to go out and stop him and talk?

"Should a girl kiss her friend goodnight or let him kiss her goodnight?

"Do you think it wrong for a girl to roll her sox?

"If you were me would you keep your hair bobbed for a while longer or let it grow as soon as it will? Your friend,

"TINNIE."

My Dear Tinnie: I am glad you wrote and some of your questions are being asked by many girls of your age. I will answer your questions as best I can in the order you give them.

If the young man is self-respecting and honorable in his intentions toward the girl five years younger than himself, I think it proper for her to accept such attention. I think you mean to ask my opinion as to the possibility of such attentions leading up to sincere love.

I believe it possible and know of cases like the one cited culminating in happy marriages. But, my dear girl, I have known of many which didn't bring happiness, especially when the girl married so young. Few, if any, girls of 16 or 17 have sufficiently mature minds to settle questions of such vital importance to their happiness. I will write more of this later.

If a girl has a decided taste for millinery there is no better thing she could do than to fit herself to follow it. She will find that her lack of schooling will hamper her as little in this trade as any.

It would not be proper or even good sense to stop a young man when he was passing and might even be an annoyance to him, if he were detained when in the pursuit of his work. If you want young men to appreciate you, always allow them to seek your society and never seek theirs.

(Continued on page twenty-six.)

What Farm Boys Want in Food

There are several ways to keep boys satisfied to stay on the farm. One way is to give them flavory, energizing food.

The automobile, moving pictures, the telephone, and now the radio—all make farm life more enjoyable to the boy.

Add the foods he likes each day and you've made the attraction just about complete.

But that food must be more than merely tasty. It must be energizing, too. For those who work hard must have the sapped energy replaced.

Rare Food Value in This Pie

No other dessert equals a luscious raisin pie made with big, plump, tender Sun Maid seeded raisins.

Raisins furnish 1560 calories of energizing nutriment per pound — more of this kind of nourishment than eggs, meat or fish.

Raisin Pie.

Two cups Sun-Maid Seeded Raisins, 1½ cups boiling water, ½ cup sugar, 2 tablespoonfuls cornstarch, 2 tablespoonfuls lemon juice, 1 tablespoonful grated lemon rind, juice of 1 orange, 1 tablespoonful grated orange rind, 1 cup chopped walnuts.

Cook raisins in boiling water for 5 minutes, pour into it sugar and corn starch, which have been mixed. Cook until thick, remove from fire and add other ingredients. Bake between two crusts. Walnuts may be omitted if desired.

All measurements for this recipe are level.

Blue package (seeded) best for pie and bread.

That's due to fruit sugar in the raisin. This sugar practically predigested by the sun, so it revives a tired man almost immediately after eating.

Raisins furnish food-iron also—fine food for the blood So these delicious seeded raisins are both good and good for you.

Try the recipe for raisin pie printed on this page. Make it with your own delicious pie crust. The juice of the raisins forms a luscious sauce. You've never tasted better pie, nor has that boy of yours.

He wants delicious food like this that energizes.

Let him try it. See what he has to say. Add this touch to the other home attractions.

Sun-Maid *Seeded* Raisins

Get delicious Sun-Maid Seeded Raisins. Big, plump, tender, juicy raisins. Made from finest California table grapes. Full of flavor, energy and iron.

High Points in News of the Week

The outstanding event of the last week from the standpoint of world interest was the signing of an armistice between the Turks and the allies, bringing to an end the warfare that has been waged in Asia Minor and in the region of the Dardanelles for the last several weeks and preventing its further spread. The terms of the armistice require that the Greeks shall withdraw from Thrace on the western side of the Dardanelles, turning over to the allied governments the civil authority of the region, the allies in turn turning over this authority to the Turks. Such military forces as are absolutely necessary for normal police protection will be permitted to accompany the Turks on their return to Thrace.

Thus Turkey is again permitted to enter Europe, from which she was driven during the recent World war. As an outgrowth of the disturbances of recent weeks and of the armistice agreement, a general peace conference is to be called in the near future with France, Italy, England, Turkey and Russia as the principal nations participating. The conference is of such importance, however, that nearly all nations will be directly or indirectly interested, including the United States, though the latter will have no official delegates at the conference itself.

* * *

Partially as an outgrowth of the Turkish troubles, the British government is experiencing a political disturbance that may require Premier Lloyd George to submit his official position to a general election within a few months. Under the British cabinet system of government, when a premier discovers a wide-spread questioning of his policies he may resign, permitting another to take his place and form a new cabinet or he may submit the entire question to the people at a general election, standing for reelection or rejection. The Lloyd George cabinet has been representative of both major political parties, being known as a coalition cabinet. It is now declared that the liberal faction is about to break away and deny Lloyd George further support. The premier last week defended his policies in a public address but did not state definitely whether he would resign, submit to an election or cling to his present office without either action, pending further developments. It is freely predicted, however, that a general election will be called before Christmas.

* * *

Sixteen railroad companies, including some of the larger roads of the country, were reported last week to have entered into agreements with employees who took the places of striking shopmen, under which both employer and employee will abide by the decisions of the United States railway labor board as to wages and working conditions, the employees agreeing not to use a general strike as a weapon to secure their demands.

While a large percentage of the strikers who walked out July 1 are still idle, settlements have been made in a considerable number of cases on individual roads and the other companies report satisfactory progress in building up crews of new employees.

* * *

Secretary of Labor Davis of the president's cabinet last week declared himself in favor of abolishing the government's railway labor board. He takes the position that the board is unnecessary, it being preferable that the duties now performed by it be performed by a division of the labor department.

* * *

President Harding has expressed the intention of calling an extra session of congress immediately after the election next month. He desires action by congress on the ship subsidy bill before the opening of the next regular session in December. He expressed the hope that with the extra session and the regular session which will close March 4 or earlier, business could be cleaned up so that congress would not have to be in session continuously next year.

* * *

Senator McNary of Oregon has prepared a rural credit bill for early presentation to congress creating a revolving fund of $12,000,000 for short-term loans to farmers on warehouse receipts and other similar security. The measure would allot $1,000,000 of this fund to each of the federal reserve districts. Security given for these loans would constitute collateral for short-time bond issues which would, as loans increase, increase the amount of money available for this class of farm credit.

* * *

The government railway labor board last week granted a 2-cent an hour increase in wages to approximately 450,000 members of the maintenance of way and shop workers on the railroads. This is an increase of about $9000 an hour, $72,000 a day or about $22,000,000 a year to these workers.

* * *

President Harding has appointed Archie Roosevelt, son of the late Theodore Roosevelt, as executive secretary of the United States Near East relief commission. President Harding has called upon the American people to contribute a large sum of money to aid in relieving those in distress as a result of Turkish depredations in Asia Minor.

* * *

The interstate commerce commission has ordered eastern railroads to deliver to western roads 3400 refrigerator cars within the next 10 days to aid in handling the northwestern fruit crop. This action follows an appeal made by northwestern senators and representatives in congress. The commission declares that there are not enough refrigerator cars in the United States to meet the present emergency adequately. The 3400 now ordered into this territory are but a small percentage of those needed. More than 10 times this number are needed to handle the fruit crop of the Pacific northwest. It is expected, of course, that others will become available as the shipping season advances.

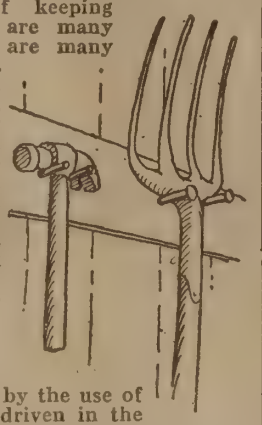
* * *

President Spreckles of the Federal Sugar Refining company predicts an early drop in the price of sugar. His prediction is based upon the prospects for an unusually heavy crop in Cuba and large production in the sugar beet districts of Europe. He forecasts no exportation to Europe within six months. The sugar factories in Cuba are expected to begin operation about December 1 this year, a month earlier than usual.

* * *

Former Premier Clemenceau of France expects to sail for America November 11 for the purpose of delivering a series of lectures in this country with a view to bringing about in America a better understanding of French policies.

* * *



A New York federal court last week granted a temporary injunction against the department of justice, which recently issued a ruling that neither American nor foreign ships operating to or from American ports would be permitted to carry intoxicating liquors either for sale or consumption on board. The injunction forbids the putting into effect of the ruling on some of the principal ship lines pending a hearing to be held this week. Upon the recommendation of President Harding the department of justice has postponed the order in so far as foreign ships are concerned until Saturday, October 21, one week later than originally intended. Heretofore it has been generally held that the prohibition amendment and enforcement laws did not apply to ships beyond the three-mile limit. The ruling of the department of justice, which is now brought into court under the injunction, would make them effective on ships entering American waters.

* * *

The United States treasury department last week offered for sale an issue of $500,000,000 in 30-year government bonds bearing 4 1-2 per cent interest. The bonds were oversubscribed by investors within a short time, applications being made for about $1,000,000,000 of such bonds. The issue is for the purpose of refunding parts of the federal debt now falling due, including a considerable portion of the Liberty and Victory bond issue.

Hang 'Em Up on the Wall

A couple of nails make a handy rack on which to hang tools. No doubt, a well arranged tool chest is preferable to any other system of keeping tools, but there are many tools, but there are many put in a chest. Many that might better be so kept, may be cared for much better than the average person now does it by hanging them on the wall of the workshop or shed. The pitchfork garden rake, shovel, pick, hammer or almost any other common tool may be hung on the wall in a regular place by the use of one or two nails driven in the right position to take the particular tool. And it is a great satisfaction to be able to turn at once to the tool that is needed. It can be found easily, even in the dark, if it has a certain place to hang and is always put there when one is done using it.

Cold storage holdings of cheese on October 1 were 49,694,000 pounds, compared with a five-year average of 62,853,000 pounds. The reduction in stocks during September was 700,000 pounds more than the five-year average.

October Crop Report

According to the October 1 report of G. S. Rea, agricultural statistician, the spring wheat crop of Washington, with an estimated yield of 9.2 bushels per acre, is placed at 10,552,000 bushels (preliminary estimate), as compared with 17,205,000 bushels in 1921 and 19,256,000 bushels the 10-year average. The yield per acre this season is one of the lowest on record. In 1921 spring wheat averaged 15 bushels per acre, while the average for the 10 years, 1911-1920, is 17.1. The quality of the crop this year averages 84 per cent against 91 per cent last year.

The Washington oat crop is placed at 7,676,000 bushels (preliminary estimate), as compared with 10,500,000 bushels in 1921 and 12,227,000 bushels the 10-year average. The yield per acre this season is 38 bushels, against 50 bushels in 1921 and 44.8 bushels the 10-year average. Quality this year averages 87 per cent, against 90 per cent last year.

Preliminary estimates place the yield of barley this season at 23 bushels per acre, as compared with 36.8 bushels in 1921 and a five-year average yield of 30.2 bushels. This yield of 23.0 bushels per acre predicts a total crop of 1,610,000 bushels.

The corn crop of Washington, averaging 90 per cent of normal on October 1, is expected to amount to 2,268,000 bushels, as compared with 2,400,000 bushels in 1921.

Pastures in Washington on October 1 averaged 70 per cent of normal.

Potatoes in Washington on October 1 averaged 79 per cent of normal and gave promise of a crop of 8,579,000 bushels, as compared with the September 1 estimate of 7,920,000 bushels and the 1921 crop of 7,425,000 bushels.

INSECT CONTROL.

In its insect-control work in the southern Oregon-northern California points (forests of the northwest) this year, the United States department of agriculture treated 69,710 acres; 7079 trees, containing 6,672,490 board feet, were felled and the infested bark containing the broods of destructive beetles removed and burned. It is thought that a reduction in the infestation of at least 50 per cent will result.

Farm Business and Markets Outlook

(Continued from page five.)

Oats—$40 per ton; steam rolled, $42.

Corn—$36 per ton; cracked corn, $38 per ton.

Barley—$42; steam rolled, $44.

Bran and Shorts—$32 per ton.

Alfalfa—$22 per ton; timothy, $24 per ton; mixed hay, $22 per ton.

General Produce.

PORTLAND, Ore., Oct. 14.—Butter—Cubes, extras, 45c pound; prints, parchment wrapped, box lots, 48c; cartons 49c. Butterfat, 48c, delivered station; buying price, A grade, 43c.

Eggs—Buying price: Current receipts, 39c per dozen; henneries, 45c per dozen. Jobbing prices: Front street, candled ranch, 48c; selects, 50c; association selects, 50c; firsts, 48c; pullets, 42c.

Cheese—Tillamook triplets, price to jobbers, f. o. b. Tillamook, 29c; young Americas, 30c; longhorns, 30c pound.

Poultry—Hens, 4 1-2 lbs. and up, 24c lb.; over 3 1-2 lbs. and under 4 1-2 lbs., 16c lb.; 3 to 3 1-2 lbs., 12c lb.; 1922 broilers, 1 lb. and heavier, 22c lb.; old roosters, 10@11c lb.; geese, fat, live, 16c lb.; do fancy dressed, 24c lb.; ducks, 3 lbs and heavier, live, 15c lb.; turkeys, fat, dry picked, 8 to 15 lbs., 30@33c lb.; do live, fat, 10 to 15 lbs., 25c lb.; squabs, large, $4.50 per doz; pigeons, $2; guineas, $8 per doz.

Insure Your Orchard!

The DUNN
With Improved Lower Stack, Umbrella Cover and Removable Top Cover.

It is important that orchardists insure their crops against frost and freezes—because when killing frosts do come—the loss is appalling. These losses can be eliminated. DUNN Orchard Heaters completely solve the problem.

650 thousand DUNN Orchard Heaters in use by California citrus growers. Hundreds of thousands this type used elsewhere in U. S. Most effective because of exclusive patented features. Improved lower stack with perforations depressed to inside, radiates heat to side and down—with most heat at bottom of stack. Perfect combustion. All heat—no smoke. Joints fit tightly. Only draft is through patented downdraft tube. Heat generated rapidly; maximum protection secured at once.

Improved stack with perforations depressed to inside. Radiates heat to side and to ground—with most heat from bottom of stack.

The DUNN Orchard Heater

is the only orchard heater with permanent asbestos lighting wick. Lights quickly and stays lit. Burns clean as a gas jet. Uses less oil. 9½ gallon heater burns 20 hours at 100% efficiency, without refilling. Patented swedge on bowl is hand grip for carrying heater. Made of 24 gauge extra heavy Keystone Copper Bearing Steel. Seamless bowl and cover.

Orchard Heaters Needed Everywhere

Growers of oranges, grape fruit, limes—apples, peaches, pears, plums, cherries, berries—every orchardist—from largest to those with less acreage—you should make prompt inquiry as to the DUNN Orchard Heater and how it protects profits.

Records—everywhere—show DUNN Orchard Heaters do pay hundreds of dollars on investment. First cost—except for fuel—is only cost. Depreciation based on actual facts, less than 2 per cent for 8 years.

Investigate! Write Us Today

You need DUNN Orchard Heaters. Write for booklet which gives facts and valuable information on how to protect YOUR crops and insure profits. Every orchardist should have it. Write today. No obligation. A postal will do. Address

WANTED: AGENTS
Representatives wanted in every county. Good pay weekly. Good territory open. Write today.
DO IT NOW

Geuder, Paeschke & Frey Co.

1576 St. Paul Avenue (Established 1881) MILWAUKEE, WIS.

Special Representatives Everywhere

Representatives in every fruit growing territory. Upon request we will give you name of one nearest you. Also other valuable information that will assist you to increase profits.

Where DUNN Orchard Heaters are manufactured. The plant of the Geuder, Paeschke & Frey Co. A well known, long established company—who have built a successful manufacturing enterprise by selling at lowest possible prices and rendering prompt, efficient service.

Bits of Fun FOR Everyone

Not Much to Eat.

Peter—You didn't have a very good time at your birthday party yesterday.

Paul—I did so.

Peter—You did? Then why ain't you sick?

Not Because of Love.

"I know a man that has been married 10 years and spends all his evenings at home."

"That's what I call love."

"Oh no; it's paralysis."

Ain't Paw Smart?

"Paw, what's this here telephone amplifier?"

"That, my son, is one of those saps who grins into the transmitter and makes gestures while he's carrying on a phone conversation."—Pacific Telephone Magazine.

No More Required.

"Yessir," said Sag Peters, the Snagtown philosopher, "that young writin' feller went back to the city. He came out here to get atmosphere for his next novel, and right after he run on to me an' Cram Ellis skinnin' skunks he hustled back to the depo'. Said he had enough atmosphere to last him 10 years!"—Capper's Farmer.

Not Puppy Love.

The first time a boy falls in love, the greatest sufferer is his dog. Even the nice pats the girl gives the poor animal do not recompense him for having to give up the fine hunts in the creek bottom.—Country Gentleman.

Table Manners.

A Texas father was dining with his son in a Texas hotel, and in the course of dinner the son got into an argument with a cowboy. The cowboy called the son an offensive name, and the young fellow grabbed his knife in his fist and started around the table to be avenged.

But his father seized him by the coattails.

"Ain't ye got no table manners?" the old man hissed.

"But, pop, ye heered what he called me, didn't ye?"

"Yes, I heered all right, but that ain't no ground for yer forgettin' yer table manners. Put down that there knife and go at him with yer fork."—Detonator.

Logical.

Near Bridgport, Ill., west of Vincennes, is an oil field where the Illinois pipe line empties a large pool of crude petroleum.

The other day a man was seen sitting fishing in that oil pool.

"What you doing?" yelled the amazed attendant.

"Fishing," was the laconic reply.

"Did you ever, you dumb-bell, hear of catching fish in oil?"

"Dumb-bell yourself! Never hear of sardines?"

And the man went right on fishing.—Farm Life.

That's Business.

"Hiram, what makes you say 'By gosh!' so much and go around with a straw in your mouth,"

"I'm gettin' ready for them summer boarders that's comin' next week. If some of us don't talk an' act that way, they'll think we ain't country folks and won't stay."—The Farm Journal.

There's a Reason.

Ez.—Wha's thet cow yu' said you was a'going to sell me for $2?"

Eph.—She got well.

The Chronic Optimist.

A group of war veterans were discussing Thanksgiving. One of the guests was a veteran who had lost both legs.

"And what have you to be thankful for?" they asked.

"Lots," he replied. "I've got cork legs, and I can put on my socks with thumbtacks."—American Legion Weekly.

Picking Up What?

"How are conditions here," asked the stranger who was sojourning in the public square.

"My business is picking up," answered the park attendant, stooping to gather another armful of waste paper.—Orchard and Farm.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3852. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 1-2 yards of 44-inch material. Price 10 cents.

4102. Girls' coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 10-year size requires four yards of 44-inch material. Price 10 cents.

4135-4113. Ladies' costume. Waist 4135 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4113, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is 2 1-8 yards. To make this costume for a medium size requires 6 7-8 yards of 32-inch material. Two separate patterns, 10 cents for each pattern.

4160. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 4 3-4 yards of 40-inch material. The width of the skirt with plaits extended is 2 1-2 yards. Price 10 cents.

4153. Girls' dress. Cut in four sizes. 8, 10, 12 and 14 years. A 10-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

4162. Lady's house dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 6 1-8 yards of 32-inch material. The width at the foot is 2 3-8 yards. Price 10 cents.

3692. Lady's apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 3 3-4 yards of 36-inch material. Price 10 cents.

4150. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 2 1-2 yards of 32-inch material. Price 10 cents.

3862. Child's romper. Cut in four sizes: 1, 2, 3 and 4 years. A 2-year size requires 1-8 yards of 27-inch material. Price 10 cents.

3778. Harlequin suit. Cut in five sizes: 8 and 10-12 years for children, 14-16 years for misses, and 38-40 and 42-44 inches bust measure for adults. A 10-12 year size requires 5 1-2 yards of 27-inch material for the suit, and 5-8 yard for the cap. A 38-40 inch size requires 8 3-4 yards of 27-inch material for the suit and 7-8 yard for the cap. Price 10c.

3745. Man's night shirt. Cut in eight sizes: 32, 34, 36, 38, 40, 42, 44 and 46 inches breast measure. A 38-inch size will require 5 7-8 yards of 27-inch material. Price 10 cents.

4165. Girl's undergarment. Cut in five sizes: 4, 6, 8, 10 and 12 years. A 10 year size requires 2 5-8 yards of 27-inch material. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates, and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various simple stitches), all valuable hints to the home dressmaker.

Please fill in this order and mail with remittance to:

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Fear is at the foundation of many of our ills.

It is strange that human experience goes for so little when we measure our own disabilities, or those of our immediate family We are sane enough when other folks are troubled, but in estimating the significance of our own symptoms too many of us lose all sense of proportion.

Dr. Copeland.

The natural tendency of disease is toward recovery. Remember that. If it were not so the first illness would be likely to prove fatal. Before your last sickness arrives you will have a hundred illnesses from which you will recover fully.

The trouble with society is it has a subconscious conviction that its manner of life is wrong, and when illness arrives it brings the fear that nature has rebelled at last and will enforce her claims.

No wonder the tribes of the earth have sought to find some drug to rob the human heart of fear.

If you are afraid of high places, avoid them. If you are fearful you will fall, keep away from the heights.

If you are afraid every time you get sick, avoid the manifest causes of ill health. You know how to keep well, or you can be taught how to keep well.

But if you live the wrong sort of a life and then when you do get sick are scared half to death, you will be assisted in that direction pretty rapidly.

Likewise, if those about you, your family and friends, have hearts filled with fear, you will be given little real assistance toward recovery. If every symptom you have—headache, running nose, paleness, a cough—excites the family, you will react to their fears and be fearful yourself.

Use common sense about acute illness and about persistent ill health. With the exception of the contagious diseases, for each of which there is a specific germ, there are underlying, even though obscure, causes for sickness.

Illness is rarely a suddenly sent thing. It does not comes like a bolt out of the blue. It gives warning of its approach. There may be a cloud on the horizon no larger than a man's hand. But that cloud gives warning of what may happen.

Almost always illness is due to neglect. There are certain very commonly overlooked causes for sickness. You can not expect to have good health if there is an organ growing the germs of disease. Yet lots of people have that state of affairs going on in their bodies and never give the matter a thought until acute illness arrives. Then there is a frenzy of fear.

Bad teeth and gums, and diseased tonsils are responsible for many ailments. A germ-laden intestine is another breeding place for disease-producing germs. Ulcerative and pus-forming conditions of other organs constitute a fourth chief cause for ill health.

The interesting and striking thing about these centers of infection is that the exciting trouble is usually painless, and unless the causes of ill health are sought for they may be overlooked.

If you are not well don't give way to a panic of fear. Sit down calmly and study yourself and your habits.

What is wrong about you?

What is wrong with your ways of living?

Knowledge dispels fear.

Just Folks

Siberia is the new America.

A masterly retreat is close to victory.

Take your medicine and forget the bitterness.

To be precise in all things is to destroy the virtue of precision.

Nobody has a universal recipe for success, not even the wisest person.

Nobody has said the last word in defining success.

Most of our own unhappiness is caused by envying the success of somebody else.

The noble struggle resulting in failure may be more of a success than the ignoble struggle resulting in so-called success.

Is popularity success? Popularity is built on the quicksands of time. Are numbers success? But numbers are deceptive. One of the old New England reformers of 75 years ago was fond of repeating that "one and God make a majority."

You are alone in your opinion and are anything but a success. Yet if your opinion is worth while you may believe with Emerson that the whole world will come around to you in 20 years. Go with the crowd and you will have 20 opinions in 20 years and none of them an accomplishment that is worth while.

In fact, a lot of time is wasted in thinking and talking about success just as a lot of precious time is wasted in trying to have a good time.

Poise is true success and poise comes by a better understanding of the needs of life.

Death is a part of life just as much as birth. Death is not to be pondered over but simply accepted. Accepting death as a part of life is poise.

Pike's Peak or Bust

(Continued from page twenty-two.)

whom the writer referred the matter for an explanation suggests that in various parts of that region seams of coal have burned near the surface; that some are on fire at the present time, and have been for years. What the six miners saw was doubtless the burning of a coal seam not far underground.)

Pushing ahead next morning, they soon found themselves in a blackened, desolate-looking region, apparently destitute of either plant or animal life. As they could see, this country had once had underground fires, like the country just passed. But the fires had burned out and the ground had cooled. Not only was every living thing destroyed here, but the very boulders, the travelers discovered, had been so burned that a shovel could be pushed into any of them.

(To be continued.)

Family Circle Girls

(Continued from page twenty-three.)

or show great eagerness to have them show you attention. Men do not like to be "chased."

I would not express myself at this time concerning your fourth question about kissing young men friends goodnight. But listen, girls, I want all of you who read this to write and tell me what you think about it yourselves. This is an important question and we will give it a hearing.

I certainly have some strong opinions about the rolling down of sox. You ask if I think it "wrong." I think it is vulgar and unladylike. I have never been able to understand how any woman could desire to expose her person to public gaze in the manner which has been common for many months. It has gone from bad to worse till it seems to some of us looking on that many women and girls have parted with all modesty.

Concerning the bobbed hair: So many lovely and sensible girls have bobbed their hair that it has ceased to be conspicuous. I do not wonder that they are enjoying the freedom from hairpins and the ease of washing and drying. The fashion will result finally in better hair and thicker. If you are happier with your bobbed hair and if it is becoming to you, why, just go on enjoying it and when you tire of it that way tuck it snugly into a net and it will look, while growing out, very much as if it were done up. Goodby, Tinnie.

Your friend,
ALICE W. BARLAND.

BEDTIME STORIES

By THORNTON W. BURGESS.

UNC' BILLY'S FAMILY ARRIVES.

Unc' Billy Possum came proudly down the Lone Little Path through the Green Forest toward the big hollow tree, which he had made his home. Peter Rabbit was the first to see him coming. Peter hurried to meet him, for Peter had prepared a surprise party to greet Unc' Billy and his family.

When Unc' Billy Possum saw all the little meadow and forest people gathered there to greet him and all the good things they had brought to eat, he was as surprised as Peter had hoped he would be. But Unc' Billy didn't show it. Oh, my, no! Unc' Billy never lets on that he is surprised at anything—he just grinned and grinned, as only Unc' Billy Possum can grin.

"What you-alls doin' at mah hollow tree?" demanded Unc' Billy, grinning more broadly than ever.

"It's a surprise party for you and your family," said Peter Rabbit. "We thought that Mrs. Possum and the children would be hungry, so every one has brought something to eat. We want you to know how much we think of you and how glad we are that you are going to stay right here in the Green Forest. I hope you will like the party."

Unc' Billy made a very low bow. "Ah certainly am obliged to you-alls for sech a right smart welcome to muh family," said Unc' Billy. "Ah reckon we-alls are going to stay right here in the Green Forest because you-alls have made it so pleasant."

Now all this time every one had been looking for Unc' Billy's family, and Danny Meadow Mouse could hold his curiosity no longer.

"But where is your family, Unc' Billy," he interrupted.

Unc' Billy grinned even more broadly than he had before. "Ah done left 'em back a piece so as to see if the road was clear. Ah'll go and fetch them."

So Unc' Billy turned back along the Lone Little Path, hurrying as fast as he could go, and everybody gathered close around his hollow tree and watched to see his family arrive. Pretty soon they saw him coming back down the Lone Little Path and behind him came old Mrs. Possum. She looked so much like Unc' Billy that Johnny Chuck giggled right out loud. Her gown was just as thin and just as rumpled as Unc' Billy's old suit. Her face was just as sharp and just as crafty as Unc' Billy's. But while Unc' Billy was grinning old Mrs. Possum had never a smile; in fact, Mrs. Possum looked cross. She looked so cross that Peter Rabbit forgot all the nice things he had planned to say to her. You see, old Mrs. Possum had

(Continued on page twenty-seven.)

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Orena Seiber, a new cousin writes: "I am a little girl in Stevens county, Washington. I should like to join the Corner. I have two brothers. My little brother, Richard, will be 3 years old in November. We have lots of fun with him. We call him Koolee for a nickname. We called him Cutie, then he called himself 'Koolee.' My big brother, Crick, is 10 years old and I am 9. Both of us go to school and both are in the fifth grade. We go to the Waits lake school. We have six children in school. Our pets are two kittens, one dog, a pig and two sheep. I planted a little patch of potatoes and took care of them myself. I got 1 1-2 sackfuls. I sold them and got $2.25. I like the Bedtime Stories in THE FARMER."

The following letter comes to us from Christian Larsen, a cousin in the Big Bend country, eastern Washington. "I am going to school now. I am in the third grade. Our teacher's name is Miss Jones. There are eight pupils in our school."

Raymond Larsen, also of the Big Bend country, Washington, has never gone to school, but he will as soon as he is old enough to go. Raymond was 5 October 23, 1922. He says his papa is not through threshing yet.

Helen Jackson lives on a farm 12 miles from town in the Palouse country, eastern Washington. She says: "I like to go to school. I like to read the Children's Corner in THE FARMER. My birthday is January 22. I am 7 years old." (Write us another letter, Helen.)

Birthday Greetings

THURSDAY, October 19—Dorris Eddings, 10 years old; Harold Hardesty, 10; Frances Zumwalt, 10.

FRIDAY, October 20—Vera Louise Kinsey, 10 years old; Emma Miller, 10; Helen Pattinson, 10.

SATURDAY, October 21—Walter Colley, 8 years old; Charles Hepler, 11; Marjorie Kelso, 11; Florence Waugh, 10.

SUNDAY, October 22—Doris Groff, 8 years old; Ruth Warwick, 6.

MONDAY, October 23—Thordis Fjerlie, 9 years old. Evelyn Seleen, 10; Raymond Larsen, 5.

TUESDAY, October 24—Mildred Blessing, 10 years old; Bessie Choufty, 11.

WEDNESDAY, October 25—Esther Pershall, 11 years old; Hubert Sparber, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in the Junior Farmer.

Willard, Raymond Linvar, June Johnson, Dorothy Watson, Signa Nieme, Alice Vance, Mary Jane Liscum, Lester Kelso, Louise Evans, Irene Fleming, Roloff Huberd.

Bedtime Stories

(Continued from page twenty-six.)

had a long journey, for she had come all the way from "Ol' Virginny" and she was tired. The fact is, old Mrs. Possum had not wanted to come at all.

Now, every one had thought that Unc' Billy Possum had a big family, and when they saw no one but old Mrs. Possum looking so cross they didn't know what to make of it, but every one was too polite to ask any questions. Each came up in turn and was introduced by Unc' Billy. Mrs. Possum just grunted to each one until Jimmy Skunk came along. Jimmy Skunk brought with him a big goose egg and offered it to Mrs. Possum with a very low bow. There is nothing in the world that Mrs. Possum likes better than fresh eggs, and this big goose egg made her smile in spite of herself. She just couldn't help it.

"It's fresh and there are more where that one came from," said Jimmy Skunk. "I certainly do hope you will like the Green Forest, Mrs. Possum. May I ask where your family is?"

"Certainly, sah; they are in my pocket," said she.

"Did—did—I understand you to say that you had brought your family in your pocket?" Peter Rabbit asked hesitatingly.

"You certainly did, Bre'r Rabbit," replied old Mrs. Possum.

Every one looked at every one else, very much puzzled. Finally Prickly Porky cleared his throat. "Have—have you got your pocket with you?"

It was such a foolish question that everybody laughed. Unc' Billy laughed harder than any one else, unless it was old Mrs. Possum herself.

"Of course I brought mah pocket with me," said she. "Would you-alls like to see mah family?"

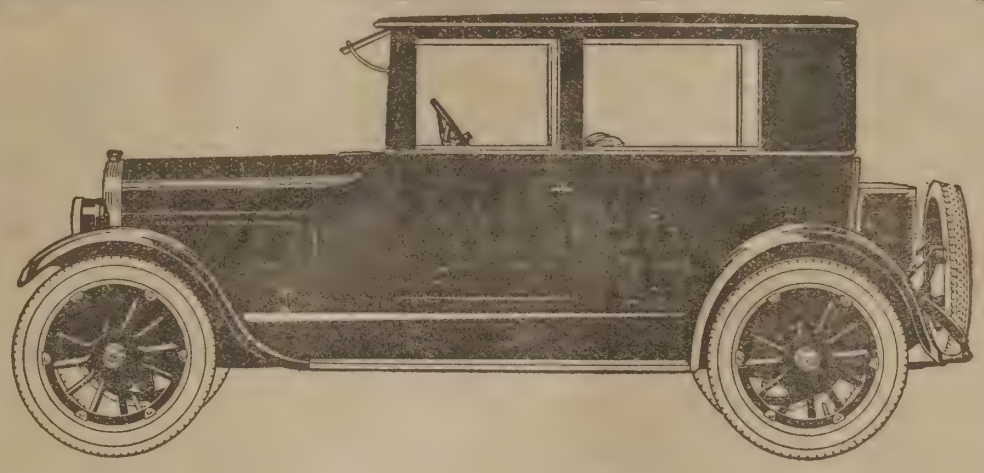
"If you please," said Jimmy Skunk, who never forgets to be polite.

Old Mrs. Possum climbed up on a stump where all could see her. My, how they did crowd around! Then very slowly she opened the big pocket in her gown and began to call one name after another. As she called, out of that big pocket popped one head after another until there were eight little heads sticking out of that big pocket and every little head was the exact image of Unc' Billy Possum.

For a few minutes no one could say a word. It was so surprising that every one rubbed their eyes to make sure that they saw aright. Then Peter Rabbit hopped up on a log and made a speech. It wasn't very much of a speech, but he told old Mrs. Possum how he had planned this surprise party and how the surprise was really theirs and not hers. He finished by suggesting that it was time to eat. Then everybody brought out the good things which they had prepared and all began to eat and talk at once. (Copyrighted by T. W. Burgess.)

That's True, Too.

"Children are so much trouble," tired parents often say, but they should consider how much trouble parents are to their children.—The National Population.



All crops must have Nitrogen. Some forms of Nitrogen are cheaper than others, some act quicker than others, some are more available, some are acid and some are alkaline.

Nitrate of Soda

is the cheapest, is the quickest, is 100% available and IT IS NOT ACID. It gives wonderful results and should always be used for fertilizer Nitrogen. Write for my FREE BULLETINS.

Have You Seen Oakland's 1923 Closed Cars?

The moment you see these beautiful New Oakland closed cars, you will want to own one or the other. Somehow you will feel, instantly and keenly, that the entire motor car market has no more satisfying cars to offer you.

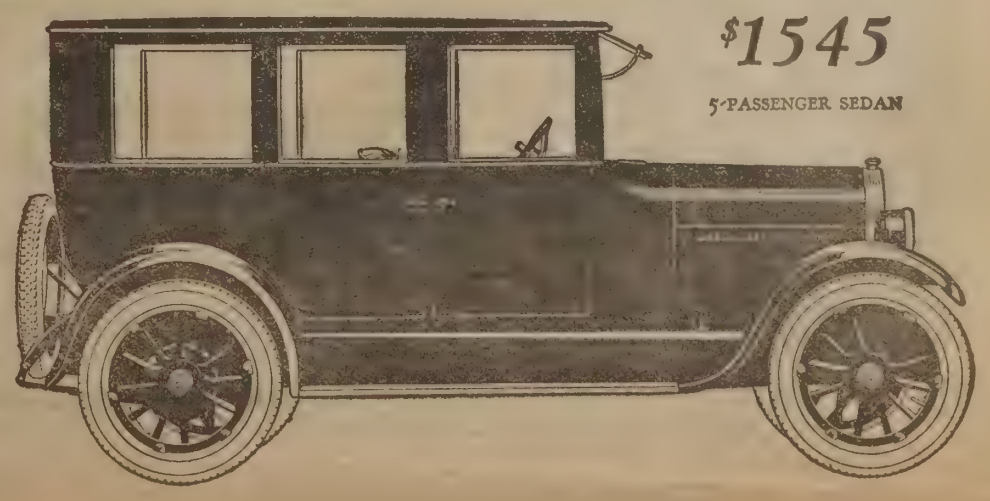
Both of the new 1923 bodies are built by Fisher. Their new and distinctive beauty; their graceful lines; the wealth of their interior appointments and refinements; their comfortable all-weather riding qualities and their complete mechanical dependability—all will impress you with the unusually high quality of these new models.

Mounted on the standard Oakland chassis, both of these new cars are powered with the six-cylinder, overhead-valve, Oakland-built engine—the only engine in the world with a performance guaranteed in writing for 15,000 miles.

Combining beauty with substantial and enduring mechanical construction, these closed cars possess that quiet, smooth and flexible performance so necessary to complete closed car satisfaction.

We ask only that you see these new models and compare them critically with any others built. After that, we feel certain you will share our sincere belief that they offer a greater measure of beauty and utility than you can possibly find else where at prices so remarkably low.

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICHIGAN
Division of General Motors Corporation



The New Oakland Six

Oakland's special written, 15,000 mile engine guarantee is conclusive proof of the in-built dependability of the new 1923 Oakland. It is possible to give this unusual guarantee only because of the high quality in every part of this car's sturdy construction.

"what's on the tag is in the bag"

ON EVERY bag of Sperry Feed is a tell-tale tag. This tag tells you plain-as-day what's inside. Yet the most important "ingredient" in this sack of feed —the thing that makes all the other ingredients count— is not to be found on this tag. For this all-important ingredient is CONFIDENCE.

—confidence in our practical, hard-pan knowledge of poultry problems.
—confidence in the Sperry formula and the seasoned experience back of it.
—confidence in our daily laboratory tests that make each batch of feed measure up in net feeding value.
—confidence in our ability to produce, at the lowest manufacturing cost, a prime quality feed that does what it's made to do.

You can never go wrong on SURELAY because we make it our business to see that everything goes right in the blending. We take guess-work out of your feeding by keeping it out of the feed.

SURELAY is always the same—always uniform. That's why you should always specify SURELAY in the yellow-striped bag when ordering from your dealer. Then you'll never be in doubt as to how the feed will turn out; for "what's *on* the tag is *in* the bag"—always!

The new edition of our guide-book to poultry profits —"Makes Hens Happy"—tells why Sperry Feeds mean more eggs and more dollars to every poultryman. Send for it today—mail the coupon now!

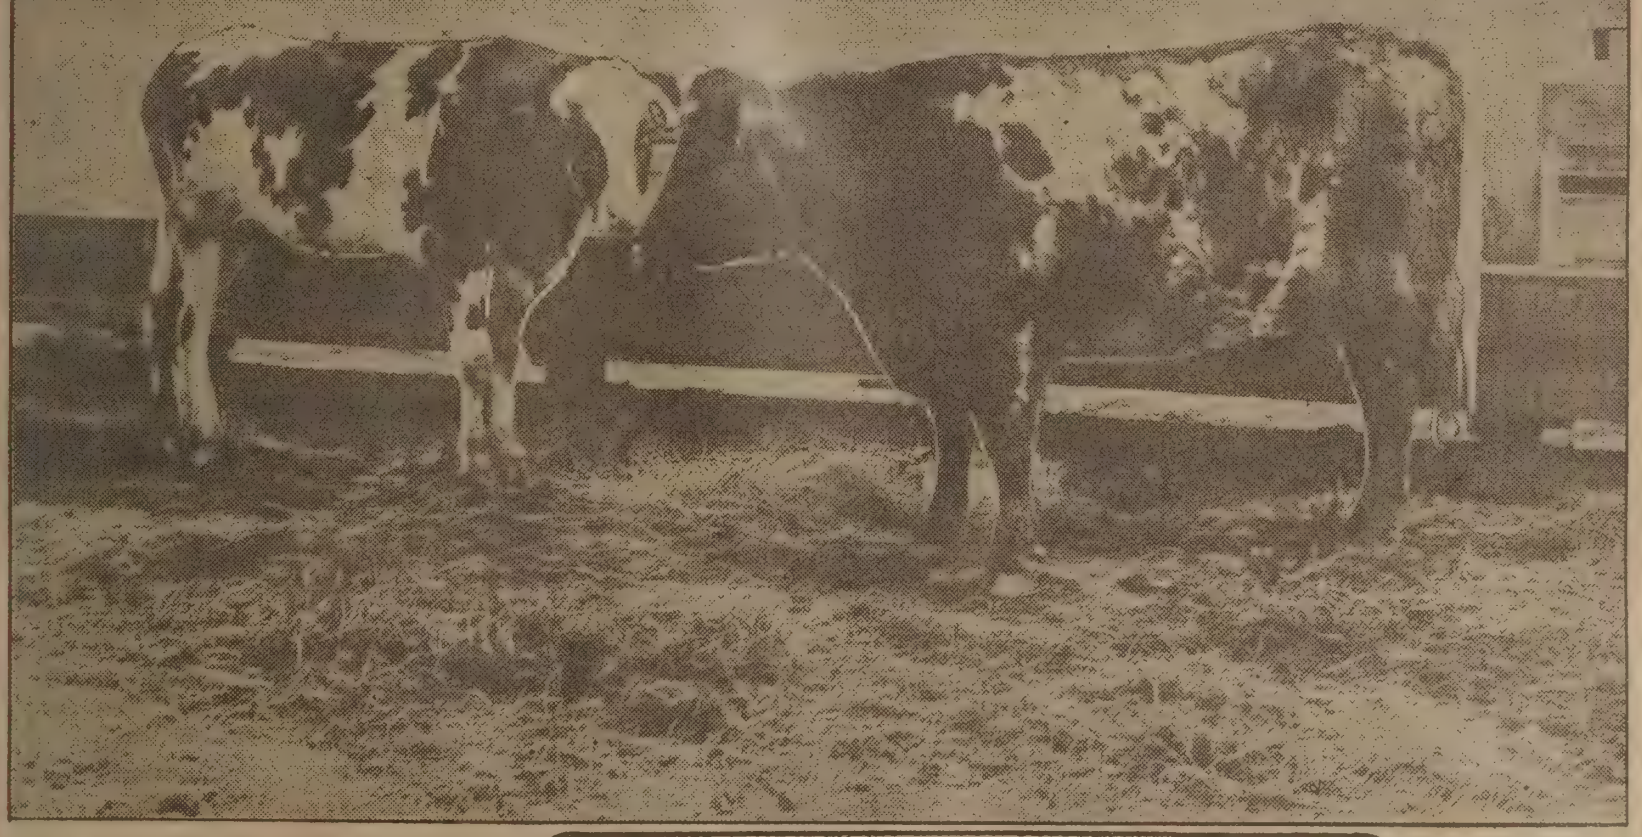
SURELAY

"A Sperry Product"

THE WASHINGTON FARMER

ESTABLISHED 1894

SPOKANE. SEATTLE.



Value of A Purebred Shorthorn Sire

STEERS SAME AGE, GROWN AND FED TOGETHER

ROAN STEER SIRED BY A PURE BRED BULL. WT. 1410 SOLD FOR 112.80

SPOTTED STEER A SCRUB WT. 990 SOLD FOR 59.40

BETTER SIRES PAY. Hercules Stock Farm Sprague Wash

THE campaign for the improvement of herds and flocks by means of purebred sires is sweeping the country. The principle involved applies to cattle, horses, sheep, hogs, poultry and rabbits—all species, all breeds. The picture above tells a story more forcefully than can words. It was taken at the Spokane Union stockyards some time ago, when Frank M. Rothrock of Hercules farm, showed the two animals as "exhibits A and B" to prove the value of the purebred sire over the scrub. The lesson is too plain to need explanation. From pigeons to beef cattle it is applicable, and he who would succeed can no longer ignore it.

Why Is It That One Man's Steers Bring More Money Than Another's?—Page 9

Fruits for Fairs

Growers Using Care in Selection

The fruit growers of western Washington have been more careful in the selection of their fruits for exhibition at the fall fairs. There have been fewer blemishes, less insect injury and disease, according to C. O. Weiss, district horticultural inspector at Everett. Mr. Weiss was asked to judge a number of exhibits at the fairs and is well pleased with the improvmeent of the exhibits.

In each district the growers selected varieties that were typical for that part of the state. The apples were splendid samples of Yellow Transparents, Gravensteins, Kings, Winter Bananas, Northern Spy, Grimes' Golden, Wolf River, Gloria Mundi, Baldwins, in both plate and box displays. Some of the boxes of fruits on display were well packed and compared favorably with the packed boxes of east of the mountains fruit.

There were plenty of Bartletts, Clapps' Favorite, Anjou, Comice and Bosc pears and the samples that were exhibited were wonderful specimens. The Bosc, or as many choose to call it, the "russet," seems to be a coming pear in the Snohomish county district. The Claireegeau, Bonne de Jersey and dound pears were exhibited to a large extent.

The rains that came seemed to have been at the right time to put the size on the fruit. The orchards that were cultivated and fed produced fine, large samples of fruit and plenty of it. The orchards in sod were set back quite a bit by the drought and the type of fruit that was developed, although it had splendid color, lacked size. Cherries and berries were on display at the earlier fairs and there one saw splendid samples of Bings, Lamberts, Royal Anns, Montmorency, Early Richmonds, Morellos, Wraggs, Cuthbert raspberries, Antwerp and Marlborough and Marshall strawberries.

At one of the fairs the local organization of the North Pacific Berry Growers' association had an exhibit of berry canes of raspberries, logans and blackberries, showing the length of growth of the new canes and the maturity of canes as well. This same fair had a splendid display of ginseng and golden seal. This grower displayed the plants showing one, two, three and five-year-old plants, and it was quite an educational feature.

A prominent fruit grower had a booth of his own, showing the various varieties of fruits raised on his place, as Bartletts, Anjou, Comice, Bosc and Claireveau pears, also some Gravenstein, Wealthy and King apples. It was educational and showed what can be grown in western Washington if the proper care is given. The blight does not trouble pears here and there were no displays that were not splendid samples of large, clean pears, and pears of high quality.

"Pike's Peak or Bust"

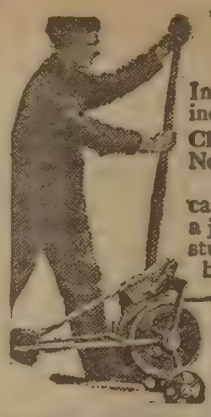
"All right, send The Washington Farmer instead of the Oregon Farmer, provided it has the same continued story as the Oregon. If it hasn't, we don't want it in the house."

Nothing ambiguous about that, is there? W. A. Tate, formerly of Holton, Ore., now of La Center, Wash., intends to finish "Pike's Peak or Bust." The mere fact of his moving from one state to another will not be allowed to stand in the way.

Mr. Tate has spent many years in Oregon, principally in the eastern part, but is now moving from Columbia county, Oregon, to a farm three miles from La Center, Clarke county, where he plans eventually to specialize in the production of "baby beef." He has about 40 acres of land, 11 of which are cleared.

Washington Invades Montana

Three prominent herds of Washington cattle competed at the Montana state fair this year, each bringing home a large share of the awards in the three breeds in which they competed.



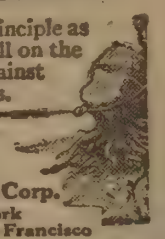
Jerseys—Glen Tana farm of Spokane showed Jerseys winning the following awards. First aged bull, first senior yearling bull, first senior bull calf, first and second junior bull calf, first ayed cow, first 2-year-old heifer, first and second junior yearling heifer, first, third and fourth senior heifer calf, first junior heifer calf, first in graded herd, young herd and calf herd, first and second in get of sire and produce of cow and all championships as follows: Senior and grand champion bull on Glen Tana Perfection, junior champion bull on Glen Tana Moroco Majesty, senior and grand champion cow on Glen Tana Sibyl 2d, and junior champion heifer on Glen Tana Moroco Inez.

Guernseys—H. E. Angel & Son of Mabton showed Guernseys and won as follows: First aged bull, third senior yearling bull, second and third senior bull calf, first junior bull calf, second aged cow, first 2-year-old cow, third 2-year-old heifer, second senior yearling heifer, first and third senior heifer calf, first graded herd, young herd, get of sire and produce cow; first and third calf herd and the following championships: Senior and grand champion bull on France's May King and junior champion heifer on Ruby Dell Butter Queen.

Shorthorns—Hercules farm, belonging to Day & Rothrock, Spokane, showed Shorthorns, winning as follows: First junior yearling bull, first, second and third, senior bull calf; first and second, senior yearling heifer; first and second junior yearling heifer; first, second and third, senior heifer calf; first yearling herd, first and second calf herd, first and second get of sire, first group of three bulls, first and second group of two bulls, and the following championships: Junior champion bull on Hercules Conqueror, junior and grand champion heifer on Perfection Lady.

Dress Forms Interest Women

The farm women of Stevens county have been greatly interested in the demonstrations of the making of dress forms by the extension service of the Washington State college. There are, however, a lot of communities that have not had the dress form demonstrations, and, while it is not possible for the county agent's office to furnish some one from the college to demonstrate, Mrs. J. F. Golder of Colville and Mrs. Ray W. Hall of Orin, both farm ladies, are in a position to demonstrate the making of these dress forms. Bulletins are on file at the county agent's office which tell how to make them.



Turn stump land into Money

Increase your acreage and thereby increase your income.

Clear your stump land cheaply. No expense for teams or powder.

HAND POWER K Stump Puller

One man with a can outpull 16 horses. Works by leverage—same principle as a jack. 100 lbs. pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

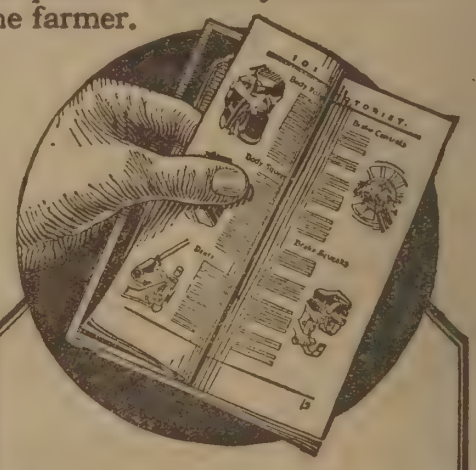
"101 Economies for the Motorist"

A brand new kind of book

A new kind of book—"101 Economies for the Motorist" is the collective experience of practical automotive men. It deals with all those little annoying problems that are the common experience of all motorists. It is the first book to actually supply the simple answers to those problems. Every one of its practical suggestions will especially appeal to the farmer.



Automobile manufacturers adopt it—"101 Economies" was first published a few months ago. Overnight the book became famous. Experts praised it. Motorists everywhere sought copies of it. Already 17 prominent automobile manufacturers are sending out "101 Economies" in the side pocket of each new car, with their instruction books. Car agents and distributors the country over are following the same plan to get this unique and practical booklet into your hands.

Written in plain English—From "Axles" to "Windshields" this booklet covers the everyday maintenance of an automobile, with economy ever the keynote. Whether you are a consulting engineer or a new car owner, you will understand its clear, untechnical style.

118 simple sketches—Illustrations that illustrate make "101 Economies" almost a moving picture of how to take care of your car.

Mail the coupon—Your free copy of "101 Economies" is here waiting for you. Invest a minute of your time. Tear out the coupon. Mail it today.

Do you know—

how to "blow out" carbon?
how to fix a slipping fan belt?
how to rid your car of rattles?
how to cure squeaking breaks?
how to make a tire change—quickly?
how to get full economy out of your gasoline and oil?
how to easily remove spots from upholstery without injuring it?

You will find the answers to these and 96 other questions in "101 Economies." Send the coupon today for your free copy.

SUCCESSOR TO

Vol. 47. No. 17 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF October 26, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Which Shall It Be, the Cocoanut or the Cow?

By J. A. SCOLLARD,
President United Dairy Associations of Washington

If present plans are followed, the next few weeks will see launched in the state of Washington the most vigorous and systematic campaign against butter and milk substitutes ever attempted in the west.

J. A. Scollard.

The fact has, seemingly, just dawned upon the minds of all persons interested in the production, manufacture and distribution of dairy products that something must be done to stop the steady march of butter and milk substitutes or a vital industry will be destroyed.

There is much more to the subject than the mere economic proposition of pure dairy products versus milk and butter substitutes. The matter not only involves the upbuilding or destruction of one of the chief industries of the state, but it also involves the health and well-being of the present and future generations of our people. As scientific investigations on this point are brought nearer to completion it becomes more certain that the vital elements contained in milk and dairy products are essential to the proper growth of children and necessary for the maintenance of health and vigor in the adult.

The Public Doesn't Know

That ignorance of the true effects of the substitution of vegetable oils for butterfat in the dietary is responsible for the increasing use of imitations is the belief of those interested in the coming campaign, and the actual effects of the use of these inferior, foreign vegetable fats will be shown in their every phase. The campaign, therefore, will be of an educational nature and will be continued until the public is made fully acquainted with the menace which the substitutes constitute, both from an economic and a health standpoint.

Few persons, excepting among those directly interested in the production and manufacture of dairy products, realize the extent to which inferior vegetable oils have replaced butterfat in the last decade. Here are a few figures that are astounding: In 1916, but 563,000 pounds of coconut oil were used in margarines or butter substitutes; in 1920 there were used for this purpose over 80,000,000 pounds, or more than 140 times as much as in 1916. These figures are for coconut oil only and do not include peanut oil, cottonseed oil, oleo oil, lard oil and others. The actual gain in butter substitutes from 1916 to 1920 reached the stupendous figure of 224,183,000 pounds.

If there is any question as to whether this vast quantity of inferior product displaces pure butter, to dispel such doubt we need only refer to government statistics on the per capita consumption of butter in the United States. These show that in 1909 the average consumption of butter per person was 17 1-2 pounds, while 10 years later (in 1919) the average consumption per person had fallen to 15 1-2 pounds. In this period the population increase was, conservatively, 10 per cent, and yet the per capita consumption of butter fell off more than 11 per cent. You can make your own deductions and see the extremity to which the dairy industry is being pushed. If you doubt that the encroachment of butter substitutes is steady, glance at these figures from recent government statistics: The increase in reported sales of margarines for June, 1922, over June, 1921, was 2,426,356 pounds. This is the increase and not the total sales, for these latter reached 10,040,280 pounds. The increase in July, 1922, over July, 1921, was 3,853,776 pounds, with a total sales for July (of this year) of 14,973,800 pounds.

Bring the Effect Home.

Can you see what is happening, Mr. Citizen of a dairy state? Do not flatter yourself that it does not affect you. To localize the matter so that you can get a better grasp of the true situation, consider this: That in December, 1921, one concern in Seattle distributed 193,000 pounds of one brand of imitation butter. Where was it made? you ask. Probably in New Jersey—certainly not in Washington. Let us analyze these figures and see what they mean to Washington industrially. It would require at least 8000 average cows to produce the butter which this one brand of substitute displaces, and since the average herd in western Washington is about 10 cows, it displaces 800 herds, or probably 800 dairymen and their families. We do not know how many naked South Sea islanders were employed in gathering the necessary coconuts to make this vast slab of imitation butter, nor how many persons were employed by the New Jersey corporation to dress it up and make it saleable from its crude state in the South Sea islander's hands to the Washington consumer's table, but we do know that the Washington merchants sell naught to the South Sea island aborigines and naught to the men on the New Jersey payroll. We do know, however, that 800 farmer families are consumers of what Washington manufacturers produce and what Washington merchants sell. What do you think of it, Mr. Citizen of a dairy state? Do you want to join in this campaign to put pure dairy products and the dairy industry where they belong for the good of your business and for the good of your state and its people?

Creamery Men Take It Up.

The United Dairy Association of Washton, with 6000 producing dairymen in its membership, have, for some time, been formulating plans for a campaign against substitutes, and recently W. E. Turner, president of the Washington Creamery Operators, Butter and Cheese Makers' association, has made known to its membership that one of the principal subjects to be dealt with at their coming convention in Seattle on November 2 and 3 will be "Substitutes and the Best Manner in Which to Combat Them." This will, undoubtedly, result in the institution of an intelligent campaign by that organization.

Commercial organiations in dairy districts in Washington realize the seriousness of the situation. Women's clubs and health and welfare organizations every where are alive to the vital need of the elimination of butter and milk substitutes, and it is believed the entire effort can be merged into one campaign which will be effective in results.

You, Mr. Dairyman, will be asked to cooperate to the fullest possible extent in this campaign, so be ready to do your part when the call comes. We will be called upon to measure strength with a tough foe. The pockets of old man "Substitute" are bulging with money, but he has little else with which to gain favor, while we have every argument with which to win intelligent public opinion if only we can get the facts before the people—and this we propose to do.

New Bridge Spans Columbia

Pasco-Kennewick Structure Is Given Formal Dedication

Half a dozen years ago the old site of Fort Walla Walla, on the Columbia, a few miles below Pasco, was the scene of a notable celebration. A fleet of steamboats making the voyage from Lewiston to Portland halted at this point to give a visible demonstration of the effect of opening the Columbia to traffic by the completion of The Dalles-Celilo cannal. By this improvement the Columbia river was made navigable from the ocean to Priest rapids, about 415 miles, and the Snake river for light craft boats about eight months in the year, nearly 200 miles from its mouth or about 550 miles from the ocean.

Within the year past there was another notable celebration, this time in Pasco itself, at which representative people from throughout the northwest were present to give a united support to the great Columbia basin project, which will open up an irrigated empire of nearly 3,000,000 acres of land.

Last Saturday a third significant celebration was held. This time Kennewick as well as Pasco participated. This was the dedication of the Pasco-Kennewick bridge built by the Benton-Franklin Intercounty Bridge company. Fourteen hundred stockholders, living in all parts of Washington, in Lewiston, Idaho and in Oregon, contributed over $430.000 for the construction of the bridge. Congressman John W. Summers of Walla Walla ventured to say in his address "that not another great bridge has been built across a major stream by popular subscription and without state or federal aid, as this one has been."

These three great celebrations in the vicinity of the junction of the Columbia and Snake rivers typifies three great planes of development which should be more or less parallel in all efforts to build up the great possibilities now more or less dormant throughout the Pacific northwest.

The increasing and more or less prohibitive rates in railroad transportation are making the people look more and more to water transportation on our navigable streams and on the seas. The development of irrigable lands in a large way will furnish production which will make the development of river navigation more and more a necessity.

The third celebration, and not the least important, is that of the statewide and nationwide improvement of public highways, by just such big undertakings as that of the building of the Pasco-Kennewick bridge.

In the marketing of farm products the transportation question looms big, and this transportation question can be solved only by linking river navigation with that of the highways in order to supplement railway traffic. In fact, railway traffic has simply fallen down under the load which has been imposed upon it.

Moreover, all of these three events are significant in their influence of uniting the people of not only the state of Washington, but of the four states of the Pacific northwest in working for their own good most effectively by uniting and pushing common projects. The development of navigation of the Snake and Columbia rivers means much to Washington, Idaho and Oregon. The Columbia basin project is typical of what might come to pass through the opening up of great areas of irrigable lands in all the Pacific northwest. Good roads certainly unite the whole country as well as sections of the country, not only in supplementing and cheapening auxiliary freight traffic, but in bringing tourists from all parts to the scenic beauties of the northwest and making the tourist crop one of the most profitable.

He Selected the Best

Frank Binns of Shelton found some white Beauty of Hebron potatoes in his field and saved them out for seed. They grew true to color and he kept saving the best seed from this variety and he now has a good-sized patch which he will hill-select and get enough seed to plant a much larger acreage next year. For a seed crop the tubers were planted late in June, but they made a good growth before the worst of the dry weather affected them. The early fall rains put the plants in fine shape to produce a good crop.

SHIPS LARGEST WHEAT CARGO.

With 369.000 bushels of wheat, the largest cargo to go from Portland this year, a British steamship has just left for Europe.

Farmer's Union Will Meet

National President Barrett Is Expected to Be Present

The annual convention of the Farmers' Union of Washington and Northern Idaho will assemble in Spokane December 12, at which time numerous matters of importance to the organization and its members will be considered.

President J. Q. Adams and other officials of the organization are hopeful that Charles S. Barrett, national president, will not only be in attendance at the state convention, but that he will be in the west for several days in the interest of the farmers' union work. President Adams has been in communication with Mr. Barrett in an effort to have him come to this state, and word has been received indirectly that it is his plan to come on November 30.

The national board of farm organizations, with headquarters in Washington, D. C., on the assumption that Mr. Barrett was coming west recently adopted a resolution requesting him to make such investigations as he deemed proper of reclamation in Washington, with a view to giving the national board the benefit of his opinion on the need and the practicability of the Columbia basin irrigation project. President Adams is preparing a tentative program of meetings throughout the district for the period that it is expected Mr. Barrett will be here. The meetings will be so arranged as to enable him to meet and address many members of the farmers' union and at the same time carry out the request of the national board in securing information concerning the Columbia basin.

"The members of the farmers' union are quite enthusiastic over the proposed Columbia basin project," says President Adams, "and we hope to be able, with the assistance of the Columbia basin committee, to devote a portion of Mr. Barrett's time to a first-hand study of the project."

Goodwin Endorses Columbia Basin Project

F. M. Goodwin, assistant secretary of the interior, has filed a report with Secretary Fall, indorsing the Columbia basin irrigation project. Mr. Goodwin sometime ago made a personal investigation of the proposed project. He expresses in his report the belief that the cost per acre can be greatly reduced from that estimated a year ago by General George W. Goethals. The latter estimated a total cost of $145 per acre. Mr. Goodwin believes the project can be completed at a cost of perhaps little above $100 per acre. In his report to the secretary he made the following five recommendations:

1. The project is worthy of unqualified support by the department.
2. The first essential step is passage by the house of the $100,000 bill directing you to investigate and report. Consideration is expected by the house committee as soon as congress reconvenes.
3. The necessity for such an investigation and report is apparent, that there may be an authoritative official certification of essential facts and plans. This calls primarily for the assimilation of data already in hand.
4. The completion of field work as to some features is necessary, either to eliminate or include same in the project.
5. The available data is complete as to soil, climate, crops, transportation, land values, damages from overflow, land levels, water supply and field surveys for the construction program proposed by the state of Washington. If the gravity system should be accepted the field data are sufficiently complete, except for the secondary storage, perhaps, to let contracts. Changes in plans will require revisions.

"TEACH IT TO THE KIDS."

The cooperative spirit among farmers is based upon the knowledge of what cooperation has done and what it can do in making farming more profitable and in pushing this cooperative movement among farm folks, some one rises and exclaims, "Teach it to the kids," and "Do not confine it to agricultural college students."

POULTRYMEN SEEK BETTER SIRES.

It is interesting to note that the poultrymen are boosting for better sires as well as are the live stock breeders. At the poultry meeting at Seattle in August there were 47 out of the 51 present who voted in favor of the use of cockerels from 225-egg record hens.

THE WASHINGTON FARMER

VOL. XLVII. NO 17.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.
SEATTLE, WASH., Office, 617 Central Bldg.
To either of which communications can be sent, but to avoid delay address office nearest you.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Filled Milk and National Welfare

Reference has already been made in THE FARMER to Dean H. L. Russell's address at the celebration of the 50th anniversary of the establishment of the Wisconsin Dairy association.

Another point taken up by Dean Russell was "The Menace of Filled Milk." He notes that the withdrawal of the natural milk fat, which was bringing 30 cents to 40 cents a pound, and its replacement with a capital vegetable fat, cocoanut oil, that could then be purchased at seven cents or eight cents a pound, curtailed in no small degree the full use of milk for the manufactured dairy product.

It is pointed out that this intrinsically cheaper substitute was customarily retailed to the consumer at nearly the same price as was asked for the standard condensed evaporated milk. "It is a pertinent question for America to ask itself," says the dean, "whether it wants to build up the farm oil industry of the tropics 'where food falls from the trees,' to the detriment of the dairy industry of the temperate zone with its steady employment and substantial homes. We could open up our gates to the flock of orientals with their low living standards and thus secure cheap labor for the industry, but as a nation we realize that there are some things to consider in the welfare of a people other than debasing the working standard to the lowest living point."

The question of "filled milk" is of importance to all the people as well as to the dairymen in particular. It is a question of health as well as one of business. It is a question of giving children a good start in life physically.

How 30-10 Plan Would Work

There is a serious educational problem in the state of Washington which needs to be solved, namely, the education of 2.6 per cent of the state's children who are getting less than eight months of schooling.

The 30-10 bill is called by its friends an "equalization" measure on the claim that it would equalize educational advantages for all the children in the state.

Is this claim justified? On the other hand, is it not contrary to the fact?

According to the proposed measure 1500 small rural districts would receive $1,107,092, an average of $738 each, and 910 large districts (including most of the cities) would receive $10,171,588, an average of $11,177 each. Furthermore, these same 1500 little districts would pay into the state, according to the bill, $2,015,294 and would only draw out $1,107,092. In other words, for every dollar they paid in they would get back from the state for their schools only 55 cents; while the 120 largest districts would receive back $1.34 for each dollar paid in.

It is true that the children in these 1500 little districts would draw $79 each for daily attendance, while the children in the 120 largest districts would draw only $46 each for daily attendance, but the taxpayers in the little districts would have to pay $143 in order to get that $79, while the taxpayers in the largest districts would only have to pay $35 in order to get their $46 for each child to be educated.

But more serious yet is the provision in the bill which forbids any school district to make a levy over 1.7 per cent of the assessed value of all the taxable property of such district for purposes other than for the payment of interest or principal of bonded indebtedness. Under the present law 10 mills may be levied without a special election. Under the 30-10 plan any district will be able to levy up to 17 mills without calling a special election, and the payment of interest or principal of any bonded indebtedness may be made by additional levies over and above the 17 mills.

It is a serious question whether this would not open the floodgates of reckless expenditure and would be likely to increase taxes in unexpected ways.

In the next article a method will be given by which it is possible to gain the desired end of aiding the short-term rural schools in a much simpler and safer manner.

A Growing Institution

Farm folks are taking eagerly to the rightly managed community fair. There is the Neuwaukum Fair association in King county, which outgrew all bounds and this year it was necessary to hold the fair at the Farmers' picnic grounds at Enumclaw. The reports speak of an exceptionally fine display of farm produce and fruits, while the poultry department housed entries of many of the flock owners in the neighborhood. The live stock division is an entirely new department, added this year. All the entries in this division were dairy cattle and came from some of the many high class herds of the southeastern part of the county.

Larger Returns From Better Cows

A dairyman does not have to wait years before getting good results from cow testing associations. In fact, he may get the biggest proportionate result at the end of the first year. This was the case in the grade herd of Jerseys on the J. A. Porter & Sons farm in Whatcom county. In 1918 the herd average 283 pounds of fat. In 1919, the following year, the average was increased to 404 pounds, and in 1920 to 408 pounds.

A careful study of the records furnished by the cow testing association and better feeding brought the gratifying results. Weeding out the cows that failed to respond to heavy feeding was an important factor in larger production per cow.

LOOKING INTO OTHER FARM FIELDS

The soy bean is rapidly taking a place as a major crop in the farming systems of the corn belt, replacing oats to a considerable extent and taking part of the corn acreage, says the United States department of agriculture. Although primarily used for forage, pasture and ensilage, the growing of seed during the last few years has become a very profitable industry.

* * *

The California Land Settlement association has been formed at San Francisco by 150 representatives of realty men of the state and has announced its chief purpose is to attract settlers and to "pull the teeth of the land sharks." Lower interest rates to settlers and assistance in financing those of small means are urged, and the association was formed to promote constructive measures in colonizatioon.

France's 1922 wheat crop is estimated at 235,000,000 bushels, a 27 per cent decrease from the crop harvested last year. Forced by this small wheat crop, the French government has decreed that all grain, except bran and refuse kernels must be used in the preparation of flour for human consumption. The manufacture of flour also is compulsorily conducted in such a manner as to extract from the wheat grain the maximum of bread flour.

State Farm News

A contract for wrecking 15 buildings consisting of barracks and quarters at old Fort Spokane has been let to a Spokane firm. The lumber is to be assorted and piled for use in construction of a hospital for Indians on the old fort grounds, which have been turned over by the war department to the Indian department for school and hospital purposes.

Congress will be asked for an appropriation of $100,000 for construction of the hospitals, reconstruction of water system and building new quarters for employees. This hospital is designed to serve Indians over the northwest.

* * *

George Lamping, Seattle port commissioner, says that there will be considerably more than 1,500,000 boxes of apples shipped to Europe via the water route this year.

* * *

The Neuwaukum fair was held this year at the farmers' picnic grounds at Enumclaw, being larger and better than ever before. Officers of the association are: John Jones, Auburn, president; Harold Hanson, Enumclaw, vice president, and Harvey Hagerman, Auburn, general manager. A. B. Nystrom, county agricultural agent and Miss Edna Walker, home demonstration agent, did much in helping to get the fair in readiness. The exhibits were judged by M. E. McCollam, agronomist of the western Washington experiment station.

* * *

The oat crop of the Skagit valley this year will be between 1,500,000 and 2,000,000 bushels. it is estimated by county officials. The yield is estimated at between 100 and 150 bushels an acre. Growers now are being paid $30 a ton for oats.

* * *

Pierce county has a potato grower's organization which stands for the improvement and development of the potato industry from the selection of the seed to grading and marketing.

The following officers have been elected to serve until the regular meeting, which will be held in January: H. S. Prescott, president, Parkland; E. E. Eiker, vice president, Puyallup; C. E. Deardorff, secretary-treasurer, Orting; Frank Kehr, director, Puyallup Heights; Tony Roesli, director, North Puyallup.

* * *

Nutrition work will be carried on in practically every school district in Lewis county before the present school year is over, according to plans laid when the executive committee of the Lewis County Anti-Tuberculosis league met in Chehalis recently.

* * *

The third western Washington egg-laying contest at Puyallup will close October 31 and promises to be one of the most interesting of the three. The birds are doing well and George R. Shoup, who has charge of the contest, believes that by feeding young kale and increasing the lights the fall molt can be withheld until after the close of the contest. The records this year indicate that the last year's record will be raised and there is going to be a close run for first place in the individual bird record.

* * *

County Agent W. H. Talley of Walla Walla has announced that he will become secretary of the Washington farm bureau federation on November 1. He will maintain temporary offices at Walla Walla until January 1, when a permanent location will be decided upon.

* * *

The contractors building a link of state road No. 22 from Inkster lake to River Homes, on the Spokane river expect to have the road finished about December 1.

This new road will connect the lower Spokane valley and the Hunters region in Stevens county direct with Spokane, via Davenport and the Sunset highway, avoiding mountain climbing on other outlets, which are generally blocked by snow in winter.

* * *

John P. Winkler's closing out sale of Holstein grade milch cows October 6 at Adna brought fair prices only, 35 animals making an average of nearly $62. The highest priced cow brought $112.50. Six 2-year-old heifers sold for $40 each, six younger heifers $30 each and seven calves $12.50 each. A horse and a mare sold for $107.50, while another team brought but $50.

* * *

Two men invaded "No Man's Land" at the western Washington fair at Puyallup and were awarded first honors for needlework. The winners are James Oliver, a Tacoma tailor, and R. D. Balou, member of the Tacoma fire department. Oliver won his first prize with a filet trimmed luncheon set and Balou's winning display was a luncheon set trimmed with tatting.

* * *

Raising more than 125 bushels of corn from an acre is what N. C. Sybouts of Moxee expects from a field of 21 1-2 acres. He has raised 125 bushels from a measured acre, and says he is certain his land will this year average between 125 and 150 bushels an acre. Twelve years ago, he says, it was thought almost impossible to raise corn in paying quantities in his locality.

* * *

Approximately $10,000 in cash was paid out to Pullman and Moscow farmers by J. M. Davis of Pullman for 2480 sheep, shipped to Chicago.

The sheep made a train of 26 cars. They were purchased in small flocks, 1600 of which were assembled near Pullman and 880 near Moscow.

* * *

E. T. Huntting of Silver Creek, whose home-dried prunes have for several seasons found ready sale locally and in the northwest cities, has just completed drying his 1922 crop. The yield was somewhat short, but made up in quality for the deficiency. Mr. Huntting has one of the most up-to-date plants of its kind in the state.

* * *

Chris Unger of Duvall, John Sinn of Novelty, Will Adair of Tolt and Ralph Totten of Falls City each have erected a home-made wooden hoop silo, in readiness for the harvesting of corn and other silage crops.

* * *

Some $25,690,283 worth of peanuts—245,867 metric tons of them—is Senegal's 1921 record, says Consul Yerby, Dakar, Senegal, in a report to the department of commerce. In 1920 this French-African colony produced 239,195 metric tons, valued at $45,686,874. Gambia, Britain's West African colony, last year produced 59,175 metric tons, valued at $3,060,232, compared with 85,190 tons, worth $11,670,829 in 1920.

* * *

After using up the better part of a day, the judges at the Cranberry fair at Long Beach awarded first prize to A. Lundquist of Long Beach.

FARM BUSINESS AND MARKETS OUTLOOK

Fresh evidence of expanding business and trade is disclosed every week. Business failures are decreasing. Freight car loadings for the week ended September 22 were within 3 per cent of the highest on record, notwithstanding the serious car shortage in the west.

The commodity price level is rising, the combined commondity index number being about 18 per cent higher than in May, 1921. Prices of farm products are still lagging, but most of them are higher than a year ago and the majority advanced during September.

Forces tending to bring about higher prices include: The abundance of credit (only one-third of the potential supply being used), the tariff law, the tendency to higher labor costs in the case of manufactured goods and the fact that wholesale and retail stocks are not large. The disastrous results from the previous period of inflation and the inability of Europeans to buy are the retarding influences.

That the country generally can flourish with farmers laboring under their present handicap is beyond belief. Either higher prices for farm products are coming or general business will lose its present bloom.

Too Many "Inbetween" Cattle.

The cattle market has had too many steers of the intermediate sort, upon which prices declined $1 to $1.50 at Chicago from the high point late in September. In the last 10 days, however, total receipts at seven markets shrank 12 to 15 per cent for the first time in a month and a recovery of 15 to 50 cents on intermediate and lower grades occurred. Car shortage was a factor in the decreased supply.

Prime steers became still more scarce last week, reaching $13.50 at Chicago, although sales above $12 are few, the bulk of beef steers going to killers between $9 and $10.50. Cows and heifers responded along with steers to the lighter supply.

Hogs Trending Lower.

Receipts of hogs declined slightly last week, but were equal to the highest on record for that week in previous years. New crop hogs, many of them underfinished, were numerous, so that weight qualifies for a premium and the price spread has narrowed sharply. Fresh pork prices were weak early, but hardened toward the close and demand in general is broad. Foreign purchases are increasing as stocks abroad are said to be light. Britain is able to pay for all she needs and central Europe, in spite of depreciated exchange, is taking a fair quota. Hog prices are apt to work lower until receipts are more nearly up to winter volume.

Lamb Run Lightens.

Receipts of lambs declined last week in seasonal fashion, although the run was already far below normal for this season of year. Dressed lamb prices sagged further, but toward the close a return of strength was evident. Feeder lambs lost $1.50 from the recent high point and are now at a slight discount below fat westerns, but have started upward again. The total feeder movement from the 12 leading markets in the week ended October 7 was 170,401 head, the largest in several years, but the total for the season to date is

Big Horses Good Property.

Sound horses with weight have advanced $20 to $30 per head recently. Loggers, miners and coal dealers finally entered the market and their competition has lifted values. Horses scaling around 1800 pounds are bringing $275 at Chicago, loggers taking plainer sorts, especially if hairy legged, as high as $225, and rugged workers scaling 1500 to 1650 pounds are clearing at $175 to $215. Wagon horses are in demand again at $125 to $200.

Wool Prices Rising.

Seaboard markets report wool prices strong and advancing. Mills are picking up all low-priced offerings and dealers are indulging in speculative operations. Advances have not been pronounced, but more are expected, especially on fine wools. The holdings of 1,200,000 bales of crossbred wools in the hands of the British Australian Wool Realization association tends to keep the market on such wools in leash, although foreign auctions are reported 5 to 10 per cent higher than a month ago. Most manufacturers are marking up prices of goods.

Bullish Revisions in Wheat Statistics.

Revisions in world wheat and rye production figures, which now give them a bullish aspect, together with maintenance of a keen demand for wheat in position for quick shipment to mills or to the seaboard, resulted in a substantial advance in prices last week.

With the total supply of wheat outside of Russia and Mexico actually less than last year, when more was consumed than was produced, the existence of a large surplus in North America becomes less serious, especially since the movement from the latter to date has been absorbed without difficulty.

Besides the decline of 250,000,000 bushels in European wheat production compared with last year, the rye crop is about 100,000,000 bushels less, so that a big increase in European wheat and rye needs is evident. These have been augmented by wet weather during harvest, which lowered the quality and necessitated the use of a high percentage of dry foreign wheat in milling. Substitutes, high extraction in milling and war bread are already being used in some European countries and will be relied upon still further if possible, but the shortage is too great to be made up by such means.

Reports from Russia are not rosy, but most of the home needs will be provided for, so that the 24,000,000 bushels imported last year may not be necessary, affording a partial offset to the increased needs of the rest of Europe. Non-European importing countries may take 25,000,000 to 50,000,000 bushels less than last year, but these deductions still leave a large increase in total import requirements to be provided for.

Under the conditions, the financial ability of the importing countries to buy as much wheat as they need seems to be the limiting factor in the long-time trend of prices.

The car shortage is becoming more acute and receipts at primary markets have declined in spite of the advance in prices. Canadian wheat is coming forward rapidly, more rapidly, in fact, than the surplus can be gotten out of the country, so that it is backing up to some extent.

Corn prices have advanced even more than wheat from the low point of the year and are now the highest since January, 1921. Receipts have been larger than usual for this time of the year.

Oat prices are trailing after corn. There is some export demand and domestic distribution is satisfactory, as the high quality of the new crop is attractive to consumers who were loathe to take the inferior oats produced last year.

CHICAGO—Wheat—No. 2 red, $1.18 1-2@1.21 1-2; No. 1 hard, $1.16 1-4@1.20; No. 2, $1.16@1.20 1-2; No. 1 northern, $1.18@1.32. Corn—No. 2 mixed, 71 3-4@74 3-4c; No. 2 yellow, 71 1-2@75c; No. 3, 71 1-2@74 3-4c; No. 4, 70 3-4@73 3-4c; No. 2 white, 71 1-2@74 1-2; No. 3, 71 1-2@74 1-4. Oats—No. 2 white, 44@46c; No. 3, 42@45 1-2c. Rye—81 1-2@84 1-4c. Barley—62@70c.

Big Increase in Clover Seed.

The crop of clover seed this year was estimated officially on October 1 at 44 per cent larger than last year. Prices advanced last week. The timothy seed market also maintains a strong tone. Alfalfa seed is not moving as rapidly as usual from producing sections.

Chicago, per 100 pounds—Clover, $15@19; timothy, $5@6.50. Toledo, per bushel—Prime red clover, $12.15; prime timothy, $3.40.

Feed Prices Maintained.

Although buying is said to be limited, feed prices have been well sustained. The advance in coarse grains is a supporting influence. Flour mills are operating above a nurmal rate and production of oil meal is large.

Prices per ton (100-pound bags) in car lots: Chicago—Bran, $24; standard middlings, $25.50; flour middlings, $28; cottonseed meal, 36 per cent, $42; 43 per cent, $46; hominy feed, $28; gluten feed, $33.85; old process oil meal, $50; tankage, $65.

Hay Market Firm.

Hay markets remain firm and are gradually working upward. Fall demand is fairly brisk, while receipts and country loadings are light notwithstanding the big crop. Car shortage is interfering with shipments.

Prices per ton in car lots: Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $20@21; No. 1 clover, $14@16; No. 1 clover mixed, $16@17; No. 1 to choice alfalfa, $23@25; rye straw, $12@13; oat and wheat straw, $10@12.

Egg Prices Holding Well.

The fresh egg market has advanced 75 per cent from the low point of the year which was reached in August and the higher level is well sustained. Receipts at the leading markets since October 1 have been a little lighter than last year, but counting the reduction in cold storage holdings the rate of consumption is larger than a year ago. The huge surplus of storage eggs is not being drawn upon as rapidly as during September, however. Further advances in fresh-egg prices are probable, as they become more scarce, but storage eggs are apt to be relatively cheap all winter.

Poultry receipts since October 1 have not been as heavy as in the same period last year in spite of the increase in poultry production. Storage stocks have not begun to increase materially as yet.

Chicago—Eggs—Checks, 15@19c; fresh firsts, 31@35c; ordinary firsts, 25@26c. Live poultry—Hens, 22c; springers, 19c; roosters, 14c; ducks, 23c; geese, 21c; turkeys, 30c.

Advance in Butter Resumed.

After a short breathing spell the advance in butter prices has been resumed. Receipts at leading markets have fallen off in the last week or two and the rate of consumption remains unusually high. A feature of the week was improved demand for undergrades and centralized storage butter. Prices on 92 score fresh butter on October 18 were: Chicago, 44 1-2c; New York, 46c; Boston, 46c; Philadelphia, 47c.

Cheese Market in Firm Position.

An advance at country markets was followed by broader buying at higher prices on the main distributing markets. Held cheese is moving fairly freely at steady to firm prices. The net movement out of storage at the four markets is running about 200,000 pounds daily. Prices on No. 1 American cheese on October 18 were: Chicago—Flats, 25 1-2c; Twins, 25@25 1-2c; single daisies, 25 1-2@26c; double daisies, 25@25 3-4c; longhorns, 25 1-2@26c; square prints, 26 1-2c.

Fruits and Vegetables.

The 19 leading late potato-producing states had shipped about 16,000 fewer cars up to October 14 than to the same date last year. Their crops considerably larger than a year ago, so that dissatisfaction with prices and car shortage are largely responsible for the retarded movement. Some of the northern states are giving potatoes priority over grain to facilitate disposal of the crop before freezing weather. Northern round whites, sacked, are quoted at 95c to $1.50 per 100 pounds on midwestern markets, No. 1 Brown Beauties and Russets are bringing 60 to 65 cents, sacked, in wagonloads at Colorado shipping points, while Rurals are bringing 60 to 75 cents at Idaho points.

The department of agriculture confirms the prevalent opinion that the increase in the apple crop this year is more largely in the early varieties than in the late keepers. Shipments of barreled apples thus far have been about 40 per cent larger than to the same date last year, while boxed apples show a decline in the carlot movement of about 50 per cent. The market for winter varieties is slowly gaining strength with A 2 1-2 Midwest Jonathans quoted at $5 to $6.50 and Grimes Golden at $4.50 to $6 a barrel on the leading central western markets. Northwestern extra fancy large Jonathans are bringing $2.75@$3 a box at Chicago.

What the Farmer Has Won at the National Capital

Work of the Farm Bloc in Congress Reviewed by U. S. Senator Poindexter

I have had many inquiries as to what this congress has done for the farmer. As a matter of fact more legislation has been enacted by the present congress for the benefit of the farmer than has been enacted in any other congress in the history of congresses and I doubt very much if all the legislation taken together by all congresses preceding the present one, intended particularly for the solution of agricultural problems, equals that of this single congress.

Farmers will remember the newspaper publicity which has been given to the so-called "agricultural bloc." While this was more or less informal and varied in strength on different measures, nevertheless it existed in fact. A great many senators from purely agricultural states devoted themselves to cooperating with one another for the passage of a number of cardinal measures in the interests of the farmers of the country. Much of this legislation received the hearty support of many senators from manufacturing states who believed in its merit and justice, although not considering themselves members of the farm bloc.

It was reported to the senate that among the things in which farmers were especially interested was federal aid for roads. There was much opposition to this from the old states whose road systems are of a more advanced condition than ours, and who opposed it on the ground that most of the taxes necessary for the measure would be paid by them and little of the benefits would be enjoyed by them Nevertheless through the labors of a number of prominent senators the vast sum of 695,000,000 was appropriated by the present congress for the construction of roads in cooperation with the highway departments of the several states to which the money was apportioned.

The postal savings banks advocated largely by country communities have been extended and developed and now constitute one of the important economic factors of the county.

Rural free delivery, which has had a great deal to do with improved conditions of agricultural life, has been enlarged and put upon a most stable footing.

The appropriations for the department of agriculture with its vast work of county agents, bureau of markets, bureau of plant industry, including the study of plant diseases; bureau of animal industry, including the scientific study of animal diseases and improvement of the quality of live stock; the publication and distribution of bulletins on various subjects of practical value to farmers have been maintained, and the activity of these various services are promoted.

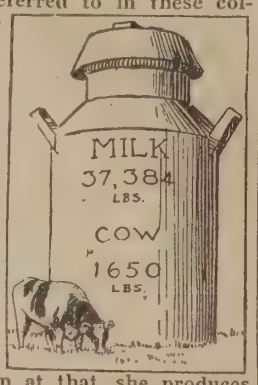
The parcel post has been improved and developed and is coming into more constant use in communities which have not had the benefit of railroads and express offices.

Three hundred and forty-two million dollars has been loaned to agricultural interests through the war finance corporation, whose powers were enlarged and authority extended for this purpose.

The meat packers, who were alleged by representatives of the live stock interests to monopolize the live stock markets of the country and control them in a manner that was injurious to farmers engaged in live stock production, have been for the first time put under government regulation and control.

The Chicago Board of Trade or wheat exchange and other similar exchanges, which were charged to be injuriously affecting the grain market in causing violent fluctuations in the price of wheat and other grain by speculative dealings, have been put under government regulation, inspection and control by an act of the present congress.

The right of farmers to organize for the purpose of marketing their crops and of carrying on their farming operations has been cleared up and established beyond question by an act of the present congress, largely framed and promoted by the special representatives of those engaged in farming.



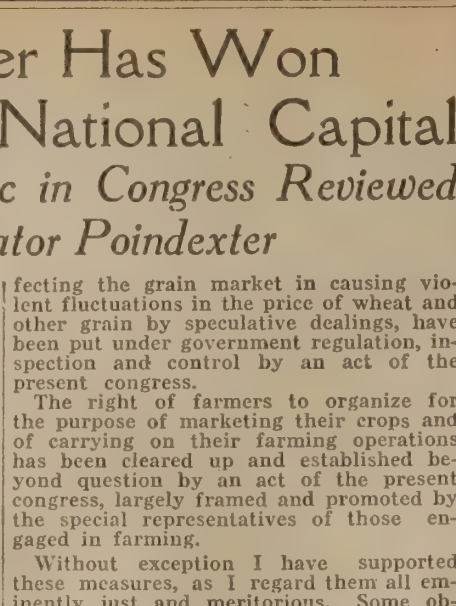
Without exception I have supported these measures, as I regard them all eminently just and meritorious. Some objection was made to the enactment of the cooperative marketing bill on the ground that it was class legislation. How empty and shallow this opposition is, is apparent from consideration of the fact that every other important element in our industrial life is and for a long time has been organized on an enlarged scale except the farmers. It would not, in fact, have seemed necessary to pass a bill expressly authorizing farmers to form cooperative associations in view of the very evident organizations of business and labor, but for the fact that in Chicago and some other places dairymen's associations had been attacked as violating the Sherman anti-trust law.

It is not necessary even to call attention to the fact that for some time vast organizations of capital in such industries as the smelting and refining of metals, manufacturing of steel, transportation and refining of oil, manufacturing and sale of farm implements, etc., has all been organized on a very large scale, so that it was manifestly a discrimination against the farmers to undertake to prevent them from pursuing the same course in the industrial struggle in which they are engaged.

MILES POINDEXTER.

Twenty Times Her Weight

The Pacific northwest has produced a cow, frequently referred to in these columns, that holds the world record for milk production of more than 37,000 pounds of milk in a year. Though familiarly known as Prospect, this black and white pure-bred is registered in the Holstein herd book as Segis Pietertje Prospect. She is no vest pocket edition cow, since she tips the scales at approximately 1650 pounds. Even at that, she produces more than 22 times her own weight in milk per year, or did during the test under which she established the world record. Prospect is the result of Idaho breeding and careful development and milking on Carnation farms in Washington.



Tappet Adjustment

Is Important in Gas Engine Work

By PROFESSOR L. J. SMITH, W. S. C.

One of the most important items in the running of a gas motor, is the movement of the valves. Each cylinder has an inlet and exhaust valve. These must open and close at the correct time. They are operated by push rods or tappets which in turn get their movement from the cams on the camshaft. There is a certain amount of clearance required between the push rod and valve stem, from one hundredth of an inch or more on large cylinder kerosene burning tractors to several thousandths on the high grade automobile motors.

As the motor gets well into the middle of its season's run, the valves tend to seat farther down on the valve seat, which reduces the clearance. This is especially true of the exhaust valves.

Many a tractor motor, and also automobile motors, finish the season with some of the exhaust valves having no clearance, which means that the valve lacks several thousandths of closing. This means loss of power, poor fuel economy, and burnt valves and seats.

When setting the tappets after grinding the valves, the usual practice is to turn the crankshaft until both valves are closed on a given cylinder, then set the adjusting screws for the proper clearance (see amount in the instruction book). This is all right if the cam shaft is true; but this is not always the case. To be absolutely sure, turn the crank over until the inlet valve comes to its seat (the end of the suction stroke), then turn the crank a little over a half turn more, which brings the piston to the beginning of the working stroke.

Now make the proper adjustment, and the valves will be sure to be closed during the working stroke which is the most vital of the four cycles of the piston.

On 50-50 Basis

Boy and Father Are in Partnership

Norman Phillips of the Thrift community, in Pierce county, planted one-quarter acre of Antwerp raspberries last year on a partnership basis with his father. He agreed to divide the profits on a 50-50 basis. The father furnished the land and the berry plants, while the son was to do the work and market the fruit.

As the berry season approached Norman began to wonder where he was going to sell his crop, so he joined the local berry association and signed over his entire crop. This move was upon the advice of the local club leader, Ralph Towne.

The results of the season's crop was such that Norman has made plans to put out two and a half acres more berries next spring. He will plant the Cuthberts, since he believes the local demand is greater for this than some of the other varieties.

Norman is one of the best workers in the Thrift Berry club and he follows all of the state college bulletins in regard to berry culture. All of the land which is to be set out to berries next spring has been planted to vetch, which will be turned under early in the spring.

The club put up a booth at the western Washington fair at Puyallup. There were three kinds of berry plants that had been transplanted from the field into soil in a large tray.

Hog Feeding Experiments

The results of three years' experimental work in hog feeding have just been published in bulletin form, general bulletin No. 169, by the Washington experiment station at Pullman. Professors Howard Hackedorn, head of the department of animal husbandry, and Jerry Sotola of that department, are authors of the bulletin.

"The state of Washington and adjacent states do not produce sufficient pork to supply the demand within this territory," says the bulletin. "All of the larger butchers and packers testify that pork has to be shipped in to meet the fresh-meat demand. Evidence of this condition is reflected by the fact that the price of hogs on foot at the Union Stockyards, Spokane, during the last two years ranged from 1 to 3 cents above the price for similar grades at the Union Stockyards in Chicago. It is apparent that the market for hogs in this territory is good.

"Crops such as barley, wheat, corn, peas, etc., all suitable for hog feeds, are grown successfully in this state. At the main experiment station, Pullman, the average yield of barley for the last six years has been 3115 pounds per acre, which is 634 pounds more than the average for spring and winter wheat for the same period. Barley and wheat have a feeding value practically equivalent to that of corn. Corn, as a grain crop, is grown successfully in some of the irrigated sections. Alfalfa and peas are used extensively as forage crops and aside from furnishing a superior forage for hogs, they aid in conserving nitrogen of the soil."

The following are some of the outstanding results of the experiments, which are discussed in detail in the bulletin:

1. Fish meal and digester tankage have, from a practical standpoint, an equal feeding value.

2. Cocoanut meal can be successfully submitted for millrun in hog rations. It is not a satisfactory protein supplement when fed with rolled barley to the exclusion of tankage or fish meal.

3. Linseed meal does not produce as big and as economical gains, nor as satisfactory growth as tankage and fish meal.

4. Mixtures of linseed meal with either tankage or fish meal have no apparent advantage over either tankage or fish meal, but they do produce better results than linseed meal alone.

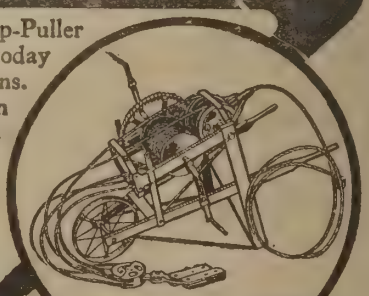
5. Cane molasses was equivalent in feeding value, pound for pound, to barley, when fed on pea forage, when used in replacing only one-half of the barley in the ration. It did not prove as efficient when fed in dry lot, nor when substituted for one-half of the barley in the ration at the rate of one and one-half pounds of molasses for one pound of barley.

6. Peas, yielding 15.5 to 17.0 bushels per acre, pastured off by hogs produced 145.8 to 222.9 pounds of pork per acre. In general, the grain saved by producing the pork on pear forage, as compared with dry lot was practically equivalent to the yield of peas. This with the labor saved in harvesting the peas, as well as the advantage of increasing soil fertility, recommend peas as a practical forage crop for hogs under eastern Washington conditions.

7. An acre of alfalfa, which yielded approximately two tons of hay the first cutting, produced during the remaining part of the summer and fall, when pastured, from August 11 to October 15, a total of 81 pounds of pork.

"CRATES," NOT "QUARTS."

In the September 28 issue of The Washington Farmer there appeared an item regarding the growing of strawberries in the Yelm district. The item stated that "with 3000 acres under cultivation, 350 of which were brought under this year, the Yelm district shipped 200 tons of fruit this season, the strawberries averaging 275 quarts an acre and red raspberries 300 quarts."



This should have read 275 "crates" of strawberries and 300 "crates" of red raspberries, instead of that many "quarts."

CHESTER SCHLIEN WON FIRST.

In the report of the Washington State fair appearing in The Washington Farmer, it was stated that Nora Waite of Ellensburg was winner in the beef cattle contest. It developed, however, that Chester Schlien of Mabton was winner of the first prize in this contest. Chester is a boy 13 years old in his first year in high school. He lives on a farm three and a half miles from Mabton.

672 Men Cannot Equal the Great Power of this One-Man Stump-Puller

This marvelous One-Man Wheelbarrow Stump-Puller actually has the strength of 672 men. It is today the marvel of all Land Clearing Demonstrations. Positively outclassed all competition last season by pulling 64 stumps in 3 hours—ONE man doing all the work of operating machine and hitching to stumps.

MARTINSON WHEELBARROW STUMP-PULLER

Made of best steel; light, handy and easily operated. Mounted like a wheelbarrow, easy to push any place in the field. Cable has tensile strength of 23 tons, enough to pull any stump. Has two speeds, continuous pull, shifts without loosening hold on stump. "My girl and boy, 8 and 10 years respectively, pulled a 12-inch stump with the Martinson," writes John Scottino, of Arnold, Minn. "The best machine out," says A. J. Engfer, Prior Lake, Minn.

64 Stumps in 3 Hours

FREE

To prove everything we say about this wonderful machine we will send it to you for FREE trial. If the Martinson fails to make good, return it and the deal is off. It is the stump-puller for the poor man who does not wish to hire expensive help.

Martinson Mfg. Co.,
1901 Lincoln Building, Duluth, Minn.

"My machine is a wonder. Have 19 acres ready for the plow.—stumps all pulled with the Martinson." Isreal Phillips, Akeley, Minn.

Try the Martinson. You will be glad of it as long as you live.

Write for full particulars.

"The Busy Thirteen"

Makes Record of 100 Per Cent

"The Busy Thirteen," a girls' sewing club of the Trafton district at Arlington, has finished its fourth year of club work with a 100 per cent record. While the club is this year working at sewing it has also worked along other lines. During its first year the girls put on a garden exhibit at the Puyallup fair. The next year they took a general club exhibit to the state fair at Yakima, while in their third year they made a showing at the Spokane Interstate fair.

The work of the members for the last year has been largely with sewing, and under the direction of Mrs. T. M. Clapsaddle of Arlington and Mrs. Harriet D. Stowe, the county home demonstration agent. The club members supervised a community fair on October 7 at Arlington and the girls demonstrated the different kinds of work which have been carried on among their members.

Credit is also due the girls for planning and carrying on a club picnic at Lake Goodwin last August, where they had a very sociable day in company with many of the parents and friends of the members. The girls are planning a similar outing for next summer.

Members of the club are: Ruth Miller, Sarah Jorgerson, Hazel O'Conner, Myrtle Mount, Mary Campbell, Maude Roark, Lucy Roark, Agnes Jorgerson, Elizabeth Clapsaddle, Victoria Hedman, Ruby Bergdahl, Viola Huff and Frances Robbins.

The final goal for the year was the one-day fair which was staged at Arlington on October 7. In addition to the sewing work from the girls there were garden products from some of the boys and a few of the girls as well. A canning exhibit was shown and one of the girls gave a demonstration on the making of hats, while another explained the process of the alteration of patterns.

The club members are planning on a greater fair for next year and there will be two new clubs organized to work in cooperation with the Trafton club. One is to be at Oso and the other at Cicero. Miss Ruth Miller, president of the club for the last year, will act as the local leader for the two new organizations.

Started With Two Cows

The DeGraff herd of 28 milking Shorthorns at Lynden, Whatcom county, was started with two foundation cows which were brought from Ohio and later there were two more cows shipped from a New York farm, and still a third shipment from Pennsylvania. It was in the last shipment that the bull, Glenside Roan Prince, then a mere calf, was purchased and he now heads the herd as a 4-year-old.

As the herd of purebred cows were being built up the DeGraff Brothers used a herd of grades to keep up the milk production, and all the cows were bred to the registered bull. There are now 20 head of these high grade cows in the herd and their quality is improving with each generation. The grade animals, however, are being replaced with registered animals as fast as the purebred calves freshen to take their place.

"We have found that two months is the best age to veal off the grade bull calves," said Mr. DeGraff, "since a greater profit can be realized at this age than later. If we had an unlimited amount of unimproved pasture it might pay to keep them until they were larger, but since we have to feed milk and grain it soon runs into money.

"For our pasture land we use clover and timothy, which is used for hay the first two or three years and pastured in the fall. The two grasses make a good combination for pasture and the timothy holds on for several years and produces an excellent feed. When the moss begins to come up in the meadow it is better to plow the entire field up and reseed.

"Oats and peas have also been grown extensively as a rotation crop and the second grade of peas used for fattening hogs. We know of no better way to raise hogs than by feeding skimmed milk until the shoats are of the right size then fatten with peas. In fact, any dairyman should have hogs as well as dairy cows to keep the farm running in the most profitable manner. The pigs will need some pasture, but they can make better use of the surplus feed than anything else that can be raised."

The DeGraff Brothers have 30 head of Chester Whites and find them a very practical breed for western Washington conditions.

Orchard Grass for Pasture

There are 80 acres of land on the J. I. Hutchin farm at Lynden, part of which is yet uncleared, but makes very good pasture for the dairy cows. Most of the hay land is seeded to red clover and orchard grass and used for pasturing after the hay has been taken off. Orchard grass is considered a very good hay and pasture grass, since the roots increase as the clover dies out. It will also stand more tramping on wet ground than will some of the other grasses and all stock are very fond of it both as forage and hay.

Orchard grass is one of the plants recommended by the western Washington experiment station at Puyallup, since it is a hardy grass and does well in this locality. Tall oat grass is another that has been showing up well at the station and it has been found to greatly increase the tonnage of hay to the acre and the aftermath makes an excellent pasture where the rainfall is light.

West Washington Potato Show

Although the Pacific Northwest Fruit exposition, to be held in Seattle November 11-19, primarily is for the display of fruit products of Washington, the first annual Western Washington Potato show, to be held in connection with the exposition, promises to be one of its big features. Every county on the West Side has entered the competition for a purse of $750. A. B. Nystrom, King county agricultural agent, is manager of the potato show.

KLICKITAT COUNTY FAIR.

The Klickitat county fair at Goldendale brought out a good variety of agricultural products, swine and poultry. There was also a fine display of needlework and the boys and girls' clubs featured strongly in several kinds of work. The whole event lasted four days and was run as a sort of family affair, since the games and contests were among the most interesting parts of the entertainment programs. The fair has been held regularly for the last 25 years.

Exide
BATTERIES

Delivering the goods

The horse is being driven closer to his stable; the gas truck (started and lighted by an Exide Battery) goes on long hauls; and through the great zone in between, the electric street vehicle is coming into its own. Propelled by an Exide Battery, it delivers the goods — with least trouble and most economy.

You will find Exide Batteries playing an important part in all manner of industries. Exides supply current for the telephone system; they run mine locomotives, operate railway signals, and propel a majority of the world's submarines beneath the waves.

Rugged, simple Exide Batteries supply the current for most of the farm light and power plants, and they are famous for lasting for years without getting out of order.

You are, perhaps, most interested in the Exide built for starting and lighting your automobile. It is known as *the long-life battery*. It keeps its dependable power so much longer that it is not merely a great convenience but is the most economical battery to buy.

Exide BATTERIES SERVICE STATION

The nearest Exide Service Station has a battery the right size for your car. If your present battery needs repairs, no matter what make it is, it will be repaired skillfully and reasonably. If not in your telephone book, please write us for the address.

LIVESTOCK AND DAIRY

Milk Is King

As a Food It Is the Most Valuable

Ever since the day when human beings rose to a form of agriculture which included domestic animals, milk has been considered the master food, says the Rural New Yorker. In his attempt to trace the growth of habit in man Wells states that milk was first regarded as an unnatural food, but that its evident effect upon life and growth made it permanent. It would be easy to show how, again and again, down through history, the world was subdued or conquered by milk consumers. In ancient times, as men became cultured and gathered in cities, their food habits changed, and milk was largely eliminated from their diet. How far this will account for their mental and physical decline we can not say, but it undoubtedly had some effect. The human swarms who spread down through Italy and captured Rome were milk consumers, living very largely on the produce of flocks and herds. The races and tribes which used milk freely in their diet have always been superior in size and quality. This we think will be found true even of African tribes. The Zulus and other peoples which have been noted as breeders of cattle were naturally milk consumers, and are usually superior in size, intelligence and spirit. The early settlers in New England were noted for their strength, hardiness and intelligence, and there seems no doubt that this condition was chiefly due to their diet of boiled corn and other cereals and milk. There is no escaping the fact that milk is the master food. The habit of consuming at least one suart of milk each suming at least one quart of milk each any child can acquire. This habit should be started on the farm, and not left to city people.

Cost of Feed for Herd

In calculating the feed cost for his herd of Berkshire hogs, for the last summer, J. W. Morris of Lynden finds that his brood sows will cost about $2.55 per month each. This figure is made upon the basis of buying all grain and running the hogs on pasture. In the winter it will run about $1 more per month, since it is necessary to feed alfalfa meal mixed in with the feed. This is a better plan than feeding the hay in racks, since it avoids all waste. Mr. Morris plans on each sow eating about two pounds of hay a day.

"In fact, I find that pork can be produced at 8 cents a pound under average conditions," said Mr. Morris, "and it will make the returns more certain if skimmed milk is used in the ration. No hog breeder should attempt to raise animals for butchering if he does not have milk of some kind to feed. I believe that there should be one sow for every five cows kept. This will, of course, take care of the young pigs as they come on and give them all the proper amount of supplement.

"I have made a rule never to change my feeding except during farrowing time and then make the cut in quantity rather than quality," said Mr. Morris. "The feed should be gradually increased after the sow has farrowed, until she is getting the proper amount. It is a mistake to leave out some of the more important parts of the ration at this time, but the amount of feed can be reduced if it is increased again as the animal can take care of it."

Crosses Durocs and Tamworths

I. J. Oder of Yakima has for many years been raising hogs on the outskirts of town and has featured prominently in the show ring at the state fair and other live stock shows of the state. He is one of the few men in the state who has made a success of raising hogs on garbage. He has had very little trouble, if any, with disease and no trace of cholera has ever been found on the farm.

The plans are to run from 100 to 150 hogs on the river pasture land, which is used mainly for range. There are times when it is necessary to buy a few feeders to keep the number large enough to clean up all the feed obtainable. Most of the hogs are Tamworths, while there are a few head of Durocs and some grade sows. Mr. Oder is convinced that a cross with a Duroc or grade sow with a Tamworth boar makes an early maturing hog which has excellent bacon qualities.

Increasing the Lamb Crop

In six years' work the United States department of agriculture has found that by extra feeding (commonly called "flushing") at breeding time its Southdown ewes yielded 198 more lambs per 1000 ewes than Southdown ewes otherwise given the same care and kept under the same conditions.

Flushing increases the size of the lamb crop in two ways—it puts the ewes in better condition to make sure of their getting in lamb and it increases the proportion of twin lambs, says the department. Sheep breeders are constantly striving to increase the proportion of lambs born to the number of ewes in their flocks, but they have in most cases paid little attention to the condition of the ewes at breeding time. A little extra care and attention just as the breeding season opens will bring results next spring.

Grain Mixture

By A. B. NYSTROM.

What is the best grain mixture for a milch cow on dry hay? A. J. H.
Rocklyn, Wash.

The kind of hay and grain you use both have a direct bearing on the question. With clover and grass hay a mixture of 300 pounds of mill run or bran, 200 pounds of ground corn or barley and 100 pounds of linseed oil meal will be found satisfactory. If all clover or all alfalfa is given use only 200 pounds of mill run and 50 pounds of the oil meal. Soy bean meal may replace half of the linseed oil meal.

VETERINARY

By DR. S. B. NELSON.

Lump on Jaw—I have a cow that freshened in August. Ever since that time she has had a small lump under her jaw. It seems to be getting larger and her jaw is swollen quite a bit. Is there a remedy?
Cliffs, Wash. J. F.

There is one of two things probably the matter with your cow. Either there is an infection in the jaw from a diseased tooth or the cow has lumpy jaw. In either case she would need an operation; the tissues removed and packed with a tincture of iodine pack. The cow should be put on potassium iodide, 1 dram, in one pint of water once daily for 10 days; stop a week and repeat for 10 days.

Tubercular Cattle.—What compensation is made by the state for a cow that is pronounced as tubercular by the veterinarian? READER.

The problem of receiving pay for a cow pronounced as tubercular by the veterinary is prescribed by law and it is the duty of the state department of agriculture through its representative, Dr. Pelton of Olympia. You can receive first-hand information regarding this by writing to Dr. L. C. Pelton, supervisor of dairying, Olympia, Wash.

Try the Grocer, first!

SLEEPLESS nights and daytime irritation, when caused by coffee drinking, often require a call on the grocer to avoid a later call on the doctor.

Postum, instead of coffee, has brought restful nights and brighter days for thousands of people—together with complete satisfaction to taste.

You will enjoy the full, rich flavor and aroma of Postum, and nerves will be free from any possibility of irritation from coffee's drug, caffeine. You can begin the test today with an order to your grocer.

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages, for those who prefer to make the drink while the meal is being prepared) made by boiling fully 20 minutes.

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS"

Smith's Steers Outsell Brown's

PART I.

"Why did my neighbor's cattle sell for 10 cents a pound, while mine, marketed at the same time and weighing about the same, brought only 7 cents a pound? What points do buyers consider in determining what prices they can pay for different bunches of steers?"

Such is the substance of an inquiry from a reader. As this answer is being written prime beef steers are selling as high as $12.90 a hundred pounds on the Chicago market, while common light steers are selling down to $5.50 and canner steers as low as $3.50. Evidently the differences in value are tremendous or the slaughterers would not discriminate so much.

If a steer buyer for one of the packing companies were asked to enumerate the primary reasons for the wide range in value, it is probable that he would say that the poor and the good steers showed three important differences.

1. In dressing percentage or percentage of carcass to live weight.

2. In the proportion of the weight of the carcass which is in the most valuable wholesale cuts.

3. In the character of the meat itself, consumers being willing to pay a much higher price for meat from the higher grades of steers.

The best steers reaching market will dress as high as 63 to 65 per cent of carcass to live weight, while common beef steers may dress as low as 48 per cent, with canner steers still lower. Thin, old dairy cows sometimes produce only 37 per cent or even less of carcass. This means that the offal varies from about 36 per cent of the live weight in the best steers to 63 per cent in cast-off "shells" from the dairy.

The offal includes the hide and hair, the blood, the feet and legs up as far as the knees and hock joints, the heart, liver, kidneys, some loose internal fat and the digestive tract with its contents. The hide makes up about 7 to 8 per cent of the live weight or from one-fourth to one-third of the offal. The tallow varies from a negligible quantity to as much as 4 per cent of the live weight. Hides at present are worth from 19 to 22 1-2 cents a pound, which is more than the average value of the carcass. Other parts of the offal are worked up into byproducts, but so much of the weight is in the stomach, intestines and their contents that its average value per pound is much less than that of the carcass.

It is easy to understand why the probable dressing percentage is a prominent factor in the mind of the buyer in deciding how much he can bid for a bunch of cattle. Many packing companies require their buyers to record their estimates of dressing per cents each time they make a purchase and the buyers are furnished the actual record later on, so that they become expert in making estimates. Rarely will they miss the actual percentage over one point on the average.

If a steer which sells for $12 a hundred pounds on the present market dresses out 63 per cent of carcass worth 18 cents a pound, then a steer dressing 58 per cent, assuming that other factors, such as cost of slaughter, value of byproducts and of the carcass per pound were the same, would be worth only $11.10 or 90 cents per hundred pounds less. For there would be five pounds less beef worth 18 cents a pound in each hundred pounds of weight on the hoof. Likewise a steer dressing only 48 per cent would be worth only $9.30. It happens, however, that the carcass from the steer dressing only 48 per cent would not be worth 18 cents a pound, so that the difference in value on the hoof would be much greater than the dressing per cent alone would make.

The proportion of the weight of the carcass which is in the most valuable wholesale cuts and which materially affects the price received for the steer, will be considered in the next article.

Many Soils Need Sulphur

Sulphur is recognized as one of the essential elements of plant growth. It is found in greater or less amounts in all soils and in all plants. In general the soil supply has been found adequate to meet the needs of the average crop. On some soils and for particular crops which are heavy feeders, alfalfa and cabbage, for instance, the addition of sulphur-bearing materials has been found profitable in many instances.

Under most systems of cultivation where manure and commercial fertilizer are used the supply of sulphur is in large measure maintained. The same thing is true with sulphur as with nitrogen or potash, that when only the one element is deficient it is most profitable to supply the one element in concentrated form. In the case of sulphur the use of the fine ground sulphur is usually the most economical.

The increases in yield following the application of sulphur to alfalfa land have been in many cases noteworthy.

Sugar beets and cabbage also are reported to have given substantial increases in yield, due to the use of sulphur.

In addition to its value in improving soil fertility sulphur is one of the two great fungicides, the other being copper.

Apparently the efficiency of sulphur as a soil fungicide is dependent on its oxidation to sulphuric acid. In the case of potato scab control the problem appears to simplify itself into one purely of soil reaction. It is quite definitely established that certain bacteria actually perform this work of oxidizing sulphur in the soil. Some soils contain these proper bacteria, while many do not. In order that the sulphur may be effective these bacteria must be introduced. This is accomplished through the use of inoculated sulphur.

Oats and Peas for Feed

Fred Morgan, a Guernsey breeder of Oak Harbor had a crop of hay that produced 38 loads on six acres. The mixture consisted of clover, timothy and Italian rye grass. "The loads would run close to a ton each," said Mr. Morgan and I consider six tons to the acre a good yield, even though the land had been well manured. The hay was an old crop that was running largely to timothy and did not make the best of cow feed, but it was cut early enough to make it a fairly good feed."

A field of oats and peas are to be cut for the silo and used for succulent feed during the winter. Mr. Morgan has raised corn for the silo and has had some good results, but feels that oats and peas are easier to raise and make about as good a feed if properly harvested.

WASHINGTON IS HIGHEST.

Washington dairymen may well be proud of the fact that the state stands highest in the seven western states in the average fat production, with 31.62 pounds per cow. This figure is taken from the cow testing association records only, and includes seven associations, with a total of 2437 cows. California, the next highest state has a production of 31.01 pounds per cow from 16 associations and 18,047 cows. Oregon ranks third, with 30.78 pounds per cow, and Idaho is fourth, with 29.27 pounds.

Washington also has the honor of having the highest milk production per cow of any state in the Union, according to the federal census of 1920. The figure is given as 571 gallons per year for each cow and was taken as an estimate from the owners' records at the time the census was taken.

What will a Tractor do?

If it's a Best Tractor it will do almost any power job and do it well—day in and day out—year after year—with a minimum of upkeep and depreciation.

Good tractors are one of the outstanding factors in increasing yields for the farmer. Plowing, cultivating and harvesting can be done so fast and so thoroughly, and with fewer hands, that the saving is the difference between profit and the even break. Then there are the numerous in-between jobs on all of which the Good tractor more than pays its way—in fact many Best owners have found a very profitable business in doing road and general contract work between seasons.

Best Tractors are not only a good investment this year; their long life and dependability keep them in service for many seasons, so that the first cost is spread out over several years, each year paying a profit.

Best Tractors are more than a combination of metals shaped and fastened together to specifications drawn to meet a price. They are the product of years of experience in building *successful tractors.* Experience that has developed a correct and balanced design—that has taught the use of special heat treated steel here—drop forgings there—anti-friction bearings at other places and so on. Just as a clean limbed horse comes into the thoroughbred class through careful breeding and rearing over a period of years—so Best Tractors have reached the top of tractor perfection.

There are two models of Best farm tractors, the "Sixty" and the "Thirty," Let us send you full information on both and the name of our nearest dealer.

BEST TRACTORS

POULTRY AND RABBITS

Lighting the Hens

By GEORGE R. SHOUP, Poultryman, Western Washington Experiment Station.

The lighting of old birds for market eggs has shown the best results when the birds were allowed to rest till December 1. The lights brought on at this time result in a heavy winter lay and the birds go through the season in good health with a continuous lay and very little mortality. Whereas, the continuous lighting of the old birds starting in September results in a fairly good lay of October and November standard eggs, and helps out in making the standard pack. But the total number of eggs laid by the flock and the flock average are far less than where the December 1 date is used for starting lights. Many of the September lighted old birds fall by the wayside and the spring and summer lay is less than that of the birds which have had a period of rest.

The lighting of the old birds for hatching eggs should never be practised except where thebirds have gone well through January without laying. The breeders should be fully molted, should have stored up all necessary supplies for reproduction and their combs should be up and bright red by the 15th of January. If they are too long coming into lay there is serious danger of their becoming too fat, their egg producing organs will not function properly and soft-shelled and misplaced eggs are apt to result. Often just a few days night lighting is all that is required about January 15 to start them laying. It is claimed that breeding houses facing east have an advantage over the south front for breeders in that the birds are up earlier in the morning in the east front house and that they require no light at all.

The lighting of the larger breeds results in fully as great an increase in lay as with birds of the Mediterranean class, but when the birds are intended to be used as breeders in their second year we have found it advisable to allow them considerable outside range all the year round to keep them in good condition, whereas the pullets of the smaller breeds are confined to the laying house from October 1 to March 1.

The large breeds respond much better to morning lighting where outdoor range is given, when they procured all the green feed they needed outdoors and it is impossible to bait them down off the roosts at night with even the most succulent kale stalk. Over-lighting of the large breeds is even more injurious to their hatching eggs in the following year than with the smaller breeds. These breeders should be given as nearly natural conditions as is consistent with their health and your retaining their ownership.

The use of any kind of artificial light, even the ordinary barn lantern, results in increased egg lay in winter, but the electric light is much more convenient and trustworthy than any oil lighting equipment. Remember this artificial light offered your poultry is like an edged tool—if you put on too much pressure you are certain to spoil the job. If carefully and intelligently applied it will add at least $1 net profit per pullet.

Swatting the Louse

It is true that lousy hens will lay some eggs, but it is equally as true that they would lay more eggs if they were free of lice. We find that the high-producing hens usually stop laying and become quite light in weight when they are badly infested with lice. The low-producing hens usually stop laying when they are badly infested with lice. One of the ways to eradicate the lice on the chickens is to apply equal parts of commercial blue ointment and pure lard, well mixed, about one inch below the vent and on the back between the wings, thoroughly rubbing the diluted ointment into the skin. Commercial powdered sodium fluoride is to be recommended when the blue ointment is not to be had. For best results, the sodium fluoride should be applied in a dry state, by thoroughly dusting the powder into the feathers. Six to 10 pinches between the thumb and fingerr, distributed over the body, are sufficient. A sodium fluoride water bath is effective also against the lice, but is not a suitable cold weather treatment.

One should examine his hens frequently for lice. It is not sufficient to believe that they are not infested.

Combating the Intestinal Worm

"In order to get the maximum number of eggs from the hens we must first expel and destroy all intestinal worms," says J. E. Layton, poultryman for Albers Brothers, who declares that large numbers of flocks in the Pacific northwest are affected by this pest. "This is not an easy task. We find pumpkins to be a very good expeller of intestinal worms in poultry when fed for a period of 30 days or longer. Chickens like pumpkins and will consume many of them when cut open and placed where they can get at them. Poultrymen should make a regular practice of growing a lot of pumpkins each year for feeding in the fall, beginning at the time the pullets and hens are placed in their winter quarters. Pumpkins will expel the intestinal worms, but will not destroy them. This makes it necessary to rake all the droppings off the dropping boards every morning before the chickens have had a chance to pick up the worms expelled during the night. This should be done daily, as long as the pumpkins are being fed to the chickens. It is best to mix the droppings containing the expelled worms with air slaked lime which will destroy the worms as fast as they are hatched, before they have a chance to develop and lay eggs. Where the pumpkins are not to be had, thoroughly mix in each 100 pounds of the dry mash to be fed, three pounds fine tobacco dust. Continue this treatment until the birds are free of the intestinal worms. Tobacco, though, does not always expel all the worms, as we have been led to believe.

"Where the ground on which the chickens run is infected with worms it will be necessary to heavily lime and spade or plow the ground. This should be done frequently until all worms are destroyed. The best time to lime and turn the ground under is during the spring and summer months, when the worms are hatching and developing from the eggs."

Free Book Tells How to Get Big Egg Yield And Save Feed

1000 Amazing Money-Making Secrets

Never before has such a valuable, dependable poultry book been given **Free.** Prof. Quisenberry explains his wonderful method of rearing, breeding and feeding for heavy egg production, now in use by over 46,000 successful poultry raisers. Tells how Chas. Kittinger averaged $11.77 net profit per hen; Mrs. Hume made $2000. Revised edition ready. **Write Quick.**

Queen Incubators

Queen Incubators are distributed by:

The Queen Hatcheries, 4th Ave. and Pine St., Seattle, Wash.
The Routledge Seed & Floral Co., Portland, Oregon.
The Brackman-Ker Milling Company, Victoria, Vancouver and Westminster, B. C., Can.

Corn Shredding—and Goodyear Belts

Alex Woelffer, of Watertown, Wisconsin, says the only belt he ever used that really held the pulleys and ran trouble-free is the Goodyear Klingtite Belt. "Even during and after rains, it delivers without a miss," he says. "There is never any tension to endanger the engine through overheating; never any re-setting. It does not stretch, shrink or stiffen.

"It is so powerful and so efficient that I have not only got my own work done with it easily and quickly, but have found time to use it many extra hours for my neighbors, in their threshing, silo-filling, corn-shredding and wood-cutting. I have made $3 an hour in that way, and counting these earnings with my own savings, the belt paid for itself long ago."

Goodyear Klingtite Belts put an end to farm belt troubles. They need no breaking in. They require no belt dressing. They do not separate at the plies. Goodyear means good wear.

They come in endless type for all heavy duty and in suitable lengths for water pumping, cream separating, electric lighting plant, washing machine and other light drives. For further information about them write to Goodyear, Akron, Ohio, or Los Angeles, California.

ORCHARD AND GARDEN

How Worms Get In

If you want to keep the pig out of the potato patch, all the holes in the fence must be smaller than the pig. In like manner, if we are to keep the worm out of our apples, there must be no unsprayed places on the apple big enough for him to get through.

This is something of the philosophy of A. L. Lovett of the Oregon experiment station, in explaining why apple orchards are showing this season a comparatively high worm injury. It is the general experience of orchardists throughout the Pacific northwest that, notwithstanding thorough spraying in most sections, the worm damage is unusually large. Mr. Lovett believes that this is in part due to the fact that the fruit developed unusually rapidly early in the season, spreading the first cover spray so that it became too thin to kill the worm as he made his entrance. Another reason given is the exceptionally favorable climatic condition during the period of the first brood moths, permitting them to increase greatly their usual quota of eggs. In an article in the Oregon Grower, he says:

"Ordinarily the first brood of coddling moths works under rather unfavorable conditions. The nights are cool as a rule; rains are not infrequent and sudden drops in temperature of several days duration below the point where eggs can be laid, are not unusual. Under such circumstances, the vitality of the moth is affected. Many infertile eggs are laid and the total number of eggs deposited is materially lessened.

"This year the season was unusually late, but when favorable temperature for growth developed they came with a rush. There was temperature suitable for egg laying a week before the moths came out, and such weather was a rule during the period of egg laying. The first brood worms were, therefore, exceptionally numerous and started life under the most auspicious circumstances.

"The prevailing high temperature, so favorable for worm development, had a similar effect on the young fruit. The increase in size with a corresponding increase in circumference made our standard spray program entirely too tardy and our regular spray covering inadequate for a protection. Our regular 30-day coddling moth cover spray was put on 15 days after the calyx spray. There should have been another spray two weeks later. The expansion of the surface of the apple during this period rendered the spray covering inadequate to afford protection. Late season worms were due mostly, simply to the exceptional abundance of the worms present, and where so many try to get in some are sure to get the fruit. In many orchards where late sprays were carefully applied the later attacks resulted largely in stings, but of these there was an unusual abundance."

Dish This Out to the Mice

James Silver of the United States biological survey, who spends his entire time working on the rodent control problems of orchardists and farmers, offers the following formula for destroying orchard mice:

Mix one tablespoonful of gloss starch in one-half teacup of cold water and stir into one pint of boiling water to make a clear paste.

Mix one ounce of powdered strychnine with one ounce (approximately one tablespoonful) of baking soda and stir into the starch to make a smooth, creamy paste. Stir in one quarter pint of heavy corn sirup and one tablespoonful of glycerine. Apply to 12 quarts of wheat, free from dirt and chaff, and mix thoroughly to coat each kernel.

This poison bait should then be scattered along runaways or about places where the mice operate. A small teaspoonful at a place is sufficient. In order to protect the poison from rain and also prevent birds and other animals from getting it, it may be placed in almost any container where it will be dry, but where it will be of ready access to the mice. Tin cans are sometimes used. Place the bait in small quantities in the cans, mashing them so as to leave only room for a mouse to enter. Lay the can in the runway or at the base of a tree where the mice are working. The bait may also be placed under boxes or boards, in drain tile or other similar places. Mice do not like to work in the open, but nearly always pick out places where they are sheltered, such as under piles of rubbish, lumber, brush or in the accumulation of vegetable matter resulting from cover crops. These are ideal places to put the bait.

Pruning the Prune Tree

The Italian prune tree should not be pruned too heavily during the first three years after planting, according to the Washington State college extension service, which graphically illustrated this point by pictures, samples of the tree itself and boxes of fruit, which were shown at a number of the fall fairs this season. One tree which was pruned heavily during the first three years produces only one-half a box of fruit the fifth year, another Italian prune tree received very little pruning during its early period, and, now 5 years old, produces three boxes of prunes.

"Young prune trees need only enough pruning to secure well-formed tops," said a placard which was tacked near by. "Older trees need more in order to take out such limbs as are interfering with each other, and are causing the tree to become misshaped. In all cases, however, the limbs should be cut back close in order that they will heal over properly."

A few branches were shown which had been pruned to leave a stub of an inch or two on the main branch, but in a short time it had caused decay, or injury of some kind to the main branch.

Chuckholes and Rotten Apples

There may seem to be no connection between the chuckhole in the road and the rotten apple in the warehouse, but there is often a very close relationship. Apples often rot or otherwise deteriorate because of bruises. Bruises often result from rough treatment, and chuckholes in the road are notorious for their lack of respect for the fellow who rides over them.

It is time well spent for the fruit growers of any section to go over the road carefully before hauling time. Every chuckhole should be filled and every rock or bump removed. The vehicle in which the hauling is done should be well equipped with shock absorbers in the form of springs, if possible.

From the time the hand touches the apple on the tree until it is displayed before the prospective purchaser in the market place, the fruit should be handled with extreme care.

WORK OF COUNTY AGENTS.

County extension agents, in carrying the results of research by the United States department of agriculture and the experiment stations of the state agricultural colleges to the farmer, visited 650,000 farms in 1921 and held 125,000 community and other meetings, with an attendance of 6,000,000.

TOBACCO SPECIAL

CLOSING OUT REGULAR $1.00 PLUG OF OLD KENTUCKY CHEWING TOBACCO FOR 60c.

Satisfaction, cut plug smoking, 1-pound lunch basket, regular 95c package for 75c. Get your order in early, while it lasts.

Also a complete line of cigars, cigarettes and smokers' supplies at bargain prices. The only cigar store in the city that wholesales and retails.

for Better Compression & More Power use better oil

"The use of Zerolene, as recommended, results in low internal friction and perfect piston seal, under all conditions of engine operation."
—Board of Lubrication Engineers.

If your tractor is not delivering all the power and gasoline-mileage you have a right to expect of it, maybe poor lubrication is the reason.

The *right* oil clings to the bearing surfaces, and maintains full compression under all operating conditions. The gain in power and gasoline-mileage may be as much as 20%.

Perfect Piston Seal

Comparative tests show that Zerolene maintains a better piston seal than any other oil now offered to the public, whether the piston clearance of the engine is small or comparatively large.

The use of Zerolene reduces carbon trouble to a minimum. A comparatively small amount of carbon is deposited, and this, being of a soft, flaky nature, is for the most part blown out with the exhaust.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your truck, tractor, or automobile.

Live Stock Need Minerals

Health and Development Are Influenced by This Element

By GEORGE A. OLSON.

Until recently students of agriculture have looked upon fertilizers as something which, when added to soil, modifies the physical condition, or supplies the crops with minerals which apparently are needed, otherwise increased crops would not be obtained.

Recently it has been discovered tha tthe minerals which are required by plants are not as well balanced for animal needs as formerly supposed. Restricting a ration or utilizing only such feed as is produced on the farm may produce disastrous results. It may be a distortion of the thorax, or the development of abnormal organs, or porosity of bone, or rickets, or abortion. It is very likely that incursions of various diseases commence soon after abnormal development. At any rate there is abnormal development and disease. Just how closely the one is associated with the other will be learned from the investigations which are now in progress.

The plant does not develop normally on account of unbalanced mineral conditions and in a somewhat similar manner the animal is affected. However, the minerals which may be inadequate for plant needs are not necessarily deficient for animal requirement. For example, the plant requires considerable potassium and this element is found in large quantities with nitrate nitrogen in the early development of the plant. It is also found in proportionately large quantities in the various cereals and may comprise as much as 50 per cent of the mineral content. Sodium, on the other hand, is found in comparatively small quantities in cereals and its importance as a plant food is difficult to prove. Yet the blood, serum and various other body fluids contain more sodium than they do potassium. In practice sodium is fed to stock in the form of sodium chloride (rock salt) and lately calcium carbonate has been recommended in view of the fact that a large portion of the mineral content of the animal is comprised of the mineral calcium. The cereals are deficient in the minerals sodium, calcium and chlorine. Iodine has also been found essential and when administered big neck, hairlessness and other well-known abnormalities are corrected. The quantity found in plant tissues varies and likewise many of the soils are found deficient in this element. But if it is present in the soil the plant evidently utilizes it, since in some districts the animals are not affected, while in other well-defined areas these abnormal conditions frequently occur.

It is obvious that the minerals operate somewhat differently in plants compared with animals. It is also apparent that the various minerals have special functions to perform. In one class of crops the requirements for a certain mineral are greater than is the case in another class. Thus it is found that root crops as a rule demand large quantities of potassium, while cereals require considerably less. Root crops contain very little phosphorus, while cereals contain appreciable quantities of this element. In case of legumes, tobacco, cotton, onions, etc., it is found that the plants contain as much or more sulphur than phosphorus.

It is known that sulphate sulphur leaches out of soil at a very rapid rate. Very little phosphorus is lost in this manner. On the other hand, some sulphur is returned to the soil by means of rains, while phosphorus usually is not. Aeolian conditions may be the means of increasing the supply of the various elements of plant food and the same forces may strip the soil of these components. In fact, changes in composition of soil are continually occuring and the success or failure in growing crops is partly due to such changes.

The practice of growing various kinds of crops in a system of rotation does not imply that such a practice conserves plant food. It merely shows that better yields can be obtained through such a practice. The reason for these differences in yield is attributed to variation in the appropriation of plant food by different kinds of plants. A rotation of corn, oats and wheat is very much like growing either one of these for a period of years, since their food requirements are very much alike. However, it matters very little as to the kind of crop which is grown, since all crops contain elements which have been taken out of the soil. The legumes are capable of supplying the nitrogen required without drawing on the soil supply and generally this eyement is increased in the soil due to this relationship. In other respects the legume draws on the soil supply of plant food.

The available portions of the plant food are most readily removed and in many instances subsequent decomposition of soil particles is too slow for the immediate needs of plants. Under these conditions it is found expedient to add fertilizers in order to assure large crops or modify the soil conditions so that larger quantities of the elements are made available.

A vital factor involved in the use of fertilizers is the combination of ingredients best suited to the particular needs. There are many soils which are low in sulphur plant food, but fairly well supplied in phosphorus, for example. In order regions the soils are low in both phosphorus and sulphur.

A soil kept in a high state of fertility contains ample quantities of plant food for plant needs. The crops are also well balanced in minerals and undoubtedly better suited for the feeding of stock. Alfalfa, which contains more sulphur than phosphorus, also contains large quantities of calcium, all of which are very important in animal nutrition. Undoubtedly the mineral balance of alfalfa is one oi the important factors which commends it as a food for stock. Alfalfa and other legumes should, therefore, be more extensively grown and fed.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

"Farm Mechanics"

A volume entitled "Farm Mechanics," and written by Crawshaw and Lehmann, has come to our hands fresh from the press. It treats of subjects ranging from woodwork, blacksmithing, sheet metal and concrete work to the repairing of machinery. Belting and care of belts, the use of ropes, the care and repair of harness, are a few of the topics taken up within its some 400 pages; lighting and sanitary system for the farm home are also given attention. A table showing the uses for which various woods are suitable is an attractive feature. The following extract, having to do with the seasoning of timber, will illustrate fairly well the character of the book.

"One of the most important processes in the preparation of wood for construction use is its seasoning, or drying. A properly seasoned board is lighter than one not seasoned. It is stronger, and is not subject to change of volume which causes checking and warping. Of the several methods of seasoning, the best is natural air drying, which takes from two to six years. In this process, boards are piled up with broad surfaces horizontal and separated one from another by thin strips of wood known as sticks. The boards in a particular layer are placed so that edges will not touch; hence, air is permitted to circulate throughout the pile and come in contact with all surfaces. The piles are set up a foot or more from the ground, one end being a few inches higher than the opposite one. They are covered with boards to protect the drying lumber from rain and sun.

"In order to produce lumber quickly for construction use, it is artificially seasoned or kiln-dried. This reduces the moisture of the wood to perhaps five per cent, whereas, in the natural process, 10 per cent is the approximate minimum. However, kiln-dried lumber will more quickly re-absorb moisture. As most lumber nowadays is seasoned by some artificial means, it is advisable to pile it in shops as for air-seasoning. In case there is a tendency to warp, it is sometimes advisable to clamp a board to a flat surface, concave surface down, or clamp two boards together with the concave surfaces facing each other.

"When a board is dressed it is well to plane both broad surfaces, especially in the case of air-dried lumber, in order to open the pores, as it were, on both sides and thus make the exposure conditions uniform throughout. If the ordinary means of overcoming warping are not sufficient, it is sometimes possible to straighten a board by heating the convex side and, possibly, at the same time moistening the concave side. The heating can be done by laying the board on top of a furnace."

The book is illustrated, both with line drawings and half-tones, rather fully. It is from the Manual Arts Press at Peoria, Ill. We note the price to be $2.

Osmosis

A Vital Factor in Life of Plants

A horticultural friend recently showed Dr. H. A. Surface of the department of biology of the Susquehanna university some peach trees on which the tips or tip halves of the leaves had turned white and dead, as though scalded, and asked him what had caused that peculiar condition. Immediately Dr. Surface replied, "Too much nitrate of soda." He said, "It is possible for nitrate of soda was used on the soil around these trees, but could such an application on the ground affect the foliage?" It was not enough to say, "It was due to osmosis," without explaining further what "osmosis" is and how it works, says the doctor in the Packer.

Osmosis is the passage of a less dense liquid through a membrane to one that is more dense on the other side. A neat little way of showing this very important phsio-chemical demonstration is to drain the contents of an eggshell from a hole in the small end, then pick away some of the shell from the spot that is not attached to the membrane or shell-skin at the large end, leaving the membrane uninjured. Then fill the shell three-fourths full of strong salt water and float it in fresh water. Enough fresh water will be taken through the membrane to fill it and sink it. Now reverse the operation. Fill it nearly full with fresh water and let it float in strong salt water, and it will rise higher, because the fresh water passes out through the membrane and mingles with the salt water below.

From the above experiment we learn that a less dense liquid passes through a membrane toward a more dense liquid, and this is called "osmosis." A plant takes up sap and sends it on up by "root pressure" because the soil moisture is normally less saturated or less dense than the liquid in the plant, and the osmotic flow is through the root hairs toward the plant. Thus the leaves get a constant supply of moisture which they continue to evaporate into the air. Thus they keep fresh and alive.

However, when a readily soluble material is applied to the soil and the solution of the soil moisture is stronger than that in the roots the direction of the osmotic flow is reversed, and instead of the sap flowing into the tree it is reversed and flows out and thus the water is taken away from the leaves instead of added to them, and the effect is a scalded appearance. This effect can easily be obtained by the use of salt or any other readily soluble substance on plants. It illustrates one of the great physiological principles of absorption in both plant and animal life.

System in Bee Keeping

Frank Ross of Puyallup reports a return of approximately 120 pounds of honey to the colony, or about six tons from the 100 stands of bees, spring count. The season has been a very favorable one for the beemen and the colonies have increased at least 50 per cent, according to Mr. Ross.

While bees are generally kept as a side line, Mr. Ross finds that it pays to gi the bees the best care possible, even the expense of his regular work. By g ting system into the day's work it can managed so that a small amount of ca can be given each day and none of t colonies will go neglected for the want time to look after them.

Much labor can be saved by giving t bees plenty of room in the hive and the is not so much danger of swarming. It generally considered that from 50 to colonies are enough for one man to lo over in a day. By spreading the wo over 10 days' time it can easily be ha dled by one man in his spare time.

Mr. Ross is one of the state's most a tive beekeepers and has done much to e courage beginners in getting their bees shape for honey production. He is al one of the main boosters in the Peninsul Beekeepers' association.

Do You Want Your Farm Removed Ten Times Farther From Town?

What would you take to have your farm removed bodily 10 times as far from the nearest town as it is now located? What would you take to have the town reduced to just one-tenth of its present size? The chances are that you would demand a substantial figure if you agreed to either change at all. You realize that being near to a thriving town is worth a good deal to you finincially, and has other values which can not be measured in dollars and cents. Being close to a ready market; having stores, churches, doctors and nurses convenient; being in a position to reach your banker or lawyer on short notice are all benefits which come from being within range of town. That being the case, it is to the interest of us all to build up our own home communities. One of the best ways to do this is to patronize the local stores and industries as much as possible, because all of the other benefits mentioned above follow in the wake of commercial activity, and perish when there is no business being transacted in the trading center.

FIRST MORTGAGES ON IRRIGATED LAND in upper Snake river valley; to exchange for improved irrigated land, preferably in southern Idaho. James B. Kite, Terreton, Idaho.

CHAPTER EIGHTEEN.

New Claims on Tarryall Creek.

Passing over the fire-blackened tract, they moved on in the direction they had been traveling.

It was somewhere on this journey across the mountains, though whether near the burning country or not is not clear after so many years, that the party discovered some hot springs. There were several of these, and the six men stopped to rest near them and to examine them. Most of the springs seemed hot enough to boil an egg or to cook meat. Yet only a few feet from the hot springs was another spring, almost ice-cold.

On this trip the party learned that descending a long mountain slope was harder on them than climbing the same distance. Brindle must have found a similar difficulty, for, when going down, she would sometimes swing round suddenly and face in the opposite direction. The men readily understood why she did it. After making their way downhill a few miles they themselves always felt a strong inclination to turn round and climb a while.

Not till they were about to emerge from the mountains did any of the wanderers catch sight of an Indian. And there was only one. The red fellow must have been very much afraid of the white. For when they first discovered him he was running like a deer. Some of the gold seekers called to him. But, if any difference, that only made him run the faster.

Now Cooper said: "Boys, that's one redskin, and he runs a streak to get away from us. But, you may be sure, there's a village of his kind somewhere not far off. And when he carries word to that village we may have a pack of them nosing our trail."

"Then I'm 'lowin' we'd better do somethin' to throw 'em off of the scent," suggested Esau.

"That wouldn't be a bad idy," Cooper agreed.

"Yes; it won't hurt anything to try a little strategy before we go to sleep tonight," was Sanders' opinion.

The sun was very high when they found themselves on the last mountain, where they could gaze out over that great tract of level, grassy country known as South Park. They camped down in the park, but against the foot of the mountain.

A big campfire was kindled, and by that the travelers cooked their supper and ate. And they lingered by the fire till night had shut down around them. Then, after saddling and packing Brindle they all took up their burdens and away they went. They were now headed southward.

Not till they had tramped several miles farther did they camp again. This time they made only a dark camp. They had been keeping near the edge of the park and were still at the foot of the mountains.

Whether any redskins were on their trail they did not know. But they slept the more soundly for the precaution they had taken.

When morning came they were up early and had their breakfast cooked and eaten before the sun rose. After that two or three of them climbed far up the mountainside for a look around. But no Indians could they discover, or signs of Indians. Brindle had already been milked, and when she had grazed long enough they saddled her and fastened on her pack. After that the men strapped on their own packs, shouldered their guns and moved on toward their destination.

In time they began to see other travelers, all moving in the same direction. Those were traveling in all sorts of ways, but most of them were on foot. Some had pack ponies or burros to carry their things. But fully as many of them were trudging along under their own packs.

It was about the middle of an afternoon when the party of six arrived at the new diggings. These were at the foot of the mountains, where a wide canyon, or gulch, opened into the park. The stream flowing out of this gulch was probably the one later known as Tarryall creek.

Here the newcomers gazed upo na scene similar to the one they had been accustomed to, on Clear creek. News that gold had been discovered in this gulch had spread rapidly, with the result that 500 or 600 miners were already here. And more were arriving almost every hour. Brush sheds, cabins and tents were strung up and down the gulch for a long distance. Near the gulch's mouth was some almost level land, and on that was more room for a populous camp than on Clear creek.

Halting at the outskirts of the mining camp, Cooper and those with him cooked and ate their dinner. Being eager to reach the diggings, they had not stopped to eat at the usual time. The meal ended, they moved through the big, bustling camp in quest of information.

And what they learned, from men longer here, was far from encouraging.

One claim was paying well. That was the first claim taken up. It had paid well from the start, and the owners were still washing out an ounce or more of gold a day. It was reports concerning the richness of this claim that had brought all these hundreds of miners here. But, as much digging had already proved, the ground surrounding the paying claim was not equally rich. Indeed, most of the claims were panning out so little as to be scarcely worth working.

However, the fact that gold was actually being obtained so close by had a stimulating effect. Many a miner was toiling like a slave on a claim that did not clean up half enough to buy what he ate.

"Well, boys, I don't know what the rest of you think. But to me it looks a right smart like we've been sold," Cooper remarked to his partners, when they had all come together at their camp again. "We've hopped out of the frying pan into the fire. Clear Creek, as we all know, wasn't anything to brag on for richness. But, from what I've picked up here, it was away ahead of what we've come to."

"That's just how the matter appears to me," answered Sanders. "Back yonder every saint and sinner of us was washing out $2 or so a day. That is, after we got our sluice box and other boxes. But claims a-plenty here are not panning out a red cent, I'm told."

"Yes; and ever so many more pan out only a few cents," spoke up Orlando. "I've talked with man after man who assured me that they've slaved from daylight till dark, with less than half a dollar's worth of gold to show for it."

"Question for our layout to decides is: What're we going to do about it, now that we've pulled up stakes and come traipsin' so fur?" Esau Haggerty remarked.

"Same old question that several hundred other sick-and-sore galoots are asking themselves, I'm thinking," was Given's comment.

And Holloway said: "It won't pay to hang around here, and it won't pay to right-about-face and mosey back. So it's a puzzle any way you view the thing."

However, after arguing the matter up and down, the party agreed to take up claims. So they went to the upper edge of the camp, where each staked out a claim fronting 50 feet on the stream. And it was on one of those claims that they kindled their campfire, just as night was filling in the gulch.

All slept well, from much tramping. When morning came they felt rested and far more hopeful. One miner was washing out gold here every day; and there was no reason others shouldn't do as well. At least there was a chance. So the six began to look about them for a place to sink a shaft.

The only way to test the dirt was to wash out some of it. And they were all soon busy with their picks and pans. But not till they had tested spot after spot did they find the color of gold—discover a little fine dust in their pans. Even with the sorry encouragement they began to dig.

During the first day after starting their shaft the six partners worked hopefully enough. Almost every hour new miners were arriving, often in numerous bands. And claims still farther away from the paying one were being fast taken up. Soon Cooper and those with him had gone back to their old way of working. Four remained at camp to carry on the mining while two went up into the mountains every day to hunt and to prospect.

The first day Orlando went hunting he returned at dusk with some startliny news.

"You couldn't guess who it was I saw over yonder in the far edge of the camp," he said, in cautious tones, to his partners, busy with supper around their fire. "Nobody—nobody—nobody in the round world but—but our one-time neighbor on Clear creek—Jeeters!"

"What! Air you shore tbout that?" demanded Esau.

"Yes, I am. Or well nigh sure. He had a little more black hair and a little more black beard, maybe, but otherwise he was the same fellow. Of course the light wasn't so very good and I might not have noticed him if he hadn't been gazing at me so straight. The moment I looked at him he turned his head away, and then he turned his back. But not before I got the impression that I'd seen 'im somewhere. Then I caught sight of an ugly-looking brute of a dog close by, and at once I recognized old Jock."

"Seems a little strange that that red-handed gang would dare venture into this camp," Cooper commented, thoughtfully. "They know, or ought to know, that the miners will give 'em a short shift if they ever catch 'em. Are you sure you didn't make a mistake, Lando? Maybe you just saw some black-bearded chap that looked like Jeeters, and in the dim light you couldn't tell the difference."

"Well, as I said, I didn't get such a clear view of the man. But I did get a pretty good look at old Jock, as they called 'im. Doesn't seem to me I could have been mistaken in the dog."

"Easier to be mistaken in the dog than in the man, to my way of thinking," spoke up Givens. "Lots of dogs look alike."

"All so, that is," Jess Holloway answered. "But not many dogs look like that ugly old brute of theirs. Doubt if I could forget him."

After the party had discussed the matter "up one side and down the other," as Holloway expressed it, Sanders voiced the general conclusion when he said:

"We're all tired tonight, and it's already dark. Even if we traipsed down there, Lando's not sure he could pick out the particular camp where he saw Jeeters. So we might have to pass from camp to camp, making inquiries. Dark as it is now we'd have to light a pine knot and go peering into every bearded miner's face till we ran across the right man—if we did run across the right man. Some of the miners are already asleep, maybe, and they'd git hot under the collar at being roused up. And if it should turn out that Lando was mistaken, after all, the whole business would look rather foolish on our part."

Orlando Sees a Familiar Pair.

"I'm reasonably sure I could pick out the right camp in daylight. But camps, like most other things, look very much alike in the dark," Orlando admitted.

And Cooper's opinion was: "I'm thinking we'd better let the whole matter rest till morning. Then some of us or all of us can take a stroll down that way. In broad daylight we ought to recognize any of the Jeeters outfit. If they're in camp, Jeeters or any of 'em, we can soon get miners enough together to surround 'em and arrest 'em. If they're really here, not halfway likely they'll light out before morning."

Orlando, himself not a little excited over the matter, was disappointed at this decision. But he could do nothing alone, and the whole party was soon asleep.

When morning dawned Orlando was the first to awake. And he was eager to visit the suspected part of the camp first thing. But the others thought it just as well to wait till after breakfast. So he milked Brindle, watered her and moved her to fresh grass and then sat down to eat. After that, in company with Cooper and Sanders, he started off to see what could be learned.

On coming to the particular brush camp that he thought must be the right one, the young man ran his eyes everywhere, but could see neither Jeeters nor Jeeters' dog. A lone miner was under the shed, and a glance showed that he was in anything but a pleasant humor. The three men approached the camp, and Orlando addressed the miner:

"Wasn't there another man here last night?"

"Yes, the' was," was the surly response. "He was a man with a black, shaggy beard, the man that I mean. And there was an ugly-looking dog with im."

"Was jist sich a man here last night, and jist sich a dog, too."

"And where are they now?" demanded Cooper.

"Wish to my soul I knowed! I'd like to clap eyes on 'em for jist about 60 seconds! I'd fix 'em, dadgast their onery hides"

"So the sly rascal slid out, did he? Well now, that's news. When did he go?" questioned Sanders.

The miner shook his head. "Jist when's more'n I know. Some time betwixt dark last night and daybreak this mornin'."

"But how did he come to go?" said Orlando.

"How does any sneak thief come to go?"

"Thief! Did he steal something from you?"

The miner laughed harshly. "Well, I reckon! About everything loose he could lay his dirty hands on! If my claim hadn't been staked down at every corner, guess he'd ha' toted that off."

"But what did he actually take?" demanded Cooper.

"Well, first and fo'most, he cabbaged on my bag of gold dust. Then he packed off every dust of flour I had, and every scrap of bacon. Plain fact is, left me jist about strapped."

Now Sanders inquired: "How did the rascal come to be here?"

"Why, he blowed into camp late yisterday evenin', him and that ugly dawg varmint of his'n. Stopped out yander where I's at work. Said he'd washed out a good big pile of dust some'r's else, and he wanted to buy my claim. He camped with me last night, him and his varmint. When me and him went to sleep, or anyhow, when I went to sleep, we'd ackshally traded. He was to plank down five hundred for my claim this mornin'. I thought he come to my terms mighty easy—the black-hearted rascal. He seemed to like my claim better'n any other, and that fooled me. To prove to 'im that I'd washed out as much gold as I said I had to show 'im my bag of dust, and let 'im handle it. He must ha' saw me put it under my head before I went to sleep. Anyhow, it was clean gone when I woke up, and the things with it. I had a little cold bread left for breakfast, but not a speck of flour."

"Did he tell you his name?" questioned Orlando.

"Yes. Johnson he told me it was."

"Got a new name since he slid out of Clear Creek camp," remarked Sanders.

"What was his name where you fellers knowed 'im?"

"That nobody knows. He went by the name of Jeeters. But guess he's got a name for every camp."

"Changes his name oftener than he changes his duds," added Cooper.

"Did you hear his dog's name?" Orlando wanted to know.

"Time and ag'in. He called the ugly varmint—Jack. No, that don't seem quite right. Reckon hit must ha' been, though."

"Maybe it was Jock," suggested Orlando.

"That's it—Jock! I thought Jack didn't sound quite right. Yes, he called the ugly varmint Jock. Called 'im that a dozen times, I reckon."

"It was Jeeters all right," remarked Orlando to his partners.

"Yes," answered Cooper. "He changed his own name, but he didn't have gumption enough to change his dog's name. The devil will show his cloven foot."

"Can't keep from it," declared Sanders.

"What do you fellers know about that scalawag?" the miner now demanded.

Cooper answered: "We know he's a dangerous man."

"And we know there's a rope waiting for 'im up at Gregory's Diggings," added Orlando.

"You may have got off light," Sanders informed the gloomy-faced miner. "He bought out a man in the Clear Creek diggings and then tolled 'im off into the mountains and murdered 'im. Got everything the miner had, and his claim to boot. And that wasn't all. He afterwards——"

"Well now, I wonder if the rogue didn't have somethin' like that up his sleeve for me," the miner broke in. "Yisterday evenin' he mentioned to me that he'd found a likely place to prospect, and he wanted me to go with 'im today and take a squint at it. Of course he knowed well enough that wherever I went my bag of gold dust would be with me. I promised 'im I'd go, too. But when mornin' come he wasn't here. Must ha' changed his mind somehow."

Here Orlando spoke up: "And I know the reason. He saw me pass your camp last night at dusk, and he knew that I saw him. From that he understood well enough that these diggings were no safe place for such as he is. There's a $500 reward out for him and his partners at Gregory's Gulch."

"If you seed 'im last night and knowed who he was, I wish to thunder you'd ha' told me what kind of a blacklaig I was harborin'. It would ha' been gold dust in my pocket and bread and meat in my belly."

"That was just what I had in mind to do, but——" Orlando was beginning, when Cooper said: "Yes, this young man informed us last night he thought he'd seen Jeeters over here somewhere. But as he wasn't sure he could come back to the right claim in the dark, and as after night is hardly the best time to attend to such

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I like the Family Circle and it helps me very much and I feel I should do my part to pay for the help I get.

I am a young mother of 33 years of age and have four children from 14 to 5 years, one girl and three boys. I was married when only 17, so you will know I had very much to learn and have gone through some hard years since. The first years of my married life my health was so poor and the doctor's bills were so large that our first little farm had to be sold to pay up the bills. There were two children at that time.

My health improved and we started again on raw stump land and it has been a hard pull to make good, but we are thankful today that we have a good start again. Since my health has been so good my husband has been out weeks and months together working in the camps, sometimes coming home nights and many times only Saturday nights and I would be alone with the milking, caring for the home and the children, but all went fine.

During the hard years we have passed through I have learned the strictest sort of economy and even now, though we are almost out of debt, I save every rag and make use of everything as long as there is anything left of it.

We have only a little shack with four small rooms, a tiny pantry and storeroom, but I find by having a place for everything and keeping it there, I know just where to go for articles as they are needed.

In my storeroom I have shelves and boxes and sacks and use them for certain kinds of things; for instance, when garments wear out I cut them up, all parts hopelessly worn go into a sack for the junk man (I used to make rag rugs, but I don't any more as I like bare painted floors or covered with linoleum as they are more sanitary and rag rugs were always rolling about one's feet). The good parts of the garments I put in a box or on a shelf and I save every thing that is at all good of all kinds of clothing whether men's, women's or children's. In making over for the children I always find use for my stores of pieces. Good stocking legs I always save and have made drawers for the children and by sewing several legs together lengthwise I have made good little skirts for the little girls. I hem the bottom and make the waists of flour sacks.

After everything worth making over is put aside into the place assigned for it, I have another box or sack into which I put all the leftover pieces too poor for making over and then I choose a nice day, pull my sewing machine out onto the porch and selecting large worn pieces, I sew the small ones in my sack, scraps from cutting out garments, old worn stockings too far gone for further use, all these things I sew onto the larger pieces which I use as a foundation and I make a good batting for a quilt at no expense whatever. Old worn out blankets are good to sew the pieces onto or old dress skirts, any thing strong enough to hold the sewing. A batting of this kind is better in some ways than the regular kind as the quilts can be washed and it is unnecessary to tie them as closely as when cotton batting is used.

Doing all these things becomes much less of a hardship because of the system followed. Keeping the things sorted and in a regular place instead of cluttered up in some cupboard or under the stairs, all in a muss, makes the work easier and eliminates the disgust one would feel on trying to get order out of a mass of soiled old clothes. I used to do things that way and have learned by experience how much more joy can be found in hard work when all is in order and have found happiness even in a small shack.

I sort the shoes and have a box to keep those unfit for wet weather and when the dry season comes I get them out. I keep the summer things in a trunk, mended and ready for use. When the cold weather comes I take out the winter garments which I have put away in mothballs, mended and ready for use and put away the summer things.

I turn the worn sheets, removing the thin center parts and hem and use for the half or three-quarter beds and the pillow slips I treat the same way by cutting out the centers worn thin and sewing them together at the ends for the small pillows. I have sometimes left both ends open of the slips and this makes them wear longer.

I have just made a set of first clothes for an expected baby at the cost of but $1, thanks to my store of saved up old material and new leftover pieces. I have made three little quilts for a good-sized crib, using pieces of new outing flannel saved for years, for the top, and filled with scraps for batting same as I make large quilts; I lined two with new outing, which I got very cheap, and the third I lined with flour sacks, dyed a lavender color. I tied these quilts with lavender for one and red cotton for the other ones and they will wash without getting bunches in them. I made three nighties out of bottoms of children's worn-out ones, four pinning blankets from two old outing flannel skirts, and six bibs, better than one can buy, out of the same material, with new goods for the binding. I made eight short skirts out of old white pieces from my bag of scraps and helped out with lace from my lace bag. Six short skirts from old lawn waists and the tails of hubby's shirts, and made four long dresses from new cloth for the skirts, and waists from my useful bag of scraps. I have made a great number of diapers out of all sorts of old soft white goods. I have enjoyed doing this work as I know I am helping to get ahead by this saving. Some think it a great hardship to save in all these ways, but I see no sense in wasting money in buying things that one can make by using things already in the home. and thereby help the husband to make a living. I can not go out of the home to earn money and the husband may not realize all it means, for a woman to save and plan at the time, but I have the satisfaction of knowing within my own heart that I have done my best to help.

When one is known to be skillful in making over garments one's friends often pass over old clothing to her and that has been the case with me and I have ripped and sorted and washed and made over and it has helped a great deal.

MRS. H. C. J., Wash.

(This letter was long and next week you shall hear how this mother gets work out of her boys and they think they are playing.—A. W. B.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Frequently we hear the expression, "the one best bet." There is one "best bet" in medicine. No matter how sick and how perilously close to death a person may appear to be, he is very likely to get well.

Dr. Copeland.

Never forget that the natural tendency of disease is toward recovery. If it were the other way the first severe illness you ever had would have ended your career.

What made me think of these things was the memory of a case I saw years ago. A New York doctor called me in consultation to examine the eyes of one of his patients. I found her in bed, with snoring breathing, eyes rolled up, pulse almost imperceptible, skin like wax and the surface of her body bathed in cold perspiration.

More out of courtesy than for any other reason, I examined the eyes as best I could. I made a report of my findings to the doctor, but said:

"It makes no difference, of course, because your patient will be dead before night."

There is a sort of unwritten law among doctors not to discuss unpleasant experiences. We particularly hate to bring up a topic which may appear to hint at any failure on the part of a colleague. It is the business of doctors to keep folks alive, so we always have a sense of failure even when an apparently incurable patient dies.

Of course, I never referred to the patient I have mentioned. What was my shock and amazement, five or six years later, to have that dear old lady walk into my office! She didn't die, after all. My own lack of faith did not discourage her doctor, who stayed by and turned the scale.

Several experiences like this and observation of other doctors' experiences have taught me that it is never safe to prophesy fearful things. There is ample foundation for bounding optimism. When I am sick I want my doctor to hang on till the undertaker drives him out. The more resourceful and hopeful the doctor, the more likely he is to restore you to health and usefulness.

Hope gives strength and encouragement. So long as there is life there is hope.

Never give way to despair.

Determine to get well.

Think recovery and health

How it helps a doctor to have a trusting and confident patient!

Half the battle is believing you will get well.

Then it is so much easier for the nurse and family if the patient is responsive and helpful.

"God helps him who helps himself," is certainly a well-founded adage.

Let's all get well and keep well.

Home Recipes

Tomato Soup—Seven quarts of ripe tomatoes, 7 stalks of celery, 7 stalks of parsley (this may be omitted), 4 stalks of bay leaves, 10 whole cloves, 4 onions (leeks are better if one has them), 1-4 pound of butter, 6 teaspoons salt, 1 teaspoon black pepper, 3-4 cup sugar, 1 cup flour.

Cook the tomatoes, celery, parsley, bay leaves, cloves and onions together till all are tender, melt the butter and blend with the flour, add the pepper and sugar, put with the pulp, cook a few minutes and seal. When ready to use take as much of the tomato as you wish, add a pinch of soda and after it foams add an equal amount of milk. It is better to heat the two in separate pans. This is excellent.

MRS. N. R., Oregon.

Mock Mincemeat—One cup each of raisins and bread crumbs, 2½ cups chopped apples, 1 tablespoon of butter, ½ cup each of sirup and good vinegar, 1 teaspoon each of cinnamon, cloves and allspice, add water to thin and cook till the apples are soft.

MRS. ED NEELY.

Lookingglass, Ore.

Cream Sponge Cake—Four egg yolks, 1 cup sugar, 3 tablespoons cold water, 1 cup flour, 1 1-4 teaspoons baking powder, 4 egg whites, ½ teaspoon salt. Beat yolks of eggs and sugar together, till light and thick, add the cold water, sift the flour and baking powder together three times and stir in the mixture gradually; put the salt into the whites of the eggs and beat till stiff, mix with the other ingredients. Add the vanilla and do not grease the cake pan. Bake in a moderate oven 40 minutes. Use a cream frosting.

MRS. JACK C., Idaho.

Delicious Quick Caramel Pudding—One-half cup each of sugar, raisins and milk, 1½ cups flour, 1 teaspoon baking powder, mix and put in a pan greased with butter. Make a sauce of 1 cup dark brown sugar and 2 cups boiling water and a lump of butter, size of a walnut; pour this over your batter, put in the oven and bake moderately but till brown. When you dip out your pudding your sauce, too, is ready. Try it.

MRS. T. A. W., Wash.

Every Housewife
Should Know These Facts About Baking Powder

—that a big can at a low cost many times results in bakings that are unfit for food.

—that lack of proper leavening strength means failure and disappointment on bake-day.

—that one cent's worth of inferior Baking Powder many times ruins one dollar's worth of other ingredients.

—that millions depend on

CALUMET
The Economy BAKING POWDER

BEST BY TEST

not because of quantity but on account of quality—not because of price but by reason of results.

That is why the sale of Calumet is 2½ times as much as that of any other baking powder.

Buy it—try it—never fail to use it.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

THE WORLD'S GREATEST BAKING POWDER

High Points in News of the Week

While there is more active interest displayed in partisan politics and the contests between party candidates for congressional offices on the eve of the coming election than in any other issue at stake, the prohibition question is a live one. A campaign is being made over the entire United States by an organization known as the Association Against Prohibition Amendment. The effort is being made to increase in congress the number of representatives and senators favorable to modification of the prohibition laws at least to the point of permitting the manufacture and sale of light wines and beer, if not to the point of repealing this legislation. The wet association is reported to have indorsed over 200 candidates for the senate and lower house whom they consider favorable to a return of liquor. A statement by the association's secretary says that party lines are being ignored and that some of the candidates indorsed are republican and some democratic. "It should be further distinctly understood that the association's indorsement of a candidate does not necessarily mean that he has directly advocated our platform," says this statement. "It does mean, however, that for reasons satisfactory to us we are willing to indorse him."

Pre ident Harding in a recent statement to a delegation of persons favoring vigorous enforcement of the prohibition laws declared that he felt sure the people of the United States would never drastically modify the present prohibition laws.

At midnight last Saturday night the order of the department of justice, issued by Attorney General Daugherty, went into effect prohibiting the transportation and the sale or consumption of intoxicating liquors on American ships at sea. The order also prohibits the presence of liquors on foreign ships within three miles of the United States coast. Court proceedings were started last week by representatives of foreign ships in an endeavor to annul the ruling of Attorney General Daugherty with reference to foreign ships.

Up to this time the federal prohibition amendment and the accompanying enforcement laws have not been enforced on ships traveling the seas.

* * *

Another interesting feature in the coming election is the presence of 21 women on the ballot, running for congress. The women include six democrats, six socialists and five republicans. At present there is only one woman member of congress, Miss Alice Robertson of Oklahoma.

* * *

Walter E. George has received the democratic nomination for United States senator from Georgia to succeed the late Thomas E. Watson. A democratic nomination in Georgia is virtually an election. If elected Senator George will succeed Mrs. W. H. Felton, who recently received an appointment from the governor of Georgia to fill the vacancy caused by the death of Senator Watson, pending the election in November. A legal technicality has made it impossible for Mrs. Felton to be seated as a United States senator.

* * *

Premier Lloyd George of England last week tendered his resignation as prime minister, following a seven-year period of service in that capacity. Lloyd George served three years during the war and four years during subsequent reconstruction. His resignation was accepted by King George. The king immediately called Andrew Bonar Law and requested him to accept appointment as premier and proceed to the formation of a new cabinet.

One of the immediate results of the resignation of Premier Lloyd George will be the calling of an election with a view to securing the expression of the people on the question of sympathy with the new or the old premier.

Under the British system of government the recognized leader of the majority party or of a coalition of parties is selected as prime minister. Upon his selection he forms a cabinet corresponding somewhat to the president's cabinet in the United States. After a period of service if he discovers himself no longer the recognized leader of the majority party he resigns and the person who succeeds him as such leader forms a new cabinet. The cabinet of Premier Lloyd George was a coalition cabinet. His resignation followed the secession of the unionist group from his support, Mr. Bonar Law being a leader in bringing about this secession.

Reports indicate that French statesmen are pleased with the downfall of the Lloyd George cabinet. It will be remembered that during the negotiations with Germany during recent years over vital questions, including those of reparation payments, Premier Lloyd George has held out for liberality in treatment of Germany, whereas France has vigorously maintained the necessity of an unrelenting attitude toward their former enemy. It is reported also that the downfall of Lloyd George and his cabinet is hailed with delight in Turkey It was Lloyd George's policy of showing force that prevented the invasion of Thrace by the Turkish nationalist army recently and brought about the signing of an armistice with Turkey and the calling of a peace conference looking toward the settlement of the Near Eastern problems by peaceable means.

* * *

November 13 has been named as the tentative date on which the peace conference will convene to discuss the questions involved in the Near East. The conference will include delegates from England, France, Italy, Turkey, Russia and a considerable number of other nations directly or indirectly affected.

* * *

President B. M. Jewell of the federated railway shopcrafts held a lengthy conference last week with Chairman Hooper of the United States railroad labor board. President Jewell notified Chairman Hooper that the shopcrafts would soon present a petition for reopening of its case against the New York Central railroad involving establishment of the piece-work system in shops in Indiana. The meeting between the two officials was declared to be cordial and perhaps to a slight degree, indicates a coming resumption of harmony between the labor board and the railway workers.

* * *

Congressman Siegel is responsible for a statement that twice as many Japanese are entering this country now as would be permitted under the letter of the immigration law if it were strictly enforced. They are coming under the so-called "gentlemen's agreement." Congressman Siegel declared that if the gentlemen's agreement continued to permit the Japanese to come in in the large numbers that are now arriving, a Japanese exclusion act will be placed before and passed by congress before the end of the year.

* * *

On November 17 a meeting of the Open River association will be held at Pendleton, Ore., to take up problems of the development of the upper Columbia river. The use of the river for power, irrigation and transportation will be considered. Eight years have passed since any previous definite effort was made to make use of the waters of the Columbia river as is now suggested.

* * *

The government of France has worked out a proposal under which, if it is adopted, the allies would take over complete control of all German finances with the power to veto expenditures, regulate taxation and dictate the arrangement of the budgets of the German state. It is the opinion of certain French leaders that in no other way can Germany be placed on a sound financial basis and the allies be guaranteed the reparations due them.

* * *

The failure of eastern railroad systems to return cars to western lines is blamed by northwestern officials for bringing about one of the most serious car shortages of recent years. Officials at Portland declare that only 40 per cent of the orders received are being filled and that the available car supply is dwindling rapidly because loads are going east as rapidly as cars are supplied and no empty cars are being returned. The fruit industry is especially hard hit by the car shortage. It has been freely predicted that unless the shortage is relieved at once, which now seems highly improbable, fruit growers of Oregon, Washington and Idaho will lose many millions of dollars through fruit spoilage.

* * *

The department of labor last week announced that during the month of September retail food prices throughout the United States fell an average of about 1 per cent. A decrease of about 9 per cent was reported during the year since September, 1921. Prices remained, however, about 36 per cent higher than in September, 1913.

* * *

A report is gaining circulation that the Great Northern, the Northern Pacific and the Burlington railroads are contemplating a merger into one big railroad system. The proposed merger must be presented to and acted upon by the interstate commerce commission before it can become effective.

* * *

Reports indicate a greatly improved condition in the lumber industry in the Pacific northwest. In the 41 weeks ended October 14 mills holding membership in the West Coast Lumbermen's association cut a total of 3,394,000,000 feet of lumber, as compared with 2,098,000,000 feet in the same period last year.

* * *

General William Mitchell of the United States army air service has set a new airplane speed record by making about a mile at the rate of 248 miles an hour.

* * *

A report of the comptroller of the currency says there are now 8,873,000 persons in the United States having savings deposits in the banks and that these deposits total $3,046,000,000. This is an increase of about $88,000,000 over last year's.

Milk Exports Fall

The export movement of milk and milk products has been much less so far this year than last year except in the case of powdered milk. Figures of exports are:

	Condensed.	Evaporated.	Powdered.
August, 1922.....	3,220,185	8,026,531	289,737
August, 1921.....	7,556,765	22,802,953	1,598,921
Jan.-Aug., 1922..	41,612,040	97,415,935	5,283,627
Jan.-Aug., 1921..	62,659,539	116,409,527	5,051,111

Cuba was the heaviest buyer of condensed milk, with 978,468 pounds. The other large buyers were: Germany, 265,328 pounds; China, 399,220 pounds; Hong Kong, 215,700 pounds; Japan, 225,284 pounds; Straits settlements, 243,600 pounds; Philippine islands, 115,400 pounds; British South Africa, 100,600 pounds. The evaporated milk went principally to: France, 492,000 pounds; Germany, 208,395 pounds; Russia in Europe, 2,543,904 pounds; Turkey in Europe, 884,148 pounds; Ukraine, 1,956,446 pounds; Panama, 302,359 pounds; Mexico, 177,433 pounds; Cuba, 147,840 pounds; French Guiana, 177,220 pounds; China, 109,506 pounds; Straits settlements, 136,380 pounds; Philippine islands, 225,004 pounds.

Wheat Discounts

A supplementary schedule of mixed wheat discounts of the crops of 1922 and 1923 has been drawn up by the executive committee of the board merchants' exchange association. The schedule is similar to that adopted by the Spokane association and it is regarded as probable to be adopted by the merchants' association of Seattle. This schedule became effective in Portland September 25. The following discounts applied to cents per bushel:

	Over 10% to 15%	Over 15% to 25%
Northern spring—mixed with		
Dark hard winter wheat	3	4
Hard winter	3	4
White or white and red wheat	5	6
Red spring—mixed with		
Any other red wheat	3	4
White wheat	5	6
Hard winter—mixed with		
Dark northern spring wheat	3	4
Northern spring	3	4
White or white and red wheat	5	6
Yellow hard winter—mixed with		
Any other red wheat	3	4
White wheat	5	6
Red winter—mixed with		
Any other red wheat	2	3
White wheat	3	4
Western red—mixed with		
Any other red wheat	2	3
White wheat	3	4
Soft white and western white—mixed with		
Any red wheat	3	5
Western white—mixed with		
Any red or Durum wheat	3	5

Wheat containing over 25 per cent of other classes not deliverable on contracts.

Bits of Fun for Everyone

Not Unlikely.

Weary Willie—I may be poor now, but when I was young I had me own carriage.

Leary Louise—Yep, and yer maw pushed it.

Some Service.

"Now, suh," said the colored bellhop at the Southern inn. "When you-all wants t' be called in th' mohnin', jes press de button at de head ob youah bed an' we'll come up an' call you'."—Orchard and Farm.

Premonition.

"What's de name ob youah hoss, Sam?"

"Blue Streak am his name, and yo' might as well lay yo' pile on him now. He am sho gonna win dis race!"

"G'long, niggah, wid yo Blue Streak, Don't ah know fast colohs kaint run!"

In Extenuation.

"So your nephew has been sent to the legislature?"

"Yes," replied Farmer Fumblegate. "But I hope you'll believe me when I tell you that all the time he was living with us he never stole anything."—Country Gentleman.

Near Tragedy.

"My, what an awful waste!" exclaimed the garbage man.

The fat woman, just passing, was so angered that she struck him over the head with her umbrella.—Orchard and Farm.

Very Considerate.

"Why do they put corn meal on a dance floor?

"To make the chickens feel at home."—Exchange.

The Leader.

It was the custom of the congregation to repeat the Twenty-third psalm in concert, and Mrs. Armstrong's habit was to keep about a dozen words ahead all the way through.

A stranger was asking one day about Mrs. Armstrong. "Who," he inquired, "was the woman who was already by the still waters while the rest of us were lying down in green pastures?"—Metropolitan.

A Bar to Bigamy.

"Boys," interrogated the Sunday school teacher, "can any of you quote a verse from Scripture tto prove that it is wrong for a man to have two wives?"

"Well, Thomas," encouraged the teacher as a bright boy raised his hand.

Thomas stood proudly up.

"'No man can serve two masters,'" he quoted.—Orchard and Farm.

Getting Better.

For years she heard her husband say:
"Can't you make bread like mother used to make?"
At last she cried: "Of course I can, you jay,
When you make dough like father used to make."

Resignation.

"Dorothy," cried mother, "if you aren't good you will never go to heaven. Think of that!"

"Oh, well," answered Dorothy, "I've been to the circus and the chautauqua already. I can't expect to go everywhere."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4157. Misses' Dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4½ yards of 40-inch material. The width of the skirt at the foot is 2 1-8 yards. Price 10 cents.

3894. Girl's Dress. Cut in four sizes: 10, 12, 14 and 16 years. A 12-year size requires 4 1-8 yards of 42-inch material. Price 10 cents.

4142. Boy's Play Suit. Cut in four sizes: 2, 3, 4, and 5 years. A 2-year size requires 1½ yards of 40-inch material. To trim as illustrated requires 5-8 yard of contrasting material 32 inches wide. Price 10 cents.

4154. Girl's Dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 3½ yards of 32-inch material. Price 10 cents.

3713. Boy's Coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 2 5-8 yards of 44-inch material. Price 10 cents.

4139. Child's Dress. Cut in four sizes: 2, 4, 6 and 8 years. A 6-year size requires 3 1-4 yards of 32-inch material. To trim as illustrated requires 5-8 yard of 32-inch contrasting material. Price 10 cents.

4145-3847. Lady's Costume. Coat 3847 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4145 cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. To make the suit for a medium size will require 5 1-8 yards of 54-inch material. The width of the skirt at the foot is 3 1-4 yards, with plaits extended. Two separate patterns, 10 cents for each pattern.

4159. Lady's Dress. Cut in seven sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 yards of 40-inch material for the dress and 1 1-2 yards of 32-inch material for the tucker. The width at lower edge of the dress is 2 yards. Price 10 cents.

3975. Lady's House Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4½ yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

4136. Lady's Waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 1-8 yards of 32-inch material. Price 10 cents.

4147. Lady's Skirt. Cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 27-inch size requires 2½ yards of 44-inch material. The width at the foot is 2 3-8 yards. Price 10 cents.

4136. Lady's Apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 3-4 yards of 27-inch material. Price 10 cents.

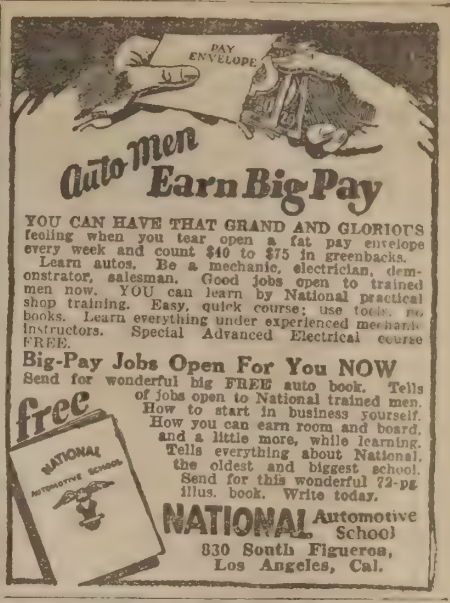
Just Folks

A new experience is a new birth. A new experience that reaches the deeps, makes a man or woman a baby again.



Old experiences in and of themselves alone do not solve the problem of the new experience.

Rebellious forces may be aroused. Dumb despair may put in its deadly work. Recklessness may show its face.

No knowing what unexpected traits of mind and heart may spring up during the crucial experience.

It is time for gritting the teeth. It is time for calling out all the reserves of the soul and having done all, to stand.

When the shock is over, when the battle is won, more of the fullness of life will be added to your days.

When answering advertisements don't fail to mention this paper.

Pearl Beads An Attractive Prize

Pearl beads are always in style and were never as popular as they are right now, and just think, only two 3-year new or renewal orders will win for you this dandy 24-inch string of graduated Pearl Beads. There is a string of these pretty beads waiting for you — get yours while the getting is good.

BEDTIME STORIES

By THORNTON W. BURGESS.

DIGGER THE BADGER ARRIVES.

The little people who live down on the Green Meadows were envious of the little folks who live in the Green Forest. There was Prickly Porky Porcupine, who came down from the North Woods, and there was Unc' Billy Possum and his family, who came from O' Virginny.

Johnny Chuck and Jimmy Skunk and Danny Meadow Mouse sat in Johnny Chuck's doorway taking it all over.

"It isn't fair," said Johnny Chuck, carefully brushing sand from the seat of his trousers. "It isn't fair at all."

Jimmy Skunk stretched himself out lazily and yawned. "That's right, Johnny Chuck," said he. "Anyway, the Green Meadows are the prettiest."

"Of course they are," put in Danny Meadow Mouse. "Why there isn't anywas nothing in the world so beautiful as Green Meadows."

"All the daisies growing near," nodded Jimmy Skunk, for he, too, thought there was nothing in the worl dso beautiful as the Green Meadows.

Johnny Chuck stood up and looked away across the Green Meadows to the Crooked Little Path coming down the hill. Suddenly he straightened up on tiptoes and shaded his eyes with his hands.

Nearer and nearer came the stranger.

"Who's that coming down the Crooked Little Path?" he exclaimed.

Danny Meadow Mouse stretched as high as he could, but Danny is so short that though he did his best he couldn't see over the meadow grass.

"Climb up on my shoulders," said Johnny Chuck, who is always good-natured. So Danny climbed up on Johnny Chuck's shoulders. He looked where Johnny Chuck pointed and then he nearly fell off, because, you know, he was so excited by what he saw.

"Hi, Jimmy Skunk! Here comes a stranger, and he's coming right straight down into the Green Meadow!" cried Danny.

Jimmy Skunk yawned. Then he got up slowly and lazily to look for himself. Danny Meadow Mouse was right. Coming down the Crooked Little Path was a sure enough stranger.

Nearer and nearer came the stranger. He had short legs, very short legs, but they were the stoutest legs that Johnny Chuck or Jimmy Skunk or Danny Meadow Mouse had ever seen. And the stranger was quite as stout as his legs. He wore a grayish coat with a light-colored waistcoat, and his face was sharp and pointed. He came along slowly as if he had come a great way and was very, very tired. When he reached Johnny's Chuck's dooryard he stopped.

"How do you do?" said Johnny Chuck in his most polite manner.

"Howdy," replied the stranger gruffly.

"Have you come far?" inquired Jimmy Skunk.

The stranger sighed. "I should say I have. I've come out of the Great West," he replied.

"And may I ask who you are?" inquired Danny Meadow Mouse in his squeaky little voice.

"Sure, son," replied the stranger, his eyes twinkling. "I'm Digger the Badger."

Pike's Peak or Bust

(Continued from page fourteen.)

matters, the rest of us decided to wait till morning. That was our mistake. Lando's not to blame for it, though. As much my fault as anybody's. Now it seems too late to do anything."

"Did two other men come with your visitors?" inquired Sanders. "I haven't heard you mention any others. But Jeeters had two partners."

The miner shook his head. "He said somethin' about some pards of his'n. But I understood they hadn't come in yit."

Ere long it developed, however, that the partners of Jeeters had reached this mining camp about the same time that their leader had appeared. Whether the three had actually arrived together was not known. But they had spent the night—or part of it—with miners here. And it soon came out that they had followed exactly the same course that their leader had followed.

Each of the two had stopped at the camp of a lone miner, whose claim he, at the time of going to bed, had been on the point of buying, at the miner's own price. But, when morning came, the supposed buyer was gone, leaving the miner poorer by a bag of gold dust and some provisions.

When the three men thus robbed had got together to compare notes it came out that Jeeters had visited the other camps after dark. There, while pretending not to be acquainted with his partners, he had managed to have at least a few words with them, in private. That was doubtless to warn them that there was at least one Clear Creek miner already here, and that the three fugitives from justice would not dare show themselves in this camp in daylight.

At any rate, the rascally trio were gone, and nobody knew in what direction.

"Strangest thing to me is that they'd have the—the brass to show their faces in a big camp like this," Cooper remarked thoughtfully.

"So it looks to me, Mr. Cooper," OrLando said. "But then we must keep in mind that criminals never have first-class sense. If they did have, they wouldn't be criminals."

"That must be true, Lando. Yes, it is true, I've no doubt. In fact, I guess you'll never utter a truer word."

"If that's the case, are men really responsible for being criminals?" asked Sanders.

Here Esau spoke: "Tell you my idy, boy.s Men don't turn crooked because they hain't got good sense. They may ha' had as good sense as anybody when they turned crooked. But the Old Scratch they went pardners with up and stole their sense away. Sorter like the fellers these men slep' with stole about all they had. No matter how much sense a feller's borned with, the minute he quits usin' it he begins to lose it. Sleepin' with the devil, I've noticed, or chasin' 'im around a stump, either, is death on brains."

(To be continued.)

Hot School Lunches

By MERYL V. NAPTON.

Every household magazine today publishes articles on the malnutrition of children, but the practical way to overcome it is more to the point. Children are undernourished from one or two causes or both, improper food or food improperly prepared. Dr. Copeland states in one of his articles that cooking for children, vegetables especially, is a fine art. The vegetable should be cooked in a small amount of water and the water allowed to evaporate as the vegetable cooks do. By this method all the vitamines and mineral salts, so necessary to body growth and vitality, are retained.

School children, particularly those in rural districts, lack proper food. They must get up early, eat an early breakfast, walk or ride a long distance to school in all kinds of weather and eat a cold lunch at noon.

From observation I know these lunches more often contain improper food poorly prepared than not. Many times they are made up of the left-overs of the breakfast table with a huge piece of cake or pie to tempt the appetite. I have seen lunches which were composed of a hard fried egg between a baking powder biscuit with a piece of mince pie to top it off. Can you imagine anything more indigestible? The cake or pie is usually eaten and the rest discarded. No wonder the youngster is irritable and perverse or slow at his studies in the afternoon and tired out by night. Every cell in his growing body is crying out for nourishing food.

How to give the growing child this proper food is the question at issue. The hot lunch has solved this problem in many one or two room country schools. Of course, it is impossible as well as impractical to serve a complete hot lunch in the school room, but one or two simple, nutritious dishes can easily be prepared and served, letting the youngsters supplement it with light bread sandwiches, fresh or stewed fruit and a piece of plain cake from home. There is no harm in cake if it is preceded by something more substantial.

One school in which I taught was equipped for hot lunches by the parent-teachers' association. By giving entertainments of various kinds they were able to collect enough money to purchase a two-burner oil stove with oven, a stew kettle, a large fork and spoon for use in cooking, a teakettle, dishpan, cups and saucers, soup plates and aluminum spoons. Each mother hemmed a tea towel and some father made a cupboard for the dishes and supplies. A small cellar was constructed in the school yard, where vegetables donated by the parents were stored. A small fund was placed at the disposal of the teacher to buy the few foodstuffs which could not be raised. This fund was raised by subscription or through an entertainment.

The food was prepared and served by the seventh and eighth grade girls under the teacher's supervision. Two girls worked together one week, two the next, and so on. These girls also cleaned up and washed the dishes, assisted by two girls from the lower grades. Boys might be persuaded to help with this part of the work and thus even things up.

Some of the hot dishes served were bacon and beans, soups of all kinds, cocoa, baked apples and potatoes, hash and rice.

One "Half-Century" Sire Left

The death some time ago of Judge Segis, senior herd sire at Hollywood farm, lends added interest to the fact that he was one of two northwest Holstein bulls which during the first six months of 1922 were added to the list of sires having 50 or more A. R. O. daughters. Further, it gives point to the statement that there is now living but one such bull in the northwest—Matador Segis Walker, senior sire at Carnation Stock farm.

"The Judge," with 62 A. R. O. daughters; "Mat," with 64, and Johanna McKinley Segis, with 94, are the only three bulls in this section (there are only five on the Pacific coast) in the "half century" list, and it is notable that these three are closely related to King Segis, admittedly one of the greatest bulls of the breed—Judge Segis and Johanna McKinley Segis being sons and Matador Segis Walker being a grandson. Johanna McKinley Segis is far enough along toward the "century" mark so that his attainment of it seems assured; Judge Segis has enough daughters living and on test so that Hollywood farm feels confident he will attain it, and Matador Segis Walker, whose real work began much earlier in life, can scarcely fail to do so.

Judge Segis was 12 years old at the time of his death, which was attributed to entirely natural causes. Judge Lyon, his maternal half brother, for which the late Fred S. Stimson scoured the entire country to secure the ideal bull to mate with years, but the quality shown by his get Judge Segis' daughters, now becomes senior herd sire. He, too, is well along in has convinced his owners that his selection was an admirable one.

SHIP GUERNSEY BULL EAST.

Fred J. Jenner of Oso, Snohomish county, recently shipped to J. H. Hammond of New York state the Jenner Guernsey herd sire, Masher's May King of Dellwood. Mr. Jenner secured the bull from Mr. Hammond in 1917 as a 4-month-old calf. He has been in use continually in the Jenner federal accredited Guernsey herd. All of the cows in the Jenner herd at the present time are daughters of this bull with the exception of two of the most desirable of their foundation cows. It cost $469 to ship the bull east by express, including insurance charges. "We feel that May King has served us and Washington well," says Mr. Jenner. "He has left us a beautiful herd of his daughters and a number of his sons are in herds throughout the state, especially in Snohomish county."

M'LEOD COW WINS MEDAL.

Double St. Mawes, a senior 4-year-old Jersey owned by David McLeod of Bellingham, recently became a gold medal cow. Her record of 10,636 pounds of milk and 683.53 pounds of fat was made under average farm conditions with two milkings a day. She was never kept in a box stall and received no feed except pasture and native hay with a grain ration. The record was made in 305 days instead of 365 as was allowed and she carried a calf 230 days during the test. Double St. Mawes was sired by St. Mawes of Eadendale, an Ed Cary bull. She is out of Missionary St. Mawes, owned by Judge Hardin of Bellingham.

MAKE GOOD SHOWING.

There are 22 registered Holsteins out of the 35 milch cows on the dairy farm of Dykstra and Wynstra, a short distance from Everett. The herd sire is Aaggie Jewel Fobes, an animal sired by Chief Fobes, a Yakima bull. Native pasture has given good results for a big part of the year and some of the best animals were shown at the Live Stock show at Everett. These animals received no special fitting, but were brought in from pasture, and made a good showing against some heavy competition.

STARTS GUERNSEY BREEDING.

King county, Washington, is to have a new Guernsey breeder, since Emery Ashbury, who recently resigned as United States consul of Wales, has purchased the Ostrem ranch at the Edgewood interurban station, King county. He has begun the establishment of a dairy farm and has secured an 18-month-old bull of Dr. A. McCrae Smith breeding from William J. Morris of Buckley. The animal is registered as Reedie of Bryn-y-Fred and will head a herd of grade Guernseys.

COMPLETES 300-DAY RECORD.

Lady Stewart of Menie, the 17-year-old cow of the E. W. VanTassel herd at Wenatchee, has recently completed her 300-day record with 14,679 pounds of milk and 524.7 pounds of fat. She carried a calf 180 days out of the 300, which gives her one of the highest records, if not the highest for any cow of her age in all breeds.

MORTON SELLS JERSEYS.

The bidding was brisk at the sale of 22 head of purebred Jersey cattle by J. R. Morton of Winlock. The top price was $479, which W. T. Churchill of Tenino paid for St. Mawes Golden Vandillah. The total receipts were about $3500.

Northwood Herd of Milking Shorthorns
The general farmer's cattle are the kind that will produce milk and beef. Milking Shorthorns fill this requirement. We want to place out bull calves where they will improve the herd. We are pricing our calves within the farmer's means. Will give terms on satisfactory references. We solicit your inquiries.
NORTHWOOD FARMS,
Redmond, Washington.

Milking Shorthorns Roan Fairholm and 13 of his get won five championships at Montana and four of the five herds and groups at Washington state fair.
ROCKROSE HERD, Salmon, Idaho.

Holstein Bulls sired by son of world record cow, from dams sired by brother to Segis Pietertje Prospect. Prices low.
H. R. BOOMER, Payette, Idaho.

Poland Chinas
We have for sale a dozen young registered, large type Poland China boars farrowed last March and April. These are sons of the great Iowa sires, Chief Wonder, Big LeSeur, Big Evolution, Grand Evolution and Rare Wonder. Their dams were imported from Iowa last February and are from some of the most noted herds in that state. Prices from $25 to $50. Send in your order and shipment will be made immediately followed by certificate of registry.
ILL-Aho Farms
Box 396, Jerome, Idaho.

The Big Wonder Herd
of big type Poland Chinas, offers a few choice boars, ready for service; sired by such boars as the 1200-lb. Giant Buster and Saint Peter, a great son of Peter Pan. Satisfaction guaranteed on all orders.
E. O. LOE, Silverton, Ore.

Stillings' Poland Chinas
Young boars and weaned pigs at farmers' prices, from prize winning stuff. My pigs please everywhere.
H. J. STILLINGS, Hermiston, Ore.

Spotted Poland Chinas Two three months old boars for sale at $25 each. Also one large boar for sale or exchange after Nov. 15.
J. D. TAGGARD, Waitsburg, Wash.

MAPLE LEAF CHESTER WHITES
Breeding stock and weanling pigs of both sexes. Chief Justice 2d, Big Buster, Buster Giant and other best blood lines.
ED SCHOEL, Albany, Ore.

O. I. C. SWINE
Choice weaned pigs, large, smooth, easily fattened. Shipped on approval.
RINGGOLD FARM.
J. H. WEST, Centralia, Wash.

Duroc Boars for Sale
Winnings at recent fairs has fully demonstrated that I have the greatest breeding boar in Idaho—Path Sensation—I have a few spring boars ready for service, sired by this wonderful sire. Visit my herd or write me.
J. P. HUNT, Gooding, Idaho.

Bred Duroc Gilts and weaning pigs. Great Wonder and Sensation breeding. All eastern bred stock. Satisfaction guaranteed.
S. D. CORNELL, Grandview, Wash.

River Banks Berkshires
Long, smooth, deep, grand champion kind. Strong in the blood of most popular families of nation.
RIVER BANKS FARMS, Grants Pass, Ore.
CLYDE E. NILES, MGR.

Choice Berkshires
Few choice boars and gilts for sale; sired by Festline's Rus, junior champion Portland show.
PEARL WOOD, Gervais, Ore.

Riverby Orchard Berkshires
Oldest established Berkshire herd in the northwest. Young pigs and bred sows for sale. Address

Guaranteed Money-Savers!

No Money Now – Pay on Arrival!

You couldn't ask for any better value than these guaranteed items. Read carefully every item on this page, select what you want, and send for it, at our risk. These prices may amaze you—they are so low—but you will be even more astounded when you see the actual merchandise. Remember, you are under no obligation—don't send a cent with your order.

Just letter or postcard brings any of these smashed price bargains. Merely give name and number of each article you want. Also state size and write your name and address plainly to avoid delay. Pay nothing till goods arrive. Then only the bargain price and postage. If you are not entirely satisfied, return the goods and we will cheerfully send back your money.

Smart Coat of All Silk Plush

$9.98

The exquisite softness, the deep pile of this handsome material is hard to distinguish from seal fur. And you may ask any one how this sturdy material wears. It is built for real service. Where else did you ever hear of an all-silk plush coat at our price? This is a handsome model cut on fur coat lines, full 36 inches long, with self material belt, turn-back cuffs, and deep shawl collar. Durably lined with black twill and finished in every detail. Misses' sizes, 16 to 20—women's, 34 to 44. Order by No. 53E5843. Send no money. Pay $9.98 and postage on arrival.

Fine Fur-Trimmed Coat *for* Girls Only

$3.98

A sensational bargain—a handsome coat of Pressed Velour in navy blue or brown, regular $7 value. Has collar of genuine Kit Coney, which buttons snugly around throat. Belt all around, two novelty pockets and two buttons at back. Sizes 7 to 14 years. Order Brown by No. 53E5595. Navy by No. 53E5596. Send no money. Pay $3.98 and postage on arrival.

Order similar style with handsome plush collar, sizes 2 to 6. Order black by No. 53E-5581. Order brown by No. 53E5582. Price either color, $2.98. Pay bargain price and postage.

Manchurian Wolf Fur Scarf

B'g Value

$4.49

In Black or Brown

Sharrood offers an unusual value at a price within the reach of every one. This scarf is about 46 inches long and 12 inches wide. It is stylish as wel las warm. The lining is good quality satin, and there is an extra ruching laid around the neck inside, so as to protect the fur from wearing. Order black Manchurian wolf scarf by No. 53E5193. Order brown by No. 53E5194. Send no money. Pay only $4.49 and postage on arrival. If not satisfied your money will be refunded. Be sure to state color wanted.

LEE
CORDS
at new low prices set new standard of tire value

The new startlingly low prices of Lee Cords stagger all previous standards of value. Car owners know that Lees have always been the highest quality tires on the market.

Now, with prices slashed to the bone, Lee Cords are sweeping the field. A great wave of Lee buying has set in. Lee superiority is recognized as greater than ever.

Lee Cords are better looking, longer wearing and considering their greater mileage, more economical than any other cords. Carried in all sizes by leading dealers.

An exceptionally sound investment. Look into it today.

Lee Standard Cords—Zig-Zag Tread		Lee De Luxe Cords—Zig-Zag Tread—10% Oversize	
30 x 3½	$14.95	32 x 4	$29.15
32 x 4	25.55	33 x 4	30.05
33 x 4	26.85	34 x 4½	39.50
34 x 4	27.45	33 x 5	46.95

Car Owners: Good dealers in most towns handle Lee Tires. If there is no Lee dealer near you, write us for address where you can be supplied. The Lee line is complete—Cords, Puncture-Proofs, Fabrics and Government Specification Tubes, both white and grey, in all sizes.

Dealers: Valuable territory is still open for progressive business men who recognize the advantage of handling a well known product on a strictly fair and square basis.

Which Protein Feeds Are Best for Hogs?

By JERRY SOTOLA, Department of Animal Husbandry, W.S.C.

The purpose of certain recent hog investigations at the Washington agricultural experiement station was to ascertain, as far as possible, the value of digester tankage, fish meal and linseed oil meal, fed singly and in combinations, as constituents of balanced rations of fattening pigs. The study deals with the following questions: (a) Do protein-rich feeds from vegetable sources, as linseed oil meal, contain proteins of the proper quality to supplement the proteins of the smaller grains and of their byproducts? (b) Are the animal byproducts, as tankage, more effective protein supplements than plant byproducts, as linseed oil meal? (c) Would combinations of tankage with linseed oil meal and of fishmeal with linseed oil meal prove more effective as supplements than any of them used alone?

From our analysis of the feeds used during these feeding trials, and with digestion coefficients worked out with pigs for similar feeds, it was calculated that the feeds contain the following percentages of digestible crude protein: Barley 5.31, millrun 15.64, linseed oil meal 31.15, digester tankage 36.20 and fish meal 41.36. In all of the feeding trials the grain mixtures have been adjusted to supply a sufficient, but not an excessive amount of protein. As the pigs gained in weight the proportion of the supplement was decreased.

The experiments were conducted with 47 head of purebred Poland China and Duroc Jersey pigs, farrowed on the college farm. The distribution in the various lots was uniform as to breed, type, condition and quality as far as possible. No runts were included in the test, and all pigs were hand-fed twice daily, and besides had free access to a mineral mixture consisting of five parts steamed bone meal, four parts air-slacked lime and one part of salt, fed in self-feeders.

All lots were fed a base grain mixture consisting of three parts by weight of rolled barley and of millrun. Lot 1 received tankage in quantities sufficient to balance the ration. Lots 2 and 3 were fed fish meal and linseed oil meal, respectively. Lot 4 was fed a protein supplement consisting of equal parts by weight of tankage and linseed oil meal. A summary of the 110-day test is given in the table on this page.

From the table it is apparent that the fish meal lot (lot 2) made the highest average daily gain of 1.074 pounds, followed by 1.060, for those fed tankage and .974 pounds for those receiving equal parts of tankage, linseed oil meal. The lot fed linseed oil meal made the owest gain of .922 pounds. The grain required to produce 100 pounds gain folows in the same order. At the close of the test, the pigs in lot 3 were in slightly higher condition than those in lots 1 and 2, but they were "chubbier" and not grown out as well. The daily gains in the respective lots are not high and undoubtedly could have been increased by more liberal feeding, but it would have meant the waste of feed. Only such quantities of feed were fed daily as the pigs would consume completely, no feed being permitted to stagnate in the troughs.

The results indicate that there is very little difference in the feeding value of tankage and fish meal when fed on the basis of their digestible protein. This is an agreement with the results of the two previous years. The vegetable protein supplements did not produce as good gains and as satisfactory growth as the protein rich feeds of animal origin. The mixture of equal parts of tankage and linseed oil meal produced gains only seven pounds greater for the entire 110-day period than the pigs receiving lineseed oil meal, and appears to have no advantage.

From the economic standpoint the fish meal gave the best results. This is largely due to the lower price of this feed and to its higher content of digestible protein, smaller quantities being necessary to obtain a balanced ration. The mixture of tankage and linseed oil meal was least economical. A gain of 100 pounds cost $6.68 when fish meal was fed as the protein supplement. The gains of the linseed oil meal lot cost $7.40. The results with fish meal are significant because of the availibility of this feed in the Pacific northwest section.

Summary of Dry Lot Feeding Experiments December 4-March 23, 1921-22; 110 Days.

	I.	II.	III.	IV.
Number pigs	12	12	12	11
Average initial weight	50.240	51.193	50.000	51.319
Average final weight	166.889	159.278	151.403	158.439
Total gain	116.649	118.085	101.403	107.120
Average daily gain	1.060	1.074	.922	.974
Feed per 100 pounds gain—				
Barley	286.95	289.25	314.81	306.02
Millrun	96.01	96.39	105.19	101.58
Tankage	53.79	.....	.....	33.78
Fish meal	.....	45.80	.....	.....
Linseed oil meal	.....	.....	81.52	33.78
Mineral mixture	1.93	1.09	.41	1.93
Total	438.68	432.53	501.93	477.09
Average daily ration—				
Barley	3.043	3.105	2.902	2.981
Millrun	1.019	1.035	.970	.989
Tankage	.570	.....	.....	.329
Fish meal	.....	.492	.....	.....
Linseed oil meal	.....	.....	.751	.329
Mineral mixture	.020	.117	.004	.117
Total	4.652	4.749	4.627	4.745
Cost per 100 pounds gain	$7.16	$6.68	$7.40	$7.49

Feed prices per ton: Barley, $30; millrun, $20; tankage, $70; fish meal, $60; linseed oil meal, $40 mineral mixture, $20.

Squirrels a Pest

To the Editor: I have been told that if I should write to you you would help me in the squirrel question. I live in the Rock Lake township. I have 490 acres this year. The squirrels ate 50 acres of fall wheat. I put out 22 ounces of strychnine, but the neighbors around me would not cooperate and put out poison, so the squirrels came in, anyway, and I could not keep them out.

If everybody would put out poison it would not be so hard. The squirrels destroy more birds than do some animals upon which there is a bounty.

Now I say, make a man poison the squirrels or make him pay for having it done. This is the only way we will ever get rid of the pests. E. CALVERT.

Amber, Wash.

TO COMBAT FOUL BROOD.

Beekeepers declare that the one million dollars' worth of honey now produced in the state could be greatly increased several times if foul brood, poisonous orchard spray, etc., could be eradicated.

If You Are in Doubt, Vote No

THE FARMER is asked, "What about the initiative and referendum measures that are to be voted upon November 7?" Our invariable reply is that the voter should vote on all the initiative or referendum measures on the ballot; that he should vote for those measures only that are clearly understood and have his approval.

On the other hand, if a voter has not had time or opportunity to make a thorough study of other measures, and to come to an independent judgment, he or she should vote NO on them.

That is the safe rule of action—vote yes for those things that you clearly understand and approve; vote NO against those things that you do not approve or do not clearly understand.

Unless that rule is generally applied by the voters, the people will wake up and find that a great deal of unsound and costly legislation has been put over in their state by small, aggressive minorities. One minority will be for one thing; another minority will want another; and various other minorities will also be active in putting over their pet measures. The rule we have just advised will block that danger, and it is tremendously important that it be blocked at this time, when taxes are burdensome to the point of confiscation, yet aggressive, well-organized minorities are back of initiative and referendum measures that would still further increase taxation.

Once more, for safety, and in the interests of good government—vote NO on every initiative or referendum measure that you do not approve or that you do not clearly understand. Vote on all these measures. Your vote is needed—against measures that you do not clearly understand or approve, to save your state from minority manipulation, much of it conceived in selfishness, some of it in ignorance and some of it in pursuit of dangerous fallacies.

Who Is Selfish?

The charge is made by advocates of 30-10, initiative No. 46, that opposition to the bill comes from "selfish interests."

What is the truth?

Opposition is voiced by the farmers' union of Garfield county, the president of the Cowlitz county grange, the superintendent of schools of Franklin, of Douglas and of Lewis counties, the farmers and taxpayers of Lincoln, Adams, Whitman, Walla Walla, Columbia and other wheat-growing counties, the taxpayers' associations, composed of parent-taxpayers in 25 counties of the state, the county assessors, the state superintendent of public instruction, the state tax investigation committee, the public school administrative code commission, the president of Whitman college, school boards, school administrative officers, commercial clubs, civic bodies and many of the leading parent-teacher workers and officers of the state.

Can these be counted as representative of "selfish interests"?

On the other hand, the principal support for the measure comes from the Washington Education association, an organization exclusively of teachers, which is raising, by its own announcement, a fund of $10,000 to finance the campaign for the bill.

And of the extra $3,800,000 state tax provided for by the bill, 67 per cent, or $2,470,000 will go for teachers' salaries.

This is what corporations call practical idealism.

Initiative No. 46 is a selfish interest bill. Vote NO.

LEAGUE OF TAXPAYERS' ASSOCIATIONS.

High Line Canal

Take Water From Tieton Dam

One of the most important high line diversion irrigation canals is that desired to convey the waters stored in the Tieton dam at Rimrock onto 37,000 acres of land lying in the Wenas, East Selah and the Moxee valleys, in central Washington. Engineers have been at work on the plans for the past four or five years and they were recently reviewed and approved by national experts. These plans call for an irrigation canal 50 miles in length that carries 500 second feet of water under two rivers and through three miles of tunnels before delivery on the lands.

The intake of the canal will be on the Tieton river about five miles from its mouth. The canal will go along the Tieto to a point where that stream empties into the Naches and will convey its waters under the Naches through a siphon. The first tunnel will pierce the divide between the Naches and Wenas valleys. This tunnel will be three-fourths of a mile in length.

Emerging in the Wenas the canal will follow the contour of the basin of the Wenas creek around to the headwaters and down on the other side, and 10,000 acres of land will be irrigated in this section. In making this loop there is a tunnel through a hill a half mile in length.

Reaching the mouth of the Wenas, the water will be conveyed by a siphon over the Yakima river into the East Selah, where it is proposed to irrigate about 5000 acres. The third tunnel will be two miles in length and will bring the water into the Moxee basin where it is proposed to irrigate about 22,000 acres of land lying above any other canals or pumping units now constructed. In the Moxee there will be four pumping units with an aggregate of 6600 acres. The rest of the land will be irrigated by gravity flow.

The lands in question have been organized into the Yakima irrigation district, which has contracted with the reclamation service for 160,000 acres of feet water, which is to be delivered from storage at Rimrock. This project, like many others, is awaiting the passage of the Smith-McNary bill, by congress.

PLANS SILVER FOX FARM.

Louis Gottlieb has leased from the city of Walla Walla 10 acres above the present water system intake and announces that he will establish a silver fox farm. He is to pay $50 a year for five years for the lease.

See What Washington Escaped!

Many of our readers will recall that when the Carlyon $40,000,000 road bonding measure was before the voters two years ago advocates of that extravagant scheme argued that the spending of $40,000,000 would be in the interest of true economy, because when concrete roads were built the item of maintenance would be cut out and there would be a big saving over the upkeep of graveled roads.

At the time THE FARMER exposed the fallacy of that argument. We showed by actual records that the cost of maintaining, repairing and rebuilding concrete roads per mile was higher than the cost of maintaining gravel roads.

During the Carlyon bill campaign its advocates had a great deal to say about the inspiring example set by California; how far Washington was behind that progressive state. It is true that California plunged in the building of concrete roads, and now, according to the report of its highway commission, is paying dearly for its recklessness. The highway commission reports that California will need the colossal sum of $65,000,000 in the next five years for highway reconstruction and resurfacing. Most of this giant expenditure is needed for the reconstruction and resurfacing of about 1400 miles of concrete pavement that is crumbling for one reason or another. More than 228 miles of concrete have already been resurfaced with asphaltic concrete and it is estimated that next year 300 miles will be resurfaced with blacktop.

Editorial comment by the Los Angeles Times is illuminating. That newspaper says: "The repair of the base alone is estimated at $5,000,000. The patchwork designed to cover up the early errors of the commission is to be applied to 1400 miles of state roads during the five-year period of the budget, and is to cost $33,000,000, which is in excess of $23,500 a mile."

These figures are interesting in view of the fact that some of the advocates of the Carlyon bill contended that concrete roads could be built for about the money that California now must pay to repair concrete roads. Speaking of the original cost, the Times says: "To this is to be added $23,000 more a mile, and the prediction is freely made that we shall not have a satisfactory or durable road when this further sum is expended."

Further comment by the Western Highway Builder on California's dilemma proves that the voters of Washington were wise when they defeated the Carlyon bill. It finds that the voters of California have approved three bond issues totaling $73,000,000, and goes on to say: "At each succeeding election the principal argument advanced in support of the issues has been the crying necessity for the completion of a state system and the assurance that the issue in question would accomplish this objective." That authority then says that an additional $80,000,000 will be needed to complete the system of state highways, and "thus we will have an original cost of $150,000,000, plus the item of reconstruction of the present system, which represents in the neighborhood of $65,000,000, or a grand total of $200,000,000."

Into a like quagmire of indebtedness the Carlyon boosters would have led the people of Washington. Fortunately our people rejected that unsound advice and Washington is now on the safe and sane basis of paying as it goes for its state highways.

Economic Substitute for 30-10 Plan

The practical problem brought to the front by the 30-10 school plan simmers down to the fact of aiding 7768 children in the back-country districts who are now getting less than eight months' schooling.

In place of raising $3,750,000 additional in state taxes, would it not be better and far more economical to render financial aid directly to these 7768 children? There are 149 school districts now giving only six months' schooling. The direct award of $1000 to each of these districts would furnish immediate relief and the cost would be only $149,000. It is possible that as many as 500 districts out of the 2595 districts in the state might need help. If $1000 were given to each (and many of them would not need much) the total would only be $500,000. Compare this with the $3,750,000 which the 30-10 plan proposes to raise.

When any district can not provide the minimum required education without going above the legal rate of 10 mills, in the proposed substitute plan, it shall apply to the superintendent of public instruction for aid. The state has invested funds derived from the sale of school lands amounting to $16,340,000, the interest of which amounts to $710,776 a year. It is proper that this interest, wholly or in part, should be used for the relief of needy school districts and their children. President Stephen B. L. Penrose of Whitman college, who proposes this substitute plan, points out that all that is required in such cases is for the legislature to give authority to the superintendent of public instruction, under the direction of the state board of education, to use the interest derived from these invested funds for the relief of needy school districts that can not provide the minimum of education without exceeding the legal levy.

Even if $500,000 would be required for the needy rural schools, that would come from present invested funds, would require no additional taxation and could be distributed without delay to the district which actually needed it. If such power should be given to the superintendent of public instruction the inequalities which are found at present would disappear. Here is a simple, economic and effective solution of the problem which has the merit of requiring no increase of taxes and of relieving distress promptly.

Yakima Lambs Restore Optimism

From the time that the first trainload of "hothouse" lambs went to Chicago early in July, Yakima lambs have been rolling steadily to market all summer and fall, and the unusually high prices which have obtained are large factors in the restoration of optimism among the woolgrowers of the valley.

Yakima lambs have repeatedly topped the Chicago market, as recently when C. H. Ballard sold 1131 head weighing 75 pounds each at $14 per hundred, and Ernest Berg 1104 head weighing 74 pounds each at the same figure. The peak price of the season was $14.75. Early in October there was a slump to $13.75, due probably to the fact that 34,000 head were offered in one day, but the market recovered and higher prices were again expected.

State Farm News

According to C. A. Lodge, county agricultural agent, more than 40,000 acres of wheat in Whitman county is being planted this fall with seed which has been treated with copper carbonate dust as a smut preventive. Mr. Lodge says that by using copper carbonate, one peck less of seed is required to the acre than when bluestone or formaldehyde is used. By changing to the new copper carbonate treatment Mr. Lodge is confident that at least $8000 has been saved in seed wheat in Whitman county this year. Tests made during the last crop year in Whitman county show a lower per cent of smut where copper carbonate was used in comparison with other smut treatments, he announces.

* * *

Prune picking has begun and the Allen Evaporating company dryer is running at full capacity day and night. The prunes are of fine quality and growers have been delivering them faster than the dryer could handle them. The capacity of the dryer is about 75 tons in 24 hours.

Growers are receiving $20 a ton delivered at the dryer.

* * *

Bringing their total investment to approximately $10,000 the Ed Schlager greenhouse will immediately commence construction on two more units to be added to their business at Port Angeles.

Twenty thousand bulbs were received at the greenhouse from Holland and France. Ten thousand of these bulbs will be sold in the bulb and the other 10,000 have been planted to be sold as potted flowers.

If spring justifies it, Mr. Schlager announces he will construct two additional greenhouses, bringing his total to five.

He plans to have one greenhouse for cucumbers alone and one for carnation culture.

* * *

Apples and potatoes from the Grays Harbor district are being used by the home economics department of the state college in experiments that are being carried on to ascertain the best methods of cooking. The varieties used are the Burbank and Gold Coin potatoes, while the apples include Wolf River, Gravensteins and Northern Spys.

* * *

The Walla Walla county commissioners have recommeided A. W. Kasten for county farm agent to succeed W. H. Talley, who has resigned, effective November 1, to become secretary of the state farm bureau. Mr. Kasten is Smith-Hughes' instructor in vocational agriculture at the Walla Walla high school. The appointment requires confirmation by Dr. S. B. Nelson, head of the extension department of the state college.

Mr. Kasten is secretary-treasurer of the county farm bureau. He is a graduate of the University of Wisconsin and was in charge of agricultural work in Wisconsin for a year.

* * *

Superintendent R. P. Bean of the state experiment farm at Prosser has purchased 878 head of feeder lambs. Last year Mr. Bean conduced successful experiments in methods of feeding lambs and will continue the same methods with additional experiments. The result of last year's work was valuable to farmers and flock masters.

* * *

Road work aggregating 38 miles and costing approximately $281,500 will have been done in Chelan county before the coming of winter. The greater part of the summer program has been completed, says County Engineer John Duff. Two grading and surfacing jobs will be completed early in November.

Part of the improvements are to be paid for out of the $830,000 road bond issue of 1919. The permanent highway and road and bridge funds take care of part of the work.

* * *

Apples in the Parker Heights district of Yakima are not coloring up as well as was expected, according to W. P. Sawyer of that district. Practically all fruit of the district will be harvested by the end of October.

* * *

A permit has been issued at Olympia by the department of conservation and development to the Macleay-Lindsey irrigation district giving them permission to divert the waters of Dungenness river for the purpose of irrigation, farm power and domestic supply. The irrigation project comprises 7415 acres of land, all of which will be put under irrigation and cultivation as soon as possible. The project will cost approximately $150,000, so it is estimated. It is located in Clallam county.

* * *

J. C. Castle of Mazama, Okanogan county, has purchased a sorghum mill and intends to test out his sugar cane, which is over nine feet high. Mr. Castle came from Kentucky and has had experience with sugar cane.

* * *

A new class in dairying was introduced at the Tolt fair. Only cows that had finished a year in the cow testing association were eligible. The scoring was done on the basis of individual production, individual conformation and net profit per cow on the herd from which the cow came. County Agent A. B. Nystrom of King county reported that this class was the most popular at the fair. There were exhibits from four herds in the class and a prize of $50 was divided among them.

* * *

The annual picnic of the Jersey cattle club was held at Grays River, with 100 people present. Two classes of dairy cattle were judged by members of the calf club and adults.

* * *

Daryl Leonard of Chehalis, a graduate of the state college, plans on getting into the purebred Shorthorn business. At present he has but one registered animal, a Scotch-bred female, Miss Rosa. This animal was mated to George Bertrand's herd sire, Max Mill Criterion, and recently freshened with a bull calf, which Mr. Leonard expects to keep as his herd sire. The calf is a splendid individual.

* * *

Fifty-five persons attended the septic tank demonstration given by A. B. Crane, drainage specialist from Washington State college, Pullman, at the home of Mrs. O. B. Newton, Oakville, October 12. The hole was dug and the forms made ready for pouring the cement. A similar demonstration was held October 13 at the home of Hubert Osborne, Elma.

* * *

Part of the third cutting of alfalfa hay in the Yakima valley is reported damaged by the early October rains. The hay, however, is not damaged enough to prevent its being fed to stock at home, although some of it is not fit for baling and shipping.

FARM BUSINESS AND MARKETS OUTLOOK

Prime steer prices highest in nearly two years.
Lamb prices on a high level.
Hog market well sustained in spite of heavy receipts.
Wheat the highest in three months.
Corn the highest since January, 1921.
Oats the highest since March, 1921.
Raw cotton the highest since October, 1920.
Butter prices highest since December, 1921.
Cheese prices highest since March, 1921.
Fresh eggs the highest since last February.

These were some of the encouraging developments in the market for farm products last week.

Since meats, butter and eggs are regarded to some extent as luxuries, they are benefiting most from full employment of the laboring classes. Cotton and wool likewise are affected favorably by the business revival and expansion in volume of manufacture.

The car situation which has been acute for several weeks seems to be clearing up in certain sections. Concerted efforts are being made to relieve congestion and after October, which is a peak month normally, conditions may gradually become better, especially if favorable weather prevails.

Reports upon industrial activity are optimistic. Steel mills and blast furnaces report further increases in operations, although new orders are less urgent and the present rate is believed to be sufficient to supply the demand. In fact, steel and pig iron prices are easing. Coal production is gradually gaining and the continuous drop in prices since the middle of August is still under way.

Bank reports continue to reflect business expansion. Loans are increasing, the federal reserve ratio is dropping and interest rates show further hardening. Banks are said to be putting gold into circulation freely apparently in an effort to raise rates. One result of a tighter money market is the decline in prices of Liberty bonds.

Abroad conditions remain in turmoil. The change in the British cabinet unsettled sterling exchange after it had reached nearly the highest point of the year. Marks dropped to a new low of about one eleven hundredth of their normal value because of a fresh reparations crisis and the possibility of Germany becoming a voluntary bankrupt. Chilled by the prospect of payments from Germany being deferred, French exchange dropped to the lowest levels of the year. Italian and Belgian exchange were similarly affected.

Prime Steers Skyrocketing.

Prime steers advanced to $13.60 at Chicago last week, a price much higher than the most optimistic hoped for a few months ago. Only extreme scarcity has made the advance possible as but few sales at a few markets are being made above $12. Early in the week intermediate and lower grades advanced 25 to 60 cents, the wide outlet to feedlots being a factor. Cows were 25 to 40 cents higher, heifers were 50 cents to $1 higher and calves rose 75 cents to $1.

Receipts at 10 markets increased slightly in the last few days, but were not above normal for this time of year. Prices on the lower grades of steers and on butcher she stock lost part of their recent gains.

But little beef has been put into freezers or "sharping plants" thus far. Stocks on October 1 were only 34,645,000 pounds compared with 44,296,000 pounds a year ago, and a five-year average on that date of 116,538,000 pounds.

Shipments of stocker and feeder cattle countryward show no abatement, the week ending October 14 being the largest in several years.

Tremendous Consumption of Hog Products.

Hog slaughter during September was of record volume, but stocks of lard in the United States declined 44,000,000 pounds compared with a five-year average decrease in that month of 37,000,000 pounds. Stocks of frozen pork and pickled and dry salt pork, both cured and in process of cure, decreased 130,000,000 pounds compared with a five-year average decrease of 145,000,000 pounds. These figures show that consumption, including exports, has been exceptionally heavy. Stocks of lard at Chicago show a further notable decrease since October 1.

Receipts at leading markets are increasing, but are not at a record level for the season as they were until a few weeks ago. The run of packing sows which continued all summer is now at an end.

Lamb Feeders Loading Up.

Lamb feeders are buying as fast as suitable offerings can be had and in the week ending October 14 took 192,315 head from the 12 leading markets. The movement countryward at present is larger than at this time last year or two years ago, but October is always the peak month, so that the present rate will not last much longer and the season's total will be a light one. Shipments in August and September were the lightest in at least six years. More are believed to be on feed in the west than last year, however.

Fat lamb prices are around $14.75 at Chicago. As soon as the western run shrinks, a moderate advance will be in order and the buyers of feeders even at $14 may yet be successful.

Horse Buyers Increase.

Horse buyers are more numerous of late and no proportionate increase in receipts has taken place, so that the market is doing better.

Wool Market Creeping Higher.

Wool prices were advanced last week under general buying by manufacturers who are supplied with orders which will keep them busy for the next few months and have not provided for their raw material needs. Further advances in cloth prices are rumored.

Tension in Wheat Market Relieved.

Some of the tension in the wheat market, due to shortage of supplies in position for immediate shipment abroad, has been relieved in the last few days and prices receded moderately.

European millers have obtained enough wheat for their immediate needs, native wheat is coming forward more rapidly in some of the chief importing countries, world shipments have increased and stocks on passage to Europe have been built up slightly. In addition the car situation is slightly better in our own southwest, and progress is being made to clear up congestion at Buffalo which has been checking the movement of Canadian as well as United States wheat to the eastern seaboard.

Domestic milling demand which has been unusually brisk has ebbed slightly as flour buyers have supplied their most pressing wants.

Factors coloring the more distant outlook favor higher rather than lower prices.

It seems premature to raise fears for the next crop, but the reports of drouth in the winter wheat belt beyond the Missouri river can not be ignored as they may become market factors later. About 25 per cent of the total winter wheat acreage is said to be affected, some sections reporting the worst condition in nearly three decades with Kansas, Oklahoma and Nebraska worse off than last year.

New Corn Prices Show Big Advances.

The advance in corn prices is indicated by the first sales of new corn at Chicago at approximately 73 cents a bushel compared with slightly less than 40 cents last year.

More Oats for Export.

Export demand for oats improved decidedly last March and has continued on the better level ever since. A measure of the change is shown by clearances from United States ports of 5,576,000 bushels in the eight weeks ending October 21 compared with 57,000 bushels in the same period last year and 309,000 bushels two years ago.

Visible supplies of oats in the United States are but little more than half as large as those at this time a year ago and are decreasing. Primary receipts are running slightly below the average for this time of year and there has been no accumulation at terminals whatever from the crop recently harvested.

Cash Grain Markets.

The range of cash grain prices for the week ending October 25 were: Chicago—Wheat: No. 2 red, $1.17@1.17 1-2; No. 3, $1.14@1.15 1-2; No. 2 hard, $1.14 1-2@.16; No. 3, $1.14 1-2@1.14 3-4; No. 2 northern, $1.17 1-2; No. 3, $1.09 3-4. Corn—No. 2 mixed, 68 1-2@71 1-2c; No. 3, 68 1-4@70 3-4c; No. 4, 67 1-2@70 1-4c; No. 2 yellow, 68 3-4@71 3-4 No. 3, 67 1-2@71 1-4c; No. 4, 68@70 1-2c; No. 2 white, 68 1-2@71 3-4c; No. 3, 65 1-2@70 3-4c. Oats—No. 2 white, 423-4@45c; No. 3, 41 1-2@43 1-2c; No. 4, 40 1-2@42 1-4c. Rye—78 1-2@79 1-2c. Barley—56@69c.

Seed Markets Performing Well.

Although seed markets lost part of their recent gains, they are by no means week. Timothy seed especially is showing a strong undertone. The cloverseed crop this year is estimated at 2,033,000 bushels compared with 1,411,000 bushels last year and 1,760,000 bushels two years ago. Alfalfa seed thus far has been marketed more slowly than last year.

Chicago, per 100 pounds—Clover, $15@20.50; timothy, $5.50@6.75. Toledo, per bushel—Prime red clover, $12.35; prime timothy, $3.30.

Feed Markets Firm.

With feed grains advancing, by-product feeds also have remained firm and in many cases are the highest since the decline started last spring. Production is at a high rate and stocks are adequate with those in transit or stored increasing. Prices are largely nominal as actual buying is said to be limited.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $26.50; standard middlings, $27.50; flour middlings, $29; cottonseed meal, 36 per cent, $44; 43 per cent, $49; hominy feed, $29; gluten feed, $34.85; old process oil meal, $53; tankage, $65.

Hay Receipts Remain Light.

Shortage of cars is curtailing shipments of hay and receipts at leading markets are light. Chicago has received 35,148 tons since July 1 compared with 37,508 in the same period last year when the movement also was limited. There is no urgent demand for alfalfa with cattle and lamb feeders as well as dairymen in the market, and good grades of timothy are moving readily.

Prices per ton in carlots—Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $20@21; No. 1 clover mixed. $16@18; No. 1 to choice alfalfa, $24@26; upland prairie, $20@21; midland prairie, $14@16; rye straw, $12@13; oat and wheat straw, $9@11.

Fresh Eggs Strong; Storage Eggs Weak.

Fresh egg prices advanced last week to new high figures for the season. Diminishing receipts and keen demand for fine eggs were the causes. Storage eggs are moving more freely than in September, but not rapidly enough to cut the enormous holdings down to normal volume. Apparently, the market must endure more pressure from this source before the stocks are distributed.

Although it is six weeks since the season at which frozen poultry uually begins to accumulate in storage, it has not begun to do so this year. Receipts are increasing and prices are slowly working lower.

New High in Butter Market.

Butter prices reached a new high level for the year at the close of last week. Light receipts coupled with maintenance of broad consumptive demand were the factors responsible. Prices on 92-score fresh butter on October 25 were: Chicago, 45 1-2c; New York, 47c; Boston, 46 1-2c; Philadelphia, 48c; San Francisco exchange quotation, 48 1-2c.

Sharp Advance in Cheese Markets.

Cheese markets have advanced about 2 cents a pound on all styles in the last 10 days. Buyers are disposed to curtail purchases at the higher level and the market is more or less unsettled with some doubt expressed as to the maintenance of the advance.

Prices on No. 1 American cheese on October 25 were: Chicago—Flats, 25@26c; Twins, 25@25 1-2c; S. Daisies, 25@26c; D. Daisies, 25@25 3-4c; Young Americas, 26c; Longhorns, 25 1-2@26c; Square Prints, 26 1-2c.

Fruits and Vegetables.

Carlot shipments of potatoes from the leading late producing states up to October 14 totaled 16,000 cars less than to the same date last year when the smaller crop was shipped at unusual speed. The present movement is not quite up to normal for this time of year. Prices were firmer last week for eastern potatoes where the crop is small, but weaker for western and northern stock. F. o. b. prices range around 60 cents per 100 pounds for Brown Beauties at Colorado shipping points and 40 cents for Rurals and 60 cents for Russets at Idaho points.

Carlot shipments of apples at present are below normal for October, due to a decline in shipments from the boxed apple states. The quantity reported in cold storage on October 1 was considerably above normal for that date, especially in the case of barreled apples. Wholesale prices have been gaining as the market is not oversupplied with good apples. Extra fancy large Northwestern Jonathans are quoted at $2.75 to $3 a box at Chicago with medium sizes at $2.50.

(Continued on page sixteen.)

Farm Bloc Legislation

United States Senator Poindexter Urges Agricultural Producers to Use Cooperative Principle

The question is often asked, "How may benefit for the farmers be derived from the number of measures enacted by this congress for their benefit?" There is no doubt at all that many farmers have been relieved financially by the credits extended to them directly or indirectly by the war finance corporation. Of course the federal land bank, passed by an earlier congress, has also been of assistance through the hundreds of millions of dollars of credit extended to farmers at comparatively low rates of interest.

The dairymen's associations which had been prosecuted for violation of the Sherman anti-trust law can testify to the benefit that the cooperative marketing bill has been to them. The live stock growers also feel an increased measure of independence by reason of the removal of the abuse of the monopoly of the live stock markets in the packing centers by the meat packers, and if the reports of farmers' organizations and members of congress representing agricultural communities can be relied upon, the control of grain exchanges by the government ought to bring substantial relief to the grain growers.

The reflection has occurred to me that there may be needed some machinery by which, without delay or expense, these various measures and others enacted by congresses in the hope of promoting and improving the agriculture of the country, can be brought into play for the relief of the farmer and this suggests one aspect of a still larger question. The individual farmer ordinarily has neither time nor means to bring his case before the proper governmental authorities and prosecute abuses of the law from which he may be suffering along with his fellows. Government authorities of course can not be informed of the private situation or experience of the farmers unless some one brings it to their attention.

So it would seem that if the farmers are to gain full benefit from this vast mass of legislation enacted in their interests, it would be necessary for them to take advantage of their rights, made still greater by the act authorizing cooperative associations and organize for their mutual benefit. Through organization, adequate means can easily be provided for the prosecution of abuses arising from violations of these several enactments.

Something more is needed than the mere passage of laws. Even the government itself can not operate merely because of the enactment of laws or the adoption of a constitution. All these would fail, however excellent they may be, if there were not people to put them into execution.

So it is, that while I have been glad to support and in many instances actively promote the various farm bloc measures, at the same time I have felt that there is a greater need for cooperation among the farmers in definite and specific way before they could receive full benefit of these enactments or of any other enactments in their behalf.

In the first place, there are many things, of course, beyond the power of government, but as to those things which are clearly within the proper limits of government activities, the active interest of some organization especially concerned in their enforcement is absolutely essential. It would seem perfectly obvious that a large group of farmers could make a much better deal in purchasing from the manufacturers a large quantity of farm implements and machinery than one individual farmer could make in buying a single implement. So it would also seem that a large group of farmers could market to a much better advantage a large quantity of farm products than any individual member of the group could secure in marketing his own individual output.

Of course, this has long since passed the domain of conjecture. In California, farmers' organizations have revolutionized agriculture and brought prosperity to all their members. What has been done there can be done here and elsewhere. However, there is this to be said about it, in order to be successful, such organizations must be of sufficient size and strength to employ high class men to represent them in all the various phases of the business involved, just as labor and business concerns would do in their transactions in which they have become so successful and so powerful.

Another essential is that such associations should be conducted within themselves on sound principles of absolute integrity, economy and justice so as to avoid the inevitable failure and disintegration which the contrary principles would bring about.

After all, our government is founded upon the principle of "self-help." It can not bring prosperity and fortune to every individual. This is up to him. What the government can do and what it ought to do in so far as is humanly possible, is to offer an opportunity to every citizen to secure comfort and happiness in so far as he is able to do with the faculties with which he is endowed.

MILES POINDEXTER.

Too Little Water

By PROFESSOR L. J. SMITH, W. S. C.

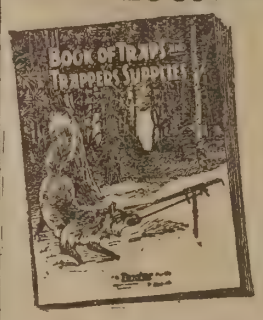
I have a small stream of water on my place which I intend damming up for power. I can put in a six-foot dam, 12 feet wide, which will back up the water for 75 feet or more. From this dam I could get an inch and a half pipe of steady water. Could you give me information as to what kind of wheel to install to get the greatest power and what power can I expect? Would like to use it for running a generator for lighting the farm.

Uniontown, Wash. A. J. J.

I am afraid that you have not a sufficient volume of water with a sufficient fall to make it worth your while to install a generating plant. With a six-foot fall you would have to have a very considerable volume of water in order to generate even a few horsepower.

For example, if you were using a water turbine, which you would have to use for small falls such as in your case, if you had an eight-foot fall and 109 cubic feet of water per minute going over the fall, a small turbine would only develop a little less than one and a half horsepower. From these figures you can readily see that you would not get sufficient amount of water to make it worth while to install a power developing proposition on your place.

THANKSGIVING IS COMING.



Large flocks of turkeys are reported from Okanogan county. H. H. Green of Tunk Creek has 500 that he is herding on the grain fields. Oswal Behimer has nearly that many. J. C. Dodge, a few miles east of Riverside, has nearly 100.

Railroads Asleep on the Job

Interstate Commerce Commission Also Naps While Fruit Perishes for Lack of Cars

For the enormous losses suffered by the fruit growers of the Pacific northwest, losses that spell disaster in many instances, the railroads that serve this region are chiefly to blame. They are trying to shift the responsibility to the strikers and to the eastern lines for grabbing their cars and delaying their return to the west. But the railroads went into the shopmen's strike totally unprepared. They had allowed their rolling stock to run down, and when 400,000 shopmen quit work there was, to start with, an extraordinarily large number of out-of-order cars and locomotives. Of course the strike made a bad matter worse, and the strikers are also to blame for the heavy losses now suffered by the orchard owners. The further excuse that eastern lines have grabbed the cars of western roads is itself a confession of negligence. The western roads should have taken steps to stop that practice. They should have done a little grabbing themselves.

Had Adequate Warning.

Nor can the northwestern roads deny that they have had ample warning and sufficient protest growing out of previous failures to supply cars in sufficient numbers. At a hearing before the interstate commerce commission at Washington nearly two years ago O. O. Calderhead, rate expert of the Washington state department of public works, testified:

"I think it is just as well to inform the interstate commerce commission that last year, on account of the failure of the railroads to properly provide equipment, on apples alone from the Wenatchee district, claims have been filed with the Great Northern railway, which undoubtedly they will have to pay, in excess of $1,000,000. They were unable to furnish refrigerator cars and it is one of the matters which I would consider inefficient railroad operation, due to the fact that they knew approximately the amount of freight that would have to be moved, years in advance. It is not a matter that came on them suddenly. The trees were planted years ago, and the railroads knew approximately how many tons of apples they would have to move out of there. They did not provide refrigerator cars, and last year the loss to the apple growers and the loss to the railroads was in excess of $3,000,000, more than $1,000,000 of which will have to be paid by the railroads."

Asleep on the Job.

There is now grave reason to fear that the losses this year will run far into the millions of dollars. It looks as if everybody who has a responsibility was asleep on the job. Some time ago the interstate commerce commission gave a priority order to the railroads, giving preference to fruits, perishable goods and fuel over other commodities. Railroads and shippers have been ignoring that priority order, and it does not appear that the interstate commerce commission has sufficiently concerned itself with the vigorous enforcement of its order.

The law properly confers almost autocratic powers on the commission to deal with just such emergencies, to issue priority orders. But of what good is a law that is not enforced? Of what service to the fruit growers is a priority order that is not obeyed? The thing to do, and to do quickly, is to enforce that priority order.

The recent supplemental order of the commission, directing the eastern railroads to deliver 3500 cars to the western lines at Chicago, is just making the motions of relief. In the first place, it was a physical impossibility to deliver that number of cars by October 12, the date set; and, in the second place, even if the cars had all been there to be started west it would be two or three weeks before they could reach the orchard districts.

The railroads have drifted into this calamity, and are primarily to blame for it.

San Juan Fair

An excellent display of fruits, vegetables and grains was shown at the San Juan county fair at Friday Harbor October 13 and 14. This was the second annual county fair, and the exhibitors turned out in true community fashion in all departments.

In addition to fruits, vegetables and home products there was also a good turnout of live stock and poultry. Guernseys and Jerseys, of course, predominated in the live stock department, while the poultry were of many breeds and came from all parts of the county.

A number of interesting commercial displays helped to make the fair complete, and the state college demanded attention from the visitors by the exhibits which were set up by the extension service.

The flower department included many seasonal varieties from the local home gardens, including some very good specimens of dahlias and asters.

The county schools were represented by exhibits of work done by the pupils, and the better baby show was the big attraction for all mothers who possessed a husky infant to enter.

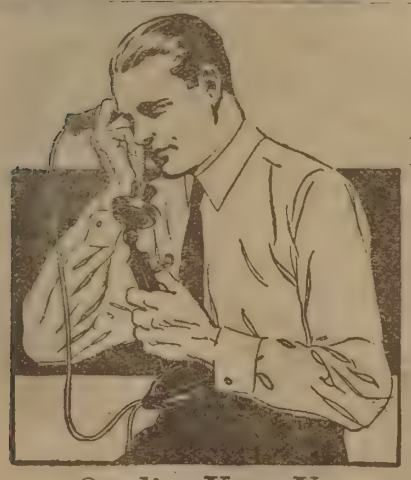
Much credit for the success of the fair, which was pronounced to be bigger and better than last year, should be given to C. J. Sandwitch, president of the fair committee, and the many department superintendents. W. W. Henry, county agricultural agent, gave much valuable assistance in getting the entries and the entire fair developed into such splendid shape.

A 100 Per Cent Record

The Gerard Creek Sewing club of Grays Harbor county has handed in a 100 per cent record for the year, to their club leader, Miss Mabel Webber. Their work consisted of the making of four garments, holding six club meetings and in addition each girl gave her mother a vacation from one or more household duties. At the final meeting for the club year the girls exhibited their articles and signed up the cards for the next year's work.

Members of the club are Verna Lemmon, president; Ruth Bleckschmidt, secretary; Lenora Carlson, Esther Olsen, Audrey Bleckschmidt and Marie Crisswell.

This is only one of the many similar clubs that have been working out the same plan under the direction of their local leader and Miss Webber. All clubs have taken a great interest in their work and the enrollment for next year looks very promising.



Farm Fair at High School

High school students are becoming interested in agriculture. There is an agricultural club, composed of students attending the Lewis and Clark high school in Spokane.

Last year high school students in Yakima held an apple show. This week they are holding a regular agricultural fair, some 800 exhibits having been entered. Nearly 500 of these are cereals and vegetables grown by students.

LIVESTOCK AND DAIRY

Smith's Steers Outsell Brown's

PART II.

Everybody knows that all parts of the carcass do not bring the same price per pound. The housewife will pay much more for steak or roast than she will for stew cut from the same beast. Naturally a steer whose carcass is relatively heavy in the valuable parts should outsell one whose weight was more largely in the cheaper cuts.

In cutting up a side of beef into wholesale cuts it is divided into fore and hind quarter, generally between the last two ribs. The "round" is separated from the other two by a cut about half way between the hips and tail head down to the hind flank a short distance in front of the stifle joint. Another cut from the rear of this flank to the middle of the last rib separates the "loin" above from the "flank" below. In dividing the fore quarter the "foreshank" is cut off at the shoulder joint and the "plate" below is separated from the "rib" and "chuck" above by a cut from near the middle of the last rib forward through the shoulder joint. The "rib" and "chuck" are separated from each other by a cut between the fifth and sixth ribs, which lie just at the rear of the shoulder blade.

The prices per pound of these different parts of the carcass are shown in the first column of figures in the table which follows. The loin, rib and round are much the most valuable. These include the upper half of the steer's body from the rear of the shoulders on back to and including the thigh. The cheaper cuts include the lower and forward part of the body. The third column of figures in the table shows the usual percentage of the carcass weight that is found in each wholesale cut and the fourth gives the percentage of the value of the entire carcass in each cut when prices are as given in the first column of figures.

At the time this article was written the Chicago wholesale prices of high and low grade beef and relative importance of the wholesale cuts are given in the following tables:

Beef cuts.	High grade.	Low grade.	Percent of carcass weight in the cut.	Per cent of carcuss value in the cut.
Sides of beef	18 cents	7 cents	100 per cent	100 per cent
Hind quarters	23 cents	..	48 per cent	66 per cent
Forequarters	11 cents	..	52 per cent	34 per cent
Loins	38 cents	15 cents	17 per cent	37 per cent
Ribs	28 cents	7 cents	9 per cent	14 per cent
Rounds	15 cents	9 cents	23 per cent	20 per cent
Flanks	13 cents	..	4 per cent	3 per cent
Chucks	11 cents	6 cents	26 per cent	17 per cent
Plates	8 cents	..	13 per cent	6 per cent
Foreshanks	4 1-2 cents	..	4 per cent	1 per cent
Tallow	7 1-2 cents	..	4 per cent	2 per cent

At the present time hind quarters are selling for more than twice as much per pound as fore quarters. Loins, whence come porterhouse and sirloin steaks, are worth more than twice as much as the average value of the carcass as a whole. The loin and rib combined have 26 per cent of the weight of the carcass, but they contain, at these prices, 51 per cent of its value.

Records from the slaughter of large numbers of animals show that in some cases the loin makes up 15 per cent of the weight of the carcass, in others 19 per cent. The rib varies from 8 to 11 per cent, or the rib and loin combined may vary from as low as 23 per cent up to 30 per cent.

After all is said, however, this second requirement made by the steer buyer, that as much weight as possible be in the high-priced cuts, is the least important of the three. Variations in it are less pronounced and more difficult to perceive.

Cattle Prospects Improving

The general feeling among Idaho stockmen is to the effect that although October 1 prices of cattle are unsatisfactory, market prospects are improving, with prices on the advance, according to the October live stock report, issued for the first time by the department of immigration, labor and statistics of the University of Idaho extension department. Ranges have not been overstocked this year and cattle are coming off in good condition. Reports indicate that the number of cattle on hand is less than usual. Lack of fall rain has left pastures and ranges generally dry, but considerable food is present in the harvested fields. Except in northern Idaho, which has experienced a dry season, hay supplies are ample. It is expected that much stock will be fed in the irrigated sections in the southern parts of the state. The average farm price of hay in north Idaho is $18 per ton, while in the southern part of the state, but $7.50 per ton is realized.

Hogs Need Minerals

Many farmers make the mistake of not including mineral elements in their hog feed. The minerals are needed for general body development, especially for blood and bone. The State of Washington animal husbandry department recommends a mineral ration made up of 25 pounds of salt, 50 pounds of bone meal and 50 pounds of charcoal or wood ashes. The charcoal and ashes act as a destroyer of worms and a general cleanser of the system. The salt, of course, is recognized as an essential in all animal feeding. The bone meal tends to aid in development of a stronger frame needed for the heavy hog.

CANADA'S DAIRY BUTTER OUTPUT.

Figures giving the total quantity of dairy butter produced last year in Canada show that the total output for 1921 was 122,776,580 pounds, valued at $45,893,082. This is an increase over the previous year of 11,084,862 pounds.

Increased production is shown by all the provinces with the exception of Prince Edward island, the largest proportionate increase, 36 per cent, being recorded by British Columbia. In order of dairying importance the provinces rank: Ontario, Quebec, Alberta, Manitoba, Saskatchewan, Nova Scotia, British Columbia, New Brunswick and Prince Edward island.

AN ESSENTIAL ELEMENT.

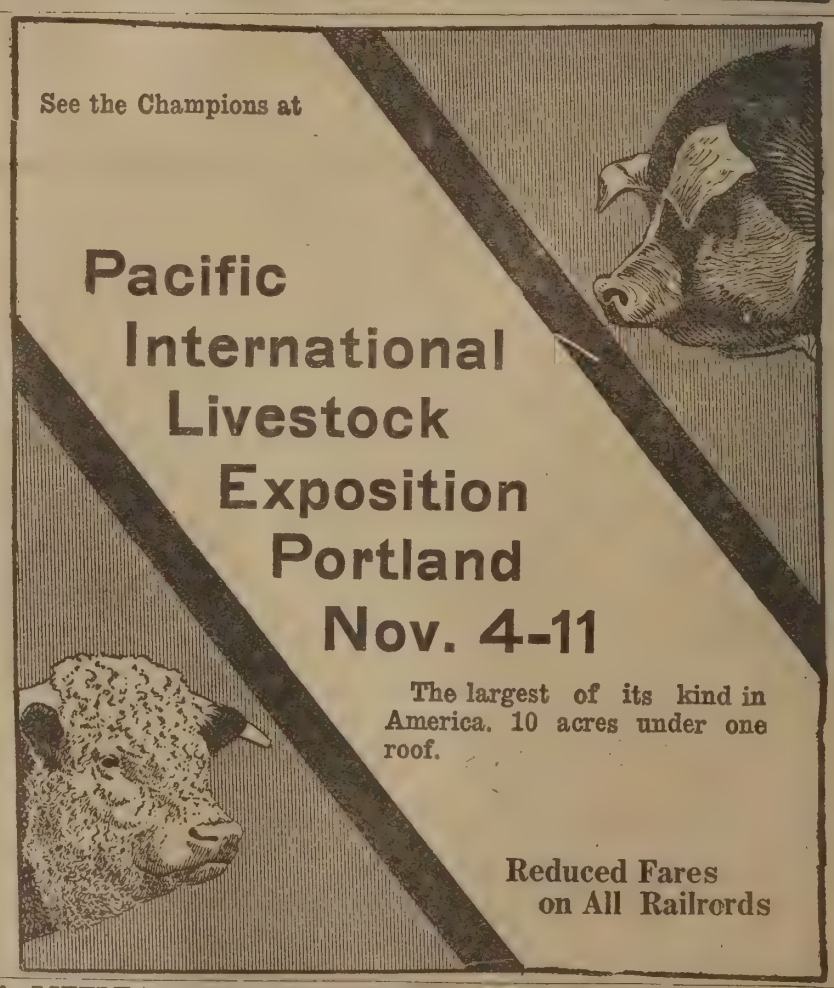
Salt should always be available to the live stock.

It's a main highway

THE way to satisfaction, comfort and health through Postum, has become a world-wide way.

This famous table beverage which has stood the test of twenty-five years, fills every requirement of taste for a hot and invigorating mealtime drink. Unlike coffee or tea, Postum contains nothing that can irritate nerves or disturb digestion. Even the children may safely enjoy it.

Wouldn't it be well for you to avoid the harm which so many have found in coffee and tea, and protect health while pleasing taste, with wholesome, satisfying Postum?



Order from your grocer today!

Postum comes in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes. The two forms are equally delicious; and the cost is only about ½c per cup.

Japanese Ruled Out

Must Give Up Reservation Leases

Japanese are barred in the future from leasing, subleasing or being employed as laborers on the Yakima Indian reservation. A year ago the United States department of interior ruled that no further leases of land could be made to Japanese and recently Secretary Albert Fall issued an order that any white man who should sublease to Japanese under labor contract would have his lease cancelled, and further that the Japanese could not work as laborers on the reservation.

It has been shown that in many instances white men have during the past season subleased through subterfuge to Japanese. There has, therefore, been further agitation by members of the American legion, which was instrumental in bringing the matter of leasing to Japanese to the attention of the department last year, for further rulings to effectively exclude the Japanese from any agricultural occupation whatsoever on the reservation, with the result that the recent order by Secretary Fall was issued.

There are said to be 1290 Japanese on the reservation and besides growing the bulk of the truck crops, such as cantaloupes, watermelons, onions and tomatoes, they have this season produced one-fourth of the potato crop of the Yakima valley. There has been a strong sentiment all through the valley that the Japanese should be excluded from the reservation in order that the farming of these lands might be left in the hands of the whites and the Indians.

It is recognized that because of a lower standard of living of the Japanese and because the whole family works in the fields, including the women and the children, the whites can not compete with them, or pay as high rents as they have paid. The truck gardening has been nearly monopolized by them and they have been a large factor in the production of vegetables and potatoes on the reservation. Last year a percentage of the leases expired and of those remaining in force 80 per cent expired this fall and the balance will run through next year. Therefore, a year from this time the last of the Japanese will be obliged to leave the district.

The Japanese, through their spokesmen, have made a strong plea for permission to remain and work on the reservation, and point out that during the war they subscribed to one-third of the Liberty bond quota of the district and came through 100 per cent in the Red Cross drive. They assert that Wapato and Toppenish bankers and merchants will lose $250,000 by the exclusion of the Japanese as this is the amount which they owe at this time. The Japanese made money on the reservation during the war, but are now heavily in debt, and if they can not remain and work, they will be unable to pay their debts, they declare.

These presentations have had little force with the interior department or with the local post of the American legion, as it is pointed out that many of the Japanese ar here illegally, having been smuggled into the United States from Mexico during the war. Sentiment is strong in favor of having the rich reservation lands farmed by white men instead of allowing aliens who do not have American ideals or live up to the standards of Americans to prosper at the expense of the white population.

CLARKE COUNTY NUT TREES.

A bumper crop of walnuts will be harvested in Clarke county this year, according to Dudley Eshelman of Lake Shore, who has 100 bearing walnut trees scattered through his prune orchard. The yield is expected to reach 150 pounds to the tree and the price per pound will be at least 20 cents, an average of $30 to the tree. Walnut trees around the city of Vancouver are loaded to the breaking point with nuts of unusually large size, and the quality of Clarke county walnuts is considered superior to the California product.

Convenient Farm Homes

Floor plans for a dozen conveniently arranged farm houses are illustrated in a new bulletin (No. 91) just issued by the extension service of the State College of Washington. Professor L. J. Smith, head of the department of agricultural engineering; Professor Rudolph Weaver, head of the department of architecture, and Miss M. Minerva Lawrence, extension specialist in home management, collaborated in its preparation from the material resulting from the competition held jointly by the college and the American Institute of Architects for the women of Washington.

The competition was on plans for three sorts of houses: Five, six and seven room bungalows; three or four room bungalows and six, seven or eight room houses of two stories. Each plan was to include a bath and a man's washroom on the ground floor, where the farmer, his sons and helpers could "clean up" before coming in to meals.

Nine business firms in the state furnished prizes for the competitors, all of whom were required to be women who actually had lived on a farm and, therefore, knew the farmer's wife's problems. The prize winning plans and those receiving special honorable mention are brought together in this bulletin and are the work of Mrs. J. C. Curry, Ferndale; Mrs. L. M. Goldsmith, Yelm; Mrs. Charles D. Gaines, Odessa; Mrs. Izola McKibben, Mount Vernon; Mrs. O. H. Prentice, Spokane; Miss Orilla Miner, Pullman; Emma Hefty, Bellingham; Mrs. A. J. Latimer, Kahlotus; Mrs. Lee Haddan, Vancouver; Miss Edith M. Cox, Kennewick, and Mrs. C. G. Waterman, Deer Park. The home of J. A. Adams, Fairfield, is shown on the cover.

Those planning to build, or to remodel an old farm house, will find the bulletin a help in deciding where windows, doors, closets, sink and other plumbing should be placed to make the home most convenient and save the housewife many steps.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

POULTRY AND RABBITS

Poultry Problems

By W. D. BUCHANAN,
Poultry Specialist, State College of Washington.

I would like some information on raising geese. We have a half acre of alder bottom land well drained, with a small creek flowing through, and all kinds of green stuff grows easily. How many geese could we have? And would they live on what they could forage there? Could we hatch geese in an incubator? How much per dozen would the eggs be? Would we have to have a shed to shelter them at night? What kind of feed do they require from first to last? Do you think we could raise 300 geese with a good profit? Would a three-foot fence be high enough to keep them in?
Milton, Wash. MRS. E. S. H.

Geese need lots of pasture and are seldom profitable when pasture or waste vegetables is limited. You could probably carry about 25 on the half acre mentioned. They could live on the land so long as pasture is abundant, but the young goslings, and the geese during laying season, should be fed. Eggs could be hatched in an incubator, but the usual practice is to hatch with hens or geese. The price of eggs varies. They can sometimes be bought for 25 cents, but some breeders will charge $1. A light, dry shed is necessary for goslings, and is recommended for geese in bad weather. Bread and milk is excellent feed for goslings. So is equal parts of millrun and ground corn with milk. If milk is not available add 5 per cent meat scraps and mix with water. The latter ration is suitable for laying geese. All feed should have about 5 per cent, by weight, of fine sand. There is profit in geese if well handled. A three-foot fence will hold them.

THE MALE PIGEON.

Please tell me how to tell the male pigeon from the female. MRS. M. P.
Deer Park, Wash.

Sex is not easily determined, but if two squabs hatch in the same nest, the one that hatches about 12 hours ahead of the other is the male. When both hatch at the same time they are likely to be of the same sex. After this it is almost impossible to tell the male from the female till they are 5 months old. Mating in pigeons is always confined to a single pair, so that there is nothing to be gained by trying to pick the male. Hand mating, that is, placing two birds of opposite sex together, is almost always a failure. Voluntary mating is usually for life.

DROPSICAL CONDITION.

Can you tell us what is the cause of water around the bowels of chickens? The back of the body becomes heavy and almost drags on the ground. The chest becomes thin, and in one case the bowels were hard and inflamed. We haven't been able to treat them so that they could recover and have had to kill them. Will you kindly tell us what to do for them?
Langley, Wash. MRS. P. N. C.

Hens sometimes have what is termed a dropsical condition, the lower part of the abdomen becoming filled with a watery fluid. It is usually caused, I believe, by ovarian trouble, though it might sometimes be traced to digestive troubles. There is no cure for it when it reaches the stage you describe, and no cure at any time except to prevent it by giving the chickens more normal living conditions.

TREATMENT FOR SCALEY LEGS.

My yearling hens are bothered some with a scale or hard crust on their feet and legs and sometimes a swelling will come on the bottoms of their feet. They don't care to walk, but want to sit most of the time. Can you explain to me the cause and also a remedy for the trouble?
Sumner, Wash. L. L. C.

Scaley leg is caused by a small parasite, or mite, that burrows under the scales of the legs, causing a scab or crust. The mite develops in muck or filth. To cure it remove the cause and bathe the legs in coal oil and lard or dip them in some good stock dip. It would be well at the same time to spray the roosts and dropping boards with crude oil or single oil.

FEATHER EATING.

My 4-month-old pullets have free range. I feed them corn, wheat developing mash, charcoal and some fish meal and bone meal. There is plenty of fish meal and bone meal in the mash, yet they eat feathers. Can you tell me what it is they lack? Do chickens at this age get the white diarrhea? I lost one that seemed to have diarrhea. In case it is, what shall I do? MRS. G. A. O.
Hillyard, Wash.

The fact that a chicken eats a feather occasionally is not serious. If they eat many, however, or pluck them from the bodies of their mates, it is serious. The cause is sometimes crowding, or poorly-ventilated houses. At other times it is a lack of something in the ration. In your case it might be a lack of crude fiber. If so, a little sprouted oats would stop it. Chickens are not likely to show symptoms of white diarrhea at 4 months of age, though they may show the effects of it. There is very little of this disease in Washington. The case you mention was probably caused by some digestive trouble.

FORMULA FOR EGG MASH.

Please publish a good formula for egg mash that is economical. SUBSCRIBER.

An economical egg mash under present conditions could be made as follows: One hundred pounds ground wheat, 100 pounds bran or millrun, 100 pounds ground corn, 50 pounds ground oats, 50 pounds good grade meat scrap or fish fiber, 20 pounds old process oil meal, 30 pounds alfalfa leaves and blossoms, 20 pounds bone meal and 15 pounds flake charcoal. If milk is available, the oil meal could be omitted.

A CULLING PRINCIPLE.

Culling can be accurate only when hens are kept under uniform conditions, since it is a comparison of hens that have had like opportunities. Housing, feeding, freedom from parasites and contagious diseases, and good management, should apply alike to all birds compared. When these conditions are poorly met even good layers may be culled out, especially at certain seasons when they are not laying.

SPOTTING THE BOARDER.

Unprofitable hens usually have combs with long, narrow serrations, which are hard and shrunken and covered with whitish scales, says the O. A. C. extension service. The eye is usually sunken and not prominent seen from the front, and has a dull, lusterless expression. The long beak and narrow, crow-like head are never found on high record hens.

AS VITAL AS FOOD.

Water is essential to animal life.

UTILIZE YOUR GOOD MATERIALS.

Any woman can make fine caps for her men and boys of partly worn, cast-off garments. Besides materials she already has, she needs good flexible stiffenings, especially for the vizor. These are to be had, accurately cut, ready to use, with patterns and detail directions, for 30 cents, silver or money order, of Fullworth Mfg. Co., 4322 6th Northeast, Seattle, Wash. Their method assures a fit. Put this in your scrap book.—Adv.

Free Book Tells How to Get More Eggs!

HOW to save feed and get double egg yield. How to cull out poor layers. How Mrs. Hume made $2000. How Mr. Luttrell makes $5 net profit per hen. This book explains Prof. Quisenberry's system now being used by 46,000 successful poultry raisers. 1000 money-making secrets.

Write Today! Simply send name, a postcard will do, for this 96-page free book, "Dollars and Sense in the Poultry Business." No cost, no obligation. Address American Poultry School, Dept. 605, Kansas City, Mo.

ORCHARD AND GARDEN

Oyster Shell Scale

One of the commonest pests of fruit trees in western Washington is the oyster shell scale and it also affects other trees and shrubs as well as commercial orchards, according to Arthur Frank, plant pathologist of the western Washington experiment station at Puyallup. It is most noticeable on such trees as pears, apples and cherries.

It should be remembered that this pest is a parasite on the trees and consequently draws vitality from the tree, thus causing injury if allowed to become abundant.

There are a large number of eggs which are held over the winter by means of the protection afforded by the scales. These are very small and pearly colored. About the time apple blossoms fall in the spring these eggs hatch and the young scale comes forth. The young appear pin-point-like, white in color and wander about on the bark of the twigs of the tree. After a time they settle down and insert their beak-like mouth tube into the bark and begin sucking the juires of the plant. They also begin to form over themselves the hard scaly covering. There is only the one brood per year.

The control of the insect is accomplished in two ways. Spraying with the lime sulphur at the dormant time, that is, just before the buds begin to swell, will kill most of the eggs. The lime sulphur is particularly effective if not put on until just before the eggs hatch as at that time the eggs are very sensitive. Usually where trees are sprayed consistently each year for the dormant spray and also for scab there is not much trouble from the oyster shell scale.

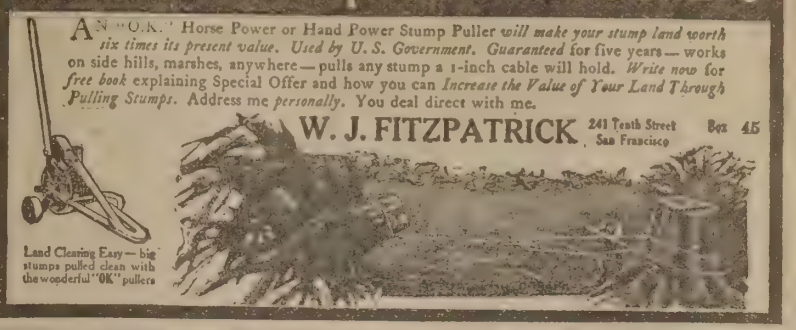
Another way to attack the pest is to wait until the young scales are seen running about on the bark. Then spray with black leaf 40 at the rate of one-third pint to 50 gallons of water. This application kills them all.

If the oyster shell scale is allowed to go unchecked for a number of seasons it will eventually cover the bark of the tree and also get on fruit and may kill the tree or parts of it.

Disks Orchard Alfalfa

"There are about four different types of soil on our orchard land along the lake," said Walter Olive of Manson, Chelan county, Wash., "Some of them are slightly sandy, but there are none that are light enough to allow for the continuous alfalfa cover crop without disking. In sections where the soil does not pack badly it will work better, but we find that some cultivation is really necessary for best results.

"One orchard of Delicious has an alfalfa crop which is a little more than a year old, but it will need some disking this fall. The hauling of the spray machines through the rows causes the soil to pack slightly and a disk will loosen it up in fine shape and still do no harm to the alfalfa. This could hardly be done last year because the plants were young and we wanted them to get a good start. From this year on the crop will be given a good disking each fall.



"The practice of turning such a crop under with a disk is very good for the soil, since it prevents packing, returns much humus to the soil and allows for more water to be taken up. By preventing a dry mulch at the surface the humus has a better chance to decay and thus become available for use by the trees."

One disadvantage to the system is mentioned by Mr. Olive. The apple harvest usually lasts until late in November and by this time it is almost time for cold weather to set in. In cases where it freezes up before the disking can be finished the work must be held over until the early spring, which is not as beneficial for the soil.

Turn Your Stump Land into Dollars

GMC

A "Jim-Dandy" Truck

Model K-16, One Ton

$1295

Chassis only—at the factory

The Best Truck for the Farm

For general farm use, on hard roads or in rough fields, the Model K-16 one ton GMC provides more pulling power, more speed, and more economy than other trucks of the same capacity.

Moreover, this "Jim-Dandy" truck is built from truck parts exclusively—no passenger car parts used. Consequently it has the sturdiness and enduring performance that is demanded for hauling over all kinds of roads and in all kinds of weather.

The exclusive features of GMC construction, developed from more than ten years of successful truck building, have provided this truck with more continuous performance and lower operating and maintenance costs. Due to its advanced design there is not a single wearing part in this truck that cannot be replaced. Such refinements as Removable Cylinder Walls, Removable Valve Lifter Assemblies, Pressure Lubrication, and Instantaneous Governor action all give to this truck the dependability that is so vital in farm trucking.

In every detail of construction the Model K-16 has been built according to the most approved and most advanced practices.

Magneto ignition, electric lights and starter with conduit wiring entirely separate from the ignition wiring, radius rods, thermo-syphon cooling, oversized brake drums, interchangeable brake rods, complete instrument board, pressure chassis lubrication, cord tires—

All these are universally accepted as the best for motor truck use—all these are standard in this GMC.

Measured by any standard this one ton truck has no superiors—and its cost, considering its quality, is much lower.

Write for an illustrated booklet, "Motor Trucks on the Farm."

GMC Chassis list at factory as follows: One Ton, $1295; Two Ton, $2375; Three and One-half Ton, $3600; Five Ton, $3950; tax to be added

Hold Club Contests

An interesting feature of the first annual dairy and live stock exposition held recently at Everett was the boys and girls' club contest, which took place on Saturday, the third day of the show. The boys were divided into two classes as listed below, together with their winnings.

In class A, including boys of 10 to 14 years, inclusive, first place was won by Harvey Galbraith of East Stanwood, a member of the Stillaguamish Purebred Calf club; second place was won by Svend Larson of East Stanwood of the same club; third place by Lief Brue and fourth place by Leland Grissom.

The prizes offered in this class were: First, $10; second, $7.50; third, $5, and fourth, $2.50. A beautiful silver loving cup offered by Batcheldor & Corneil, clothiers of Everett, for the best showing made in this class was won by Harvey Galbraith.

In class B, boys 15 and over, Norman Refling of Snohomish Purebred Dairy Calf club won first place, winning a silver cup donated by Don McRae, prominent Jersey breeder of the county. He also won a $10 cash prize. No other prizes were awarded in this class.

The two representatives of the Silvana club were close contestants for prizes in class A, one of them losing out by only one point.

The boys were also allowed to show their animals in open competition. Leland Grissom's heifer won third in the junior yearlings, while Harvey Galbraith's heifer, a Guernsey, took third place in the senior calf contest and Lief Brue's fourth place in the junior yearlings. The interest shown by farmers and others at the show ring during the time the judging was going on was very noticeable and some of the boys themselves were on hand to see their calves judged. W. D. Love, the county agent, who has acted as club leader, helped the boys care for their animals and prepare them for the show ring.

Aims to Spray at Right Time

J. H. Fraser, whose orchard is in the Lower Naches of the Yakima valley, sprayed his apple trees only twice this year, one calyx spray and one cover spray. While worms may be plentiful in some orchards, Mr. Fraser reports but one-half of 1 per cent of worms this year in his orchard. He says he aims to spray at the right time and in the right way.

He has two outfits at work all the time and the third one stands ready for use should either one of those running break down. Seventy-five acres of orchard are thus handled with two outfits running constantly while the spraying season is in progress.

It may also be stated that the community is composed of commercial growers of fruit and there are no neglected orchards to infest the district. Mr. Fraser reports the largest crop he has ever had and expects to get 45,000 boxes from the 75 acres. Jonathans are an especially fine crop with him this season. All his apples are hauled to Yakima for packing.

Keeps Check of Costs

While cherries are grown successfully in western Washington, they are not grown on a commercial scale as a general rule, but Rudolph Baer of Ferndale has 85 trees on which he kept a close check of all costs. From the 85 trees he received a gross income of $913. The cost for harvesting was $208, while other incidentals amounted to $4, which brought the net return to a little over $700.

It should be remembered that these figures were produced in an exceptionally dry year when other crops were below normal. The illustration points out the value of diversified crops to insure a steady return to the farmer.

To Check Fire Menace

As a step toward checking the smoke nuisance, which is common to all parts of western Washington during the summer months, the second annual forestry convention at Seattle suggested a ban on all fires, except the burning of forest debris in piles in open clearings.

A further recommendation was made which called for screened windows for smoking compartments of railroads and stages which would prevent fires from starting by lighted matches or cigars thrown from the window. Other measures were suggested, all of which will help curtain the fire menace if made a part of the state laws.

Reforestation measures were drawn up and the lawmakers will be asked to make adequate appropriations for replanting the cut-over lands and make them productive. This, of course, applies to lands that are not suited for agricultural purposes. The cutting of Christmas trees from replanted lands was condemned as a serious setback to reforestation.

The conference was held under the auspices of the forestry committee of the Seattle Chamber of Commerce and was held in the lobby of the latter organization. Dean Hugo Winkenwerden, of the school of forestry at the University of Washington, was chairman of the convention.

Women's Fair Exhibit

"I have never seen more splendid exhibits," said Miss Maud Wilson, extension state home demonstration leader of the Washington State college, in speaking of the women's departments at the different fairs over the state. "Not only was the quality of entries high, but they were attractively and conveniently displayed. I especially noted their freshness and the care with which they had been prepared for entry. There were few articles that were not distinctly modern, and in a sewing, fancy work or millinery exhibit, out-of-date articles are as little to be desired as in a woman's wardrobe.

"The big need in most of the fairs is more room for display. I found that superintendents had spent days in arranging exhibits, where hours would have been sufficient had more room been provided.

The DUNN
With Improved Lower Stack, Umbrella Cover and Removable Top Cover.

It is important that orchardists insure their crops against frost and freezes—because when killing frosts do come—the loss is appalling. These losses can be eliminated. DUNN Orchard Heaters completely solve the problem.

650 thousand DUNN Orchard Heaters in use by California citrus growers. Hundreds of thousands this type used elsewhere in U. S. Most effective because of exclusive patented features. Improved lower stack with perforations depressed to **inside**, radiates heat to side **and down**—with most heat at bottom of stack. Perfect combustion. All heat—no smoke. Joints fit tightly. **Only draft** is through patented **downdraft tube.** Heat generated rapidly; maximum protection secured at once.

Improved stack with perforations depressed to *inside*. Radiates heat to side and to ground—with most heat from bottom of stack.

The DUNN Orchard Heater

is the only orchard heater with **permanent asbestos** lighting wick. Lights quickly and stays lit. Burns clean as a gas jet. Uses less oil. 9½ gallon heater burns 20 hours at 100% efficiency, without refilling. Patented swedge on bowl is hand grip for carrying heater. Made of 24 gauge extra heavy Keystone Copper Bearing Steel. Seamless bowl and cover.

Orchard Heaters Needed Everywhere

Growers of oranges, grape fruit, limes—apples, peaches, pears, plums, cherries, berries—every orchardist—from largest to those with less acreage—you should make **prompt inquiry as to the DUNN Orchard Heater and how it protects profits.**

Records—everywhere—show DUNN Orchard Heaters **do** pay hundreds of dollars on investment. First cost—except for fuel—is only cost. Depreciation based on actual facts, less than 2 per cent for 8 years.

Investigate! Write Us Today

You need DUNN Orchard Heaters. Write for booklet which gives facts and valuable information on how to protect YOUR crops and insure profits. Every orchardist should have it. Write today. No obligation. A postal will do. Address

WANTED: AGENTS

DO IT NOW

Geuder, Paeschke & Frey Co.

1576 St. Paul Avenue (Established 1881) MILWAUKEE, WIS.

Special Representatives Everywhere

Representatives in every fruit growing territory. Upon request we will give you name of one nearest you. Also other valuable information that will assist you to increase profits.

Where DUNN Orchard Heaters are manufactured. The plant of the Geuder, Paeschke & Frey Co. A well known, long established company—who have built a successful manufacturing enterprise by selling at lowest possible prices and rendering prompt, efficient service.

Blast 1/2 more stumps per dollar

BY using Pacific Stumping Powder, you can cut the cost of clearing your land. For 50 cents more than you pay for 85 sticks of any standard stumping powder, you can buy 130 sticks of Pacific Stumping.

Every stick of Pacific Stumping has approximately the same strength as a stick of standard stumping powder, and for land-clearing it shoots with it, stick for stick. And it is non-headache and *non-freezing*. Your saving is 2½ cents (or 30%) per stick.

Think what this new explosive means to you! Nearly ½ more acres cleared at the same cost, or the same number of acres cleared at the saving of about ⅓ in cost of dynamite.

Buy Pacific Stumping at your local dealer's. Write for booklet "The Development of Logged-off Lands."

OKLAHOMA MINERAL LAND; TRADE; ASsume. Earl Boyd, Kettle Falls, Wash.

PIKE'S PEAK OR BUST

By LEWIS B MILLER

Copyright 1921

CHAPTER NINETEEN.

Away to the End of the Rainbow.

MUCH excitement and indignation blazed up in that big mining camp when the news spread abroad, as it very soon did, that three robbers and murderers had spent a night there. Had Jeeters and his two followers been captured at the time there is scarcely a doubt as to what would have been done with them. But they had made good their escape; and, with a world of wilderness to hide in, it was now a question as to whether they would ever be captured.

The excitement soon subsided, and the picks and pans were again as busy as ever. It was still true that, with the exception of the first claim discovered, none of the claims was really paying. Of the great army of miners now here, some were toiling on in the hope of striking "pay" dirt sooner or later, but more of them because they did not know anywhere else to go or anything else to do.

Cooper and those with him worked ahead steadily, for about the same reason. They were not washing out much gold; so little, in fact, that they were disgusted with themselves for having come. But the Clear Creek claims had not been rich enough to tempt them back to that now deserted camp. They were using their pans only. None of them cared to spend the little gold dust they had saved to buy costly lumber for a sluice box.

Every day, while four of their number remained at the camp, busy with picks and shovels and pans, two wandered away over the near mountains, hunting and prospecting. No mineral was discovered by the prospectors, but they easily kept their party supplied with meat. This went on day after day.

But one night, as the six men sat in a circle around their campfire, Sanders broke a rather lengthy, gloomy silence by saying: "Boys, I don't know how the rest of you feel. But, for one, I'm just about ready to shake the dust of these diggings off of my feet. Even if we shouldn't better ourselves by moving, I don't see how we can do much worse."

"We're all ready for a move, I'm guessing," Cooper answered. "But the hard question is: Where can we go and fare better?"

And Esau Haggerty said: "One place that won't pay is about as good as another, it looks to me like."

Now many suggestions were offered, not one of which was very satisfactory, even to the man who offered it.

Esau kept silent, listening to the others. At length he spoke out: "To my way of lookin' at it, we've made one big mistake up to this time. We've follered the crowd. The men that's struck it rich out here has always cut loose and made their discoveries by theirselves. After that the crowd flocked to them. Even then they'd ha' been better off without the crowd. When you're by yourself, you may be a little lonesome, but you can prospect wherever you feel like and dig wherever you're a mind to."

"Something in that," Cooper admitted.

"Yes, there's a whole lot in it," declared Sanders. "If we figger on ever making any great spect, we've got to hustle out and dig where no miner has ever stuck a pick."

But where'll that be? Where'll we go?" demanded Givens.

And Jess Holloway remarked: "This is a whale of a country. Mighty lot of big mountains out here; more than I ever saw piled up anywhere else. So far as we know, too, there's just as apt to be gold in one place as another. Esau's right. About the best thing we can do is to get away from where others have prospected. Worlds of room for that, too."

"As the sun was setting today, behind that great snow-roofed range over to the west, I was up on the mountainside yonder and watched it. And it occurred to me that I'd like to cross that range and gaze down upon the far side. I'd like to see what's over there." Orlando was speaking.

"Just some more mountains, I'd guess," Givens answered. "Mostly mountains from here on till you strike the Pacific ocean, I've heard tell."

"Yes, I know. This is all a mountainous region." Orlando was speaking again. "It's only the more interesting on that account. But I'd like to see those mountains. Over there, it's pretty safe to say, no prospector has ever yet set foot. And that ought to be our best show to dig up some gold."

"We'd have as good a chance there as anywhere," was Cooper's opinion.

"And even if we didn't find much gold, we'd see some new country," Holloway suggested.

"But we'd be a long, long ways from our base of supplies," objected Esau.

"If we hadn't been in such an all-fired rush to get to these new diggins we might have done some prospecting on our way across the mountains," Givens remarked.

"Yes, and we'd have had just as good a chance to strike pay dirt there as anywhere," said Sanders.

"And we'd be in reach of our supplies," urged Givens.

Till late the six partners discussed the question. Orlando was still in favor of striking out west, though to himself he had to admit that that would be getting rather far away from camp between Denver and the mountains. Still, as long as he had to be separated from the object of his infatuation he might as well go farther if prospects were better. But the farther they went the more danger there would be from Indians. So, when the party fell asleep they had pretty nearly decided to return to the mountains they had crossed and prospect there.

Morning came, and the six men ate breakfast very early. The question as to what they should do was still undecided, however. After that they remained under their camp shed, debating whether to go or stay.

Finally Cooper spoke out: "Well, boys, this is not getting the baby a shirt, or paying for the one it's got. I'm for doing something, and that forthwith. Let's go to tramping, or else hustle back to our digging. One or the other, and that right quick."

"I'm tired of digging for my salt. I'm ready to strike out myself. Somewhere, anywhere. Not much matter, as I see," was Holloway's answer.

"I'm with you," said Orlando. "But I still think the snowy range over yonder is the place for us. I'd like to wade some snow in summer time."

"And you'd be pretty apt to wade into some redskins' camp," Givens told him.

"Snow or what not, redskins or what not, gold or what not, I'm for setting out somewhere," declared Sanders, springing to his feet.

At once the six men began to pack up. In a very short time they were ready to travel. They had kept their own counsel, and the first intimation their neighbors had of the matter was when Cooper called out to the miner nearest them: "Goodby to you! We're off to greener pastures!"

"And any feller hankerin' for these claims of our'n can jump 'em and welcome!" added Esau.

"Where to now?" the miner called back.

And Sanders answered: "That we don't know yet. The Rockies are all before us to choose from. We've going to wander to and fro and up and down till we strike a mountain of gold, or something smaller."

"Well, goodby, and good luck to you," the miner shouted.

Away the party marched, their faces turned northward. They were keeping near the foot of the mountains, as they had come.

During the next few days the six wanderers moved here and there, sometimes down in the park, oftener up in the mountains. They were making their way back toward the mountains they had crossed after leaving Denver; but all were doing more or less prospecting as they went.

One morning they awoke very early and had started by the time they could see. They moved at a brisk pace and had tramped a few miles before the sun appeared. While the sun was still invisible to them, Orlando turned his eyes toward the west and northwest, and saw it shining dazzingly against the white roof of a great snowy range. He gazed in that direction longingly.

The snow roof looked all the whiter, more dazzling because it was set in relief against a black cloud. The sky above the range was covered by the cloud. Rain must have been falling from it, for already a rainbow appeared there.

The rainbow was complete and very distinct, all its colors showing brilliantly. And each end of it disappeared behind the great snow banks of the range top. Soon all the party were gazing at it admiringly.

"Rainbow in the mornin', sailors take warnin'," quoted Esau.

"Oh, nothing of the kind" exclaimed Orlando, impatient at the old weather saying. "I can tell you something better than that. 'Go to the end of the rainbow and you'll find a pot of gold.' I've been hearing that all my life, but I've never yet tried it, or met anybody that had. Now, for once, though, I'd like to see what's in the old saying. I'd like to run that pot of gold down and find out of it's really there."

Rather oddly, the suggestion struck several of the party in a favorable light.

"Does look rather interesting over there," admitted Sanders. "Don't know but what I'd like to see what's on the other side of that big snowdrift."

"I can tell you what's over there, without goin' a step," Esau assured him. "It's the jumpin'-off place."

"Then let's go and see it," spoke out Holloway. "I've been hearing of that place all my life, and now at last I'd like to catch a glimpse of it. Of course we can see it without jumping off."

"Some danger of redskins over there, I suppose," Cooper suggested.

"And they're all known to be hostyle," said Esau.

"No hostile redskins in mine, if you please!" Jeff Givens hastened to say. "I had trouble enough with the friendlies on our way out here—them and their lousy buckskins. The Lord save me from any of 'em that's trotting the warpath."

"There's a little danger, of course, but not a great sight, I guess." Holloway was speaking. "That trapper from St. Louis told us, you recollect, that he'd trapped all over this western country. If he had the spunk to trap there alone, we ought to have the spunk to prospect there six together."

"Even if the mountain Indians are dangerous, their villages are few and far between, they say," Orlando argued. "By keeping a sharp lookout we can dodge 'em. That's how trappers do. In fact, we might wander about over there for a year without seeing any of 'em, or being seen by 'em.

The rainbow was still visible, and the party were still tramping northward. All were now in favor of turning west but Jeff Givens and Esau Haggerty.

Finally Esau said: "Jeff, it's four ag'in two. I never did believe in the tail waggin' the dawg. Let's give in—wha'd'ye say? I'm beginnin' to like the looks of that big snow bank myself."

"Oh, all right, then! I'm not going to be bullheaded about it! If the five of you are crazy enough to strike out chasing rainbows to the jumping-off place, I'll chase 'em with you. And I'll jump off with you if you say so! Here goes!"

At this Orlando, who was driving his cow and leading the way, turned Brindle's head toward the west—somewhat north of west.

"Hey there, Lando!" called out Holloway, gaily. "Two ends to every rainbow! Which end is the pot of gold at? Just tell us that, will you?"

"I've never heard anybody say as to that, Jess. Must be two pots—one at each end. I'm making for the right end, though—the right-hand end. Fellow that goes right can't well go wrong."

Gradually the rainbow faded out. At last not a trace of it remained.

"Now where's your guide post, you rainbow chasers?" scoffed Givens.

Orlando answered: "Rain may have washed it out. But I know well where it was—where the end of it was. See that little white point reaching down from the main snow cap? Bow's right end was exactly behind that."

The party were now traversing an almost level prairie, thickly overgrown with high grass and abounding in game of many kinds. Here and there they could follow a game path. Just as often, though, they had to plow their way through thick, waist-high grass. Sometimes a grove or a lone tree dotted this great meadow. And it was in one of these groves, on the bank of a little stream, that the gold seekers halted for dinner.

While resting, after eating, and allowing Brindle to rest, they bathed their feet in the stream. Later they saddled the cow, strapped on their own packs, took up their guns and tramped on. And after that they pushed ahead steadily, always toward the northwest.

Just how long it took the party to cross the open country is not clear at this distance. But at length they found themselves at the edge of a great forest. From there on their course led through pine woods.

The traveling had been hard enough before, but now it suddenly became harder. There was much fallen timber, and on Brindle's account they were under the necessity of making their way around all but the smallest logs.

"Wouldn't this forest make a terrible fire?" remarked Sanders, who knew something of the great fires in the piney woods of Michigan.

The others had been accustomed to forests, but not to pine forests. And not till Sanders had explained to them did they understand the danger here. In the forests they had been familiar with a fire meant the burning of all the dead leaves and all or most of the dry wood.

(To be continued.)

Bits of Fun FOR Everyone

By Request.

Customer—I say, do you ever play anything by request?

Delighted Musician—Certainly, sir.

Customer—Then I wonder if you'd be so good as to play a game of dominoes until I've finished my lunch.—Exchange.

Depends on Meaning.

"Well, my boy, do you like to go to school?"

"Yes, goin' to school and comin' from school are all right, but it's a awful long time between!"——Orchard and Farm.

The Modern Rube.

"Say, Cy, I jest found out what a rube is."

"Thet so, Hiram? What it is?"

"Why, it's one o' them 41-hour, $95 a week labor guys that thinks a farmer is goin' to sell him food cheap."—New York World.

Bad Practice.

Mrs. Reddy—Why don't you let your Willie play baseball with the other boys?

Mrs. Green—A part of the game is stealing bases, and I'm afraid it might have a bad influence.—Topics of the Day.

His Vocation.

It was the first day of school and the teacher was taking the names of the children, those of their fathers and the business of each one. Small Lucy gave her name and that of her father, but hesitated and became silent when it came to his business. Urged by the teacher, she blushingly said:

"He is Aunt Jane that does the woman's page and the beauty column of the Daily News."—Orchard and Farm.

Slipped One Over.

Casey—Ye're a har-d worruker, Dooley. How many hods o' morther have ye carried up that ladther th' day?

Dooley—Whist, man, I'm foolin' th' boss. I've carried this same hodful up an' down all day, an' he thinks I'm worrukin'!—Cleveland Leader.

Square With the World.

Casey—Did that lawyer prove yez not guilty of stealing that watch?

Murphy—He did that.

Casey—How did yez pay him?

Murphy—I gave him the watch.—American Legion Weekly.

Guilty.

"Sir, I am entirely a self-made man!" magniloquently asserted the Hon. Boanerges Blawhaw.

"It is very commendable in you to own up to it," said old Gaunton Grimm. "Many a man would have blamed it on his wife."

Just Folks

Talking with one of the national leaders of the boys' and girls' club movement, I found him well grounded in the opinion that if you want to get this boys' and girls' club work into the busy thoughts of influential men, you must put the boy first and his work second: "This is the boy who did this work," and not "This is the work done by this boy."

Worth while boys and girls attract the attention of the biggest folks in the country. To waken up the boys and girls, it seems to be necessary to get them together in clubs and awaken their interest by offering prizes for the best work done. Rivalry is a great energizer.

The club leader pointed out that when a boy's mind is really awakened, the matter of not getting a prize could not put him to sleep. The boy might regret and might for a time lament over it, but you could not keep him away from the line of work which had aroused his ambition.

I remember one instance of a teacher who presided over a backwoods school of western Washington some years ago. She aroused the community spirit. The school site, hewn out of the forests, became the center of neighborhood attraction. Soon there was a loud call for a new school house, and the new schoolhouse became a reality largely through the volunteer work of the men and women of the district. The teacher dedicated the old schoolhouse to manual training work, which in turn became the central attraction of the pupils of the district. Soon the report leaked out that the boys would break into that old schoolhouse Saturdays and Sundays, as they could not forego the continuous pleasure of that manual training work.

Boys and girls readily respond to doing something along the line of what fathers and mothers in the community are doing. They take to the big woods "accomplishment" and "achievement." Their hearts are enlisted in this kind of work as well as their heads; in fact the heart is the inspiration of the head.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I always turn to the Family Circle for helps and decided to tell the sisters my method for dressing geese and ducks. The old way is very tedious, and I am sure all who try it will be delighted with my quick, easy method.

Tie the fowl by the feet, hang it up and pick off all the feathers you care to save, then kill the bird. Have a sack of powdered rosin ready, sift the powder through the feathers allowing it to sift into the downy feathers close to the body, which are so hard to remove. Have a boiler of boiling water ready and dip the fowl in, entirely covering it, and the feathers will roll and rub off as easily as from a chicken. I would be pleased to have a good recipe for making salt rising bread. Mrs. Thos. A. Whalen, Wash.

(Mrs. Whalen sends in some fine recipes which will appear in the Home Recipes. —A. W. B.)

Dear Mrs. Barland: I have often wanted to write to the Circle and now will do so. I live eight miles northeast of Choteau, an old cattle town, and 15 miles from the famous Flying U ranch, but it is all cut up into small ranches now. We are 35 miles from the main Rockies and I wish you could see them sometimes, as I know from your letters to the Circle that you are a lover of beauties in nature. In the winter the mountains are like great sugar loaves with their snow-covered peaks, and when the sun comes up and paints them pink with dark blue streaks they almost take one's breath away. They are hidden with smoke these days and last night the sun went down a great pink ball into the smoke.

A half mile from us is a small alkali lake called Priest lake, at the foot of a butte called Priest butte, because the Indians killed a priest there at one time.

We have a fairly good crop this year, will get 15 bushels of grain to the acre I think, but have not had more than $1000 worth of grain on 160 acres of land in the past three years. The pests are frightful; there are weeds, cutworms, grasshoppers, noseflies, horseflies, deerflies, flying ants and mosquitoes.

We came here from the Camas prairie, Idaho, in 1918, to make our fortune and have lost the $5000 we brought with us and in debt that much now. I have made over clothing till I hate to think of it. I have three children, Frances, 6 years, Eugene, 3 years, and Phyllis, 7 months. She was born in the middle of a night when it was 10 degrees below zero, before either doctor or nurse got there and only my husband was with me and he got in the house only 10 minutes before little Phyllis arrived. My husband had gone to a neighbor to ask him to go for a doctor. We had a boiler full of boiling water and everything was as sanitary as in a hospital and we got along as those who live far from town have to do.

I am telling you all this because I feel I am writing to a motherly woman who understands our troubles. I lost my mother in 1921 and I do miss her so much. There was to have been a golden wedding on September 15, 1922, and we were all planning to go, all nine of us left from her family of 12 children. There are now six girls and three boys. We were all given a high school education and some went to college and normal and we were not rich, either.

Have you ever tried tying children's hands as a punishment for the naughty little things they do? I call their fingers soldiers and sometimes write a note to their daddy and send them to him with it. It cures them.

We have been today six miles away to the Teton river for gooseberries, but they were all gone. There is nothing in the fruit line here but buffalo berries and chokecherries and there are not even those this year as they have all been picked when green.

Though we live in such a dry country my little ones find many beautiful things to enjoy. A cloud to them is like a beautiful flower, or the sun shining on a bird's wing. They keep the house full of wild flowers. To some women these things are "trash" and are things "dirty," but I want my children to remember the days when mother would let them have their flowers in the house.

MRS. K. S., Mont.

Family Circle Girls

Dear Mrs. Barland: In a recent issue of THE FARMER I read Tinnie's letter and your reply. I am taking advantage of your invitation and am going to give my opinion concerning kissing friends goodnight.

I think kissing boy friends absolutely wrong. If it did nothing worse, it most assuredly does cheapen love. The young folk of today act as if there was nothing but the present to think of, and they must get as much fun (as they consider it) out of the springtime of their life as possible, regardless of self-respect that is lost by permitting familiarity.

I can not understand how self-respecting girls can permit a boy friend to kiss her. I am 18 years old and I am proud to say I have never been kissed by a boy and I do not intend to be until I have promised to be some man's wife.

I think girls of today do not stop to think how things may turn out. Perhaps their parents do not give them the right kind of training. What real man would want for his wife a girl who had flirted with every Tom, Dick and Harry who came along. If she did it before marriage what would keep her from doing it afterward?

What conception of love can a girl have who has permitted "petting parties," as they are called. If she is a real girl with a true womanly heart she surely looks forward to a home of her own in God's good time, a home wherein the leading element will be a true and never ending love between herself and her life partner.

If she has allowed promiscous love making from different men, how is she to recognize true love on the part of a man when it comes to her? Married life is or should be far more serious than a common flirt would make it. The boys who take advantage of these thoughtless girls are not real friends, but are only amusing themselves and are sure to drop the friendship as soon as they settle down and begin to take life seriously. I feel sure you will agree with me, Mrs. Barland. I wouldn't say so much, but I get so disgusted in school watching the girls try first one boy and then another to gain

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color the buttermilk. Tasteless.

Wells & Richardson Co., Burlington, Vt.

No Leather in the World Like This—*Stays* Soft

The Wolverine brings a new era in shoemaking. For we specialists have perfected a secret process of tanning that means better workshoes than any known before.

The leather in the Wolverine stays soft. It does not dry out after wetting like a hard board, as other leather does. After every soaking it dries out as velvety soft as new buckskin. Thus permanent comfort is assured. And this new-day leather wears longer than men thought possible! No other leather in the world is like it.

We make this leather from horse hide by our secret process in our own tannery. Horse hide is the toughest, longest-wearing leather known — the leather used for Cossack saddles and for baseball covers because it is the only leather that will stand the pounding. Yet we give this thick, tough leather almost the softness of velvet. It stays soft. And we increase its natural wear-resisting powers. It wears and wears and wears.

WOLVERINE Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

And, when you consider how they wear, these new-day shoes are very low priced. For we effect very large economies through the operation of our own tannery.

For Every Work Use

For field and factory, for forest and mine, for oil field, camp and motor—for every use there is a Wolverine model to outlast rough work and give perfect comfort always.

If your dealer does not have the Wolverine we will see that you are supplied. Send the coupon for catalog.

High Points in News of the Week

Chief interest throughout the United States this week lies in the election which will be held throughout the country on November 7, next Tuesday. This is the first general election since the presidential election of 1920, and in many states will indicate somewhat the pupular opinion of the Harding administration up to this time.

In the state of Idaho chief interest probably centers about the contest between C. C. Moore, republican, and Moses Alexander, democrat, for governor. Special interest is felt in the fact that Alexander was governor preceding the election of Governor Davis.

In Oregon there are a multitude of vital issues. Keen interest is being expressed in the race for governor between Walter Pierce of La Grande, democrat, and Governor Olcott, republican. Prominent also is the so-called compulsory education bill which would, if adopted, require that all children attend the public schools up to and including the eighth grades. The measure is opposed by those organizations conducting private schools. The measure that would give the city of Portland the right to bond itself in a sum of $3,000,000 for the support of the proposed 1927 exposition, is also of vital interest in Oregon.

In Washington keenest interest is apparently felt in the race for United States senate between Senator Miles Poindexter, republican, and former Congressman C. C. Dill, democrat. The initiative and referendum measure in which most interest is being expressed are the 30-10 school plan under which the state would be required to raise $30 per school child and the county $10 (the state now raises $20 and the county $10 per child); the bill by means of which parents in city schools might exempt their children from physical examinations by school physicians upon written request; the bill requiring voters to state their party preference when registering and requiring them to vote only in the primary of that party at the primary election, and the bill that would require any public service corporation to secure from the state director of public works a "certificate of necessity" before entering a field already served by a similar corporation.

* * *

From a world standpoint deep interest centers in the reports from Europe that a liquor organization is joining hands with the liquor interests of America in a fight for the "modification" of the present liquor laws in this country. As stated in last week's issue of THE FARMER, there is a well-organized campaign in this country looking toward electing of senators and representatives in congress favorable to modification if not actual repeal of the present prohibition enforcement laws.

The movement is organized under the name of the International League Against Prohibition. Organizers of the league say that they have little to fear from the prohibition forces in Europe. Their chief concern is to give every possible assistance to American wets. It is urged that the European liquor forces do not want to make the same mistake that the American prohibitionists did when they came to Europe preaching prohibition. Officers in the new organization will communicate with the anti-dry leaders of America to offer the full support of their organization.

"We are not going to America to ask the United States to overthrow prohibition," said Jean Couprie, one of the French delegates to the Brussels convention, which organized the league. "We would probably be politely but firmly ejected if we did and rightly so. However, we believe our cause is just as legitimate as that of the prohibitionists. American supporters of prohibition have taken the liberty of sending their apostles to Europe. We believe we have at least the right to offer our wholehearted support to American wets if they will accept. **They will find our organization amply backed financially and with a 100,000,000 advocates back of it.**

The president of the new anti-prohibitionist international organization is a former deputy and president of one of the largest champaign companies in France. He was formerly an extensive exporter to the United States.

* * *

The new British premier, Andrew Bonar Law, who has succeeded Premier Lloyd George, who resigned recently when the unionists element withdrew its support from his administration of the affairs of England, has begun the formation of a new cabinet. England is now deeply engrossed in the pre-election campaign for the new parliament. Following the resignation of Lloyd George the king dissolved parliament, necessitating an election of a new one. The election is a test between the policies of the outgoing and the incoming premiers.

* * *

At a meeting recently of the Pan-Pacific league a leading Japanese citizen delivered an address urging all nations holding lands in tropical waters of the Pacific ocean to adopt an open door policy toward the Japanese. He declared that there are now great areas of tropical lands undeveloped that the Japanese would gladly enter and upbuild if permitted to do so. He urged the necessity of his country finding outlets for its ever increasing population. His suggestion was received by anti-Japanese as but another step in the scheme of "peaceful invasion" by the orientals.

* * *

Another request that the United States actively participate with the allied governments in the settlement of European difficulties, this time involving the establishment of peace between Turkey and the allies and the status of the Dardanelles and the Bosporus straits, was received last week by the Washington government.

Its formal presentation by the British ambassador and representatives of France and Italy was followed by an authoritative statement from the state department that this government had instructed its ambassadors in London, Paris and Rome to inform those governments that it could not officially participate in the Near East conference at Lausanne, Switzerland.

At the same time, it was pointed out that there were important interests in the Near East and treatment of these by the conference in which this government was interested.

Outstanding among these were said to be that of protection of racial and religious minorities in Turkish territories and other humanitarian considerations, including those of the great missions and educational institutions. Apart from these, but regarded as of equal importance to Americans' welfare in the Near East was the problem of opening the Dardanelles and Bosporus straits.

Regarding the decision not to be represented through appointed delegates, it was said the United States never had been at war with Turkey, and, therefore, did not believe it could appropriately take part in framing a treaty of peace with that nation in association with the allied conferees.

* * *

The situation in Ireland has taken what looks like a turn for the better. Last week a constitution was adopted that one member of the Irish parliament described as "the greatest triumph for Ireland since the battle of Kinsale." It puts Ireland on about an equal footing as a member of the United kingdom with Canada, Australia, South Africa and New Zealand.

The leaders of British parties have made it clear that the overthrow of the Lloyd George government and the temporary return to power of the conservatives will not alter the attitude of Great Britain toward the new Irish constitution. The treaty will be scrupulously observed by any government that is likely to come into power in Great Britain.

* * *

Approximately $9,000,000 will be expended by the American Red Cross during the fiscal year ending next June for the relief of former service men disabled during the World war.

* * *

Belated action is taken to provide western fruit growers with at least a portion of the number of cars they need to handle their crop. The car shortage has become acute. Last week the car service division of the American Railway association ordered the eastern roads to return to the western lines at once the cars belonging to the latter. The interstate commerce commission has also played a part in the situation. The present order involves 4400 cars, enough to aid in meeting the crisis, but not enough to prevent losses unless others follow, which it is believed they will. United States Senator Miles Poindexter wired the interstate commerce commission last week urging that it put forth the maximum effort to meet the emergency "to prevent a catastrophe in the northwest." He declared that he was advised that the cars are not being moved by the railroads in accordance with the commission's orders.

Secretary of Labor James J. Davis has taken up the fight of Washington shippers for relief from the car shortage, urging President Harding to take steps to avert disaster threatening northwestern orchardists.

Secretary Davis' entrance into the car shortage situation was made following a request by Senator Miles Poindexter that action be taken at the national capital to relieve the situation.

Secretary Davis' telegram to President Harding, as reported from Seattle, follows:

"Shortage of refrigerator and box cars on railroads serving the Yakima and Wenatchee valleys in Washington threatens disaster to thousands of apple growers whose crops must be moved or rot. Anything that can be done at Washington to relieve the situation and avert the disaster threatening the great industry should be done at once."

* * *

The allied reparations commission is meeting in Berlin to get a first-hand viewpoint of the German situation and meet German exports in an effort to solve the difficult situation existing in that country's finances.

It is generally believed that the fall of the Lloyd George cabinet in England will tend to give the allies a solid front in their negotiations with Germany, whereas heretofore England has taken a more lenient attitude toward Germany than has France, with a result that Germany's attempts to get out from under part of her obligation have not been effectively forestalled.

There is a definite movement on foot in the allied organization looking toward strengthening the German industrial and financial situation, a collapse being feared.

* * *

Federal Judge Page Morris has issued an order temporarily restraining the operation of the grain futures act, on application of the Minneapolis Chamber of Commerce, until its constitutionality has been passed upon by the United States supreme court. A hearing was set for November 9.

Twenty Boxes to a Tree

An average of 20 boxes of Gravenstein apples to the tree is the experience of A. T. Linstad, a fruit grower of Vashon, King county. From seven trees Mr. Linstad realized $2 per box this year and there was a good demand for all he could produce.

"The Gravenstein is one of the best apples we can raise west of the Cascades," said Mr. Linstad. "It will always bear a crop and will sell at a premium on any market. I have a few trees of the red Gravensteins which usually sell at a 50-cent premium per box above the ordinary Gravenstein."

Mr. Linstad is one of the prominent fruit growers of the county, and has 15 acres, five of which are devoted entirely to fruit.

APPLE PRICES IN ENGLAND.

Family Circle Girls

(Continued from page fifteen.)

their attention. They do not realize that the boys think much more of the girls who take no notice of the notes they throw and such cheap attentions. I always manage to get my share of pleasure out of life without chasing the boys.

Should there be a girl with opinions like mine I wouldn't mind writing to her if it can be arranged through you. M. P.

Dear Mrs. Barland: I have never written to the Circle, but have read it and think it great. I am just a little country girl 18 years old and there are some questions I want to ask about. I have never been any place, never traveled in my life and want to know the proper way to conduct myself when I do travel. What should one do when going to a restaurant; does each person in the company order his own meal or if there is a man along does he order for all?

I have red hair, brown eyes and a few freckles. What colors should I wear. Hoping to see answers to my questions in THE FARMER soon. PEGGY SMITH.

My Dear Peggy: There is not, so far as I know, any set rule about who should order a meal in a restaurant. When a man is taking out a lady or ladies to eat at a restaurant he should, of course, give each an opportunity to choose what she desires. That being done, he can give the order to the waiter for all and I think this is the best form in case they are his guests. But when a lady is paying for her own meal she should give the order to the waiter herself.

One with your color of hair and eyes always looks well in brown and dark shades of tan and greens are good. Avoid pink and, in fact, all shades of red. For a real dressy gown your complexion favors a certain shade of blue. It is hard to tell you what shade, but would be easy enough if you were present to try on the shade. Any conscientious and capable sales woman would help to select the shade for you. ALICE W. BARLAND.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4100. Ladies' coat. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5 1-2 yards of 44-inch material. Price 10 cents.

3743. Child's coat and cap. Cut in four sizes: Six months, 1 year, 2 and 4 years. A 2-year size will require 2 1-2 yards of 27-inch material for the coat and three-fourths yard for the cap. Price 10 cents.

4158. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3 1-4 yards of 54-inch material. The width at the foot with plaits extended is about 2 1-4 yards. Price 10 cents.

4152. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 3-4 yards of 44-inch material. Price 10 cents.

4138-4148. Ladies' costume. Waist 4138, cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. It requires 2 3-8 yards of 40-inch material for a 38-inch size. The skirt 4148, is cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. A medium size requires 3 5-8 yards of 44-inch material. The width of the skirt at the foot is 2 3-8 yards. To make a girdle and the facings on the panel of contrasting material will require 1 1-4 yards 40 inches wide. Two separate patterns, 10 cents for each pattern.

4003. Ladies' "apron frock." Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 1-4 yards of 36-inch material. The width at the foot is about 2 1-8 yards. Price 10 cents.

3860. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires two yards of 27-inch material for the guimpe and 2 1-4 yards of 36-inch material for the dress. Price 10 cents.

4004. Misses' dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size requires 4 5-8 yards of 36-inch material. The width at the foot with plaits extended is about 2 1-4 yards. Price 10 cents.

4161. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires five yards of 40-inch material. The width at the foot is 2 1-4 yards. Price 10 cents.

4143. Boy's suit. Cut in four sizes: 3, 4, 5 and 6 years. A 4-year size requires two yards of 44-inch material. Price 10 cents.

4140. Girl's dress. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires 3 1-4 yards of 32-inch material. Price 10 cents.

3674. A comfortable corset substitute. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size requires 1 1-2 yards of 32-inch material. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates, and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

R-A

Underwear

For Women and Children

FARM life tests the wear and warmth of underwear. R. A. Underwear stands the test.

There is a suitable R. A. undergarment for the smallest child up to the out sizes for plump women.

At last you have union suits which do not gap or bunch, because of the long, wide, curved R. A. gusset.

The fabric is knit of the finest cotton and will last two or three seasons with proper washing. The seams will last as long as the fabric. This means double wear and at a moderate price. So R. A. is a money saver.

The R. A. Children's Underwear is durable and warm. The button holes are made to stay buttoned. The seats are full, giving freedom without wearing strain on the garment. Ask to see R. A. Waist Suits.

When you see R. A. Underwear, you will want it, so ask your dealer to show you the R. A. Points of Excellence.

BEDTIME STORIES

By THORNTON W. BURGESS.

DIGGER DECIDES TO STAY.

Digger the Badger crawled out from under a little bush on the edge of the Green Meadows. It was very early in the morning, so early that no one was astir but Old Mother West Wind. Digger watched her coming down the Purple Hills with her big bag over her shoulder and wondered what she could be carrying in it.

Digger had reached the Green Meadows only the night before. He had come all

"That settles it," said Digger the Badger, right out loud. "I'm going to make my home right here on the Green Meadows."

the way from the Great West and that is the reason he had slept under the little bush. You see, he was a stranger there, and had no home at all. He had met Johnny Chuck and Danny Meadow Mouse and Jimmy Skunk, who had been very polite, very polite indeed to him. They had pleased him so much that when he had curled up under the little bush for a good night's sleep, he had almost made up his mind to stay on the Green Meadows and make his home there.

Now, as he carefully brushed his coat and smoothed all the wrinkles out of his waistcoat, he watched Old Mother West Wind, and the longer he watched the more he wondered what she could possibly have in that big bag. When she reached the middle of the Green Meadows she stopped. Then she opened her big bag, turned it upside down and shook it. Out tumbled all her children, the Merry Little Breezes, and began the funniest little dance among the buttercups and daisies, and as they danced they began to sing. Digger the Badger stopped brushing his clothes and listened, and as he listened he began to smile; for this is what he heard:

We're the Merry Little Breezes,
And we love to romp and play,
We're the Merry Little Breezes,
And we're happy all the day.
Oh, we love the pretty flowers,
And the little birds that sing.
And we love the Sun and Showers
Of the summer and the spring.
So we play and romp and frolic
From dawn till day is through.
But most of all we're happy
When there's some good deed to do.

"That settles it," said Digger the Badger right out loud. "That settles it. I'm going to make my home right here on the Green Meadows."

"Is that so? Who invited you to, I want to know?"

Digger whirled around. There sat Reddy Fox. Reddy had swelled himself up to look as big as he could, and was trying hard to look very fierce, for you know Reddy Fox is a bully. But all the time he was taking great care not to come too near, for bullies are almost always cowards.

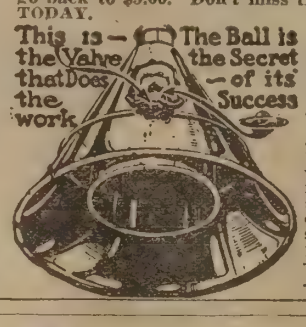
Digger the Badger grinned. "I reckon it isn't any of your business who invited me," said he. "I'm going to make my home right where I please."

"You can't unless I say so," replied Reddy Fox, showing his teeth.

Then Digger the Badger opened his mouth and yawned. Yes, sir, he yawned right in the face of Reddy Fox. And when he yawned Reddy saw such long, strong teeth that he backed away just a little. But still he tried to appear very fierce and important.

"You can't unless I say so," he repeated.

Digger the Badger looked at him a whole minute. Then suddenly he threw a whole handful of sand right in the face of Reddy Fox.



"Bah!" shouted Digger the Badger. What do you think Reddy Fox did? Why, he put his tail between his legs and just sneaked away. And all the time he could hear Digger the Badger laughing fit to kill himself.

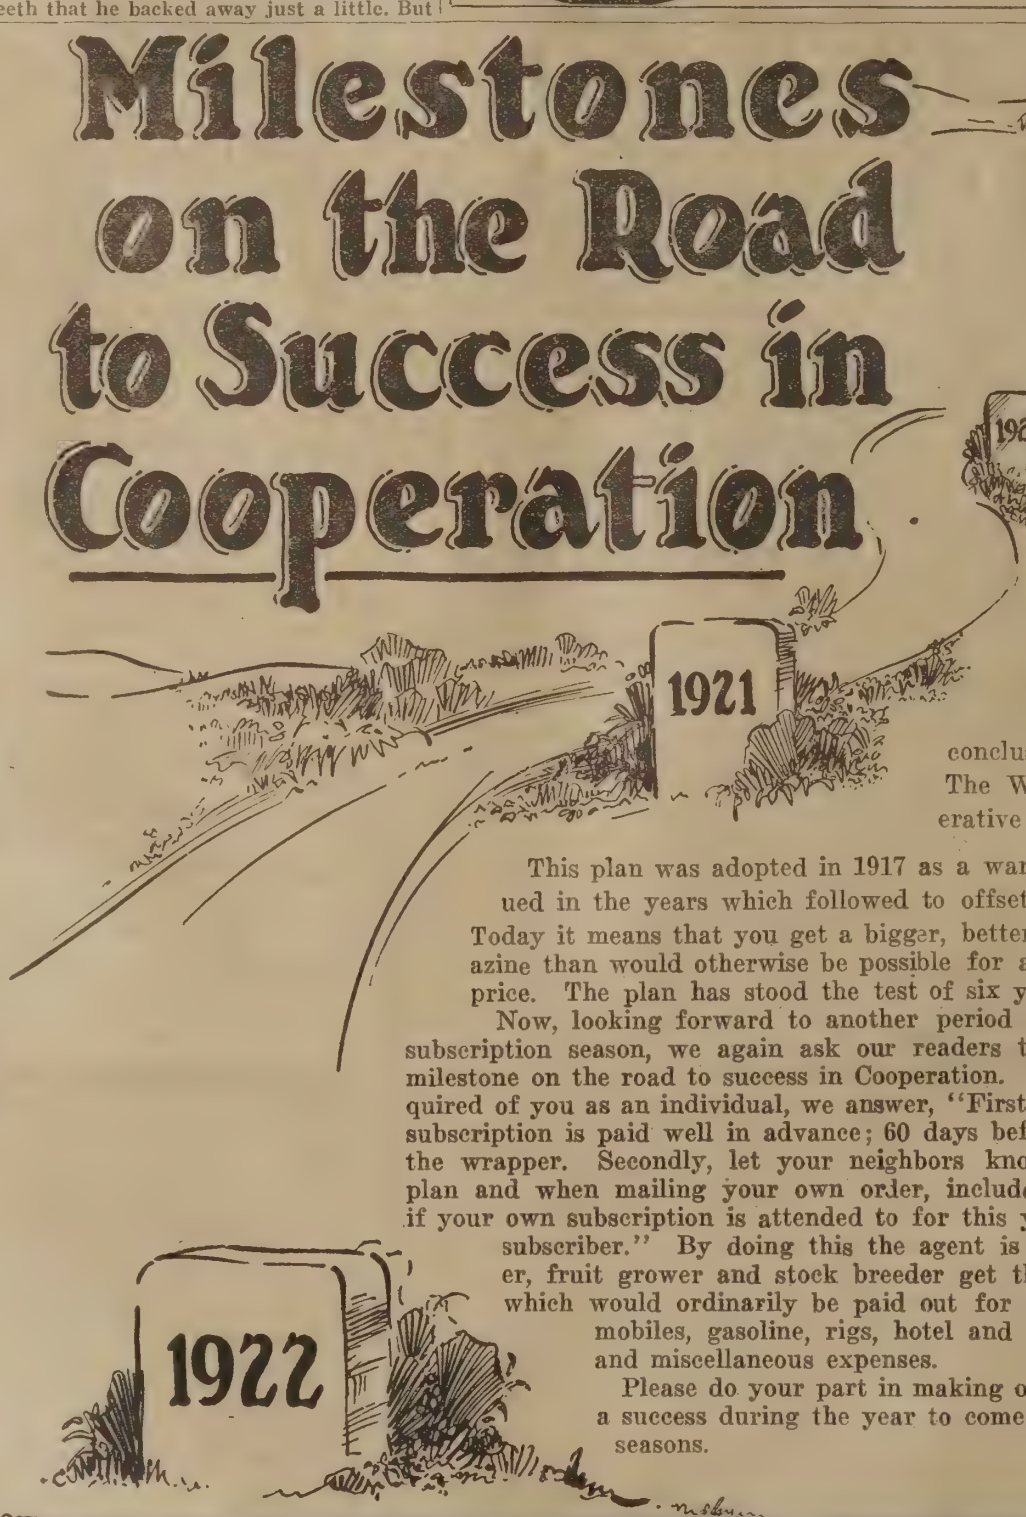
$5.00 Solid Copper Vacuum Washer $2.50

Will Last a Lifetime! Get One Today

If you want the very best that can be made, here it is. We have sold over 300,000 tin washers, and they have given perfect satisfaction, but, of course, the solid copper is much better. We are just selling a few at $2.50 to introduce them. After which the price will go back to $5.00. Don't miss this wonderful chance. Tell your friends about it. SEND TODAY.



We Absolutely Guarantee the Duplex Will

wash a tubful of anything washable in three minutes. Blankets, lace, socks, cuffs, silks, underwear, curtains, towels, handkerchiefs, ANYTHING. Hands do not come in contact with the water, therefore it can be scalding hot. So easy to operate that a child can do it. Will not wear out your clothes. The Duplex forces the boiling suds through the clothes, NOT the clothes through the suds. Will save your back and many hours of needless toil. An ordinary weekly wash can be washed, blued and on the line in one hour. Your money back without question if it will not do all we claim and more. DON'T MISS THIS SPECIAL OFFER. Send only $2.50 and this ad TODAY and we will send you the solid copper Duplex Vacuum Washer, regular price $5.00, by parcel post to any address. Agents wanted.

Duplex Mfg. Co., Dept. C. 97 Detroit, Mich.

Milestones on the Road to Success in Cooperation

That there is a big army of loyal boosters throughout Washington for the principal of Cooperation is shown conclusively by the success of The Washington Farmer's Cooperative subscription plan.

This plan was adopted in 1917 as a war measure, and was continued in the years which followed to offset the tide of rising prices. Today it means that you get a bigger, better, more helpful home magazine than would otherwise be possible for a rock bottom subscription price. The plan has stood the test of six years.

Now, looking forward to another period of long evenings, a new subscription season, we again ask our readers to help us set up another milestone on the road to success in Cooperation. If you ask us what is required of you as an individual, we answer, "First of all, see that your own subscription is paid well in advance; 60 days before the expiration date on the wrapper. Secondly, let your neighbors know about our cooperative plan and when mailing your own order, include theirs as well. Thirdly, if your own subscription is attended to for this year, find us just one new subscriber." By doing this the agent is eliminated, and the farmer, fruit grower and stock breeder get the benefit of every penny which would ordinarily be paid out for the agents' salaries, automobiles, gasoline, rigs, hotel and garage bills, railway fares and miscellaneous expenses.

Please do your part in making our Cooperative plan as big a success during the year to come as it has been in previous seasons.

Nov. 2, 1922.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash. 1922

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

Will Hold Many Live Stock Sales

The two big live stock shows next week and the following week will offer a multitude of opportunities for farmers and stockmen to inspect the best herds and flocks of the west and make such purchases as they may desire for building up their own live stock. The shows are always the occasion of many private sales and purchases and this winter will be no exception to this rule. There are also scheduled a large number of auction sales at which many animals of excellent breeding will be offered, including a considerable number of those shown in competition. The only auction sale at the Western Royal at Spokane so far announced is that of the Hereford Breeders' association, which will offer 45 head of animals consigned by several breeders. This sale will take place Wednesday, November 1. Half a dozen auction sales are scheduled for Pacific International week at North Portland. Two Hereford sales, one of Henry Thiessen of Sweetwater, Idaho, and one a consignment sale, including cattle from several of the prominent herds of the Pacific northwest, will be held. Two Shorthorn sales, one a consignment sale of the beef strain, including 50 head, and one of milking Shorthorns, including 20 head, will be held. In the dairy breeds there will be at least two sales. A consignment sale of 70 head of purebred Holsteins, including a considerable number of animals competing in the show, and a similar sale of Jerseys made up of consignments from several of the best producing herds of the Pacific northwest, will be held. The Hereford sales will be managed by R. P. Banks of Spokane, the Shorthorn sales by A. E. Lawson of Spokane, the Holstein sale by George A. Gue of Yakima and the Jersey sale by E. A. Rhoten of Salem.

JUNIOR HERD HEADER.

The picture herewith is that of Majesty's Cowslip's Noble, the Jersey junior herd sire on the farm of Nichols & Plunkett,

near Ellensburg. The sire of this bull was formerly owned by C. M. Talmadge when the latter was farming near Newport, Wash. His dam was Majesty's Boutilier.

TWO SONS OF GREAT COW.

Allen Reynolds of Walla is the owner of one of the only two bull calves born to Sammamish Topsy, the world-record Guernsey cow of the Dr. Park Weed Willis herd, which died after contracting pneumonia on the fair circuit the past season. Dr. Willis stills owns the other son of this cow. Topsy not only held the record for Guernsey cows west of the Mississippi at the time of her death as an aged cow, but as a 2-year-old held the state record with a production of 629 pounds of butterfat. Three daughters, 14 granddaughters, one great-granddaughter and one son of Topsy are now in the Willis herd, which is to be dispersed at public sale at Orchard Hill farm, Redmond, November 22.

PLAN THREE BERKSHIRE SALES.

The Washington State Berkshire association is planning to hold three sales about the middle of February. The first will be held at Prosser February 13, the second at Yakima February 14 and the fifth at Ellensburg February 15. Kenneth Wilcox of Wapato is secretary of the state association and also secretary of the association promotion committee for the upbuilding of the Berkshire breeding business in this state. This committee is already planning for a junior and senior futurity at next year's state fair. The committee is composed of J. A. Bull of Ellensburg, Fred Sinnes of Prosser and R. C. Woodruff of Yakima.

DREAM GIRL OF HOPE FARM.

One of the registered Guernseys on the Leland J. Clark farm at Gold Bar is making a record that promises to be one of the top-notchers of the state. This heifer, Dream Girl of Hope Farm, is but a 2-year-old and is producing 45 pounds of milk daily, with a test of 5.4 per cent. At this rate she would make close to 70 pounds of fat per month.

OXFORD RAM TO HEAD FLOCK.

C. J. Sandwith of Friday Harbor, San Juan county, recently purchased a new Oxford ram to head his flock of sheep on the farm a few miles from town. The animal is a yearling and won heavily at some of the larger fairs of the state this fall. He was secured from the H. W. Hastings flock of Thornton, Wash.

Pay nothing till goods arrive, then only the smashed price and postage. If not delighted with your bargain after examination and try-on, return goods and we cheerfully return your money instantly. Don't put it off. Send now.

SEND NO MONEY—PAY WHEN GOODS ARRIVE

Manchurian Wolf Fur Scarf

$4.49

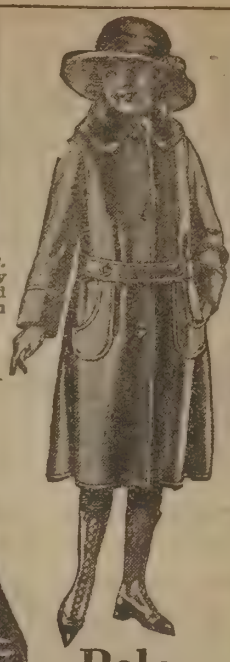
This scarf is about 46 inches long and 12 inches wide. It is stylish as well as warm. The lining is good quality satin, and there is an extra ruching laid around the neck inside, so as to protect the fur from wearing. Only the most expensive fur scarfs have the features which we offer you at this bargain price. **Order black Manchurian wolf scarf by No. 51E5193. Order brown by No. 51E5194. Send no money. Pay only $4.49 and postage on arrival. If not satisfied your money will be refunded. Be sure to state color wanted.**

Exquisitely Embroidered Gabardine Dress

$2.98

This delightful model is sure to be one of the favorites of the season. It is of beautiful cotton gabardine in navy blue or brown. The vestee, smart bell sleeves and fashionable panels are richly embroidered. The self material belt ties gracefully at back. Sizes 16 to 44. **Order navy by No. 51E5525.**

Order brown by No. 51E5526. Send no money. Pay $2.98 and postage on arrival.



Handsome All Silk Plush COAT

$9.98

Where else did you ever hear of an all-silk plush coat at our price? This is a handsome model cut on fur coat lines, full 36 inches long, with self material belt, turn back cuffs and deep shawl collar. Durably lined with black twill and finished in every detail. Misses' sizes 16 to 20; women's 34 to 44. **Order by No. 51E5843. Send no money. Pay $9.98 and postage on arrival.**

Girl's Winter Coat With Fur Collar .. $3.98

A handsome coat of pressed velour in navy blue or brown, regular $7 value. Has collar of genuine Kit Coney. Belt all around, two novelty pockets and two buttons at back. Sizes 7 to 14 years. **Order brown by No. 51E5595. Order navy by No. 51E5596. Send no money. Pay $3.98 and postage on arrival.**

Order similar style with handsome plush collar, sizes 2 to 6. brown No. 51E5581. Blue No. 51E5582. Price, either color, $2.98. Pay bargain price and postage.

Polo Cloth Coat

$9.98

We positively guarantee that—quality for quality—there is not the equal of this garment under $12.00 anywhere else in the country. Note the snappy lines, the deep coney fur collar, the self-material belt, the side patch pockets and two muff pockets besides. Misses' sizes. 14 to 20 only. **Order No. 51E5657. Send no money. Pay $9.98 and postage on arrival. State size.**

"Stylish Stout" Gabardine Dress

$3.98

This is a special design planned to give long slendering lines to stout figures. Note how the collar, revers and panels carry out the long effect. Note, too, the attractive embroidery on sleeves, vestee and panels. The self-material belt ties at back. Sizes 39 to 53. In three popular shades. **Order Navy by No. 51E5470. Order Black by No. 51E5471. Order Brown by No. 51E5472. Send no money. Pay $3.98 and postage for any color on arrival. State size.**

Men's Underwear 99c

Jaeger or gray random color. Heavily brushed fleece lining on inside. Wrists and ankles are elastic knit. Sizes 34 to 46 chest. **Jaeger color No. 51C1279. Gray random No. 51C1280. Send no money. For Good Farming, Attractive Country Homes and Happy Country People

Farmers Are Thoroughly Aroused

Charles Barrett Says a Farm Organization Must Be an Organization Of, By and For the Farmer

Through the kindness of J. Q. Adams, president of the Washington State Farmers' union. The Farmer is favored with an advance copy of the annual address to be delivered by Charles S. Barrett, president of the National Farmers' union, at the convention in Lynchburg, Va., November 21, 1922.—Editor.

During the 12 months that have rolled around since last we met in national convention I have devoted my time, perhaps as never before, to coming to grips with farming conditions. In this time I have traveled more miles, attended more meetings, got face to face with more folks and visited more farmers' business activities than in any other year of my life. No one can say, therefore, that I have not had an exceptional opportunity to find out what is in the minds of hundreds of thousands of farmers.

Out of the Maelstrom.

A great change is coming over the American farmer. He has been sorely disappointed, bruised and battered, and all but submerged in the economic maelstrom. The farmer will not soon forget the billions upon billions of dollars losses which he has suffered during the long period of deflation. For some little time he was stunned, bewildered, as a man fighting for life usually is; but now, glory be, he is coming to his senses in more ways than one.

Farmers' Business Awakening.

For a moment I shall discuss the business side of the farmers' reawakening before dwelling upon the more spectacular reentry of the farmer into the arena of politics.

Wherever I have been I have closely studied the progress of our cooperative associations and business institutions and it is very plain to me that our membership throughout the many states are, with renewed and determined vigor, throwing their energies into and behind our self-help institutions.

Our cooperative live stock, shipping and centralized commission companies are upon a most satisfactory basis and are doing a volume of business almost undreamed of a few years ago. A similar situation exists upon the part of our cooperative grain elevators, the managements of which are still pressing forward with all commendable zeal toward the goal which they had in mind; viz: The gradual and orderly absorption of the farmers' grain until present unnecessary and positively harmful speculative middlemen can no longer exact their toll in the handling of the farmers' products.

In this connection it may not be inappropriate to say, now that the ill-advised and ill-starred U. S. Grain Growers, Inc., has resulted only in self-acknowledged failure, that the way for legitimate cooperative pooling effort on the part of self-help organizations has been made easier. As a feeder for membership in a certain so-called farm organization, from the outset financially backed by the Chicago Board of Trade, the U. S. Grain Growers was for a time fairly successful; but as the legitimate national cooperative grain marketing movement, it has taken a header into the ditch as was only to be expected by those who were familiar with the origin and chief backers of the enterprise.

In addition to the highly satisfactory situation in the cooperative marketing of live stock and grain great progress has been made along the other well established lines of farmers' union effort, both in the selling of farm products and the effecting of legitimate savings in the purchase of the farmers' requirements. Cooperative insurance, including hail, fire and life, is progressing safely and rapidly.

In addition there is a strong indication that within a comparatively short time the membership will have organized a number of cooperative banking institutions following the example of practically every great industry which has found it advisable and necessary to become a part of the banking system of the country. Recently in Arkansas, I attended the organization of the first farmers' cooperative bank, where an enthusiastic group of farmers' union members made a 100 per cent subscription to their bank.

The Farmers in Politics.

On the political side of the farmers' activities I am frank to say that I have never seen them so determined to play their part in governmental affairs, and on the other hand, I don't believe I ever saw the old political war horses more determined to prevent them from getting their minds on things political. One need not pose as a prophet to predict that at least several of the newly nominated United States senators will, when they enter congress, give considerably more attention to and show more interest and sympathy in the problems that are concerning organized agriculture. The fact is that our farmers have been thoroughly aroused. They say they have been fooled with too long and there is bound to be more upsetting of the apple cart if the farmers do not get the recognition they are entitled to.

Recognition of Agriculture.

When I speak of recognition of agriculture, I am referring, of course, to those legitimate aims and needs of agriculture which spring into being and become articulate from the experience and consciousness of the organized agricultural producers.

It is very clear that the viewpoint of the farmer who has things largely his own way, through good fortune, inheritance or special privilege, would not necessarily be a viewpoint which would at all fairly reflect the condition of American agriculture.

Such a fortunate individual might fairly radiate a well-fed contentment and feel at peace with all mankind. Having an abundance of life's necessaries and luxuries, such things as the lack of fair markets for farm products, the exorbitant interest rate, the discrimination and boycotting of chambers of commerce and boards of trade which injure the average farmer might give him no concern. Often enough his viewpoint on such matters as the Esch-Cummins law, the excess profits tax, ship subsidy bill or the gambling of the speculative middleman would be bad, as we folks see it.

There are many farmers of this sort with their little gardens of Eden, and whose complacent indifference toward the evils and abuses which exist in our human society make them a positive menace to the program of general advancement for all.

And for every one of these complacent producers there is usually another so-called farmer to match him, who, upon investigation, will prove to be a banker-farmer, a lawyer-farmer or a political farmer, whose income is principally derived from interests which have nothing to do with the growing of crops.

It is almost wholly from these two classes of nonrepresentative farmers that men are being considered for positions in government departments, boards and commissions. As I have said on former occasions, just dirt farmers won't do. There are other requirements besides the ownership and operation of a farm.

Trying to Think for the Farmer.

For the last two or three years a powerfully financed movement has been attempting to do the farmers' thinking for them and quite naturally it has attempted to do much of its work through the two types of farmers I have named.

Generally speaking the organization known as the American Farm Bureau federation has throughout its state units been officered and led by the "complacent" farmer and the banker or politician-farmer, and it has been in the activities of the farm bureau movement that one could best see the efforts of a certain group of financial, manufacturing and political magnates to direct and to mold the destiny of American agriculture.

No one can truthfully say that I have ever been unfair to the farm bureau. The fact is that I am surprised at the forbearance and toleration which I have shown toward a movement which, deep in my heart, from the very first, I instinctively knew was destined to become consciously or unconsciously a plaything and a tool of certain great vested interests. Some of these interests have ever been determined to rob the farmer of initiative, to lull him into paths of industrial indolence, to do both his business and his thinking for him, to keep him happy and contented with the growing of bumper crops.

I do not intend to make any extended or specific statement with reference to the record of the farm bureau movement. Those who are interested in the record and would have proof in black and white might secure a copy of the farmers' union statement: "Who and What Are Behind the American Farm Bureau Movement," copies of which probably can be secured from Secretary A. C. Davis.

My business now is to deal with certain conclusions with respect to the unenlightened attitude of those who feel called upon to guide and direct the farmers' affairs.

Farmers Won't Be Fooled Long.

The first outstanding conclusion is that the dream of a generation, the dream to make the farmer safe and sane in the eyes of the business world has been tried out and failed.

The dream that farmers can be taught to remain patient, plodding producers of food and clothing materials, that farmers would continue to permit exploiting middlemen to take these products at their own prices under the law of supply and demand, which business interests are forever tampering with and making inoperative, the dream that leaders could be set up in every rural community who would take their economic doctrines from the hands of the exploiters, has been shattered into a thousand bits.

What mighty backing, what wondrous publicity, what powerful personages have thrown their influence into the farm bureau scale! What a fair trial they had in doing this.

The great manufacturing interests, the most powerful financial interests on earth, have proved to their satisfaction, let us trust, that nobody can run the farmers' business, but the farmers themselves. Great men have smeared their fingers in the pie. Men who wanted to see that the farmers were organized and belonged to a "respectable" sort of farm organization. Great captains of industry have thrown their mighty influence behind the movement that would "weed out the sheep from the goats." The great metropolitan press, the biggest magazines, with their millions of readers, the wiseacre reviews and digests of current affairs, all, or nearly all, decided that the farmer had been, or should be, organized in a safe and sane manner. Large sums of money and time were spent in this direction. Even the greatest government in the world acting through the department of agriculture in conjunction with these other gigantic interests, with the biggest brains in the country planning and advising each step, was not able to make a go of the farm bureau movement.

After 20 years of experience in farm organization work with nothing else on my mind during the whole time, I unqualifiedly declare that there is not enough brains, money and influence and power in the world to put over on the American farmer the wrong sort of organization and make a permanent institution of it.

The Reason and the Remedy.

Why? Because what the business world, what politicians, what government has been trying to do in this matter runs counter to human nature. The farmers naturally resent an interference from quarters which experience and intuition tell them is not working to their best interests.

Farmers have never tried to dictate the policies of the business groups. They do not go to the bankers or the manufacturers or conventions expecting to be seated as delegates or to be received as confidential advisers.

They accept the general run of manufacturers, bankers, railroad magnates for what they are, individuals largely imbued with the present day spirit of money-making and of acquiring vast economic or political power.

Steadily, inevitably, the bonafide farm organization member has been building toward a better condition for himself and for civilization through a cooperative system of purchase and sale which recognizes the value of the individual as higher than the almighty dollar.

The organized farmer expects as time goes on that the soundness and justice of the cooperative program will leaven the crass commercialism of the nation and make it a better place for all to live in; but our farmers do not expect this to come about all in a minute. What they do expect is to be left alone, free from any tampering or manipulation.

That is why they have resented and repudiated the attempts of those who have set up or backed the farm bureau as a movement to dominate and control the farmers' affairs. I can not help commenting on the sad, the sorry spectacle presented by those who have tried to put the rings in the farmers' noses and lead them from the paths of their own choosing. And what a great economic and social loss must result from these pitiable, misguided efforts.

Well Wishers Fooled.

It certainly is true that not all are bad who have entered into the designs to "educate" the farmer. Some of these manufacturers and bankers, for instance, and many of the educators in the nation have been and are sincerely interested in being of help to agriculture. What a pity, therefore, that they have been in such abysmal ignorance of the way to do it. What loss has resulted in their lack of knowledge—for, in regarding the wholesale program of agricultural cooperation, they have retarded the general prosperity of the nation—a loss of prosperity in which they themselves must eventually share.

So many of our city brothers think they have been helping agriculture, when they have simply been following some red herring drawn across the trail. A city friend

(Continued on page eight.)

C. S. Barrett Is Here Next Month

President C. S. Barrett of the National Farmers' union will spend at least two weeks in the Pacific northwest in the interests of the order, beginning Thursday, November 30. During his visit he will attend the annual convention of the Washington and northern Idaho union and that of Oregon, the former at Spokane and the latter at Lebanon. He will also attend several farmers' union meetings throughout Washington and Idaho and while doing so will make a personal survey of the proposed Columbia basin project at the request of the national board of farm organizations, with which he is prominently identified at Washington, D. C. State President J. Q. Adams of the farmers' union and representatives of the Columbia basin committee have worked out the following schedule for Mr. Barrett while in the northwest:

November 30—Arrives in Spokane. On account of this being Thanksgiving day, no special activities have been arranged.

December 1—Columbia basin executives escort Mr. Barrett to Sandpoint and arrange boat trip to show him Lake Pend Oreille, a secondary storage reservoir for the Columbia basin.

In the evening Mr. Barrett will address a meeting of the farmers' union, delegates to be invited from all parts of northern Idaho. Farmers' union officials in charge of night meeting.

December 2—Mr. Barrett will be escorted to the Albany falls dam-site on the Pend Oreille river by executives of the Columbia Basin Irrigation league, and will go to Spokane for a conference with the Columbia basin committee.

December 3—Sunday.

December 4—At noon Mr. Barrett will be the special guest of the agricultural bureau of the Spokane Chamber of Commerce. For this meeting invitations will be sent to leading agriculturists of the state college, state university and the officials of farmers' union and other similar bodies.

In the afternoon Mr. Barrett will be taken to Pullman for a visit to the Washington State college and will address a farmers' union meeting there in the evening.

December 5—Craigmont, Idaho, under auspices of farmers' union.

December 6-10—In Oregon for Oregon state convention.

December 11—Probably will address the general assembly of the Spokane Chamber of Commerce. This will be the only meeting to which all of the business and professional men of the city will be invited.

Farmers' union convention opens its sessions at 1:30 p. m. and Mr. Barrett will be escorted from the Chamber of Commerce to the union meeting in time for the opening ceremonies.

December 12-13-14—State convention of farmers' union.

December 15-16—Mr. Barrett will be taken onto the Columbia basin area and meetings will probably be arranged at Ephrata, Mansfield and Connell. This part of the itinerary to be worked out later.

"The Living Wage" Is a Makeshift and a Guess

In his dissenting opinion to the decision of the United States railroad labor board increasing the pay of maintenance of way employees two cents an hour, A. O. Wharton, labor member of the board, maintained that the law of supply and demand, which operated in private industries to fix the price of labor, should not be taken as a basis by the labor board.

He contended that the basis should be "the living wage," but the majority of the board found that his proposed "living wage" was confessedly based upon a makeshift and a guess. The board finds that if the 48-cent minimum hourly wage demanded by maintenance of way workers were granted and corresponding differences were made for other classes of railway employees, an increase of more than 50 per cent in wages would be necessary, adding $1,249,390,994 to the annual wage bill of the railroads. That, of necessity, would have to come out of the producers and consumers.

In the arguments for the proposed increase some advocates declared that common labor on the railroads should have a 75-cent hourly minimum wage in order to maintain their families in reasonable comfort. The board finds that such an advance, with corresponding differentials for other classes, would mean an increase of 125 per cent in the nation's railroad wage bill.

The board's conclusion that the phrase "living wage" as used in this connection is "a bit of mellifluous phraseology well calculated to deceive the unthinking" seems harsh, but it is the cold economic truth. Of necessity we must deal here with a difficult and sometimes impossible adjustment to the varying needs of individual workers. A liberal "living wage" for a worker with a family of five or six dependents would enable a single man or woman to live in luxury. Apply, for illustration, this test to agriculture.

Of what avail would it be to rail at nature because a wheat farm or an orchard refuses to double its yield when its single owner marries and takes on the responsibility of a family?

Unfortunately, all other industries have like limitations. The transportation industry has its limits of collectable wealth, just as the soil has its limitations.

This impossible doctrine, that common labor in the railroad industry should be paid wages that would enable an employee to support a large family in comfort and educate his children according to exacting American standards, and that corresponding differentials should be paid to the skilled employees, has been advanced with increasing emphasis since the war, as if that demoralizing conflict had been productive and constructive instead of consumptive and destructive.

Farmers and other well-informed producers know beyond peradventure that freight rates are excessive and that relief must come from a lowering of these burdensome charges. But reductions would be impossible if the railway employees were granted their demands as to wages, hours of employment and easy working conditions. Quite to the contrary, existing freight rates, already excessive to the point of confiscation in many instances, would have to be still further increased, to the ruin of industry, and especially of agricultural industry in the Pacific coast region.

Make More Use of Schools

That the schools, high and low, throughout the country can be made of more use for the common good of the people, is a fact which is being recognized. A news item from Seattle says that caring for 80,000 Chinook salmon eggs for the federal government will be part of the work this fall of fisheries students at the University of Washington who help to conduct the college of fisheries hatchery.

They Are "Yes-Butters"

"Farmers will admit that it should be done, but—"

This significant comment on the attitude of Thurston county farmers toward the construction of manure sheds on their farms appears in the annual report of County Agent E. B. Stookey. "Manure conservation, while admittedly a very much worth-while project, is a difficult one on which to make headway," he says. "Our program of work called for the construction of 31 sheds this year, but only two have been built. Farmers admit that sheds are a good thing, all right, but they have too many other things that they think are of greater importance."

Corn for Silage in Snohomish

Corn is a standard silage crop. Corn for silage is being grown more and more throughout the Pacific Northwest.

D. J. Barker of Snohomish, in western Washington, finds corn silage one of the most profitable feeds for his herd of dairy cattle. He makes a specialty of the milk business.

There are 12 acres of Minnesota corn on the Barker farm this year, which he says will produce around 12 tons to the acre.

Mr. Barker is enthusiastic over the crop and declares corn for silage should be grown to a larger extent by farmers in Snohomish county.

LOOKING INTO OTHER FARM FIELDS

It is estimated that 15,000 to 20,000 tons will be the grape harvest in the Niagara grape belt of Ontario, Canada. The growers expect from $80 to $125 a ton. A large part of the grapes will be shipped to the United States for making grape juice.

* * *

The world's corn crop is estimated at around 500,000,000 bushels short of last year, the greater part of the decrease being in North America, but reports from Italy and Rumania show heavy losses as compared with 1921 in these two countries. Export clearances for the 1921-22 season promise to be the largest since 1900, when the total was 90,000,000 bushels, and no material letup in the outward movement is expected, although Argentine corn is in better condition now for export.

* * *

The California fruit and vegetable standardization act of 1921, under which the state department of agriculture was given power to decide what oranges should be considered too badly frozen for shipment, has been declared invalid by the state supreme court.

The act delegated it to the state department of agriculture to determine what should constitute frozen oranges within the meaning of the law, but the court held this to be improper, since it vested an administrative body with legislative power.

* * *

The Satsuma orange industry is a rapidly growing one in Alabama. Last year there were 160 cars produced and this year there is an increase of over 100 per cent. With the new acreage, which will come into bearing next year, a crop of 600 cars is expected. The first trees were put out 15 years ago. The Satsuma orange belongs to the Mandarin citrus fruit. One of its characteristics is the ease with which the rind is removed, giving it the name of "kid glove" orange. The oldest known Satsuma tree was in the garden of the emperor of China. This tree is now 300 years old and is still bearing. The name, "Satsuma," was given to the tree by the emperor of China, who named it and the fruit in honor of his favorite wife.

State Farm News

A 40 per cent increase has been made in the beekeeping industry of Washington in the last 10 years, according to A. B. Slocum, bee specialist of the state college extension service, who has recently made a comparison of the 1910 and 1920 census reports. This means that the state ranks second in the United States in the increase of colonies, but 24th in the number of colonies owned. The total value of the bee industry was estimated at $1,000,000 in 1920. Three thousand Italian queens have been introduced into the state and 13 bee associations have been formed during the last three years. The average yield per colony in the state is estimated at 75 pounds.

* * *

The people of Tonasket, in Okanogan county, are rejoicing over the fact that immediate construction of the Whitestone project is promised. The maximum price of raw land has been fixed at $50 per acre and the water cost is estimated to run between $60 and $70, making a combined cost of $120 per acre.

* * *

A conference has just been held at Montesano regarding the proposed Carstairs prairie irrigation project, which is expected to develop 400 acres, to be increased to 600 and 1000 acres later. H. E. Drew, county farm agent for Mason county, and Earl F. Dickinson, constructing engineer of Shelton, were in conference with H. S. Shorey, engineer, and Robert Cowan, farm agent for Grays Harbor county. While located in Mason county, this district is tributary to Chehalis river points and is a matter of interest to the people of Grays Harbor county.

* * *

A shipment of cabbage seed valued at $28,000, totaling 70,000 pounds, has just been shipped to Detroit from Burlington. Other shipments from several farms will also be made. The Skagit valley has become one of the greatest cabbage seed districts in the country.

* * *

According to the annual report of County Agent Fowler of Lewis county, there are 2600 people engaged in farming in that county. Agent Fowler spent 219 days in the field and 78 in the office, made 886 calls and 748 callers were received at the office. Seventy-eight farm demonstrations were completed during the year. There are 22 more purebred sires in the county this year than last and the tuberculin cattle tested total 5000.

* * *

Alvin Anderson of Deep River purchased a purebred Jersey bull from J. E. Johnson of Grays River to head his herd of 21 cows.

* * *

King county ranks 11th in the state in the production of honey per hive, averaging 43 pounds. This year, however, the average over the entire state was 35 pounds, which shows that King county was slightly above normal for this season. As a result of the cleanup campaign which has been carried on, bee diseases have been decreased 20 per cent in the county. There is, however, danger of foul brood, and all beekeepers have been warned to keep a lookout for this disease.

* * *

County Agent Love of Snohomish county reports that the Snohomish Valley Cow Testing association has completed its second year's work and will continue along the same organization plan for part of next year.

* * *

One of the busiest packing houses in the mid-Columbia district may be found on the Gilmer place of the Mount Adams Farm company, which is said to be the largest tract of o'Anjou pears in the United States. This company, which also owns a heavy acreage of apple trees, has shipped 33 carloads of d'Anjous from White Salmon, and eight cars of Bartletts were dispatched.

The big Klickitat county orchard place employs 80 harvest hands throughout the fall months. The place is well equipped with dormitories and commissary.

* * *

A ton of rolled oats and 100 ounces of poison were used in Yakima in preparation for the winter campaign against field mice. J. F. Finley of the United States biological survey and A. E. Lovett, county agricultural agent, supervised the mixing and the poisoned grain was distributed to farmers who are being troubled with the pest.

* * *

A new potato growers' organization is planned for Lewis county to promote standardization and better selling methods.

* * *

Captain McDonald, pioneer river man, has purchased a steamer, Gleaner, which is being repaired and which he will put on the Skagit river to assist the Harvester in the transportation of oats and potatoes that are being shipped to various points in the United States. About 100,000 sacks of grain were shipped by the river route last year and about the same amount is ready for shipment this year.

* * *

The Holstein club of Skagit county is planning to organize bull associations during the winter in different sections of the county.

* * *

The apple harvest at the Mount Adams farm above Husum has begun and Manager Hamlin places the yield at 40 carloads, which will be packed on the farm and shipped from Underwood. The farm has 400 acres in apple and pear trees and 42 cars of pears has been shipped this fall.

* * *

At a recent Holstein sale at Elma, eight farmers purchased 14 purebred animals at a cost of $1815. County Agent Robert Cowan reports that five of these dairymen bought their first purebred females.

* * *

The annual report of County Agent W. H. Talley of Walla Walla on extension work shows 216 meetings held during the year, with an attendance of 19,042. Two hundred and sixty-five farms were visited and 4063 farmers visited the office for advice. Demonstrations were given of best methods of orchard pruning, potato diseases, sunflower silage, water smut, fruit thinning, etc., making saving to members estimated at $37,621.

Live stock, dairy feeding, bee and poultry demonstrations are estimated to have saved $10,632. Women of the county saved $8993, it is estimated, through making dress forms, dresses, hats, etc.

The orchard of Mr. and Mrs. Dahling of Omak, in Okanogan county, was so severely damaged by a recent hailstorm that their crop was considered a total loss. Mr. and Mrs. Dahling, however, are people who are not easily discouraged. They are making apple sirup from hail-marked fruit for which they report a ready market. While the hail marked the apples so as to render them unsaleable, the flesh was firm and good.

FARM BUSINESS AND MARKETS OUTLOOK

A near-by view of industrial and trade conditions involving the next few months or the next year presents a fairly pleasing picture in all but one or two sections of our economic life, but when the focus is adjusted to cover a longer span of time, clouds can be seen on the horizon. Since the rate of turnover in farm production is so much longer than is the case with other lines of endeavor, the far view is quite important.

The close up outlook covers universal employment of labor at high wages, industries operating at a high rate, steady gains in bank clearings measuring volume of trade, rising commodity prices, freight loadings far above normal with those of general merchandise especially heavy, car orders about 15 per cent in excess of the supply, reports from wholesalers and retailers corroborating other signs of broad demand for consumers' goods, comparatively cheap money, gains in savings deposits, declines in commercial failures, and increases in our export trade. Even farmers, who have benefited least, have reduced their indebtedness a great deal. General sentiment is the most hopeful since 1920. Indeed, much more progress in industrial revival has been made than seemed possible with the farmer's buying power reduced and European conditions as unsatisfactory as they have been.

Some further improvement in activity is expected in the next few months and it may extend through much of next year, but the opinion is becoming more prevalent that ultimately a relapse must take place before all fundamental conditions will be sound. Labor and fuel are too high, so that costs of fabricated goods are out of line, building costs make investments in construction unsafe, transportation costs are exorbitant, taxes must come down and some progress must be made toward healing the economic wounds of Europe instead of making new ones all the time.

Just when the turning point will be reached, assuming that this view is correct, remains to be seen, but presumably the usual signals will be given. No change is expected before some time next year, at least, and it may be still longer deferred.

In any case farmers will be least harmed by virtue of the already overdeflated status of prices for most of their products. In fact, it should be of benefit to them in the long run by bringing prices for other products more nearly into alignment with their own.

Big Run of Short Fed Steers.

Chicago and Kansas City were gorged with the largest run of cattle in nearly two years early last week and the total around the market circle was the largest for the corresponding week with one exception in at least eight years. Both rangers and short fed steers increased in number and a few Canadian steers arrived, part of them smuggled over the border line. Prices on intermediate and low grades lost part of the recent advance. Short fed steers were 25 to 50 cents lower, butcher she stock 15 to 25 cents lower and bulls 5 to 25 cents lower. Another influx of calves caused a drop of practically $1 on veals at Chicago. In spite of the decline on short fed steers, most of those returning after 80 to 100 days on full feed show a substantial margin over first cost.

Prime steers became still more scarce and are still quoted at $13.60 at Chicago, but the average price for all beef steers is in the vicinity of $10.50 so that the $13.60 figure is deceptive in registering the approximate level of cattle values. That the average price is so high, however, in the season of heaviest slaughter, with hogs selling considerably lower, is quite encouraging. Not only is the demand for beef of broad proportions, but hides and other byproducts are moving at satisfactory prices.

Prime and choice steers will not be numerous for six weeks or so, but by that time some of the heaviest cattle taken out in recent months will be ready to make the return journey to market. This fact, combined with the passing of the holiday demand for high class beef, is quite apt to result in lower prices for the best grades.

Demand for feeder cattle has slackened slightly in the last two weeks, although the movement from the leading markets appears to be above normal for this season of the year. Scarcity of cars curtailed shipments from some points.

Hog Values Still Shrinking.

Receipts of hogs at the leading markets are running only slightly above the 10-year average for the corresponding period, but they are increasing nearly every week and prices are shrinking, the loss last week being nearly $1. Eastern shipping demand in the middle west has not attained large volume, as a shortage of cars restricts it to some extent. Packers are determined to put prices down to a lower level before the winter accumulating period begins and conditions are apt to be favorable to their program for a few weeks longer at least.

Lamb Feeders Going Strong.

Shipments of sheep and lambs from the 12 leading markets to feedlots for the week ending October 20 totaled 212,948 head, the largest on record since this data has been reported. Shipments in the corresponding week last year were 145,850 head and two years ago 103,249 head. Both of these two years, however, were below normal, so that the increase is not as serious as it appears. If the same pace is maintained during the next month feedlots will be more completely filled than seemed probable 30 days ago. No comprehensive report has been made and scattered observations are rather contradictory, but the bulk of the evidence indicates that the movement of lambs direct from the range to the feedlot as well as the number retained for winter feeding in the range states is larger than last year.

Prices for fat lambs at Chicago dropped 50 to 75 cents last week. Receipts increased and are not so much below normal as they were a few weeks ago, but with the large share which feeders are absorbing, the number to be absorbed by packers remains abnormally small.

Big horses are bringing $25 to $50 per head more than six weeks ago. Medium sized chunks are not easy to move, but the demand for sound horses weighing above 1600 pounds is larger than the supply with New York, New England and other industrial centers in the market. Loggers are taking the plainer big horses rather freely also.

Wool Markets Strong.

Wool prices are gradually working higher as stocks in producers' and dealers' hands are small and mills are obliged to buy. The Texas fall clip is meeting a splendid reception. Retail demand for clothing is active and both yarn and cloth markets are brisk. Although August was a dull month, consumption of wood by mills was approximately 71,600,000 pounds reduced to a grease equivalent or only slightly lower than at the peak of the 1920 boom. No substantial reduction in activity, if any, has occurred in the last six weeks. Foreign wool markets are firm, the London auction closing 5 to 20 per cent higher than the previous sale with some American buying in evidence.

The Boston market is quoted as follows: Oregon—Eastern No. 1 staple, $1.27@1.32; fine and fine medium combing, $1.15@1.20; eastern clothing, $1.10@1.15; valley No 1, $1.12@1.18. Territory—Fine staple choice, $1.35; 1-2 blood combing, $1.18@1.25; 3-8 blood combing, 97c@$1; 1-4 blood combing, 85@90c.

Advance in Wheat Resumed.

After two weeks of hesitation the wheat market is again responding to the factors favorable to higher prices. The main features in the situation show but little change. Car shortage and port congestion are responsible for scarcity of wheat in position for quick shipment. Canadian wheat is still coming from farms at a phenomenal rate and is piling up at lake ports, but is not exerting much pressure on the world market. World shipments each week are not running as large as the estimated average requirements of importing countries. Domestic mills are operating and, presumably, acquiring wheat at above the normal rate for the season.

Unusual Strength in Corn.

Unofficial reports show a farm carryover of old corn of approximately 168,000,000 bushels and a new crop of 2,796,000,000 bushels, making a total supply, including visible stocks at terminals of 2,973,000,000 bushels compared with 3,385,076,000 bushels a year ago, a decrease of 412,000,000 bushels or 12 per cent.

The range of cash grain prices for the week ending November 1 was as follows: Chicago—Wheat—No. 2 red, $1.20@1.23; No. 2 hard, $1.19@1.20 3-4; No. 2 northern, $1.16@1.17 3-4. Corn—No. 2 mixed, 67 1-2@70 3-4c. No. 3, 66@70c; No. 4, 64@68 3-4c; No. 2 yellow, 68 1-4@71 1-4c; No. 3, 66@70 1-2c; No. 4, 64@70c; No. 2 white, 67 3-4@70 3-4c; No. 3, 65 1-2@70 1-2c; No. 4, 64@69 1-2c. Oats—No. 2 white, 43 1-2@44 3-4c; No. 3, 41 1-2@43 1-2c; No. 4, 40 1-2@42 1-2c. Barley—59@70c. Rye—82@83 5-8c.

Hay Markets Firm.

Feed markets have become easier in the last few days with wheat feeds $1 to $2 lower and jobbers quoting $1 below mill prices. The southwest remains the principal buyer and dairy sections are said to be doing little. Stocks of feed are generous and the rate of production is up to normal at least.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $25.75; standard middlings, $26.75; flour middlings, $28.50@29; cottonseed meal, 36 per cent, $44; 43 per cent, $48; hominy feed, $29.50; gluten feed, $34.85; old process oil meal, $52.50; tankage, $65.

Small Change in Clover Seed.

Clover seed prices show little change compared with a week ago. Scattered reports point to a lighter yield of red than the last official estimate indicated. Foreign yields are said to be small and of poor quality. The department of agriculture reports that about one-third of the red clover and one-half of the alsike clover seed crops had been sold by growers by October 14.

Chicago, per 100 pounds—Clover, $15.50@20.50; timothy, $6@6.50.

Toledo, per bushel—Prime red clover, $12.80; prime timothy, $3.45.

Car shortage and high transportation costs are keeping down receipts of hay and prices on most markets remain firm. Demand is not especially urgent except for best grades. The supply of alfalfa at Kansas City has expanded moderately and that market has lost some of its recent snap.

Prices per ton in carlots—Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $20@21; No. 1 clover, $16@18; No. 1 clover mixed, $16@18; No. 1 to choice alfalfa, $25@27; upland prairie, $20@21; midland prairie, $14@16; rye straw, $12@13; oat and wheat straw, $9@12.

Advance in Egg Markets.

Fresh egg prices have advanced sharply in the last 10 days as a result of pronounced scarcity. Further contraction in receipts at the leading markets will be due in the next month. Storage egg prices are not keeping pace with the advance in fresh eggs and have been weak much of the time recently.

Poultry receipts are increasing but the accumulation of frozen poultry in storage at the four leading markets during October was only 1,023,000 pounds compared with 6,276,000 pounds last year. Prices have declined and are not much above the level at which extensive buying for storage seems ready to enter the market.

Light production of butter as shown by reports from numerous creameries and by receipts at the leading markets resulted in a further advance in the butter market last week. Fancy butter was easy to clear as usual at this season of the year, but the shortage in receipts was sufficient to help the lower grades materially. Prices have advanced much more rapidly than in other countries and it is reported that several cars of fancy Canadian butter are en route to this country as well as small quantities from Denmark and England. The amounts are too small to be of much consequence, but if disposed of profitably, more may come later.

Prices on 92-score fresh butter on November 1 were—Chicago, 47c; New York, 49 1-2c; Boston, 48 1-2c; Philadelphia, 50 1-2c.

Advance in Cheese Checked.

The advance in cheese prices seems to have checked the demand as buyers purchased only small quantities for immediate needs. The reduction in storage stocks during October was a little larger than last year.

Prices for No. 1 American cheese on November 1 were—Chicago—Flats, 25@25 1-2c; Twins, 24@25c; S. Daisies, 24@25 1-2c; Young Americas, 25c; Longhorns, 25@26c; Square Prints, 26@26 1-2c.

Fruits and Vegetables.

Carlot shipments of potatoes in the week ending October 28 filled 8469 cars, the largest movement for one week for the season to date. The three-year average for the corresponding week is 7140 cars. Minnesota, Wisconsin, Maine, New York and North Dakota are the leading shippers. Prices were only steady to weak in western potatoes, but eastern markets were higher as the eastern crop is small and car shortage is restricting the movement of supplies. The Kansas City market is quoted at $1.10 per 100 pounds on sacked Russets.

The carlot movement of apples in the week ending October 28 aggregated 6462 cars compared with an average of 7711 cars during the corresponding week in the three preceding years. Prices are practically steady in consuming markets while shipping points are advancing. The British apple market is said to be advancing and export sales during the winter promise to be fairly large. Midwestern Jonathans range from $4.50 to $6 a barrel in city markets with northwestern extra fancy large Jonathans at $2.25 to $2.50 per box in the Chicago carlot market.

Six States Compete at Western Royal

Strong Show Fails to Attract; May Consolidate With 1923 Interstate Fair

Those who attended the Western Royal Live Stock show at Spokane October 28 to November 2 saw about 950 head of cattle, horses, hogs and sheep that averaged higher in quality than did those at any of the three previous Western Royal shows. Those who did not attend missed a display of live stock such as is seldom offered to the public. The disappointing feature was that neither the people of the city of Spokane and neighboring towns nor of the rural districts of the Inland Empire were led to take advantage of their opportunity.

Result: The fourth annual Western Royal was a heavy loser financially, notwithstanding an ideal location in the very heart of Spokane and in the geographical center of an immense territory with wonderful endowments favoring live stock production. Result No. 2: When the doors closed late on the night of November 2 the hinges squeaked what was probably the swan song of the show—a sort of "Good Night, Ladies," in a minor key. It seems to be the consensus of opinion that they will "rust in peace." If the doors again open it will be perhaps in conjunction with the Spokane Interstate fair, though there are a large number of die-hard friends of the Royal who are hoping for a continuation of the show as a winter event on the circuit with the Pacific International and the San Francisco shows.

Uncertainty has hovered over the show since the 1921 event closed with a deficit, and it was not until late in September that it was finally decided to hold it again this year. Hence, there was inadequate time for widespread advertising and the working up of features that would attract attendance by people whose interest in and appreciation of live stock is secondary. A strictly educational affair can not compete successfully with political rallies and moving picture shows, and Spokane had these latter features in abundance during Western Royal week. The stock show had comparatively little to attract any but the lover of good live stock.

Unfortunately, it would seem, a movement was started a month before the opening of the show looking toward the consolidation of the Western Royal and the Spokane Interstate fair, with the result that a general impression got out that the Royal was going into the discard. This no doubt chilled the ardor of many who otherwise would have been boosters.

Thus it was that when the breeders loaded out Friday for the Pacific International at Portland, the big question was: "Have we seen the last of the Western Royal?" That question is troubling many stockmen and business men of the Inland Empire who are loath to give up. Many remember the struggles through which the Pacific International at Portland went in its early days, when only the bulldog tenacity of a few never-dies saved it from the ash can and made possible the great, permanent exposition that it now is. The never-dies of the Western Royal are now looking for a Moses to lead them on to a promised land like that reached by the Portland show.

That the live stock industry of the Pacific northwest needs a real live stock show such as the Western Royal promised to be, and such as the even present development of the live stock industry could make, is the consensus of opinion among the stock men and many business men. In spite of all its handicaps, the show this year was proof that the cattle, horses, hogs and sheep are available. They were present in their finest fettle, but they must have been disappointed at the indifference shown by the general public.

THE BEEF CATTLE SHOW.

While the beef cattle show was not as large as a year ago, the average quality was fully as good if not better than ever before, for there were very few animals shown of which it could not be said they were high class. Differing from any previous Western Royal, Herefords had a greater number of entries present than the Shorthorns. This is accounted for by the fact that a sale of Herefords was to be held, and, while the tops were of the best quality, there were more ordinary individuals among the white faces than among the reds, whites and roans.

Shorthorns.

One herd of Shorthorns from California and one from Oregon added much to the show made by Washington breeders. The Idaho University showed several head, as did the Washington State college. These two institutions had entries in all the beef breeds, as well as in some other departments, and each won a fair share of prizes. The Pacheco Cattle company of Hollister, Cal., won both grand championships. Their 2-year-old bull, Pacheco Lad 215th, that won the premier bull honors, is a pure white of large size, most approved Shorthorn type and wonderful quality showing in his hair as well as his smooth, even covering of flesh and his typical, masculine head. The junior champion, Hercules Conqueror, a Day & Rothrock junior yearling entry, has great depth of body, well-sprung rib, length, a good head, but might be just a little better in the crops. In the opinion of most observers, the junior yearling heifer, Knight's Lassie, that was made junior and grand champion, was a little the finest thing in the show. She had won similar honors wherever shown in her own state and, while she met some great opponents, both in class and in the other champions, there never seemed much doubt of her standing above all other females. Hercules Topsy 5th, the heifer that stood second to her; the Dunn 2-year-old, Supremacy 2d; the senior yearling, Hercules Matchless 3d, and others, all looked good in their classes, but Lassie has such wonderful breed type, depth and roundness of body, short neck and such pleasing outlines all over, as to make her easy to pick by a much less competent judge than Frank D. Tomson, long head of the publicity department of the American Shorthorn association, who placed the ribbons in a manner to win the approval of all breeders and exhibitors, even when they lost. Orange Blossom Lady, the Washington State college entry, with calf at foot, was made senior champion. She defeated G. W. DeLay's great cow, Scottish Jane 4th, that won most of the way around the fall circuit. While not carrying quite as much flesh, she had the same true breed type and was a little smoother over the hips.

Group of three bulls owned by exhibitor: 1 and 3, Day & Rothrock, Spokane, Wash.; 2, Pacheco Cattle company, Hollister, Cal.; 4, A. D. Dunn, Wapato, Wash. Group of two bulls, bred and owned by exhibitor: 1, 3 and 4, Day & Rothrock; 2, Pacheco Cattle company.

Bulls: Aged bull—1, G. W. De Lay, Hot Lake, Ore., on Village Reserve; 2, E. G. Kohlsaedt & Son, Colville, Wash., on Tribute; 3, J. W. Fox, Cedonia, Wash., on Captain. Two-year-olds—1, Pacheco Cattle company, on Pacheco Lad 215th (senior and grand champion); 2, De Lay, on Hercules Cornerstone; 3, Dunn, on Matchless King. Senior yearling—1, State College of Washington, on Hercules Rex. Junior yearling—1, Day & Rothrock, on Hercules Conqueror (junior champion); 2, Pacheco Cattle company, on Pacheco 284th; 3, Dunn, on White Clipper; 4, J. H. Matheson, Buena, Wash., on White Forest; 5, De Lay, on Linden Laddie. Senior calf—1, 2, 3 and 4, Day & Rothrock, on Hercules Ideal, Hercules Radiance, Hercules Marshal and Hercules Bandmaster; 5, Dunn, on Dunbro Lad; 6, State College of Washington, on Village Cup. Junior calf—1, Pacheco Cattle company, on Pacheco Fair Play; 2 and 3, Day & Rothrock, on Hercules Brilliant and Hercules Marquis; 4, State College of Washington, on Doune Sultan; 5, De Lay, on Royal Villager.

Females: Aged cow—1 and 2, De Lay, on Scottish Jane 4th and Ruberta's Missie; 3, Dunn, on Queen of Dunbro; 4, Fox, on Cedonia Bell. Two-year-olds—1, Dunn, on Supremacy 2d. Senior yearling—1, Pacheco Cattle company, on Knight's Lassie (junior and grand champion); 2 and 3, Day & Rothrock, on Hercules Matchless 3d and Perfection's Lady; 4, De Lay, on Village Missie. Junior yearling—1, 3 and 4, Day & Rothrock, on Hercules Topsy 5th, Hercules Victoria 4th and Hercules Jasmine 2d; 2, Pacheco Cattle company, on Pacheco Lass 280th; 5 and 6, Dunn, on My Lassie and Bonnie Girl. Senior calf—1 and 5, Pacheco Cattle company, on Pacheco Lass 292d and Pacheco Lass 293d; 2, 3 and 6, Day & Rothrock, on Hercules Silvia 3d, Hercules Violet 6th and Hercules Missie 5th; 4, Dunn, on Cup's Princess. Junior calf—1 and 2, Earl McDonald, Fenn, Idaho, on Mc's Sweetheart and Lady Kelmscott 3d. Cow, any age, with calf at foot—1, State College of Washington, on Orange Blossom Lady (senior champion); 2, De Lay.

Aged herd—1, Dunn; 2, De Lay. Young herd—1, Day & Rothrock; 2, Pacheco Cattle company; 3, Dunn; 4, De Lay. Calf herd—1 and 3, Day & Rothrock; 2, Pacheco Cattle company; 4, Dunn. Get of sire—1, 2 and 4, Day & Rothrock; 3, Dunn.

The Herefords.

Six exhibitors, with practically full herds, besides a few small exhibitors, made a Hereford show great in numbers, and with some excellent individuals. Herbert Chandler of Baker, Ore., was the largest winner, annexing eight firsts, besides a number of other prizes. The Methow Valley Live Stock company of Winthrop, Wash.; Henry Thiesen of Sweetwater, Idaho, and the University of Idaho, each won three blues, while Clyde Weatherford of Dayton, Wash., won two. Competition was close in many classes. Had Chandler's aged bull, Bonnie Prince, not been lame it is believed by a good many that he would have been senior and grand champion. But the Thiesen entry, Rupert's Model 14th, that won the honor, has excellent type, length of body and great bone, but was a little thin in flesh. The senior yearling, Beau Stewart, awarded junior and grand championship, shown by the Methow Valley company, was wonderfully finished, is a deep and smooth fleshed animal, with best of breed type, has a wonderful front and strong back, but is just a little narrow behind, a fault which he may grow out of. The aged cow, Catherine 10th, that was made grand champion, has been senior champion many times, but has been beaten by her 2-year-old stable mate, Mary Debonair, that was first in class at this show. The junior champion female, Semolina 3d, a senior yearling, has breed type, good size and smoothness of covering. Both are owned by Chandler. Herefords were judged in a very satisfactory manner by W. L. Carlyle of Alberta.

Group of three bulls owned by exhibitor—1, Herbert Chandler, Baker, Ore.; 2 and 4, Methow Valley Live Stock company, Winthrop, Wash.; 3, Henry Thiessen, Sweetwater, Idaho. Group of two bulls, bred and owned by exhibitor—1, Methow Valley; 2, Thiessen; 3 and 4, Chandler.

Bulls: Aged bull—1, Chandler, on Bonnie Prince; 2, Herman Nordby, Lewiston, Idaho, on Blanchard. Two-year-old—1, Thiessen, on Rupert's Model 14th (senior champion); 2, Chandler, on Debonair 119th; 3, Methow Valley, on Chewuck Panama 14th. Senior yearling—1, Methow Valley, on Beau Stewart (junior and grand champion); 2, Clyde Weatherford, Dayton, Wash., on Don Blanchard 3d; 3, Platt Bros., Genesee, Idaho, on Beau Type 1st. Junior yearling—1 and 7, Weatherford, on Majesty Fairfax and Don Blanchard 12th; 2 and 6, Chandler, on Prince Debonair and Rupert's Debonair; 3, Methow Valley, on Commander Junior; 4 and 5, Thiessen, on Lord Carlos and Disturber Carlos. Senior calf—1 and 5, Chandler, on Prince Donald and Prince Claude; 2 and 4, Thiessen, on Bonnie Master and King Rex; 3 and 7, Methow Valley, on Prince Perfect and Prince Chewuck 2d; 6, Nordby, on Don Rupert 7th. Junior calf—1, University of Idaho, on Militant Lad; 2 and 3, Methow Valley, on Beau Sunshine and Sir Radio; 4 and 7, Thiessen, on Ideal Bonnie and Bonnie Brummel 2d; 5, Chandler, on Bonnie Prince 4th; 6, Weatherford, on Don Blanchard 20th.

Females: Aged cow—1 and 2, Chandler, on Catherine 10th (senior and grand champion) and Semolina 2d; 3, Thiessen, on Miss Rupert 3d; 4, Methow Valley, on Jeanette 2d; 5, Weatherford, on Ruby Lass. Two-year-olds—1 and 4, Chandler, on Mary Debonair and Salome Generous; 2, Methow Valley, on Florence Debonair; 3, Thiessen, on Cherry Blossom 3d; 5, Platt Bros., on Esther Fairfax. Senior yearling—1 and 3, Chandler, on Semolina 3d (junior champion) and Princess Debonair; 2, Thiessen, on Bonnie May; 4, Platt Bros., on Lady Type 11th. Junior yearling—1, Thiessen, on Bonnie Jane; 2 and 3, Methow Valley, on Princess Lily and Blossom's Joy; 4 and 5, Chandler, on Princess Donald and Princess Donald 2d; 6 and 7, Nordby, on Miss Perfect Rose 5th and Miss Perfect Rose. Senior calf—1, 4 and 5, University of Idaho, on Donna Perfect 3d, Princess Donna and Tantille Lass; 2 and 6, Methow Valley, on Lady Annabelle and Miss Frances; 3 and 7, Weatherford, on Betty Blanchard 20th and Betty Blanchard 21st. Junior calf—1, Weatherford, on Betty Blanchard 23d; 2, Chandler, on Bonnie New Year; 3 and 4, Methow Valley, on Wild Rose and Wild Cherry; 5, Platt Bros., on Lady Type 16th.

Aged herd—1 and 4, Chandler; 2, Thiessen; 3, Methow Valley. Young herd—1, Methow Valley; 2, Chandler; 3, Thiessen; 4, Platt Bros. Calf herd—1, University of Idaho; 2 and 5, Methow Valley; 3, Chandler; 4, Thiessen. Get of sire—1, Thiessen; 2, University of Idaho; 3, Methow Valley; 4 and 5, Chandler. Produce of

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

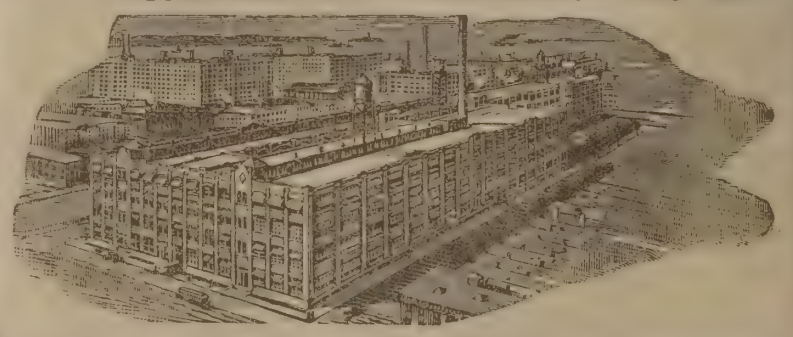
Born in the mind of a Farmer



A-M-F SICKLE BAR

The Safety Razor of the Fields

It was no accident that a farmer invented this wonderful improvement, for who but a practical farmer could understand the extreme need for a better mower knife—a knife without rivets, a knife with sections or blades, each instantly and easily removable in the field. Always sharp, always ready for work—the A-M-F Sickle Bar, the Safety Razor of the Fields.

Made in a great Industrial Plant

Who but the American Machine and Foundry Company, with its vast resources and capitalization; its great manufacturing plant, should develop this real labor-saving; cost-reducing tool! The Company has, for many years, been developing and making special machinery of many kinds.

A-M-F Bars are made for all standard mowing machines and for any width cut. Built stronger than old style bars—rust-proofed too by the Intraloy Process.

A-M-F Blades are high carbon steel, heat treated and tempered. Will not break. In handy dozen packages. Interchangeable in all A-M-F Bars. Ask your dealer or write us. Head and bar guaranteed against breakage for one year.

American Machine & Foundry Co. 511 Fifth Avenue New York

If you took a knife and sliced it through—

here's what you'd find:

Not just a shell of rubber and stiffened fabric—but the real explanation of the rugged strength that gives to "U. S." Boots extra months of wear.

First a series of strong reinforcements, from seven to eleven layers of rubber and sturdy fabric at every point of strain and wear—across the instep, above the heel, about the ankle, etc.—

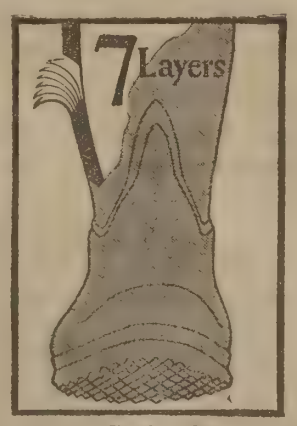
A flange shaped sole of one single, solid piece of rubber, extending all the way from toe to *back* of the heel—

Tough, flexible rubber everywhere backed by the best grade of heavy, close-woven fabric—

A special lining that adds stiffness to the upper and prevents wearing out from the inside.

The diagrams on the left show you some of these details. Every one means longer wear and greater boot comfort.

We've been making rubber footwear for 75 years. We don't just *buy* rubber—we produce on our own plantations the finest grade that can be grown. Our factories are manned by the most experienced boot-makers in the country—craftsmen who know the value of painstaking care. And we're proud of the results—and of the satisfaction U. S. Boots are giving to farmers everywhere.



THE SOLE—*A thick, single layer of the finest, toughest high-grade rubber. Its flange shape means extra protection and wear. A rugged outside foxing unites the sole and the upper into one solid piece.*

BACK OF THE HEEL—*Eleven layers of heavy duck and highest grade rubber make this one of the strongest points of the whole boot.*

THE INSTEP—*A boot has no lacing in front, like a shoe, to give as you walk. Every mile you go, the rubber bends and buckles 900 times. We've put a series of graduated reinforcing layers into the instep, combining unusual flexibility with surprising strength.*

THE ANKLE—*Here's where so many boots sag and crack. The "U. S." Boot has an extra "collar" that runs all the way round the leg, and on top of that is vulcanized a heavy side-stay.*

Other "U.S." Footwear—all built for long wear

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. Lace Bootee, a rubber workshoe to be worn over your socks for spring and fall—U. S. Arctics and Rubbers—all the styles and sizes for the whole family. Look for the "U. S." trademark before you buy—the honor mark of the oldest rubber organization in the world.

Farmers Are Thoroughly Aroused

(Continued from page three.)

recently told me that he had done his bit to help our movement along. It seems he had subscribed to a certain proprietary farm paper which is about as much in sympathy with the farmers' union as I am with the boll weevils in my cotton patch. But this man was honest in his belief that he had been doing his bit to help us on the way, and there are thousands of decent individuals who would like, but do not know how, to help bring prosperity to agriculture, which they instinctively know is the bed-rock of general prosperity.

U. S. Department of Agriculture.

With the United States department of agriculture, I ask you to show a broad-minded and tolerant spirit. In many respects it has been and can be a power for good. It rests largely with the enlightened organized farmers of this nation to say what the department of agriculture shall do. There is no doubt that many of the department's chieftains were sincere in their belief that they were increasing the influence of the department by trying to build up in every agricultural county in the various states and nationally the farm bureau movement.

Departmental leaders and directors have gathered widely in the farm bureau conclaves, quite largely directed its activities, furnished advisors on the U. S. Grain Growers committee, believing that they were doing something of a beneficial nature. Instead they find that they have antagonized a very large number of farmers. They are facing cuts in their appropriations and they see their efforts instead of helping have retarded.

I say that we must stand by the department of agriculture and together with all bonafide self-help farm organizations help to make it retain the confidence and the respect of the American farmer. And what I say of the United States department of agriculture applies also to the state agricultural colleges, many of which, I regret to say, have upon their own initiative or because of federal pressure, been carrying farm bureau banners and ignoring, if not attacking, the movements which years ago naturally and properly sprang up upon their native heaths.

These state agricultural colleges will learn, if they have not already done so, that the farmer himself must work out his own salvation. They can help him do it if they will by throwing their efforts in the direction of his cooperative activities. But if they do not choose to do so they must at least confine their efforts to the two blades of grass theory and not attempt to dictate his economic program.

When I think of all the splendid men and women in the agricultural colleges and state extension work, and of the many folks in other classes of society who really have a desire to be of help to the farmer, I wonder why, if they really wished to help, they did not throw their support behind the farmers' union movement and other great self-help organizations that for years have been doing the important and necessary things for the farmer along economic lines. Why, when the farmers' union already had over 6000 local business institutions, many of them federated into strong centralized activity, did our self-confessed well-wishers fail to throw their support behind us?

We, and other self-help organizations, have long been upon the right road. Then why have not these great chambers of commerce that have given such large cash grants to the farm bureau, why have not the politicians and the money lenders given us their hearty support?

Can it be that these institutions and individuals have felt that we were not going fast enough? Or, can it be barely possible that we are making too much headway?

State Aid Versus Self-Help.

A considerable number of farmers joined the farm bureau, believing it worthy of their support. There are members of the farmers' union who belong to the county farm bureaus. I have no criticism to make of them. There might be a way to make the farm bureau a useful institution. Whatever it may be in some particular county, or even in a state or two, as a national movement it is not wholesome or helpful.

There are too many middlemen, too many bankers, coal operators, industrial overlords in and behind the membership, and too many designing politicians have wound their tentacles around the movement.

A legitimate farm organization must be an organization of, by and for the farmer. This the farm bureau is not. In the main it permits any citizen to belong to it. This feature alone is enough to bring it everlasting harm.

But in addition to being a purely farmers' movement a farm organization must be self-help, that is, it must be financed solely by the farmers. I will stand for no hair splitting by those who say that the national farm bureau movement is wholly supported by the dues of the membership. The fact is, and no one can deny it, that the movement was builded upon county agricultural agents who are supported by federal, state and county funds. The officials themselves have said that the county agent is the keystone of the farm bureau movement. Lincoln said, "No nation can exist half slave and half free."

Agricultural cooperators know that no farmers' organization can exist in the interest of the farmers when the general taxpayers' money is furnishing the keystone to the arch.

The testimony of the world's great agricultural leaders points the way for the farm bureau if it has the will to become a real farm organization. Purge the membership to its non-farmer members, the banker, the lawyer, the politician and the industrial magnate. They already have their clubs and associations; let them gather there.

Let the farm bureau cast off all its state aid associations and the leading strings of state and federal supervision and stand on its own feet.

Adhering to the principle that all my time and energy belong to the farmers' union, I have steadily and resolutely rejected all invitations to serve in other capacities, complimentary and even flattering as some of these invitations have been. I am devoted to agriculture and whatever of power and influence I may possess will be used to promote our cause. Of course I have given aid on boards and commissions where agriculture was entitled to a voice, but without pay.

During the year just passed I have produced a book entitled "Uncle Reuben in Washington." I expect no revenue. Neither will I accept any personal profit from its sale. If it is extensively distributed I believe it will prove a valuable agency in getting over to a large part of the public the story of the farmer, a story which is little known and therefore not appreciated. In this book I try to tell the tale of the farmers' trials, tribulations, sorrows and difficulties, and also something of his success.

I try to show how he has been tripped, fooled, camouflaged, skinned and humbugged. But the book, I trust, carries a message of good cheer and hope to the farmers. In it I try to show, I think successfully, how agriculture may, by its own efforts, pull itself out of the ditch and eventually become a cooperative and articulate power that will be able successfully to defend itself against the designs of the confederated interests. I regard the production of this book as entirely in line with the commission you have repeatedly given me to serve as head of our magnificent organization.

West Washington Apples

"The trouble with our western Washington apples is not the fact that they are grown in a milder climate, but because they seldom receive the proper care," says Peter Nelson of Keyport, Kitsap county. "We can raise apples that are as high in quality, with the possible exception of color, as are grown in eastern Washington. If we were to give the trees the attention they do in the apple-producing districts we could raise apples that would demand a better price on the local market."

As for varieties to raise, Mr. Nelson recommended the Gravenstein and King, since they are both good producers, sell well on the local marketss and bring a fair price. As yet he has had no trouble in disposing of either variety and in many cases could have sold more than was produced on a few trees on the Nelson farm.

cow—1 and 5, Chandler; 2 and 4, Methow Valley; 3, Thiessen.

The Aberdeen Angus.

L. A. Wells, Trout Creek, Mont., the only exhibitor of Aberdeen Angus, showed in all but the aged bull classes. His entire herd, which is mainly of the Queen Mother strain, were well fitted and of excellent Angus type. His champions were: Senior champion bull, Quiet Lad of Dundee; junior and grand champion bull, Prince L. A.; senior and grand champion cow, Queen of Granite; junior champion heifer, Queen of Dundee.

Milking Shorthorns.

Two herds of milking Shorthorns, both well fitted and both of good type, gave a good representation for the dual purpose idea. Frank D. Tomson judged these, as well as the beef Shorthorns, and, while he did not lose sight of the dairy quality, he did want substance and constitution in any animal he put up. Northwood farms of Redmond, Wash., had a little the better of Foothills farm of Carlton, Ore., winning eight firsts to five for Foothills. Northwood's senior and grand champion bull, Gretna Challenger, is large, has a good back, great length and is deep bodied and masculine. This farm had the junior champion bull also in their senior yearling, Northwood Pride, a masculine, deep-bodied youngster. They won senior and grand championship on the great white cow, Billing White Ruth, milking close to 50 pounds a day, right now, and showing in good enough form, almost, for a beef show. The junior champion female, Foothills Kismet 11th, is a sweet senior yearling, showing enough dairy type, without losing her Shorthorn characteristics.

Bulls: Aged bull—1, Northwood Farms, Redmond, Wash., on Gretna Challenger (senior and grand champion). Two-year-old—1, Foothills Farm, Carlton, Ore., on Foothills Milkman; 2, Northwood Farms, on Northwood Defender. Senior yearling—1 and 3, Northwood, on Northwood Pride (junior champion) and Northwood Viscount; 2, Foothills Farm, on Foothills Bagpipe. Junior yearling—1 and 3, Foothills Farm, on Foothills Prior and Foothills Milkman's 2d; 2 and 4, Northwood Farms, on Northwood's Cyrus and Northwood Surprise.

Females: Aged cow—1 and 4, Northwood Farms, on Billing White Ruth (senior and grand champion) and Glenside Winnie; 2 and 3, Foothills Farm, on Glenside Rose and Glenside Daphne. Three-year-olds—1 and 2, Northwood Farms, on Mollie and Lady Susie 3d. Two-year-olds—1, Northwood Farms, on Vera's Snowdrop; 2, Foothills Farm, on Foothills Kismet 9th. Senior yearling—1 and 2, Foothills Farm, on Foothills Kismet 11th (junior champion) and Foothills Kismet 13th; 3, 4 and 5, Northwood Farms, on Moss Rose of Pokelawn, Northwood Winnie 2d and Northwood Rose. Senior calf—1 and 2, Northwood Farms, on Northwood Jessie and Northwood Susan 2d.

Aged herd—1, Northwood Farms. Young herd—1, Foothills Farm. Get of sire—1, Foothills Farm. Three cows in milk—1, Northwood Farms.

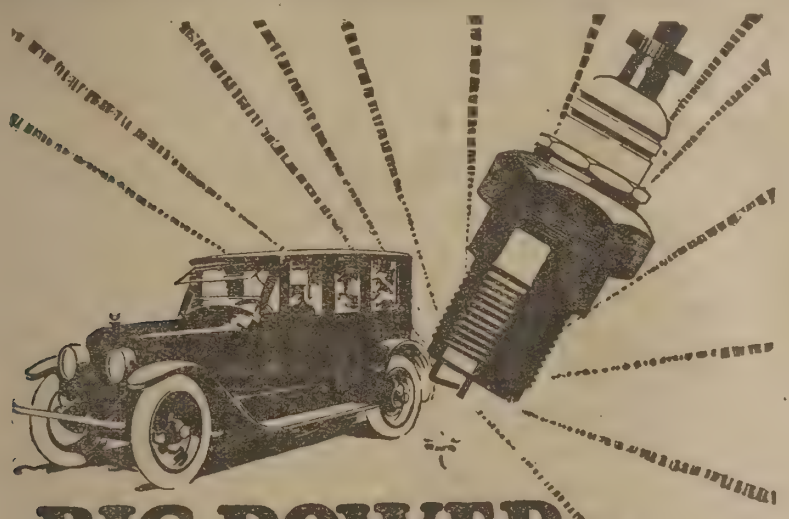
THE DAIRY CATTLE SHOW.

All four of the dairy breeds were well represented, Jerseys with four exhibitors, Guernseys with three, Holsteins with two, and Ayrshires with one. In the first two breeds named, competition was keen almost from first to last class shown and it was close in some classes in the Holsteins. Two California herds of Jerseys and a Wisconsin herd of Guernseys made the competition interesting from a standpoint of state and district pride. The show, while not large, was high class throughout.

The Holsteins.

John L. Smith of Spokane and the University of Idaho made the Holstein show, the former with almost a full herd. Good type and good condition prevailed with most of the animals shown, and the show was one of all around quality. Smith won all firsts except on mature cow, where the university's grand old cow, Idaho Segis Walker Colantha, a daughter of Matador Segis Walker, defeated a strong class and won. Perhaps the most interesting contest was for grand championship on bull. The calf that was made junior champion here and at the Pacific International last year was showing in great form as a senior yearling. He had to meet the great old show bull, Segis Pietertje Clothilde, also owned by Smith. But so good was the younger animal he had no difficulty in winning. He has plenty of size, a great back, long, straight hips and much quality. Smith's 2-year-old, Hazelwood Leda Heilo Korndyke, won senior championship over the Idaho cow and was made grand champion. She was showing in excellent bloom and is a promising heifer, as is the senior yearling, Hazelwood Ormsby Heilo Duchess, junior champion. John B. Irwin of Minneapolis, Minn., judged all dairy cattle.

Bulls: Aged bull—1, John L. Smith, Spokane, Wash., on Segis Pietertje Clothilde (senior champion); 2 and 3, University of Idaho, on King Segis Violet Posch Idaho and Matador Violet Idaho. Junior yearling—1, Smith, on Hazelwood Heilo Butter King (junior and grand champion); 2, University of Idaho, on King Posch Segis Idaho. Senior calf—1, Smith, on Hazelwood Stella Champion; 2, University of Idaho, on Idaho Matador Conqueror. Junior calf—1 and 2, Smith, on Hazelwood Heilo Homestead and Sir Bessie Segis.



Females: Aged cow—1, University of Idaho, on Idaho Segis Walker Colantha; 2 and 3, Smith, on Lady Bracelet Jewel and Hazelwood Leda Korndyke Ormsby. Two-year-olds—1 and 2, Smith, on Hazelwood Leda Heilo Korndyke (senior and grand champion) and Hazelwood Johanna Skylark; 2, University of Idaho, on Idaho U Segis Colantha. Senior yearling—1 and 2, Smith, on Hazelwood Ormsby Heilo Duchess (junior champion) and Hazelwood Bessie Pauline; 3, University of Idaho, on Idaho U DeKol Korndyke Violet. Junior yearling—1 and 2, Smith, on Hazelwood Heilo Piebe Homestead and Hazelwood Heilo Fobes Tritomia. Senior calf—1, 2 and 4, Smith, on Hazelwood Ormsby Duchess, Hazelwood Heilo Posch Ormsby and Hazelwood Heilo Fayne Bessie; 3, University of Idaho, on Idaho Matador Countess. Junior calf—1 and 2, Smith, on Hazelwood Ormsby Butter Girl and Hazelwood Bessie Pauline Posch.

Aged herd—1, Smith; 2, University of Idaho. Young herd—1, Smith. Calf herd—1, Smith. Get of sire—1 and 3, Smith; 2, University of Idaho. Produce of cow—1 and 2, Smith; 3, University of Idaho.

The Jerseys.

One full herd, two partly full and consignments from two more made a real show and hot competition in Jerseys. Glen Tana farm of Spokane, the largest exhibitor, was the largest winner, securing three of the championships, 12 of the 16 blue ribbons, and other prizes. J. E.

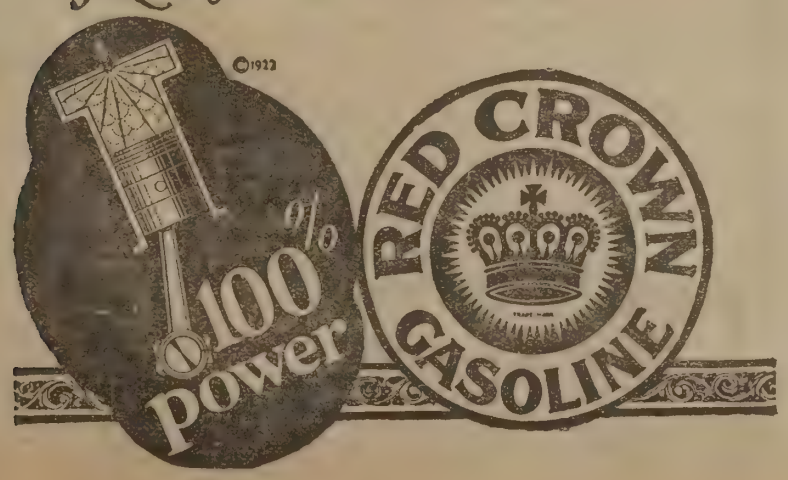
BIG POWER
in EVERY DROP!



"Red Crown" meets the automotive engineer's demand for a motor fuel that will vaporize *rapidly* and *uniformly* in the carburetor, and explode *completely* in the cylinder. Every drop is 100% power.

Fill your tank with "Red Crown" and *nothing else*, and you won't have to bother with carburetor adjustments. You'll get prompt starting, better mileage, and a sweeter-running motor.

Fill at the Red Crown sign—at Service Stations, at garages, or other dealers.

STANDARD OIL COMPANY
(California)

The Gasoline of Quality

Only Pure Virgin Rubber in Gold Seal Boots

PURE virgin rubber is new, elastic rubber that has never been used before.

Gold Seal boots are made only from pure virgin rubber. They contain no shoddy, reclaimed rubber or substitutes. We use a special process of vulcanizing that makes all the layers one solid piece.

Gold Seal Boots Are Crack Proof

Gold Seal boots never look "all tuckered out." Their surface is never honey-combed with little cracks that are forerunners of big cracks. Gold Seal boots are crack-proof.

We make our red-soled "Manure" boot especially to resist the acids and the alkalies of the farm.

Gold Seal boots will outwear ordinary boots. Good stores all over the Northwest sell them. They also sell Goodyear oiled clothing. Always look for our trademark, it's been a sign of quality since the 70's.

This is the one Gold Seal label—it's round and gold colored. It is your guarantee of a virgin rubber crack proof boot.

We are the original and only

Goodyear Rubber Co.

Portland and San Francisco.

No connection with any other firm using the name "Goodyear."

Goodyear

GOLD SEAL BOOTS

Authorized since the 70's to use the name of Charles Goodyear, inventor of vulcanizing.

LIVESTOCK AND DAIRY

Smith's Steers Outsell Brown's

Part III.

The table given last week makes clear the third of the primary requirements of the steer buyer, namely, that the meat must please the consumer. Prime native steer carcasses are worth 18 cents a pound, while plain cows bring only 7 cents a pound. Even this price range does not tell the whole story, for the carcasses of canners are unsuitable for selling over the butcher's block, but are worked into other forms, such as canned beef. The retailer will pay 23 cents for loins from the best steers, but he can pay only 15 cents for others and hope to sell them at a profit. The better grades of beef are more tender, palatable, juicy, nicely flavored, more nutritious as well as more attractive in appearance than the low grades.

Besides having a dressing percentage of around 63, the $12 steers on the present market would produce beef worth about 18 cents a pound. They probably would have a little more of their carcass weight in the valuable cuts. The $5.50 steers would be low dressers and their carcasses worth only about 10 cents a pound. Canner steers selling at $3.50 would dress out still more poorly and produce beef worth only 6 to 8 cents a pound.

Whether a steer will have a high dressing percentage or not depends on how fat he is, on the degree of paunchiness he shows and the amount of weight in his hide, head and legs.

When a steer is fattened the weight put on is added mostly to the carcass, while the parts going into the offal are changed but little. A 1000-pound feeder steer gaining 400 pounds in a five months' feeding period would increase his dressing percentage perhaps 10 to 12 per cent. A broad body, full and plump in every part, deeply covered with mellow flesh indicating a thick carcass and high finish, goes with a high dressing per cent for the same reason. The cattle buyer, usually mounted in the larger yards, will handle the animal, pressing along the spine over the loin and along the ribs to see how deeply they are covered. Other signs that the animal is highly fattened and, therefore, will be a high dresser found in the size of the tongue fat, or "wattle," between the lower jaws, the "roll," which the fat steer pushes up at his hind flank when he walks, and the fat on the ends of the pin bones.

Paunchiness is due to an excessive quantity of feed and water in the digestive tract. It is the custom to "fill" cattle with hay and water when they reach market. If the cattle "fill" excessively, because of hot weather or some other cause, so that their sides project decidedly beyond straight lines from the shoulder to the hip, the buyers will expect them to be low dressers and will make low bids or will delay making any bid at all until the cattle have lost some of the fill. It can be shown that each 10 pounds of fill which a 1000-pound steer takes reduces its value per hundredweight about 1 per cent, but since cattle are always assumed to be filled when they are offered for sale, the seller is the loser if they have not had the customary feed and water.

Although a heavy hide lowers the dressing percentage, it is not discriminated against on that account unless excessively dirty, because hides as a rule are worth more than the average value of the carcass. There is no similar compensation when the dressing percentage is lowered by a big, coarse head or coarse legs and joints.

From what was said before with reference to the location of the high and low priced cuts it follows that animals which have short legs, short necks, are broad over the crops and along the back, loin and rump, thick and bulging in the thighs and are full and low in the twist and which lack prominence at the shoulders, hips and tailhead would have a high percentage of weight in the high-priced parts.

VETERINARY

By DR. S. B. NELSON.

Mange—Will you please give me a good treatment for mange? SUBSCRIBER.

One of the good treatments for mange is to use a mixture of petroleum and sulphur, mixing an ointment that is semi-liquid. Apply this with a brush all over the body and leave it. Give a second treatment in five days and another in five or six days more.

Growth on Hip.—One of my hogs has a large growth on one hind quarter. I first noticed this to appear when the pig was about 6 weeks old. At first it was only the size of a quarter and looked like a patch of mud. Now it is about 10 times as large and bleeds and looks sore. Will it be necessary to remove this growth with the knife? A. T.

Try using a 1 per cent solution of picric acid in water two or three times daily on the sore.

Lump in Udder—We have a cow just fresh about five weeks that has a hard lump forming in the front teat at the end, which seems to have almost entirely closed the opening. It is nearly impossible to force any milk through, but there seems to be no soreness. K. M. R.

Try applying United States Farmacopis iodine ointment to the lumpy part of the udder, using it morning and evening after milking, with a reasonable amount of massage.

Dehorning.—When is it best to dehorn a cow, before or after freshening? Our cow will be fresh about the middle of January and we would like to have her dehorned right away if advisable. W. A. H.

If you are in a position to handle the cow without too much injury in restraint you might dehorn her right now. If you have no stanchion into which you could fasten her you might try one of the good simple ways of handling the animal. One way is to tie her up very short to a post and push the body around to the side of the fence, so as to crook her head, and hold her steady by means of a long plank, 2x6. When the horn on the outside has been taken off push her around to the other side of the fence and remove the remaining horn. If she is pretty nervous and you do not have a good place to fasten her without the possibility of injury to her you had better wait until she freshens.

SORE UDDER—I have a cow that has pimples all over her teats. Occasionally these pimples break and they are bloody. J. B. R.

Wash the teats and udder of the cow in a 2 per cent solution of lysol in water before and after milking. After milking and when the udder has been dried, apply a little mercuric oxide ointment to the sores and pimples.

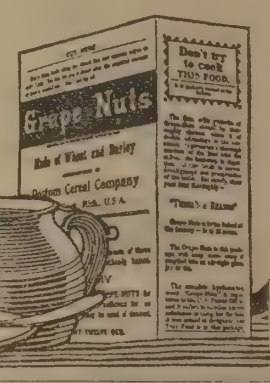
Are you among these thousands?

THOUSANDS of people keep on trying, year after year, to build health from food that has been robbed of certain elements required for perfect nutrition.

If your food doesn't contain the mineral properties that go to build up nerve, tooth and bone structure, *there is no other means by which you can get these vital elements.*



This is one reason why so many well-informed people eat Grape-Nuts—the food that enriches the blood, and builds sound, healthy bodies.

Grape-Nuts is made from whole wheat flour and malted barley—baked for 20 hours, which develops the natural richness of the grains and makes for ready digestibility.

And Grape-Nuts is perfectly delicious—served with milk or cream, or made into an appetizing pudding for dinner.

Get a package of Grape-Nuts from your grocer today, and give the family a help to health.

WESTERN CANADA
for Wheat Growing, Cattle Raising
and a Happy Home of Your Own

Prosperous Farms and Happy Homes await those who are desirous of enlarging their present resources and securing for themselves homes in a country that, while yet in its infancy, has made itself famous by the quality of the grain it produces and by the excellence of its live stock.

There are Millions of Acres

of the highest class of soil available for the man whose object in life is to become his own landlord, and who wishes to share in the opportunity which has given wealth to the thousands of Americans who, having started on Western Canada farms with but small means, are now writing home to their friends, telling of what they have done. Lands are cheap and homesteads farther from lines of railway are **free to settlers.** Upon these lands can be grown the best of wheat, oats, barley, flax, grass, hay, fodder corn and sunflowers.

Cattle winter in most places without shelter; dairying is highly successful. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write to

New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hopper-cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

(11)

LIGHT WEIGHT 4 H. P.

For all power jobs up to 5 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

CUSHMAN MOTOR WORKS
415 E. Ash Street. Portland, Ore.

Do You Wear a Truss?

MR. C. E. BROOKS

BE COMFORTABLE—Wear the Brooks Appliance, the modern scientific invention which gives rupture sufferers immediate relief. It has no obnoxious springs or pads. Automatic Air Cushions bind and draw together the broken parts. No salves or plasters. Durable. Cheap. Sent on trial to prove its worth. Never on sale in stores as every Appliance is made to order, the proper size and shape of Air Cushion depending on the nature of each case. Beware of imitations. Look for trade-mark bearing portrait and signature of C. E. Brooks which appears on every Appliance. None other genuine. Full information and booklet sent free in plain, sealed envelope.

Six States Compete

(Continued from page nine.)

Thorpe of Lockeford, Cal., had two firsts; Waterloo farm of Lockeford, Cal., one, and the University of Idaho one, while Glenwood farm of Buckeye, Wash., just missed first on junior calf, on a close decision, after the judge had looked long at the Glenwood calf and the Glen Tana calf that beat her. Perhaps the most outstanding animal is Glen Tana's senior and grand champion bull, Glen Tana Perfection. Three years old and well developed, he has a wonderfully strong back, deep, round body, good length and a head to please the most fastidious. All three of the aged bulls were strong show animals. Biddy's King of Mossdale, that stood second, is a son of Financial King. He has long, straight hips and wide pin bones. To the writer's view the third prize bull, Jolly Senator Raleigh, has the best head of the three and an exceptionally deep middle, but is the least bit rough over the tail setting. Eminent Jimps Owl, the grand old cow that was senior champion at the Pacific International Stock show last year and grand champion the year before, was given that honor at the Western Royal. Her udder seems hardly as good as a year ago, but her great length of body, sweet head and good back, are still hard to turn down in a cow of her age.

Bulls: Aged bull—1, Glen Tana Farm, Spokane, on Glentana Perfection (senior and grand champion); 2 and 3, J. E. Thorpe, Lockeford, Cal., on Biddy's King of Mossdale and Jolly Senator Raleigh. Two-year-olds—1, Waterloo Farm, Lockeford, Cal., on Financial Corrector. Senior yearling—1, Glen Tana Farms, on Glen Tana Morocco Wonder (junior champion). Junior yearling—1, Thorpe, on King's Tip of Mossdale. Senior calf—1, University of Idaho, on Idaho Baronet Hero; 2, Glen Tana Farms, on Glen Tana Morocco Guenom; 3, Thorpe, on Nomie's King of Mossdale; 4, Waterloo Farm, on Financial Corrector's Gold. Junior calf—1 and 2, Glen Tana Farms, on Glen Tana Morocco Majesty and Glen Tana Morocco Sultan; 3, University of Idaho, on Idaho Torono Experimentor.

Females: Aged cow—1 and 4, Glen Tana Farms, on Eminent Jimps Owl (senior and grand champion) and Glen Tana Sibyl 2d; 2, Thorpe, on Goldie's Nehalem Cowslip; 3, University of Idaho, on Owlet's Louise of Waikiki. Two-year-old—1, University of Idaho, on Waikiki's Pilot's Bessie; 2, Glen Tana Farms, on Glen Tana Dorothy; 3, Thorpe, on Gertie of Mossdale; 4, Waterloo Farm, on Goldie's Dame Onota. Senior yearling—1, Thorpe, on Wardress of Mossdale; 2, Waterloo Farm, on D. L. K.'s Aljibe. Junior yearling—1 and 2, Glen Tana Farms, on Glen Tana Morocco Inez and Glen Tana Golden Girl; 3, Thorpe, on King's Miss of Mossdale; 4, Glenwood Farms, Buckeye, Wash., on Fern's Bonnie Lady. Senior calf—1 and 3, Waterloo Farm, on Financial Corrector's Foxola (junior champion) and Financial Corrector's Viola; 2, Glen Tana Farms, on Glen Tana Morocco Lady; 4, Thorpe, on Miss Golden Gate of Mossdale. Junior calf—1, Glen Tana Farm, on Glen Tana Morocco Fairy; 2, Glenwood Farm, on Laddie's Ethleen of Glenwood; 3, Waterloo Farm, on Financial Corrector's Glory; 4, Thorpe, on King's Daughter.

Aged herd—1, Glen Tana Farms; 2, Waterloo Farm; 3, Thorpe. Young herd—1, Glen Tana Farm; 2, Thorpe; 3, Glenwood Farm. Calf herd—1, Thorpe; 2, Glen Tana Farms. Get of sire—1 and 3, Glen Tana Farms; 2, Waterloo Farm. Product of cow—1 and 2, Glen Tana Farms; 3, Thorpe.

The Guernseys.

Another real contest all down the line was in the Guernsey classes. Three herds competed, although they did not all fill all classes. All had good, typy herds, but the F. J. Reuping herd from Fon du Lac, Wis., showed perhaps a little more type and the arrivals were a little more highly fitted. They won the lion's share of the first prizes. Their old bull, Superb of Edgemoor, that has been grand champion most of the way around the Eastern circuit, was defeated by their 2-year-old, Gay Girl's Golden Secret of Owland. This is the young bull's first time to win the honor, though he has never been defeated in class. He has wonderful depth and long, wide hips, together with most approved type. Wallace & Fordyce's junior champion, Fawndale Morose, a junior yearling, is a promising youngster, with best of type, constitution and capacity—a real bull. Judy of Thatch Meadow, the Thousand Springs entry that, as a yearling, won junior championship last year, was made senior champion. She is just as sweet as a year ago, with a strong constitution, fine head, and an excellent udder. The junior and grand championship went to Reuping's senior heifer calf, Corium Nancy's Cassie, a beautiful calf with plenty of constitution, that has been winning in class in the east and was second at the National Dairy show.

Bulls: Aged bull—1, F. J. Rueping, Fond du Lac, Wis., on Superb of Edgemoor; 2, Wallace & Fordyce, Sunnyside, Wash., on Chicona Lover Bold. Two year old—1, Rueping, on Gay Girl's Golden Secret of Owland (senior and grand champion). Senior yearling—1, Thousand Springs Farm, Wendell, Idaho, on Masterpiece Ultra King of Edgemoor. Junior yearling—1, Wallace & Fordyce, on Fawndale Marose (junior champion); 2, Rueping, on Corium Brownie's Count. Senior calf—1, Thousand Springs Farm, on Deacon of Thousand Springs; 2, Rueping, on Corium Nellie's Rosa's Delos. Junior calf—1, Rueping, on Corium Ladock Jennie's Prince; 2 and 3, Wallace & Fordyce, on Fawndale Boulder and Fawndale Bold Laddie.

Females: Aged cow—1, Wallace & Fordyce, on Edna of Mountain View; 2, Thousand Springs Farm, on Imp. Fascination 2d of Oakes Farm; 3 and 4, Rueping, on Topsy of City View and Imp. Ladock Jenny. Two year old—1 and 3, Thousand Springs Farm, on Judy of Thatch Meadow (senior champion), and Yeoman's Mixter Babbette; 2 and 4, Rueping on Jeanette of Louis Corners and Mabel's May Queen. Senior yearling—1, Rueping, on Corium Beulah; 2 and 3, Thousand Springs Farm, on Imp. Chinc Fascination of Thousand Springs, and Mixter May Hopeful. Junior yearling—1, 3 and 4, Rueping, on Corium Rose de Houards, Corium Ladock Jenny's Cloe and Corium Caroline; 2, Wallace & Fordyce, on Anchor Rose of Fawndale. Senior calf—1 and 4, Rueping, on Corium

POULTRY AND RABBITS

The Longer Day

Use Hen House Lights With Care

The lighting of houses for young pullets is no doubt a profitable practice when not carried to excess and is destined to become a permanent and very valuable adjunct to commercial poultry keeping, says George R. Shoup of the western Washington experiment station. Records at the station have shown an average November and December lay of 60 per cent or better with lights and only about 30 per cent for November and 40 per cent for December without them. The beginner especially is prone to use this very effective means of increasing production to an excess, which usually causes his ultimate financial loss through broken down birds and a premature molt, and later makes his yearlings much less fit for the breeding pens.

Morning lighting is more efficient than evening lighting in proportion to the number of hours of illumination given, continues Mr. Shoup. The birds are very hungry in the morning and the advent of the light insures every healthy bird leaving the roosts and attempting to appease the craving for food. Thus, if they are given a feed at 4 a. m. their egg-making organs have three more hours in which to work than if they had been fed at 7 a. m. and apparently these three extra hours are about all that is needed to reproduce the daylight prevailing during the spring, when production is normally the heaviest. Without evening lighting the pullets go to roost about 4 p. m. during the cloudy winter day in this lattitude and they utilize about 12 hours for feeding when lights are given at 4 a. m. The inconvenience to the caretaker in getting up at this early hour can be remedied to some extent by having an electric light switch in the house or an alarm clock may be adjusted to turn on the current.

If pullets are at all backward in starting, or if the lay has not reached 50 per cent when those of the smaller breeds are 6 months old and the large breeds 7 1-2 months old, both morning and evening light should be given for a period. The main fault found with morning lighting other than the inconvenience is that the pullets may have access to frozen green food or to ice water which may develop through a sudden drop in temperature during the night. The early morning period before dawn is often the coldest of the entire 24 hours and, unless the birds have plenty of deep straw to work in and plenty of grain in the straw which was placed there the night before, they are likely to catch cold. When they leave the roosts they are always warm from close contact with each other during the night and idleness is likely to produce the greatest menace to which commercial poultry handling is subject—a cold which is often the forerunner of roup and kindred ailments. The practice of feeding at night for the morning consumption also invites many rats and mice, and a consequent loss of grain. The germinated oats are much more palatable if fed warm out of the sprouter, and they are quite certain to freeze and to cause serious indigestion if placed in the litter on a cold night.

In many cases where the pullets are going through a partial molt and the production is down to 30 per cent the caretakers have either used an excessive amount of morning and also evening light and the birds have been forced past their powers of recuperation, or else the birds have been eating frozen food in the morning before the caretaker got around. Therefore, if morning light is given the green food and water should be removed the night before on cold nights, or else the caretaker should get out and give personal supervision as soon as the lights are turned on.

The practice of lighting only in the evening has seemed the wisest to recommend to poultrymen in general. It is almost impossible to overdo evening lighting, as the birds will go to roost or stand idle after the crop is entirely filled, and the time of giving the various feeds is entirely in the caretaker's control. If the first feed is given at 7 a. m. it is only a short while before the day starts to warm up and there is less danger of colds. It is also possible for the feeder to remove the frozen green food before the birds get to it, and to refill the drinking vessels with fresh water which is not ice-cold. Hot water is still better.

In order to make adequate use of the evening light it is necessary to withhold some highly relished food until a period of the evening later than would be necessary in spring and summer. The wet mash which may carry some fresh animal food should be fed about 6 o'clock and this followed by a green food supply sufficient to last till 10 a. m. the next day. The green food is fed after supper, and the craving for this very necessary and palatable part of the ration insures a full attendance on the floor until the lights are turned out at 9 o'clock.

It takes several days for the pullets to become accustomed to the use of the night lights, but it is not uncommon in November and December to find more birds on the floor and a more general consumption of food at 9 o'clock than at 6 o'clock or earlier.

Whenever the production approches 65 per cent the lights are turned out at 8:30 p. m. and sometimes even 8 p. m. There are, of course, many individuals in a large flock which can stand a higher lay than 60 per cent, but we have found that a flock lay of approximately 60 per cent is about the limit that the average flock can produce, keep on laying continuously and come through the season in good condition.

The physical condition is easily determined by examining the keel or breastbone. If the breast is well filled out and there is not more than one-quarter of an inch of the breastbone which protrudes past the flesh the bird is in good laying condition. When the flesh recedes till one-half inch of bone protrudes she is in poor condition and has had too great a strain on her digestive system and will likely die if she keeps on laying. If such a hen stops laying she very rarely makes a good bird for the breeding pens.

The Time of Molting

Hens are always doing one of three thigs, namely, laying, molting or fleshing. Hens usually start molting when they stop laying, unless they are broody or sick. Therefore, the later in the year the hens lay the later they will molt. The earlier in the year the hens stop laying the earlier they will start molting. The late molters are the persistent, or high producers and best payers. The early molters usually are the low producers and, therefore, the poor payers. It is true that we do find some early molters that are high producers, but usually they have laid about all their eggs when the price was low. It is equally as true that we do find some late molters that are low producers, but usually these hens have either been sick, broody or both. Remember that egg production controls molting, and not molting egg production.

To keep up flock egg production it is necessary to cull out all hens that stop laying and start molting early, regardless of their individual production in the past. Oftentimes we cull out and move these early molters to other quarters by themselves and they soon come back to laying and produce many eggs. This, no doubt, is mostly due to their not having had the opportunity to get the necessary kind and amount of food while in the former quarters. We usually find that many of the early molting hens are whipped and kept away from the mash hoppers by the better layers. When placed by themselves they have much more of a chance to get to the mash hopper and secure what they desire and need, therefore, they usually resume egg production.

CONSERVE ENERGY.

Warm quarters make for better production.

Start Your Pullets and Moulted Hens to Laying

You have had your summer's poultry cares.

Now is the time for you to cash in on eggs.

Go after those dormant egg organs that moulting threw out of gear.

Go after them with the "Old Reliable"

Dr. Hess Poultry PAN-A-CE-A

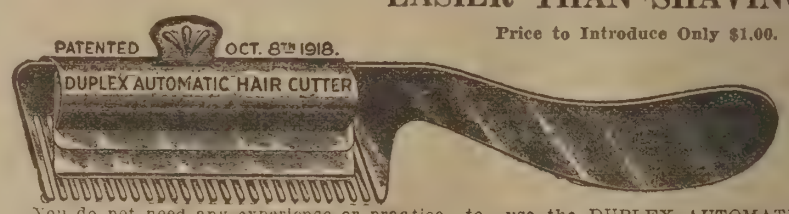
Pan-a-ce-a puts the egg organs to work.
It starts the feed the egg way.
Feed Pan-a-ce-a—then you will see red combs and red wattles.
It brings back the song and scratch and cackle.
It gives hens pep.
It makes music in your poultry yard.
That's when the eggs come.

Tell your dealer how many hens you have.

There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

GUARANTEED

DR. HESS & CLARK Ashland, O.



I spent 30 years in perfecting Pan-a-ce-a.

CUT YOUR OWN HAIR

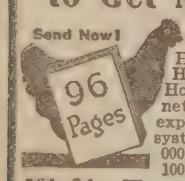
EASIER THAN SHAVING

Price to Introduce Only $1.00.

You do not need any experience or practice to use the DUPLEX AUTOMATIC HAIR CUTTER. It comes to you ready for instant use, and five minutes after you receive it you can have your hair cut better that it was ever cut before.

The DUPLEX will cut as closely or trim as long as you wish it to be. No clippers or scissors are needed with the DUPLEX; it finishes the work completely. It cuts the front hair long and the back hair short. Trims around the ears, etc.

Inside of a very short time you will have to pay $2 for the DUPLEX. The price today is $2, but while our present stock lasts we will accept this advertisement the same as $1 cash. Cut it out and send it with ONLY $1 and we will send you the DUPLEX AUTOMATIC HAIR CUTTER, ready for instant use, postage paid, to any address. Send today. AGENTS WANTED.



DUPLEX MANUFACTURING CO. Dept. 214, DETROIT, MICHIGAN

Free—Conkey's Poultry Book

Pages chock full of information about the feeding and rearing of chicks, culling of hens, etc. Tells how to keep chickens healthy and how to make them pay. Whether a beginner or a professional, Conkey's Book is worth dollars to you. Sent for 6 cents in stamps to pay postage.

THE G. E. CONKEY CO. 6536 Broadway, Cleveland, Ohio

Free Book Tells How to Get More Eggs!

HOW to save feed and get double egg yield. How to cull out poor layers. How Mrs. Hume made $2000. How Mr. Luttrell makes $5 net profit per hen. This book explains Prof. Quisenberry's system now being used by 46,000 successful poultry raisers. 1000 money-making secrets.

Write Today! Simply send name, a postcard will do, for this 96-page free book, "Dollars and Sense in the Poultry Business." No cost, no obligation. Address American Poultry School, Dept. 605, Kansas City, Mo.

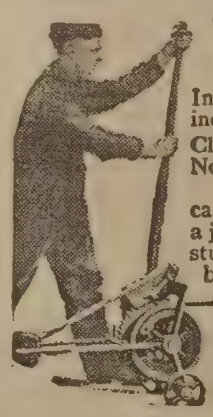
New Way of Hatching Makes More Money!

A small Porter Incubator earned $225 in 3 hatches for Mrs. K. Pfaffenberger, Gillette, Ark., an inexperienced operator. Hundreds tell of similar profits. YOU, too, can make easy money with a

Porter SOFT-HEAT INCUBATOR

Gets a plump, healthy, perfect chick from every good egg. Moist warmth keeps Glass of brittle and membranes tender. No top suffocation, no cripples. Center heat; Round Chamber. No tubes or pipes. Round egg chamber. ALL CONTROLS AUTOMATIC. $39.50

Saves 300% in money time and labor. One filling—3 to 4 qts. of oil—to a hatch. Only 2 minutes' daily care needed. Children succeed with Soft-Heat. We pay express.



Free Book Tells all about Soft-Heat and how it will make money for you. Send name for free copy today.

ORCHARD AND GARDEN

Pit the Cabbage

By C. L. VINCENT,
Department of Horticulture, Washington State College.

Housewives are often heard to remark in the winter and spring that cabbage is dry and not crisp and juicy like it is when it first comes from the garden. This dryness in cabbage can be prevented by properly pitting the heads in the fall.

There are various ways of pitting the cabbage for winter use. One of the most common ways is to open up a trench in the fall one and one-half feet to three feet wide, according to the number of heads to be stored on the bottom layer, on a well-drained slope which has a sandy or gravelly soil. It will depend somewhat on the size of the heads as to what width to make the trench and also on the amount of cabbage you have to store. If two heads are placed side by side probably one and one-half feet will be sufficient, but if three, four or more heads are to be placed side by side in the trench the width will have to be greater. The depth of the trench will vary from six inches to one foot, depending on the size of the heads to be stored.

The cabbages to be pitted are pulled roots and all and placed in the trench, heads down. Do not remove the outer leaves. After filling the bottom of the trench, which may be two, three or four plants wide, the next layer of heads must be placed so that the heads will fit between the stalks and the roots of the bottom layer. For example, if the bottom layer is four plants wide then the second layer will be three plants wide, or if the bottom layer is only two plants wide then the second layer will contain only one row of plants. After packing the heads together in this fashion put a covering of burlap or a thin layer of straw over the plants in the trench, to protect them from the layer of dirt which is to be put on next. Only a sufficient amount of soil to protect the plants from severe freezing should be put on at this time. After severe winter weather sets in, a sufficiently large amount of manure or straw should be put on to prevent severe freezing and alternate freezing and thawing. This will also enable the grower to remove the heads as the market or home desires them during the winter.

The outside leaves of the heads will have rotted some by late spring, but this does not affect the flavor of the cabbage in any way. After removing the decayed leaves you will have a beautifully bleached head of cabbage which is crisp and juicy and consequently of higher quality than heads simply stored in the dry cellar or basement without paying any attention to the humidity of the air.

If only a few heads are to be stored for winter use, the following is suggested: Cut the heads from the stems of the plants and wrap them first in the large outer leaves of the plant and then in paper and pack between layers of sand in a barrel or in boxes. The sand should be kept moist, but not wet. Keep the barrel in a cool cellar. In this case also the outer leaves will decay, but as suggested before the flavor is in no way impaired.

Orchard Problems

By O. M. MORRIS, Head Horticultural Department, Washington State College.

Can you tell me what to do for my apricot trees? One of them started spreading or literally separating the thin outer bark. It just seemed to pull apart. This was followed by deep breaks in the soft inner bark reaching to and exposing the heart of the wood, which seems to be infested and turns brown. The other tree is beginning the same way and the disease grows very rapidly. The trees have had cultivation, pruning and commercial fertilizer. E. E. G.
Olalla, Wash.

From your brief description, I am led to believe that your trees are suffering the result of the winter injury done either last year or two years ago. There is probably little or nothing that you can do other than see that the plant has plenty of soil fertility and water, and that insects do not harbor under the bark that is peeled back. In case large sections or wounds are left open, exposing the sap wood, it would be a wise plan for you to bridge graft this. A few months ago directions were given in the columns of The Washington Farmer for bridge grafting work. Very detailed directions can be secured from the United States farmers' bulletin 710, if you did not save the copy of The Washington Farmer.

BROWN SPOTS IN PEARS.

I would like to know what is wrong with my D'Anjou pears. They are very large and look good. When you cut them open there are brown spots in them about the size of a pea and smaller. The skin is not marred at all. They are juicy and sweet. The trees look healthy and this is the first year we had much of a crop. The trees are about 9 years old. They are in clean cultivation and there don't seem to be any insects. C. E. G.
Yakima, Wash.

In all probability what you are noticing in your D'Anjou pears is the result of the extreme fluctuations of drought and moisture supply that existed during the summer. You will remember that during the early part of July your section was visited by a few days of extremely hot, dry weather. Many pear trees lost their leaves entirely. The leaves before droping turned practically black. This was apparently due to the extreme dry weather drying the leaves on the trees on account of the trees not being able to supply them with water. This happened in some cases where trees were standing in wet ground. The trees after losing some of their foliage or being badly checked by drought, started again into very vigorous growth. The cell tissues were probably killed or ruptured, and now show this effect.

It is not a disease, and probably will not reoccur. It will only to a very slight extent, if at all, reduce the keeping quality of your fruit. It has already done its damage in reducing their acceptability for market.

Unripe Honey

"The term, 'unripe honey,' is used to designate honey that is extracted before it has been capped over by the bees," according to W. L. Cox of Elma, who is noted for his success with bees and for the production of queens. "The bees allow all honey to stand in the open cell for a few days before putting on the caps. This allows all the moisture to evaporate before the comb is sealed with wax. If such combs are taken out and extracted it is apt to ferment. In any case the honey should be stored in a warm room to prevent its becoming damp and sweaty."

You're Right

The Adcox Auto & Aviation School did NOT train auto mechanics for the Government during the world war. At that time, the Adcox School was so small that it was NOT even considered for inspection—but (and mark this carefully) its students have been so *un*usually successful in applying what Mr. Adcox and his assistants teach, that the school has long since passed all rival Pacific Northwest institutions in size—and now holds the record for graduating the largest percentage of students who make good in a big commanding way. When you buy an education, be sure to obtain an up-to-date one. What a school actually *is* NOW—and what it is doing today are the things—the only things that count. Descriptive of this institution is a big dollar book—the biggest, most complete catalog issued by any automobile school. A copy will be sent to you *free*. Write for it today—ask for the Adcox catalog, number 103.
Adcox Auto & Aviation School, Portland, Ore'

Too Long Without Paint

Are You Adding to Your Depreciation Costs

THERE'S no middle ground. Either your buildings and equipment are well protected by paint or they are going to require costly repairing or rebuilding within a few years.

Paint saves your property. It is an investment in long service—not an expense. The expense results from allowing buildings to rot or equipment to rust. Paint now. Save repairs.

The next question is what paint to use. Use the best. It costs less in the long run. It spreads easily—saves labor cost. It covers more surface per gallon than "cheap" paint.

And the best paint will serve you five or more years longer than "cheap" paint.

The best paints are scientific in formula and preparation. We've made them for 73 years—to meet the weather conditions in the West.

The best materials—PIONEER WHITE LEAD—pure linseed oil, pure zinc and pure colors—are combined in Fuller's Paints in scientifically exact proportions with long-time skill.

House Paint: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured—32 colors.

Barn and Roof Paint: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality—6 colors.

Floor Paint: Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

Implement Paints: Fuller's Pacific Wagon Paint, adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish—7 colors.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

Advice on Painting FREE

If you want to do your own work and get the best results, ask our Specification Department for *free advice*.

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

Fuller's SPECIFICATION Farm Paints

House Paint - Barn & Roof Paint

Six States Compete

(Continued from page eleven.)

Nancy's Cassie (junior and grand champion) and Corium Pretty Maid's Cora; 2, Wallace & Fordyce, on Fawndale Leading Lady; 3, Thousand Springs Farm, on Susette of Thousand Springs. Junior calf—1 and 2, Rueping, on Corium May Queen's Donna and Corium Nellie Calongis Dawn; 3, Thousand Springs Farm, on Topsy of Thousand Springs.

Aged herd—1 and 2, Rueping; 3, Wallace & Fordyce. Young herd—1 and 2, Rueping. Calf herd—1, Rueping; 2, Thousand Springs Farm. Get of sire—1 and 2, Rueping; 3, Wallace & Fordyce. Produce of cow—1 and 2, Rueping; 3, Wallace & Fordyce.

Ayrshires.

E. W. Van Tassell of Wenatchee, Wash., was the only exhibitor of Ayrshires, showing about 20 head and winning all awards in a full class. His champions were: Senior and grand champion bull, Queen's Scottish Cavalier; junior champion bull, Peter Pan's Choice of Wenatchee. Senior and grand champion cow, Empress Lady of Wenatchee; junior champion heifer, Wenatchee Blossom.

THE SWINE SHOW.

The swine show was not as large as a year ago. The quality exhibited averaged higher than a year ago, with the tops about the same. A larger proportion of extra good hogs were shown. Poland Chinas and Durocs led in numbers, as usual, but Chester Whites were closer to them than any time before, and made a strong show. California, Oregon and Idaho vied with Washington in the leading breeds and premiums were fairly well divided.

Poland Chinas.

This show has never had a better lot of Poland Chinas, taken as a whole. The high quality and lack of poor or indifferent hogs were at once noticeable. Competition was close and often decisions were made by the closest margins. There was, however, no question as to the grand champion boar, Headliner, shown by A. Kloppenberg of Spokane. He might have a bit more length, but he has such great bone, good feet, strong back, depth and quality for a boar of his age as to properly place him a "headliner." Idaho Buster, the junior champion boar, shown by A. W. Johnson of Nampa, Idaho, is stretchy, high backed, has good bone and feet and promises to make a great breeding boar. Probably on senior champion sow competion developed keener than anywhere else. It was won by Idaho Queen 6th, shown by A. J. Firkins & Son of Nampa, Idaho, and her hardest competition was perhaps in her own class. Her own sister, shown by Johnson, was a close contender, and Hugh Walters of Townsend, Mont., had in Montana Gianteess, a sow that might have defeated her had she not for some reason been showing badly just at the moment the judge saw her. D. F. Kammerzall & Sons of Colfax, Wash., won junior champion honors, with Sammie's Chess Girl, a junior pig of large size, but showing femininity and quality. O. E. McConnell of Idano judged both Poland Chinas and Durocs.

Boars: Aged boar—1, A. Kloppenburg, Spokane, Wash., on Headliner (senior and grand champion); 2 and 3, Hugh Walter, Townsend, Mont.; 4, P. L. Sain, Oakesdale, Wash. Junior yearling—1, 2 and 5, A. J. Firkins & Son, Nampa, Idaho; 3, Walter; 4, D. F. Kammerzell & Sons, Colfax, Wash. Senior pig—1, A. W. Johnson, Nampa, Idaho, on Buster (junior champion); 2, Johnson; 3, Firkins; 4, Sain; 5, Walter. Junior pig—1 and 2, Firkins; 3 and 4, Kammerzell; 5, Walter.

Sows: Aged sow—1, 4 and 5, Kloppenburg; 2, Firkins; 3, Walter. Senior yearling—1, Kammerzell; 2, Walter. Junior yearling—1, Firkins, on Idaho Queen 6th (senior and grand champion); 2, Johnson; 3 and 4, Walter; 5, Firkins. Senior pig—1, Johnson; 2, Firkins; 3, Kammerzell; 4 and 5, Walter. Junior pig—1, Kammerzell, on Sammie's Chess Girl (junior champion); 2, Firkins; 3, Kammerzell; 4, Johnson; 5, Walter

Aged herd—1, Firkins; 2, Walter; 3, Kammerzell. Young herd—1, Kammerzell; 2, Johnson; 3, Firkins. Herd bred by exhibitor—1, Firkin; 2, Walter; 3, Johnson. Get of sire—1, Firkins; 2, Walter; 3, Kammerzell. Produce of sow—1 and 3 Firkin; 2, Walter.

Duroc-Jerseys.

If competition was warm in Poland China classes, it was even more so with Duroc-Jerseys, all down the line. Nearly every class had large numbers of high-class entries and often the result was so close as to leave the impression that one or more besides the one placed first was good enough for the place. Busch's Royal Pathfinder, shown by Frank P. Busch of Johnson, Wash., with his great length, good feet, heavy bone, strong back and smoothness, had to win. But for junior champion it was not so easy. Joe's Sensation, shown by Lester Daily of Palouse, Wash., had his hardest competition in his class of senior pig. He is a boar of much masculinity, great size, strongest of feet and legs and most approved big type. Joe Orion's Sensation, shown by S. L. Banks of Tekoa, Wash., is a smoother pig, has neater shoulders and a good back, but he was a little smaller and lacked the masculinity of the other, and this was the big deciding factor with the judge. Thousand Springs farm's entry, from Wendell, Idaho, was plenty good enough for first place, had he not met such hot competition. This farm had an outstanding sow for senior and grand champion in Queen Mammoth Sensation, that won the same honor at the Pacific International last year. She has a wonderfully strong back, great length, good feet and great depth. Thousand Springs farm won junior honors, also on a most promising junior pig, Island Lady Sensation.

Boars: Aged boar—1, Frank P. Busch, Johnson, Wash., on Busch's Royal Pathfinder (senior and grand champion); 2, J. E. Thorpe, Lockford, Calif.; 3, Oscar Miller, Spokane, Wash. Senior yearling—1, E. A. Goodhue, Spokane; 2, S. L. Banks, Tekoa, Wash.; 3, Miller; 4, Thorpe. Junior yearling—1, Thousand Springs Farm, Wendell, Idaho; 2, Thorpe; 3, Busch. Senior pig—1, Lester Bailey, Palouse, Wash., on Joe's Sensation (junior champion); 2, Banks; 3, Thousand Springs Farm; 4, Thorpe; 5, Miller. Junior pig—1, Bailey; 2, Busch; 3 and 5, Thousand Springs Farm; 4, Thorpe.

Sows: Aged sow—1, Thousand Springs Farm, on Queen Mammoth Sensation (senior and grand champion); 2, Thorpe. Senior yearling—1, Thorpe; 2, Banks; 3, Thousand Springs Farm; 4, Goodhue. Junior yearling—1, Thorpe; 2 and 4, Thousand Springs Farm; 3, Brown & Adams, Spokane; 5, Busch. Senior pig—1, Thousand Springs Farm, on Island Lady Sensation (junior champion); 2, Thousand Springs Farm; 3, Thorpe; 4, Banks; 5, Brown & Adams. Junior pig—1 and 2, Bailey; 4 and 5, Thorpe; 3, Busch.

Aged herd—1, Thorpe; 2, Thousand Springs Farm; 3, Busch. Young herd—1, Bailey; 2, Thousand Springs Farm; 3, Thorpe. Herd bred by exhibitor—1, Thorpe; 2, Busch; 3, Thousand Springs Farm. Get of sire—1, Thousand Springs Farm; 2, Bailey; 3, Busch. Produce of sow—1 and 2, Busch; 3, Bailey.

Berkshires.

The Berkshire exhibit was small, but of excellent quality, although big type was not quite so universal as in the two breeds that go before. All the Berkshires shown were in good condition. Indian City farm, of Spokane, won both senior championships, but both junior championships were taken by Lester Barrows, a club boy of Shaw, Ore., whose pigs were shown by Cass A. Nichols, Chester White breeder. Young Barrows had two outstanding barrows, as well as the few breeding stock he showed, and not only won in Berkshire barrow classes, but his pig brought grand championship on barrow of the entire show to the Berkshire breed.

Boars: Senior yearling—1, Indian City Farm, Spokane, on Matchless Lee's Royal (senior and grand champion). Junior pig—1, Ashlane Farms, Pleasant Grove, Utah, on Ashlane Laurel Prince (junior champion); 2, Lester Barrows, Shaw, Ore.; 3, Indian City Farm.

Sows: Aged sow—1, Indian City Farm, on Iowana Lenore 76th (senior and grand champion). Senior pig—1, Indian City Farm. Junior pig—1, Lester Barrows, on unnamed (junior champion); 2, Ashlane Farms; 3, Barrows; 4 and 5, Frederick Barrows.

Young herd—1, Indian City Farm. Get of sire—1, Lester Barrows. Produce of sow—1, Lester Barrows.

Chester Whites.

C. M. Meenach of Sharon, Wash.; H. S. Curtis of Palouse, Wash; and Cass A. Nichols of Salem, Ore., put up a white hog show to be proud of. J. H. T. Smith, who judged Chester Whites, Berkshires and Hampshires, was not inclined toward big type to the extent of the other judge. C. H. Meenach's Wildwood Boy, that was made senior and grand champion, while well fitted and with good bone and feet, is hardly the modern type. He won over the formerly undefeated Oregon Buster, owned by Nichols. Meenach had the junior champion boar, also, in a stretchy junior pig, Sharon Buster. And Nichols' senior and grand champion sow, Marjorie B., is of the long-bodied, high-backed, modern type, and Curtis' junior champion, Opal's Sensation 1st, is quite stretchy, and has good feet and bone.

Boars: Aged boar—1, C. M. Meenach, Sharon, Wash., on Wild Wood Boy (senior and grand champion); 2, H. S. Curtiss, Palouse, Wash.; 3, Cass A. Nichols, Salem, Ore. Senior pig—1, Meenach, on Sharon Buster (junior champion); 2, Nichols. Junior pig—1, Nichols; 2 and 5, Homer Bray, Salem Ore.; 3, Curtiss; 4, Meenach.

Sows: Aged sow—1, Nichols; 2, 3 and 5, Curtiss; 4, Meenach. Senior yearling—1, Nichols, on Marjorie B (senior and grand champion); 2, Curtiss. Junior yearling—1, Meenach; 2 and 5, Nichols; 3 and 4, Curtiss. Senior pig—1, Curtiss, on Opal's Sensation 1st (junior champion); 2 and 3, Nichols; 4, Meenach; 5, Curtiss. Junior pig—1 and 3, Nichols; 2, Curtiss; 4 and 5 Bray.

Aged herd—1, Nichols; 2 and 3, Curtiss. Young herd—1, Curtiss; 2 and 3, Nichols. Herd bred by exhibitor—1, Curtiss; 2 and 3, Nichols. Get of sire—1 and 3, Nichols; 2, Curtiss. Produce of sow—1, Curtiss; 2, Nichols; 3, Bray.

Hampshires.

Harold W. Hastings, Thornton, Wash., the only exhibitor of Hampshires, received all awards in a fairly well filled class. He won the following championships: Junior champion boar, Homeland's Buster; senior and grand champion sow, Betty Dawson; junior champion sow, Little Betty.

THE HORSE SHOW

The horse show was very small, but of good quality. Clydesdales were the only breed with anything like full classes and some divisions of that breed had no entries. But for the number on exhibition the horses were well shown and attracted their share of attention. W. L. Carlyle, formerly dean of the Idaho State university and now in charge of the prince of Wales estate in Alberta, placed the ribbons.

The Percherons.

Three stallions and a 2-year-old mare made up the Percheron show. There were no poor animals and the two champions are a credit to the show as well as creditable representatives of the breed.

Stallions: Four years or over—1, Fred Balmer, Odessa, Wash., on Pershing; 2, Carl Schigger, Hillyard, Wash., on Buster. Three-year-olds—1, E. W. Pratt, Rockford, Wash., on Colonel Dean (champion).

Two-year-old mare—1, H. C. Doepke, Fairfield, Wash., on June Waltz (champion).

The Clydesdales.

A good lot of Clydes faced the judge. While this breed is usually credited with being a little more leggy than most drafters, the judge showed his preference for plenty of substance, especially in his selection of champions.

All awards in Clydesdales went to Robert C. McCroskey, Garfield, Wash., except first on stallion four years or over, which went to H. T. Whitman, Rosalia, Wash., on Majesty's Best. McCroskey's champions were: Champion stal-

It Takes Skill to Catch Them

There are at least two ways in which hunters and trappers get paid for the game they capture. There is the money the fur houses pay for the pelts and there is the satisfaction the sportsman feels when he demonstrates his skill in outwitting the wily fur-bearer.

The average hunter or trapper has to find his business near home. He can not leave the farm and go miles away into the mountains, even though it was necessary. He can, however, put his skill to work right in his own neighborhood and in all probability right on his own farm. Wild animals differ greatly even in adjoining localities, but there are few communities in which coyotes, skunks, muskrats, weasels, coons, moles or other animals the pelts of which is worth money are not to be found.

The same methods by which one can capture a coon will not result in the capture of a coyote or a muskrat. Each animal has its own life habits, and the successful trapper is the one who learns these habits and hunts or traps in accordance with them. The boy or the man who wants to enjoy trapping this winter should find out exactly what animals there are in his community and write to some of the widely known fur dealers for information as to how valuable their fur is and what the most successful methods of trapping them are. One should never go at it hit-and-miss fashion. Not only is he sure to have poor luck, but he is likely to injure the furs of the few animals he does catch.

It is poor policy to set out traps and leave them for days at a time. If an animal is caught he may keep up a struggle that will damage his fur, and may even twist or gnaw off the foot that is trapped. This is the money2side of the question only—the humane side is even more vital. One should bear in mind that the creature he catches suffers both in mind and body and should be relieved as soon as possible after being caught. In some cases, animals can be so taken that death will quickly result, but this is not possible in the majority of cases. Where it is not, the traps should be visited as frequently as possible without the danger of driving away the game.

Whatever you are out to catch, leave as few signs of your presence as possible. Unless your dog is a direct aid in the capture (which he is not in most cases) leave him at home. Remember, trapping is a fine art. You have to outwit the animal you are after.

Removing and Caring for Hides

The following are suggestions offered by the department of agriculture for properly skinning animals and curing the hides:

1. Before killing clean off as much as possible all manure, dirt, mud, etc., and during skinning keep the hides and skins clean and free from blood especially.
2. In bleeding cattle always stick the throat lengthwise, never crosswise.
3. In skinning use the knife carefully and no more than is necessary. Avoid cutting the hide or skin.
4. Make all ripping cuts with straight, smooth edges, not jagged ones.
5. Pay attention to the pattern of the hide and see that it is properly distributed among the shoulder, belly and butt sections.
6. Take off a hide or skin free from meat, sinews, bag, tail bone, horns, dewclaws and split shanks.
7. Keep the hide or skin clean and away from water.
8. After removing the hide or skin from the animal allow the hide or skin to lie separate in a cool, dry, dark place from 6 to 12 hours, with the flesh side up, until the animal heat has escaped.
9. Do not let the hide or skin dry out either before or after salting.
10. Do not allow the hide or skin to freeze.
11. Use only fresh, clean salt.
12. Use plenty of salt; too much will do no harm; too little will. Use about one pound of salt to each pound of hide.
13. Salt more thoroughly the heavy parts, such as the head and neck, and also open up any folds that may be stuck together and sprinkle them with salt.

Ranchmen desiring complete information on this subject should write to the division of publications, United States department of agriculture, Washington, D. C., for free copy of farmers' bulletin 1055, "Country Hides and Skins."

To Loosen Wool on Pelt

By H. HACKEDORN,

Department of Animal Husbandry, Washington State College.

What solution is best to use to loosen wool on pelt so it may be pulled? What solution is best to wash wool in after pulling? L. E. S.

Hampton, Ore.

One of the easiest methods is to use a lime water solution. Make a saturated solution, allowing the lime to settle, pour off the clear liquid and then allow the pelt to soak in it until the wool is loose. You will get better results if you use warm water.

If you have a small amount of wool to wash I would suggest that you make a strong solution of common laundry soap and water and wash the wool much as you would clothing. I have known some people to use a washing machine and they stated that it was very satisfactory. Hot water will work much more satisfactory than cold. I would suggest that you wash the wool in two soap solutions and rinse three times.

FURS FIND READY SALE.

The total receipts for three days of the fur auction conducted at St. Louis, Mo., by the Fouke Fur company and the Merchant's Sales company, were $1,700,000. Cheaper grades of furs were reported in heavy demand. Purchasing was brisk, with wolf and squirrel pelts being the best sellers. Three thousand four hundred wolf skins sold on a range of from $1.90 to $30 each, while 65.000 Russian squirrel hides brought 9 cents to $1.25 apiece. Other sales included 20 leopard pelts at $11 to $21; 25 bear skins, $5 to $8.50; 25 polar bear pelts, $8 to $45; 18 wolverines, $16 and $17.50, and 3600 lynx, $5 to $28.

HERE'S something for YOU, Mr. Trapper and Fur Shipper—something very important to YOU. Prices of raw furs are high this season, so get all the furs you can, BUT to get the most money for your furs, *you must be accurately posted on market conditions and market prices.* Make this your biggest season by reading "The Shubert Shipper" regularly. Stop Using Coal and Wood New Device Burns 95 Per Cent Air

Did you ever think of burning air in order to heat your home or do your cooking? I have a new invention, gives three times the heat of coal or wood—yet burns 95 per cent air, and only 5 per cent oil.

Thousands of housewives, happy to be free from the drudgery of coal and wood, are enthusiastic about my amazing new invention—the Oliver Oil-Gas Burner. It frees them from the dirt and muss of heating and cooking the old way and, also, it saves them expense and worry of coal and wood at this time.

The device sets right into the firebox of any stove or furnace. It is entirely safe and requires no adjustment. Just a turn of a little valve and the housewife instantly has as much or as little heat as she wants—three times the heat of coal or wood—when she needs it in the coldest weather. I want every woman to have the use of my invention.

If you will write me, you will receive an attractive booklet FREE that tells all about it. I am now making a special Low Price Offer, including a 30-day Free Trial, and am also looking for good, live distributors. If you are interested I will tell you how to earn $500 a month, or, in only your spare time, how you can make $100 a month. Write to me today. Address Mr. B. M. Oliver, 2121-K Oliver Building, St. Louis, Missouri.—Adv.

Please mention THE WASHINGTON FARMER when writing advertisers.

Horticultural Meet

State Association in Spokane in December

What the railroad strikes have done to the northwest fruit industry and what is to be done about it, is one of the live topics to be discussed at the annual meeting of the Washington State Horticultural association to be held in Spokane December 12 to 14. This probably will take the form of a round table discussion, led by some of the most prominent individual and association shippers in the state. The importance of transportation has been as keenly realized in Washington this year as during the cold snap two years ago, and the necessity of avoiding as far as possible such tieups in future, probably will make the discussion of this subject among the "snappiest" at the conference.

Publicity and marketing problems will be given some attention, and D. M. Botsford of Portland, one of the foremost advertising men of the northwest, has been secured to address the association on "Advertising and Its Relation to the Northwest Fruit Industry." A symposium on codling moth control promises, in view of the trouble Washington growers have experienced with this troublesome "bug" this season, to bring out some valuable information, and another on horticultural conditions in Europe probably will be participated in by a half dozen prominent growers of the state who have visited on the other side of the Atlantic within the last 18 months.

Plans for the meeting are in the hands of President H. L. Geary of Underwood and Secretary M. L. Dean of Wenatchee. The gathering will be followed by the annual state grade and pack conference.

Six States Compete

(Continued from page fourteen.)

lion—Meg's Chief, a three-year-old. Champion mare—Garfield Bell, a two-year-old.

The Belgians.

Belgians had only three representatives, of which two were mares. The champion mare has the others outclassed, but the show was good as far as it went.

Albert Owes of Amber, Wash., the only exhibitor, showed three head, winning the stallion championship on Avenerde Bell, a four-year-old, and the mare championship on Dora, a three-year-old.

THE SHEEP SHOW.

The sheep show was small, but it included some as good animals of the breeds shown as were in any department of the entire show. The University of Idaho showed a few Lincolns and Rambouillets, and were the only exhibitors, with entries that would be creditable in a show with strong competition. The university showed a few Hampshires, also. But it was Mrs. Minnie Miller, proprietor of Thousand Springs farm, of Wendell, Idaho, showing a full flock of Hampshires, who made the sheep show really worth while. She had a number of imported Hampshires that had been prize winners, even up to champions, at the Chicago International. They were shown in the best of condition and won, whether with or without competition.

Harold W. Hastings of Thornton, Wash., exhibited a nearly full flock of Oxfords, and J. E. McGoran of Valleyford, Wash., a few. They were not highly fitted, but were good typy specimens of the breed. Archie Pryor of Yakima, Wash., judged all sheep breeds in an impartial and satisfactory manner.

Hampshires.

Rams: Aged ram—1, Thousand Springs Farm, Wendell, Idaho. Yearling ram—1 and 3, Thousand Springs farm; 2, University of Idaho. Ram lamb—1, 2 and 3, Thousand Springs Farm; 4, University of Idaho.

Ewes: Aged ewe—1 and 2, Thousand Springs Farm; 3, University of Idaho; 4, Harold W. Hastings, Thornton, Wash. Yearling ewe—1 and 2, Thousand Springs Farm; 3, University of Idaho; 4, Hastings. Ewe lamb—1, University of Idaho; 2 and 3, Thousand Springs Farm.

Flock—1 and 2, Thousand Springs Farm; 3, University of Idaho. Pen of four lambs, bred by exhibitor—1 and 3, Thousand Springs Farm; 2, University of Idaho. Get of sire—1 and 3, Thousand Springs Farm; 2, University of Idaho.

Champion ram and champion ewe—Thousand Springs Farm.

Oxfords.

Rams: Aged ram—1, Harold W. Hastings, Thornton, Wash. Ram lamb—1 and 3, Hastings; 2, J. E. McGoran, Valleyford, Wash.

Ewes: Aged ewe—1 and 2, Hastings; 3, McGoran. Yearling ewe—1 and 3, McGoran; 2, Hastings. Ewe lamb—1 and 3, Hastings; 2, McGoran.

Flock—1, Hastings; 2 and 3, McGoran. Pen—1, Hastings; 2, McGoran. Get of sire—1, Hastings; 2, McGoran.

Champion ram—Hastings. Champion ewe—McGoran.

Rambouillets.

All awards in Rambouillets went to the University of Idaho, except third place in aged ewe, which was won by A. S. Sharp, Dubois, Idaho. The university showed a full class and was awarded both championships.

Lincolns.

The University of Idaho showed two Lincolns on which both championships were awarded.

FAT STOCK SHOW.

One carload of cattle in the yards and two cars of fat hogs in the show made up the carload lots. The champion carload of hogs, Chester Whites, were a very even lot of 50 head and well worthy of the honors received. The winning of champion barrow of the show by Lester Barrows, a club boy of Shaw, Ore., might be called the outstanding feature of the fat stock show. This is a good Berkshire pig in every respect, with breed type as well as perfect fitting. The fat wethers shown by the University of Idaho and the State College of Washington were all highly fitting and commendable exhibits for the awards.

Fat Cattle.

Steer or Martin heifer: Purebred senior yearling Shorthorn—1, University of Idaho. Purebred junior yearling Shorthorn—1 and 2, State College of Washington; 3, Northwood Farms, Redmond, Wash.; 4, A. D. Dunn, Wapato, Wash. Purebred senior calf Shorthorn—1 (champion), State College of Washington; 2 and 3, University of Idaho. Purebred junior Shorthorn calf—1, University of Idaho; 2, State College of Washington. Purebred junior yearling Hereford—1, University of Idaho; 2, Methow Valley Live Stock Co., Winthrop, Wash.; 3, Archie Kane, Moscow, Idaho. Purebred senior Hereford calf—1, State College of Washington (champion); 2, University of Idaho; 3, Platt Bros., Genesee, Idaho. Purebred junior Hereford calf—1, University of Idaho. Purebred Hereford herd—University of Idaho. Purebred junior yearling Aberdeen Angus—1, State College of Washington (champion). Purebred senior Aberdeen Angus calf—1, University of Idaho. Grade junior yearling—1, Harold Holmes, Mabton, Wash.; 2, University of Idaho; 3, Nora Waite, Ellensburg, Wash. Crossbred senior calf—1, University of Idaho, on Hereford-Aberdeen Angus cross (champion); 2, Platt Bros. Crossbred herd—1, University of Idaho.

Best carload of beef cattle—John Napier, Sprague, Wash.

Fat Hogs.

Carlot of 50 head, 175 to 225 pounds—1, Kraber Bros., Spokane, Wash., on Chester Whites. Carlot of 50 head, 225 pounds or over—1, Kraber Bros., on Chester Whites. Pen of three purebred barrows—1 and championship, Kraber Bros., on Chester Whites; 2, Cass A. Nichols, Salem, Ore., on Chester Whites; 3, H. S. Curtiss, Palouse, Wash., on Chester Whites. Pen of three senior pigs—1, State College of Washington, on Berkshires. Pen of three junior pigs—1, Kraber Bros., on Duroc Jerseys.

Champion barrow of the show—Lester Barrows, Shaw, Ore., on Berkshire.

Fat Sheep.

Pen of three wethers—1 and 4, University of Idaho; 2 and 3, State College of Washington. Pen of three lambs—1, State College of Washington; 2 and 3, University of Idaho. Champion pen—University of Idaho.

THE CLUB DEPARTMENT.

While there was a much smaller club show than last year, the quality of the exhibits and of the work done was good. The outstanding feature of the club work was the showing and sale of the Shorthorn steers of the Hercules Baby Beef clubs of Ellensburg and Mabton. The steers were purchased last spring of F. M. Rothrock of Hercules farm, Sprague, who took the notes of the young buyers on condition that the steers were to be cared for during the year and part of them shown and sold at the Western Royal and part at the Pacific International, after which the notes were to be paid.

In the contest the Kittitas Valley Boys and Girls' club won as follows:

Nora Waite, 1st and 4th; Meta Bennett, 7th and 17th; Jessie Woodhouse, 6th; Walter White, 21st and 18th; Eugene Wilson, 8th and 31st; Erling Hansen, 22d and 26th; William Waldron, 5th and 20th; Robert E. Kresge, 28th. All are from Ellensburg.

The winner of the Yakima Valley club were are follows:

Gerald Varnum, 11th and 25th; Harvey Varnum, 10th and 15th; Chester Schlein, 9th and 12th; Fred Schlein, 3d and 13th; Floyd Hager, 24th; Harold Holmes, 2d and 16th; James Gordon, 14th and 29th; Kay Olson, 23d and 27th.

In the sales, which were conducted by D. C. Keith, the champion steer owned by Nora Waite was bought by the John Lewis Meat company of Spokane at 31 cents per pound or a total of $332. Prices on the other 18 head that were sold ranged from $76 to $122. They were nearly all purchased by Spokane business firms or clubs.

Scoring 1175 points out of the possible 1500, the Whitman county stock judging team won first place. The team consisted of John Hendricks and Eugene and Antone Harms. The Pend Oreille county team, consisting of George Da Vaz, Alfred and Edwin Pease, won second with 1100 points, and the Spokane county team, composed of Paul Cordell, Lester Hartley and Ernest Hueter, with 1082 points, won third.

NEXT YEAR'S SILAGE.

Don G. Magruder, specialist in dairying, says: Start this week to provide homegrown protein for your dairy cows by sowing vetch with grain for next year's silage.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

FARM LANDS FOR SALE 651

ALFALFA AND FRUIT LAND FOR SALE— Would you be interested in owning a farm in the fine alluvial soil of the San Joaquin county, in the heart of the dairy and fruit center, ¼ mile from fine grammar school, three miles from big high school, and three miles from railroad center, connecting with all of the larger markets, where people are making fortunes in grapes and dairies? 800 acres of this fine land, with lots of water, is being subdivided into small farms putting on house, barn, tank house and irrigation plant, all ready for occupancy. You can be the lucky owner of one of these farms for a small payment down, six per cent on all deferred payments, and contract to extend over a period of nine years. The owners will do more than the above development and help finance orchards, vineyards, alfalfa or purchase dairy cows. For further information address owner, F. F. Copp, 430 E. Mariposa st., Stockton, Cal.

20-ACRE OKANOGAN FRUIT RANCH; 500 apples and peaches; good income from established orchard; excellent chance for poultry; on improved road; close to town; overlooks Okanogan lake; about 8 acres tillage; lots of timber; 250 apple trees, Rome Beauties, Jonathans, Winesaps, McIntosh Reds; 250 peaches, Elbertas, Crawfords, Triumphs, St. Johns; plums, cherries; dwelling with grand view distant mountains and orchard-covered valley; barn; to settle affairs, $3000 gets it, tools included; only $1000 needed; immediate possession. G. Y. L. Crossley, West Summerland, B. C.

LAND—STEADY EMPLOYMENT. MOST PROductive farming lands in Western Washington, surrounded by prosperous farm and dairy community; level valley and bench; ideal for berries or poultry; near town, good schools, railroads and markets. Steady work for years to come; within walking distance for land buyers. Only $15 to $45 acre. Exceptionally long easy terms. Graham Land company, 1008 American Bank bldg., Seattle.

DO YOU WANT A HOME IN A RICH IDAHO valley near Spokane, on three transcontinental railroads, where soil is perfect, rainfall ample, summers cool, winters moderate—the kind of stump land that pays to clear? Timothy and clover green eight months in the year; natural stock country. Land cheap; 10 yearly payments at 6 per cent. Humbird Lumber Co. Box 5, Sandpoint, Idaho.

PART OR ALL FINE HAY AND DAIRY farm; joining town; nice trout stream, good soil. For particulars, W. B. Ashley, Springdale, Wash.

280 ACRES, 65 CULTIVATION; GRAVITY water system; stocked. A. M. Mowrey, Rt. 2, Boring, Ore.

FARM LANDS FOR SALE (Continued) 651

PAYING FARMS AT LOW COST—160-ACRE farms, improved or unimproved; 30 to 160 acres irrigable land on each parcel; near Lethbridge, in sunny southern Alberta; can be bought for $15 to $40 an acre. No need for pioneering. Well settled country, good roads, railways, schools, telephones; agreeable social conditions; fertile land; success of irrigation farming here already demonstrated; irrigation system being constructed under government supervision; water available in 1923. Write for information concerning crops grown and description and location of farms to the province of Alberta, Irrigation Council, 12 Provincial building, Lethbridge.

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane; on hard-surfaced highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising, with Spokane markets and creamery near at hand. Will help the man who will live upon this land and agree to clear a part each year by giving lumber to help start his buildings, and a purebred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

TEN TO FORTY ACRE TRACTS OF MY OWN land in Macleay-Lindsay irrigation district, Clallam county, Wash., containing 7350 acres fine, level land, rich soil; Olympic highway runs through; railroad in center. $175,000 being spent on irrigation system at cost of $24 per acre; annual cost of water less than $2 per acre; work guaranteed to June 1, 1923, when ditches will be completed. $10 per acre cash, balance on or before ten years at purchaser's option. Write for particulars. J. W. Lindsay, Port Angeles, Wash.

BIG OPENING SALE OF YAKIMA VALLEY farm land, under an assessed state and government approved irrigation project; good, deep soil; close to town, railroads and state highway. We sell in tracts to suit purchaser at $25 per acre and up, on easy terms. Our many sales to farmers show that this land is a good investment. Western Lands, Inc., owners, 913 Green bldg., Seattle.

CHAPTER TWENTY.

Attacked in the Night.

"If this forest got afire on a windy day no human being would have a chance to escape. That is, if he was unlucky enough to be in front of it," the man from Michigan told them. "The fire would jump from tree top to tree top, so fast that a race horse couldn't outrun it."

"Would even the green trees burn?" asked Esau.

"Burn they certainly would! Green trees, dry treesall together. They wouldn't burn up, maybe. But all their tops would burn off, leaving only blackened trunks and snags. You saw that burnt-over ground there close to Denver. And of course all this bed of pine needles we're tramping over would turn to fire. Oh, this whole region would soon be a roaring furnace, you'd better believe!"

When night came, the party camped in a little prairie, where grew plenty of grass for Brindle. And they let her graze rather late neyt morning, because the traveling was as hard on her as on the men. Besides the fallen timber and thickets to be avoided, the pine needles were deep nearly everywhere. And they had a provoking tendency to let one's feet slip and slide as he tramped over them.

When at length the wanderers traveled on they were still in forest, and the country became more and more broken as they neared the snowy range. From time to time, and from the highest points, the adventurers caught glimpses of that great snow roof. But usually they could see nothing, so dense and high was the pine forest surrounding them.

Much game was here, especially elks. The bull elks had great spreading horns. And it seemed a marvel that they could dash through the thick, tangled forest with them as well as they did. But they would raise their heads high, so as to lay their horns back against their bodies. and go tearing away at a breakneck speed.

There were also bears here. The wandering rainbow chasers, as they now jokingly called themselves, caught sight of black bears from time to time during the day. They did not attempt to kill any of them. As they were well aware, there were also grizzlies in this primeval forest, though those larger, fiercer bears did not seem numerous. Perhaps they were asleep in their dens during the day, only coming out at night in quest of prey. Of these dangerous creatures all the party were more or less afraid. They were constantly on their guard to keep from being surprised by one. And they always had their weapons in readiness to shoot.

Once or twice during the afternoon the six men halted at streams to wash out some sand. They found no gold; nor did they travel very far. The nearer they approached to the great mountain range the more broken the country became. And the forest that covered it was even more dense and tangled than before.

As night was drawing nigh, the wanderers in the wilds went into camp at the foot of a great rock. Here was a little open spot, and a tiny spring, trickling out from under the rock, afforded all the water that the campers and Brindle would need. There was also plenty of grass for the cow in the opening.

After carefully clearing away a patch of grass the party started a campfire. They didn't want it to spread into the surrounding forest. Later Holloway and Orlando found a sloping place at the back side and, by boosting and pulling each other, succeeded in mounting to the top of the big rock, to get a view of the surrounding country. Now that mighty, snow-roofed range seemed almost to overhang them.

After the travelers had finished with supper they sat by their roaring campfire and talked. It was now about the end of August. But at this high altitude, and so near to that field of snow, the night was almost cold. When the time came for sleep Orlando first went out to see if Brindle was all right. Frisk, lying by the fire, sprang up and followed him.

The cow had grazed her fill and was lying in the grass, contentedly chewing her cud. Her owner paused and patted her neck.

"Good old Brindle! Good old milk horse! I don't know how we rainbow chasers would get along without you."

After making sure that her rope was securely tied to a bush the young man returned to the campfire.

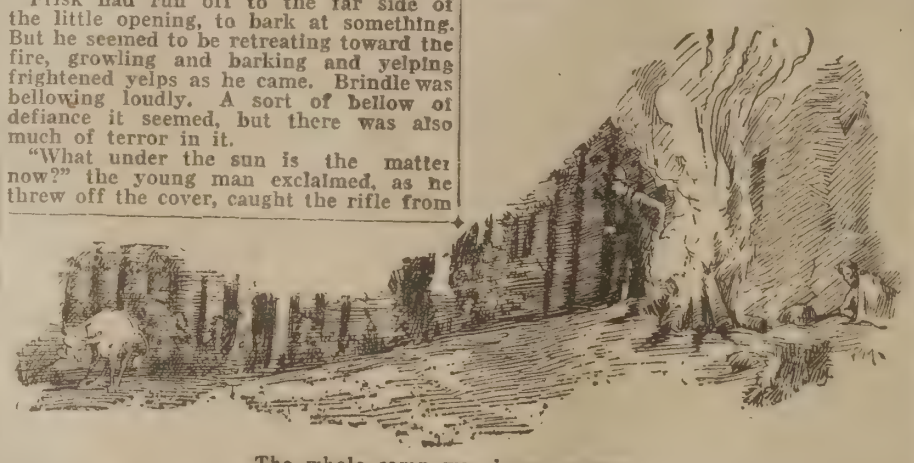
"Chilliest August night I ever got into," he shivered, as he stood in the light and warmth.

"I'm guessing we're likely to strike a chillier place than this before long," Sanders remarked. He was now ready for bed.

"Where's that?" Orlando inquired.

"Why, when we come to that white country, that region of everlasting frost."

"Yes, chances are it will be a little bit cool up there. In fact, some of that coolness has already slid down the mountainside. I'm happy that we don't have to burn buffalo chips here."



In a little while all the party were in bed and asleep, or ready to sleep. They were bedded in pairs, and were glad to "scrooch" up together to keep warm. They also had their feet near the fire. The three pairs of sleepers occupied three sides of the campfire, and Frisk had curled himself up in the middle of the remaining space.

Thus it was when Orlando rose to his elbow, just before falling asleep, for a final look around. All the rest of the party were asleep, as he could tell from their regular breathing. Even the dog seemed to be slumbering peacefully, soundly.

But when Orlando awoke, some hours later, the whole camp was in an uproar.

Frisk had run off to the far side of the little opening, to bark at something. But he seemed to be retreating toward the fire, growling and barking and yelping frightened yelps as he came. Brindle was bellowing loudly. A sort of bellow of defiance it seemed, but there was also much of terror in it.

"What under the sun is the matter now?" the young man exclaimed, as he threw off the cover, caught the rifle from

The whole camp was in an uproar.

under the edge of his bed and leaped to his feet. The others were already doing the same.

Nobody answered at first, for nobody knew for certain what the tumult meant. Some were throwing more pine wood on the fire. Others were examining the locks of their guns by the firelight, to make sure that the caps were all right. Soon all were standing with their guns in their hands, thumbs on hammers and fingers on triggers. Every man was trying hard to penetrate with his eyes the darkness where the growling and barking and bellowing were still going on. When the uproar had subsided somewhat, one of the party said:

"What in the world can be the matter out there? Brindle and Frisk both seem scared frantic!"

Cooper advanced a few steps and again tried to peer into the darkness beyond as he answered: "Of course I don't know for certain. But my guess—my guess would be that—that there's a—a grizzly close around. And the animals scent 'em."

At the mere mention of a grizzly bear, that monster of these wilds which, so it was believed, no rifle bullet could stop, every man of the party felt a shiver of cold fear run through him. And the bellowing of the cow, ringing out loudly a little later, seemed to inspire a feeling of terror in all of them.

Ere long the wood just tossed upon the fire was blazing brightly, throwing its strong light afar. By that light the men could now make out the cow, and they could assure themselves that there was no beast of prey near her. Her terror must have come from seeing some animal farther on. Or possibly she only scented him. Frisk was somewhere beyond the cow, but could not be seen.

All the campers had their boots off, and most of them were now dressed only in their underclothes. But as soon as there was light enough to make sure that the grizzly, if grizzly it was, had not begun an attack, they made haste to clothe themselves better.

"No great fun to fight a grizzly, even when you've got all your duds on," Cooper remarked. "I'd like to be excused from—from——"

"From having a tussle with one when you're naked?" laughed Sanders. "Yes, and so would I. Though I don't imagine clothes would be much production if the monster raked you with those terrible paws of his."

"You may be sure they wouldn't, Abe. No more than clothes would protect you from bullets or Indian arrows. I never had but one encounter with the beasts. Twenty years ago that was. It happened while I was wagoning on the Santa Fe trail. We were out on the plains at the time. The grizzlies had a way of leaving the mountains and coming out there, numbers of 'em. Early travelers crossing the plains used to declare that they'd counted as many as a hundred in one day."

"They must all have deserted the mountains." Orlando was speaking.

"Most of 'em did, it seems," Cooper continued. "They came out for the reason that no end of good eating could be found there. They'd keep close to those great herds of buffaloes migrating north or south, to feast on buffalo meat. When they——"

"Did they travel in a pack, a huntin' pack, them bears? Or would every bear run in a gang to hisself?" Esau wanted to know.

"They didn't all come out from the mountains together, if that's what you mean. I think they commonly traveled in pairs, a he bear and a she bear. Man and wife. But they hunted singly. Or at least they often did. A hungry she grizzly is just as capable of dragging down a buffalo and killing it as her old man would be."

"And did you actually get into a scrimmage with one?" questioned Givens.

"Well, yes. Guess that's what you'd call it, Jeff. One night, while our wagon train was in camp, a hundred miles or more from the mountains, a grizzly plunged right into our corral. He came in through an opening we'd left at one end. I've often wondered what possessed 'im to do such a thing. Meanness, I'd guess. Or maybe the camp just happened to be in his way, and it was beneath his dignity to go to the trouble to pass round it."

"Must have made a lot of excitement," Orlando was moved to remark.

"Excitement was no name for it, Lando, boy. It was a stampede—the wildest stampede you ever heard of."

"Took all of you by surprise, I'd guess," Givens commented.

"Well, no. Not just by surprise. You see, Jeff, we had sentinels out. In fact, we kept sentinels around the camp every night, from the day we rolled out of Council Grove, on the Neosho, till the day we rolled into Santa Fe. But it was a dark night. Or at least there was no moon. Of course our campfires had gone out. We had only little fires, because we were using buffalo chips for fuel. You all know how long those last. You've tried 'em."

"You're in bully good luck if you can make 'em last till supper's cooked," chuckled Esau.

"Well, of course, our horses and mules gave the sentinels warning. They were all staked not far from the wagons and the instant they scented the grizzly they began to snort and roar and then to try to break their lariats or pull up their stake pins. As soon as the sentinels caught sight of the grizzly—the one at that end of the camp—they blazed away at 'im. After that they dashed back into the wagon corral, with the bear right at their heels."

"In a wagon corral with a grizzly, eh? Pretty close quarters, it seems to me," laughed Holloway.

"Altogether too close to be comfortable, Jess. A few of the boys, maybe, were asleep in their wagons—those that had sleeping room. But most of us had our beds on the ground near our wagons. At the first shot we all jumped clear of our blankets and grabbed our guns. Every man of us slept with his weapons within reach. That was the captain's orders. At first we supposed it must be an attack by redskins, till one of the sentinels yelled:

"'Look sharp there, boys! Here comes a bear'"

"And then you ought to have seen us climb! Safe to say you never saw a more active set of bull-whackers. We couldn't climb——"

"Climb! What was there for you to climb, Mr. Cooper?" inquired Orlando. "That is, if you were out on the bald plains, as I understood you to say you were."

"Oh, there wasn't any tree to climb, nor anything else of the kind. But there were wagons a plenty, and the instant we jumped out of our blankets and snatched up our guns we went up a wheel or the side of a wagon. Some stood on top of a wheel and some crawled into their wagons. And as soon as anybody reached a place of safety he began to pop away at the bear. We had a lively time in that camp for a few minutes, I can tell you!"

"And how did the scrimmage wind up? Did the grizzly devour any of you?" Jess Holloway wanted to know.

"Not one. We all got off without a scratch. No, not all. There were some dogs in the camp, and one of them, a half-grown pup, was foolhardy enough to run up close and bark at the bear. But it was that pup's last barn. He let out one sharp yelp as the grizzly's paw struck 'im, and that was the end. As I told you, all of us teamsters got off unhurt. I don't suppose the bear was hungry. At any rate, he kept right on. Maybe we made too much noise for 'im. He didn't stop to attack anybody. Only knocked the pup out of his way. After passing through the corral he dived under a wagon or between two wagons and disappeared. That was the last we saw of 'im."

(To be continued.)

Bits of Fun FOR Everyone

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: One day not long ago I was crowded with work and my daughter was called away to help a sick neighbor. It being vacation it was up to me to get help from my three boys, as I was in the midst of house cleaning. The first thing I did on that morning after breakfast was to make each of my three a cook's cap and apron out of flour sacks, which took but a few minutes to run up on the sewing machine, and I told them they must be my cooks for that day. The boys were delighted and those caps and aprons worked wonders. They never grumbled once all day. The oldest boy, age 12, went right ahead and washed the dishes and the next one, age 7, wiped them, while the young 5-year-old did what he could, and by 9 o'clock in the morning all the kitchen work was done. From 9 till 10:30 the two older boys went fishing and came home with a nice mess of fish, which they cleaned and fried as well as any one could do. They baked spuds and set the table and with the fish and whatever was ready in cold food in the pantry they prepared a fine dinner and I never stopped my work to do a thing. They cleaned up the dinner work the same as they had the morning work and they were happy and there was no grumbling. Those caps and aprons did the business and have been in use many times since and work well when my oldest girl is away working. When she is home the song is changed and I try not to ask too much of them when she is home. However, I do bring them into service when it is necessary to rush work through, as when we are to go to meeting on Sunday mornings.

Training children is a difficult matter and requires study, as no two are alike. I agree with one mother who wrote on child training who said parents must set good examples for the children if they want them to be well behaved. If father is careless and throws his hat and coat into a corner or on a chair, beats the dust out of his gloves or mittens in the house, half washes his hands and leaves a blot of dirt on the clean towel you can be very certain that the boys will do the same. If the mother remonstrates in her desire to bring up the boys to good habits she will be pretty likely to hear those boys say, "Papa does that way." A mother can about wear herself out trying to combat an influence like this and will fail after all, in many cases.

The same holds good with the training of girls. Mother must set a good example if she wishes her girls to be neat and tidy in appearance and become good housekeepers. My girl is slow, but does her work well. I, too, was slow once and I trust my girl will grow swifter.

I often take the boys and clean up the yard, raking up and burning scraps and litter. Just a little work now and then keeps the outside appearance of the home place neat and attractive. With all I try hard to teach my children that cleanliness is next to godliness, whether it be bodies or minds, the inside of the house or the outside. MRS. H. C. J.

Washington.

Just Folks.

A happy family is the happiest thing in life. In my school days for two winters I did chores in a happy family for my room, meals and washing. It is needless to say that the happiest recollections of my school days are associated with those two winters.

The family consisted of father, mother, one son and four daughters. The home was on the outskirts of the town, there being ample grounds around the house and stable. The father of the family was a business man in town. He had a black horse and a family carriage in which he drove to and from his place of business, generally accompanied by his son, who was in business with the father, and three of the children who attended school in town.

Nig, the horse, was as fat as a butter ball, with a black, shiny coat of hair. You can depend upon it there was no racing back and forth to business. The horse was too fat to race and his driver was too happy a man to waste his happiness by driving faster than a jog trot. Nig was happy, too. There was only one regulation imposed upon me in feeding him, and that was to see that he had enough to eat. So I saw to it that Nig had all the hay he could eat and came pretty near giving him all the oats he would eat as well.

There were two cows to milk; the older cow, an easy milker, and the heifer that gave undue exercise to my wrist. The cows also were happy in having all they wanted to eat. So we had all the milk and cream the family could use and more, too.

The good mother, with the help of the oldest daughter and the spasmodic help of the other children, did all the housework. The mother and eldest daughter were of the same warp and woof in the web of life—with a quiet joy meeting the duties and happenings of the day, and with a poise taking the sting out of the little ripples of youthful temper on the part of the younger children.

The son enjoyed music as a side line and I remember reading one or more of Dickens' novels to the rhythm of his piano playing in the next room. One of the younger daughters was a spitfire, and the happy way in which the father and mother overcame those spitfire episodes would be a revelation to many a scientific child manager.

It was an old-fashioned church-going family and one of the happiest scenes was to see the family carriage packed to the limit as Nig jogged his way to church on Sunday morning

I would not decry the value of books on child training, but I do not remember to have seen such a book in that happy family; nor do I remember seeing any of the other hundred and one ways by which happy homes are made. That was simply a happy family. Perhaps it just happened so; perhaps there were hidden struggles of self-denial that had something to do with it. Passing by all that it gives me happy thoughts today to think of that happy family of long ago. E A S

Can Anyone Tell?

Will some one tell how to prepare pine needles for pin cushions, when to gather them and will fir needles do as well?

Will some one tell us how to put up the large green peppers such as can be had at the stores? They are put up some way in vinegar and sweet oil.

Also will some one tell how the pimento peppers are put up, if it can be done in the home? And what kind of peppers are used for these? Several readers want to know.

Will some one send in a recipe for making pickles of cucumbers, onions, apples, grapes, etc., in some way so they make their own vinegar? A sister wants to know.

Can some one tell us if they have ever had success putting away ripe tomatoes or string beans in brine for winter use? Tell us of any other vegetable you may have preserved successfully in brine.

Can some one tell how to set the bristles in a shaving brush or any brush?

Will some one tell how to make milk chocolate candy, such as we buy in stores, and has some one a recipe for French pastry?

A sister says she set out two geraniums at the same time and both are alike thrifty, but one has bloomed constantly and the other never a bud. Who knows why?

The Holiday

By JULIA M. MARTIN.

Oh, proudly, noble country, in thy name
The thousand throats of brazen trumpets blare;
The pennon flutters crimson, white and blue;
And pomp is marching by, and torches flare.
And they who late carouse, and loudest brawl,
Profess thy name. What—shall the shout be all?

Not in the flash of rocket, roll of drum,
Not in the scream of eagle, vapid boast,
Not in the threat of steel, or flaunt of gold,
Shall men discern thy soul, defend thy coast.
Alike the true, the false, they thus proclaim.
Oh, purer burn my country's altar flame!

Not all our joy in thee, our songs to thee,
Not all the grace of those three colors twined
May keep thee free and honored, if thy sons
Withhold the earnest toil of hand and mind.
While Pleasure oft prefers a sordid spot,
Men say they love thee who can know thee not.

My country, stronger hearts and clearer minds
Bring other, nobler offering to thee.
The grov'ling beast itself may pleasure know,
But only men may guard a nation free.
And hands that labor, hearts that earnest beat
Bring fairest gift, my country, to thy feet.

Observe Educational Week

President Harding has assured Commissioner Tigert of the United States bureau of education that he will issue a proclamation urging the observance of the third national week for education, December 3 to 9, inclusive. Commissioner Tigert says that the purpose of this week is to center attention upon the needs of our schools, especially on Americanization, better trained and better paid teachers, more adequately equipped buildings, eradication of illiteracy, improvement of rural schools and physical education and hygiene. The American legion and the National Educational association are cooperating in plans for the observance of the week.

Library of Apiculture

By GEORGE W. YORK.

It may be of interest to know that Dr. C. C. Miller, the nestor of American beekeeping, who passed away in September, 1920, has just been honored by having established "The Dr. C. C. Miller Memorial Library of Agriculture" at the Wisconsin State university, in Madison, Wis. Already over $1400 has been contributed by admirers of Mr. Miller, and the income from the endowment will be used to maintain the library.

Dr. Miller was 89 years old when he passed away, and had been a beekeeper for over 60 years. During the last 25 years of his life he had answered 10,000 questions propounded by beekeepers in the question and answer department of the old American Bee Journal.

Dr. Miller wrote more on the subject of bees and beekeeping than any other man of his time. He lived at Marengo, Ill., for over 60 years, and was an intimate friend of the writer for nearly 30 years.

These Are Good to Have

Recent farmers' bulletins which may be of value to northwest farmers and which may be obtained free upon application to the chief of the division of publications, U. S. D. A., Washington, D. C., include the following: School Lunches (F. B. 712); Sheep-Killing Dogs (F. B. 1268); Celery Growing (F. B. 1269); the Stock-Poisoning Death Camas (F. B. 1273); Use of Rural Community Buildings (F. B. 1274), and Game Laws for 1922 (F. B. 1288).

CROPS ALWAYS FALLS SHORT.

Of every 100 bushels of corn that farmers set out to grow, only 64 bushels are realized, according to figures compiled by the United States department of agriculture over a period of 13 years. The difference between the potential crop and the quantity harvested is due to weather conditions, defective seed, plant disease and insect and animal pests.

SIGN OF HARD WINTER.

Southern California hunters report finding high up in the trunks of dead trees an unusually large supply of acorns cached in holes, and declare that in each acorn is a juicy grub well fattened to be pecked out as a part of the winter ration of the woodpeckers. This is regarded as a sure hard winter sign.

Here's your stove polish!

Here it is—the Stove Polish which, for 30 years, has stood alone in the field—the favored way to beauty and protection for your stove.

The majority of housewives prefer it because it is so easy to apply and *outlasts* all others. It anneals to the iron and will not rub off or dust off. When a salesman wants to show a stove to the very best advantage he uses Black Silk Stove Polish. Why not have it on *yours?* Get a can today. Money back if not the best you ever used.

The sale of Calumet is 2½ times as much as that of any other brand.

THE WORLD'S GREATEST BAKING POWDER

High Points in News of the Week

President Harding last week officially designated Thursday, November 30, as Thanksgiving day. His proclamation follows:

"By the president of the United States of America:

"A proclamation: In the beginning of our country the custom was established by the devout fathers of observing annually a day of thanksgiving for the bounties and protection which divince providence had extended throughout the year. It has come to be perhaps the most characteristic of our national observances and as the season approaches for its annual recurrence it is fitting formally to direct attention to this ancient institution of our people and to call upon them again to unite in its appropriate celebration.

"The year which now approaches its end has been marked, in the experience of our nation, by a complexity of trials and triumphs, of difficulties and of achievements, which we must regard as our inevitable portion in such an epoch as that through which all mankind is moving. As we survey the experience of the passing 12-month, we shall find that our estate presents very much to justify a nation-wide and most sincere testimony of gratitude for the bounty which has been bestowed upon us. Though we have lived in the shadow of the hard consequences of great conflict, our country has been at peace and has been able to contribute toward the maintenance and perpetuation of peace in the world. We have seen the race of mankind make gratifying progress on the way to permanent peace, toward order and restored confidence in its high destiny.

"For the divine guidance which has enabled us in growing fraternity with other peoples, to attain so much of progress, for the bounteous yield which has come to us from the resources of our soil and our industry, we owe our tribute of gratitude and with it our acknowledgment of the duty and obligation to our people and to the unfortunate, the suffering, the distracted of other lands.

"Let us in all humility acknowledge how great is our debt to the providence which has generously dealt with us and give devoted assurance of unselfish purpose to play a helpful and ennobling part in human advancement. It is much to be desired that in rendering homage for the blessings which have come to us we should earnestly testify our continued and increasing aim to make our own great fortune a means of helping and serving, as best we can, the cause of all humanity.

"Now, therefore, I, Warren G. Harding, president of the United States of America, do designate Thursday, the 30th day of November, as a day of thanksgiving, supplication and devotion. I recommend that the people gather at their family altars and in their houses of worship to render thanks to God for the bounties they have enjoyed and to petition that these may be continued in the year before us.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this 2d day of November, in the year of our Lord, one thousand nine hundred and twenty-two, and of the independence of the United States of America, the one hundred forty-seventh.

"WARREN G. HARDING."

* * *

President Harding was 57 years old last Thursday, November 2. No special observation of the day was held at the White House, the president carrying out his usual program of official duties.

Social functions at the White House are practically discontinued, owing to the ill health of Mrs. Harding, who is still confined to her room, though reported to be recovering from illness that was considered serious a few weeks ago.

* * *

The American Farm Bureau federation last week wired the interstate commerce commission urging that an embargo be placed on Canadian wheat passing through the United States and using American cars and boats. It was claimed that the embargo would release enough boats on the Great Lakes to move 20,000,000 bushels of American wheat before the winter closing of navigation and would also release 21,000 cars that are now carrying wheat from Buffalo to the Atlantic coast. The farm bureau was later joined by other grain shipping interests in urging the embargo.

* * *

Secretary Mellon of the United States treasury, last week stated that the public debt had been reduced $3,784,000,000 from its peak of over $26,000,000,000 at the close of the war.

* * *

Municipal elections held in London and other British cities last week resulted in heavy losses by the labor party. Out of 574 labor candidates in 70 leading boroughs, 215 were elected; out of 450 conservative candidates 350 were elected. In the city of London the number of seats in the councils held by the labor party was reduced from 573 to 253.

* * *

United States Senator Borah of Idaho has, during the election campaign which closed Monday this week, renewed his appeal for the election of the president by direct vote of the people.

* * *

It may be a crime to possess liquor under the prohibition amendment and the Volstead enforcement act, but it is not a crime to steal it. This is the opinion of Judge Marsh of Santiago, Cal., who last week dismissed a case in which it was charged the defendant had stolen $10,000 worth of intoxicants. The judge ruled that in the sight of the law liquor now has no actual value.

* * *

The United Mine Workers of America have filed a formal application with the United States coal commission created by congress at the request of President Harding asking that all coal mines be unionized. The organization argues that this action would result in stabilizing of wages and working conditions in all coal fields and would prevent future strikes.

* * *

Thomas N. Page, former ambassador to Italy, died last week at his home in Virginia.

* * *

A semi-peaceful revolution has taken place in Italy recently, resulting in what appears to be a victory for the conservative element of the Italian people. Benito Mussolini, leader of the so-called fascisti troops, has been appointed premier by the king and has begun the formation of a new cabinet in somewhat the same manner as did Mr. Bonar Law, the new British premier. The Italian situation is looked upon as a defeat of communism.

* * *

Notwithstanding repeated efforts on the part of the railroad companies and the interstate commerce commission to supply the west with adequate cars for handling the fruit crop, the car shortage situation appears to have grown worse rather than better during the last few weeks. Heavy losses have already been incurred by growers of early varieties of apples and other perishable fruits and even greater losses are in prospect. Governor Hart of Washington has started a movement looking toward a conference in Sacramento, Cal., for the purpose of forming an association of fruit growers of all the Pacific coast states. The primary object of the association would be the prevention in the state of catastrophes similar to that experienced by the fruit growers this season.

The interstate commerce commission has given the public service commissions of western states power to distribute the available supply of cars wherever it seems most urgent that they be delivered, the idea being that the most perishable produce be handled first and that all districts shall share alike in what cars are available.

* * *

The new British census gives the population of London as 7,480,000.

* * *

Prohibition is perhaps the outstanding feature in the election in New Jersey this year. The fight seems to be centered on the race between Governor Edwards, the liquor candidate, and Senator Frelinghuysen, the dry candidate. The former is a democrat and the latter republican.

* * *

It is reported that there are now $700,000 subscribed to the proposed $1,000,000 fund for the endowment of a Woodrow Wilson foundation designed to provide annual awards to persons rendering distinguished service in the advancement of peace.

* * *

The new grain futures law, which gives the secretary of agriculture regulative power over the buying and selling of grain on grain exchanges, went into effect November 1. Two of the leading grain exchanges have secured court conjunctions against the enforcement of the anti-futures feature of the law. On all other exchanges this feature of the law will be vigorously enforced, according to Chester Morril, who is in charge of the grain futures law administration for the department of agriculture.

* * *

If the entire United States potato crop is to be consumed this year, each person in the country, large and small, will have to eat four bushels, or an average of that amount. The production is estimated at 433,000,000 bushels, against 347,000,000 bushels last year.

The legislature of the Philippine islands has adopted a resolution requesting the United States to call a Philippine convention for the purpose of adopting a constitution and forming an independent republic of the Philippine islands.

Dedicate Recreation Building

A large crowd was present at Buckley, in Pierce county, when Senator Miles Poindexter dedicated the recreation building of the school district. The building is 80 feet long, 40 feet wide and is for the accommodation of the pupils of grades one to six during the rainy weather. It is also to be used as a grade school auditorium and as a lunch room. All the windows are so arranged that they may be quickly swung outward and plenty of ventilation obtained. A stage at one end of the hall assures facilities for a grade school assembly. Folding doors in the center make it possible to convert the building into two large play rooms, one for boys and the other for the girls.

The people of Buckley are proud of their school system. With a total of 10 buildings, including four rural school buildings, two of them having play sheds, a modern high school building, an up-to-date grade building, a large gymnasium and swimming pool and now the recreation building, the citizens feel that they have the beginning of a plant which will have no superior in the state. Four large busses bring in high school pupils from South prairie, Burnett, Wilkeson, Marion, Spiketon and Connell's prairie, swelling the high school enrollment to 203 pupils.

To Sell 40 Guernseys

On Wednesday, November 22, the entire herd of Guernseys at Orchard Hill farm at Redmond, King county, owned by Dr. Park Weed Willis of Seattle, will be sold at public auction. Forty head of this well-known herd will go, Dr. Willis being compelled to give up his farming interests so as to devote all his time to his profession in Seattle.

One of the best known animals of this farm was Sammanish Topsy, an advanced register cow that was born on the place and had a record of 831.58 pounds of fat in class A. At the time of her death, last September, she held the record of highest producing Guernsey west of the Missouri river. There are three of her daughters and 12 granddaughters in the sale. Topsy's Robin Hood of Orchard Hill, a 3-year-old, one of the herd bulls, a great-grandson of King of the May and out of Sammanish Topsy, will be sold. He has produced 15 heifer calves out of 20.

There are about 20 daughters and granddaughters and one son of Sammanish Topsy in the sale and several of her stable mates, including Sammanish Roxie. Five of the number to be sold are bulls. The rest being cows in milk and heifers. The entire herd is government accredited and there are a number of cows that have A. R. records. The farm can easily be reached by stage from Seattle. The sale starts at 10 a. m.

WOULD STORE POTATOES.

Report comes from Yakima that the potato growers who are in a position to do so are figuring on placing their potatoes in cold storage.

Farm Business and Markets Outlook

(Continued from page five.)

CHAMPION SPARK PLUG CO. TOLEDO, OHIO

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Don't you feel sorry for a person who is so disgusted with life that he looks bored every moment, and spends much of his time covering half-concealed yawns?

Dr. Copeland.

That blase, weary, sophisticated, drooping manner ill becomes any person, young or old, who assumes it.

Undoubtedly it is a manner which, in most instances, is assumed. If it is not assumed, I am inclined to believe it is founded on physical or mental disability. Itis impossible to conceive of any perfectly sane and normal individual becoming so bored with life as to wear a perpetual mask of disgust or indifference. It is not natural to be so unimpressed by the events of daily life.

There are some unfortunate persons who are bashful and retiring. Some of these attempt to hide their embarrassment by assuming various mannerisms—haughtiness, toughness or an air of being bored.

Don't be bored.

If you are human there is something of interest in every moment. Try to get the best out of life. Look for good and pleasing things. You can't be bored a single minute if you have any powers of observation and the capacity to appreciate what you see and hear.

If you want to be like a block of wood, or to assume to be as immobile as a stone statue, go ahead! Nobody will love you but your parents, and they just have to—they wouldn't if they could help it. A bored person is not fit company for man or beast.

It isn't good for your health to be bored. Yor heart must have emotional stimulation in order to beat as it should.

You want to have a good complexion, to be bright-eyed and red-lipped, to have rosy cheeks and warm hands. You can't have these without a strong and forceful circulation.

You want a good appetite, perfect digestion and normal action of all the organs. You can not have these without proper heart action.

Happiness, good nature, exuberant spirits, mental alertness, human interest, enthusiasm, laughter—all these are heart stimulants. They are better than a jugful of medicine. Indeed, they are nature's agents of good health.

Occasionally there is an individual who might admire the sphinx. He might even seek the companionship—or rather should I say, company—of the sphnix.

What we call "personality" is really the magnetism of a happy and winning nature. No bored person is possessed of magnetism.

Therefore, if you would be loved, and if you would be healthy, you will cultivate enthusiasm instead of indifference. You will be interested and blase.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4151. Girls' Dress—Cut in four sizes, 6, 8, 10 and 12 years. A 10-year size requires 3 1-4 yards of 32-inch material. Price 10 cents.

3849. Ladies' Dress—Cut in seven sizes, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 4 7-8 yards of 42-inch material. The width at the foot is a little more than two yards. Price 10 cents.

3969. Ladies' House Dress—Cut in seven sizes, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires six yards of 36-inch material. Price 10 cents.

Home Recipes

Beet Salad.

Select young tender beets and cook till tender, slip off skin by placing in cold water and instantly rubbing; remove from water, cut into dice, add a tablespoon of butter, one of sugar, a little vinegar and water, one tablespoon of flour or cornstarch, allow to boil, then serve in a dish or on a lettuce leaf. Very good.—Mrs. W. R. L.

Meat Balls With Tomato Sauce.

One pound hamburger sauce and one-half pound pork sausage, one onion minced fine. Put some bacon or other fryings into a pan and cook the onion to a light brown, mix with meat and make into flat balls and roll in flour and fry. After they are done add a can of canned tomatoes or cut up ripe fresh ones and put over and cook an hour all together. —Mrs. W. R. L.

Brown Sugar Cookies.

Two cups brown sugar, two cups shortening (meat drippings are good), one cup sour or butter milk, one full teaspoon of soda, cinnamon or other spice as desired. If no eggs are handy they may be omitted, but will make more cookies if two are added. One-half teaspoon of salt, three cups of flour and mold as soft as can be handled and sprinkle white sugar over the tops before cutting out, and roll softly with rolling pin.—Mrs. W. R. L.

Blackberry Dumplings.

One or more boxes of blackberries; if out of season used canned. Place in a stewpan with about two cups of water or a little more if needed; add sugar to make quite sweet. Before serving add a good thick dumpling dough made of one cup of milk, one teaspoon baking powder, pinch of salt and one egg. Drop into the berries in spoonfuls and cook with the cover on for about 15 minutes. Juice of the fruit makes a good sauce or cream may be used.—Mrs. W. R. L.

Home Helps

By ELIZABETH QUAKER.

When hanging the clean curtains, or wherever it is necessary to run tape, ribbon or string through casings, an ordinary hairpin is excellent. If the casings are wide enough to permit, a bone hairpin runs more smoothly than a wire one.

A bit of sour dough or starter yeast is easy to keep on hand in cool weather and is very handy. Bread, a tin of rolls and batch of raised doughnuts can be made from the same dough.

Nearly all fresh fruits will make their own juice when baked in a pie and to most such pies a tablespoonful of flour needs to be mixed with the required sugar to thicken the juice and so prevent its running out over the oven. Some cooks prefer finely crushed cracker crumbs for this.

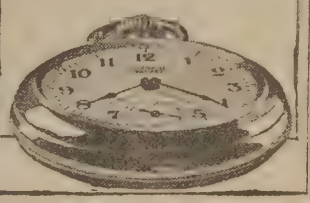
If the mixed pickle or chow-chow in open jars has a tendency to mold it may be necessary to reheat the batch. First, remove the mold, then place in granite kettle on stove, add a little fresh vinegar and let come to a boil. Scald the jar it was in and refill, covering with a thin layer of paraffin or an oiled paper cut to fit smoothly directly against the pickle. This covering helps to guard against another attack of mold.

Wool Comforts

By Mrs. E. M. Anderson.

People here make ideal wool comforts from their own wool by washing it themselves in plenty of good soap suds, using several waters and rinsing thoroughly. It is then nice and white, with no objectionable odor of grease, and can be used in challis or other dainty coverings with perfectly satisfactory results. After washing the wool we simply pick it into fine pieces by hand, spread it evenly over the comfort lining, put on the top, and tie a trifle more closely than cotton.

Ingersoll
WATERBURY
Radiolite



$5

THE WATERBURY Radiolite, like the famous Ingersoll Yankee, leads in its field. It is the best watch that $5 will buy—a *jeweled* watch that combines stamina and style. It is the small, popular 12-size, and graceful from antique bow to fine, open face that glows in the dark. A "silver" dial harmonizes with the polished solid nickel case.

Here is a watch with a sturdy 4-jeweled movement of modified bridge construction, built to combine enduring accuracy with lasting good looks.

Ingersoll Yankee $1.50

This is the reasonable, reliable, famous American Watch—the best known time-piece in the world.

IMPERIAL MUSIC SCHOOL
3009 16th Street
San Francisco, Cal. Dept. B.

When answering ads, please don't fail to mention this paper.

What is the first thing a man plants in his garden? His foot. What does a walnut say? "Don't put your teeth in me." These two are from Clara Peterson. Clara's home is near the Canadian border in Whatcom county, Washington. She is 11 years old. Her birthday is March 6.

Aunt Nellie was glad to hear from Dora Urquhart of Grant county, Washington. Dora is eight years old now and she is in the sixth grade. She says there are six children in her class. February 28, 1923, she will be 9.

Lois Disney writes to us again. Lois lives in the country near Kettle river, in northeastern Washington, and she doesn't have far to go to school. She has one sister, Leona. Lois and Leona have two dogs and four cats for pets. They think The Junior Farmer is a fine paper. February 7 is Lois' birthday.

About the middle of the school term Ethel Stiltner expects to pass into the seventh grade. She says teacher is a good helper and is a fine domestic science teacher. At one time she was supervisor of the home economics department of the Albany, N. Y., schools. Ethel is 11. She had a good vacation this summer. Her home is near Cowlitz river in western Washington.

"I have a pet cat and a pony," writes Freda Johnhson, a western Washington girl. "I milk two cows. We have 12 cows milking.

Thirty-five children go to school where Bertha Holmes attends in Okanogan county, Washington. Bertha is in the third grade and there are 10 in her class. She has two sisters and a brother. They are Evelyn, Dorothy and Cletus.

Evelyn Holmes is having a nice visit with her auntie, who came from Carthage, Mo., to visit them. Auntie is packing apples. Evelyn lives in northern Washington. She has a sister, Dorothy, whose birthday is December 21. Brother's birthday is January 21.

BEDTIME STORIES

By THORNTON W. BURGESS.

DIGGER MAKES A HOME.

Digger the badger, was busy. He was so busy that he could hardly stop to brush the sand out of his hair. From the corners of his eyes he could see the little

Peter's big eyes nearly popped out of his head.

meadow and forest people gathering around to watch. And as he worked he sang, and this was his song:

Dig, dig, dig, I make the sand to fly;
The yellow sand, the golden sand, I toss it up and high,
And deep, deep down, way under ground
My home so snug is always found.

Peter Rabbit was the first to discover Digger at work. Peter's eyes opened wide. Never in his life had he seen sand fly so. When he had first seen it he didn't know what to make of it. He had been coming down the lone little path. Looking across the great meadows he had seen the sand flying in a perfect shower, and he couldn't see what made it fly. At first he thought that Johnny Chuck must be at work on a new house. But Johnny Chuck never had made the sand fly like that in the world, not even when he had won a digging match from Reddy Fox.

Peter hitched up his trousers and hurried over toward the flying sand lipperty, lipperty, lip, as fast as he could go. When he got there nothing was to be seen but a hole in the ground, out of which the sand poured in such a steady stream that it seemed to Peter that there must be several diggers at work down underground.

In a few minutes the sand stopped flying and Peter saw a pair of stout legs and the seat of a pair of pants, very much covered with sand, coming up out of the hole. Peter's big eyes nearly popped out of his head, for Peter did not recognize those stout legs at all, and he was sure that he never had seen that pair of pants before. Who could it be? Peter grew nervous and ran back a little way. Then he sat up very straight with eyes and mouth wide open and his heart going pit-a-pat, he didn't know but this stranger might be dangerous.

In a minute out backed Digger the badger and shook the sand out of his clothes. Then he turned and saw Peter Rabbit with eyes popping out and mouth wide open and Peter looked so funny and foolish that Digger the badger couldn't help laughing right out.

"Howdy friend?" said Digger the badger. "You must be little cousin of big Jack Rabbit, who lives out where I came from."

Peter closed his mouth and found his tongue.

"I'm Peter Rabbit, and I have a cousin Jack who lives way out west. May I ask who you are and where you come from?" said he.

"Sure, sure!" replied Digger heartily. "I'm old man Badger and I've come from the great west, and now I'm going to live on the Green Meadows. I'm very fond of your cousin Jack and I guess you and I are going to get along fine. Will you shake hands?"

"I'm sure we are," replied Peter, holding out his hand. And Digger the badger shook it so hard that Peter afterward declared that it was lame for a week.

(Copyrighted by T. W. Burgess.)

Birthday Greetings

THURSDAY, November 9—Bella Harvey, 8 years old; Delma Hedington; Hannah Wells, 10.

FRIDAY, November 10—Chester Gabriel Abernathy, 8 years old; Sarah Edwards, 10; Louise Gentry, 11; Freeda McCaul, 9; Dorothy Provo, 11; Helen Staadt, 9.

SATURDAY, November 11 — Gaylus Adams, 10 years old; Geraldine DeGooyer, 11; Viola Erickson, 11; Hilma Johnson, 11; Elizabeth Reykjalin, 11.

MONDAY, November 13—Leona Case, 7 years old; Ruby Irene Downing, 6; Thelma Duckworth, 11.

TUESDAY, November 14—Martha Keelmer, 11 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Frances Zumwalt, Sylvia Wilson, Beryl McCarthy, Elry Shouf, Aileen Grainger, Katie Harvey, Virginia Weldert, Lauretta Schuman, Magdalene Lindh, Audrey Wagner, Evelyn Lindh, Harold Thaden, Freda Johnson, Clara Peterson, Dora Urquhart, Edith McCarty, Hope Lane, Walter J. Frenz, Ida May Riley, Vernice Maurer, Agnes Maurer, Lucille Lemmon, Marie Clark, Maxine Chiles, Edna Richards, Louis Skok, Alice Ritchie, Laura Stringfield, Ruth Stuhr, Daniel Trupp, Olga Foster, Dorothy Schidleman, Edna Crable, Vina Kimm, Marguerite Edlin, Helen H. Howe, Johnny Best, Howard Gallaher, Alene Hensley, Iona Easton, Virginia Hunt, Katherin Oltmar, Thelma Cruse, Jean Cruse, Margaret Littell, Helen Enzler, Ernest Long, Clara Nelson, Rose Hakala, Clara Breitmeier, Edwin Warpala, Madge Black, Jessie Shaw, Thelma V. Heimen.

—A Chain Which Hasn't Developed a Weak Link in Six Years of Constant Use

The strain of six years is a pretty hard test for a car, an implement, or a plan; yet a test of that duration has been given the Cooperative Subscription Plan introduced by The Washington Farmer in 1917, and it has stood up under the trial in every way.

As most of our readers know, this plan sought the elimination of the traveling subscription agent, who for years had been an important factor in obtaining circulation.

We said to our friends, and still say: "Send your subscription orders to us direct. Get your neighbors to do the same. This will save the large sums which would ordinarily be paid out for the agents' salaries, automobiles, gasoline, rigs, hotel and garage bills and miscellaneous expenses. We will give you, the reader, the benefit of every penny saved, first in the form of a low subscription price; second, in an improved paper."

Readers throughout the state have done their part for six years to make this plan a notable example of the savings which can be effected through the right sort of cooperation.

A new subscription season is now beginning. Our cooperative plan is still in effect, and we again look to our friends to put their shoulders to the wheel. Once more the request is made that instead of waiting for a notification, you mail in your order at least 60 days in advance of the address label of your paper, include your neighbor's orders with your own and in case your subscription is paid well in advance, secure at least one new subscriber for our lists. If each one does his share, our cooperative plan will have another highly successful year to its credit.

November 9, 1922.
THE WASHINGTON FARMER,
Review building, Spokane, Wash.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to
THE WASHINGTON FARMER.

(Rate: $1 for five years; 50c for three years; 25c for one year. In Canada 1c a copy extra.)

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

A GRAND CHAMPION MARE.

The picture herewith shows Nig, the 7-year-old mare with which E. L. Mulhall of Buena, Yakima county, won the senior and grand championship in the Percheron division at the Washington State fair in September.

RADER GETS SHORTHORN BULL.

Ralph Rader of Walla Walla recently purchased the Shorthorn bull, Good Mariner, by Bapton Mariner, Imp. His dam, Choice Lassie 2d, by Choice of All, son of Choice Goods, was twice grand champion of the Chicago International and once reserve grand champion. Choice Goods, it will be remembered, was the sire of Golden Goods, the bull made famous in the herd of W. O. Minor of Heppner, Ore. He is a rich roan, scaling close to 2400 pounds, and not fat. Mr. Rader and his father, Carey M. Rader, who takes time from his law business in Walla Walla to enjoy himself with the Shorthorns, now have about 75 head, of which quite a number are straight Scotch and some Scotch topped. These gentlemen expect to see beef prices yet come back to normal.

LEASES HOLSTEIN BULL.

A. F. Bernard of Alfalfa, Yakima county, Wash., is leasing Vonheim Aaggie Hartog, a 5-year-old Holstein bull, from the L. G. Stickney farm of Toppenish, for his 22 head of registered Holstein cows. The junior herd sire on the Bernard farm is Chinook Pontiac Segis, a 3-year-old, which came originally from the state college. There are some of the 5-year-old bull's daughters in the herd which makes it necessary to keep the second herd sire. Mr. Bernard is starting a new foundation family, made up largely of daughters of Vonheim Aaggie Hartog, and there are some that trace to the Bessie breeding, and are from a son of Jessie Fobes Bessie Homestead. The original stock came from the old Monroe herd at Spokane.

BUILDING UP PUREBRED HERD.

R. Trenckmann of Elma, has six purebred Jersey females and a registered bull with which he is building up a herd of purebreds to replace the grade animals already on the farm. His first purchase of registered animals was at the time E. L. Brewer of Satsop dispersed a large part of his herd and Mr. Trenckmann bought a heifer calf and a bull. Two purebred cows and a heifer were purchased at the Jersey sale at Elma, one of which has just freshened with a heifer calf. All of the animals in the Trenckmann herd promise to do their part in making this a real herd of registered Jerseys.

LIKES THE GUERNSEYS.

D. J. Barker of Snohomish has a herd of 28 grade Guernseys, which are headed by a registered bull, Governor of Lopez. He is a 4-year-old and comes from the Dr. H. A. Wright herd on Lopez island, San Juan county. Another bull, the junior herd bull, has produced 11 heifer calves out of 14. There are 34 head of animals on the farm and Mr. Barker feels that he has selected one of the best breeds for his section of the county.

Breeders' Dept.

LET THE LITTLE FELLOWS PAY OFF YOUR MORTGAGE.
Silver Fox Ranches Make Big Profits.
Finest Quality Imported Prince Edward Island Stock.

All Pedigreed and Registered. Fully Guaranteed.

River Banks Berkshires
Long, smooth, deep, grand champion kind. Strong in the blood of most popular families of nation.
RIVER BANKS FARMS, Grants Pass, Ore.
CLYDE E. NILES, MGR.

Choice Berkshires
Few choice boars and gilts for sale; sired by Festline's Rus, junior champion Portland show.
PEARL WOOD. Gervais, Ore.

Riverby Orchard Berkshires
Oldest established Berkshire herd in the northwest. Young pigs and bred sows for sale. Address
D. C. BUNN. Prosser, Wash.

ORCHARD HILL FARM
DISPERSAL SALE
Wednesday, November 22, 10 A. M., at the Farm, Redmond, Near Seattle, Washington
40---REGISTERED GUERNSEYS---40
Professional business takes my interest from the farm. Therefore, I must dispose of my complete herd immediately at whatever prices are offered.

THE FINEST Guernsey sale ever held in the northwest. You have a rare opportunity to buy beautiful high-producing Guernseys. No like opportunity has been offered for years, to get such high producing animals, QUALITY, PRODUCTION.

Buyers wishing terms can make arrangements by writing, or calling upon the owner in advance of sale. Write for catalog to ORCHARD HILL FARM, Redmond, Washington, or to DR. PARK WEED WILLIS, 1256 Empire building, Seattle, Washington.

UNITED STATES GOVERNMENT ACCREDITED HERD, which bred and raised Sammamish Topsy, the Guernsey holding the best record west of the Missouri river, 831.58 pounds butterfat in one year. On this occasion will be sold the progeny of this famous cow, one son, three daughters, fourteen granddaughters and one great-granddaughter.

HOW TO GET OUT THERE—Orchard Hill Farm is located one mile north of Redmond, near Seattle. Ferries leave at the foot of Madison street, Seattle, at 7:15 and 8:30 a. m. for Kirkland, and a stage will meet the Ferry going direct to the farm. Those coming by automobile can take the New Bothell highway out of Seattle to Bothell, Woodinville, past Hollywood Farm, and on through to Orchard Hill Farm on the paved highway.

It has also been arranged for stages to leave the Frye hotel, Third and Yesler, at 9 a. m., going direct to the farm.

ORCHARD HILL FARM, Redmond, Wash.
DR. PARK WEED WILLIS, Owner. 1256 Empire Bldg., Seattle.

what method of feeding do you use—

trust-to-luck or trust-to-cluck

THE difference between a poor-paying flock and a profit-paying flock is the difference between take-chances and take-NO-chances. Indifferent, haphazard, "trust-to-luck" feeding will never pay. It can't! Nothing will rob you of your rightful profits as quickly as blind feeding. True, your hens may live and be fairly healthy on a poor ration. But—

You are in the poultry business to make money. The more eggs you get the more money you net. You must realize, then, that it takes an excessive amount of a hen's energy to convert poor feed into money as against converting good feed into money. So that—far from saving mo[illegible]—the only result of a "cheap" ration is a *higher cost* for each do[illegible]ggs produced.

A tasty, well-balanced ration is absolutely necessary for maximum production—that's sure! Equally sure is the fact that a uniform, quality-feed like SURELAY pays its way—and more! Its slight added cost comes back to you many times over in the extra eggs produced.

Have you ever compared the results you're getting from "trust-to-luck" feeds with the results other poultrymen are getting from SURELAY? After all, the real profit-point is this: What do your *hens* think of the feed you give them—and what do they do with it?

Why not put this egg-production question squarely up to your hens? Feed them SURELAY—a prime, true-to-test formula that has weathered the years—and let the results speak for the feed and for us. Meanwhile we suggest that you write for your copy of the new, enlarged edition of "Makes Hens Happy." It is the most complete and helpful handbook on poultry husbandry we have ever issued—and it's free. Simply clip the coupon—and mail today!

Potato Shows Are Becoming the Order of the Day—Page 3

Ptomaine Poisoning Like Lightning

Ptomaine poisoning is like lightning—one never knows where next it will strike, or who will be the victim. A news dispatch from Wenatchee, Wash., reports the death of three ranchers living in Tumwater canyon, on the Columbia river, 35 miles east of Okanogan, from eating contaminated canned beans.

Another news item from Helena, Mont., says that tests of samples of home-preserved corn show the presence of the botulism germ, which caused the death of a school teacher in Prairie county.

At the annual convention of food commissioners at Kansas City last week an address by Dr. Charles Thom of the United States bureau of chemistry dealt learnedly with the problem of protecting the public against impure foods.

Dr. Thom believes that botulinus organisms are distributed by rodents and other vermin which infest food-handling establishments. In addition, dirt, filth and all the accidents and contacts of handling, including both human and animal carriers, provide ample opportunity to pass contamination from product to product. The somewhat alarming conclusion is reached by this expert that the consumer of such a product, without knowledge of its history, has little or no protection from his senses. All investigations agree on that point.

On the other hand, it is encouraging to be assured that any cooking process in which the entire mass approximates the boiling point will destroy these deadly germs entirely. Canned food, if it keeps at all, must be cooked at a heat far higher than that necessary to kill the fatal germs. Infections of this kind are, therefore, unlikely from products direct from the can.

The danger, then, from food in cans comes largely from defective cans that allow the product to spoil after it leaves the cooking chamber of the cannery. The precaution should always be taken to examine the can before the contents are served at the table. A can in which active growth is found becomes a "springer" first, and then a "swell," with odor unnatural to the product. Dr. Thom advises dealers that no "swell," "springer," "dripper" or "leaker" should be accepted or sold by them. He further advises that a supply of botulism antitoxin should be maintained in centers accessible to every section of the country. Saving the sufferer, he says, is a problem that may be left to the medical profession. THE FARMER wonders to what extent the physicians of the Pacific northwest are alert to this danger and are taking precaution to keep a supply of antitoxin.

Dr. Thom clearly points to a very general failure to appreciate the danger of bacterially contaminated and of spoiled food. He advises that food to be eaten raw should be fresh, clean, sound—free from stale odors, from slimy, rotting, areas, from discolorations and from mold, and should be carefully washed in an abundance of clean drinking water. Sound food, freshly cooked, does not cause food poisoning.

Moist or soft cooked foods, if held more than a few hours, should be kept in a good refrigerator. If such refrigerator is impossible the food, even though showing no sign of spoilage, should be recooked before serving.

This eminent authority justly concludes that responsibility for preventing the consumption of spoiled food rests equally upon the packer, the dealer and the person who prepares it for the table. Every person, he declares, handling any kind of foods should be familiar with standards of quality, appearance, odor and texture of the product, whether handled in bulk or in sealed containers. We wonder how many persons who handle food in one way or another measure up to that qualification.

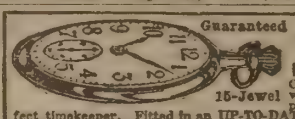
In the meantime, report has been made of an exhaustive investigation over a period of several years of the medical schools of Harvard and the University of California, and Stanford university, in cooperation with the United States public health service, says, using figures supplied by the California investigating authorities:

"During the year 1920 there were more than 97,000 deaths from tuberculosis in the United States, more than 3000 from dysentery, more than 1700 caused by accidental poisoning by products other than foods, nearly 5000 from drowning and more than 400 persons killed by lightning. When we compare these with the average annual death rate from botulism of less than 25, the position of botulism among the causes of death becomes insignificant.

"If we accept, for the sake of argument and without qualification, the statement that a total of 29 outbreaks of botulism have been caused in the United States by commercially canned foods (an average of less than three outbreaks per year) the number is still relatively small in comparison with the total pack. We should bear in mind that during recent years the annual total pack of canned foods of the United States has been not far from 4,000,000,000 cans. There has, therefore, been less than one outbreak of botulism ascribed to commercially canned foods for every billion cans that have been packed since botulism has been recognized as a disease that might be possibly caused by canned foods."

And yet, if that one fatal case happens to come to a member of your own family, there is not much comfort in the ninety and nine, or the nine hundred and ninety and nine that may escape. There is no gainsaying the fact that this is a subject of vital importance that well may engage the study of farm organizations at their conferences and social sessions. The best scientific advice can be freely had by writing to your state agricultural college or to the department of agriculture at Washington, D. C.

BRINGS LOW PRICES.



The Hereford sale during the Western Royal Stock show resulted in low prices and only part of the animals was sold. Most of the consignments were in fair sale condition and some of them were in high flesh and show condition. But the buyers were not there.

PLAY-OLA $15

This wonderful talking machine plays all standard records up to 10 inches; equals in tone a $100 machine. Have a PLAY-OLA in your home and enjoy a band piece, a song, a comedy or a march, according to the mood of the family. Surely you can afford to pay this low price of $15 for the everlasting enjoyment it will give you. Thousands are being sold for Christmas presents. To quickly introduce it in every locality, we are offering the PLAY-OLA at the low price of $15 each. Rush $7.50; balance C.O.D. shipped by express.

New Process Play-Ola, P.F.T.CO., Salina, Kan.

Will Your Child Be Next?

Here are some startling facts:

"The New York State Health Department," says a leading national farm journal, "has found that twenty-one percent of the country school children have defective vision as compared with five percent of city children."

Four times MORE eye trouble in the country than in the city—*WHY?*

The farm journal gives its own conclusion: POOR LIGHT IN MANY COUNTRY HOMES!

Install a Colt "Gas Well" and Get Sunlight After Dark

How is your home lighted? Preserve good vision by installing a COLT "Gas Well." Live, work and read indoors under sunlight!

The COLT generates carbide gas which gives a clear, steady light exactly the color of sunlight. A *white* light—not a *yellow* one. A light that rests and soothes the eyes instead of taxing and straining them—"Artificial Sunlight."

Goes on at the twist of fingers, too—no matches.

Generated automatically by the COLT from carbide and water—no bother. Simple and economical—nothing to fuss and tinker with.

Use the gas also for cooking—a city refinement brought to the country home.

From Factory to Farm

The COLT comes to you complete and ready for installation from the factory—no dealers. Sold direct by COLT solicitors. Easy to install—within reach of all.

You Insure Your Life, Home and Car
—Now Insure Your Family's Eyes

Poor eyesight is a life-long handicap. Don't burden yourself and children with it—*install Carbide gaslight NOW, before Winter with its long nights sets in.* Easy and quick to do. Dependable and preferable—a half million in rural communities use it. Just drop us a postcard and we'll give you full particulars.

Potato Shows Are Growing in Interest

The Four States of the Pacific Northwest Will Unite in Big Show and Conference in Spokane

Remarkable interest in the potato growing industry is seen all over the northwest and potato shows are a common occurrence. This week there is being held in connection with the Pacific Northwest Fruit exposition the Western Washington Potato show. There has just been held in Olympia the Thurston County Potato show. Sandpoint, Idaho, also has been the scene of the Sandpoint and Bonner County Third Annual Seed Potato show, the winning exhibits to be taken to the Idaho State Seed show, the Yakima Potato show and the Pacific Northwest Potato show. The last named show will be held November 21-24, inclusive. There will also be held in Spokane on the same dates the Pacific Northwest Potato Growers' conference. The potato show exhibits will be in the Chamber of Commerce assembly room and will be open to potato growers and exhibitors from 9 a. m. to 12 and from 1 p. m. to 10 p. m., the show will be open to the public, admission free.

The potato growers' conference will be held in the Davenport hotel, opening at 1:30 p. m. Tuesday, November 21, with an address of welcome by J. K. McCornack, chairman of the agricultural bureau of the Spokane Chamber of Commerce, the response by H. F. Schedler of Sandpoint. This will be followed by the annual address of the president, G. J. Cannon of Buckeye on "Relation of the Seed Potato Growers to the Growers of Commercial Stock." Dr. G. K. K. Link, bureau of plant industry department of agriculture, will discuss that most important topic of potato growers, "Mosaic and Leaf Roll; the Menace to the Potato." "What Can We do to Regulate the Potato Planting Industry?" is the subject of the address by C. W. Eckman. The closing address of the afternoon will be by Dean E. C. Johnson of the State college of Washington on "Educational Needs of the Potato Grower of the Northwest."

Wednesday afternoon, November 22, the conference will begin with an address by Dr. William Stuart of the bureau of plant industry, United States department of agriculture, on "Potato Growing From a National Standpoint." The next item on the program will be a report and discussion of the "Season's Experimental Work on Potatoes," by Professor G. R. Hyslop of the Oregon Agricultural college; Professor O. M. Morris of the State College of Washington; Professor C. C. Vincent of the University of Idaho and Professor F. M. Harrington of the Montana College of Agriculture. E. R. Bennett, horticultural specialist of the extension division of the University of Idaho, will talk on "Lessons From Field Observations During the Last Season." J. E. Currey, Washington state seed inspector, will discuss "Efficient Method of Growing Seed Potatoes." The closing address of the afternoon will be given by Professor George R. Hyslop of the Oregon Agricultural college on "Methods of Utilizing Cull Potatoes and Surplus Stock."

Thursday is Certified Seed Day, the program beginning at 2 o'clock in the afternoon with an address by H. N. Werner of the University of Nebraska on "Certification for Potatoes in the Plains States." Business committees will be appointed, including a committee to draft rules for commercial grades and standards of potatoes to be recommended to enforcement officials of the four northwestern states.

The annual dinner, with George J. Cannon as toastmaster, will take place Thursday evening, the chief address being made by Dr. W. J. Hindler, educational director of the Washington state retailing association, on "Marketing of the Northwestern Potato From the Retailer's Point of View."

Friday is "Commercial Grades and Standards Day," the program beginning at 1:30 in the afternoon. "Potato Grades and Their Enforcement" will be discussed by Charles A. Park, president of the Oregon state horticultural division; Charles L. Robinson, Washington state supervisor of horticulture; W. H. Wicks of the Idaho department of agriculture, and William L. Schovell of the Montana horticultural division. This will be followed by a report of the committee on commercial grades and standards. This report, after final adoption, will be submitted to authorities of Oregon, Washington, Idaho and Montana, with the recommendation that they be incorporated in their state rules and regulations.

Rates of fare and one-half have been adopted on the certificates from all parts of Washington, Oregon, Idaho and part of Montana west of Great Falls and Bozeman, to become effective when 150 receipts have been received.

The Pacific northwest is sending millions of dollars each year for seed potatoes, while this part of the country has the soil, altitude and climatic conditions necessary for the production of the best kinds of seed potatoes. The Northwest Potato show is for the purpose of encouraging the development of an industry that will keep these millions of dollars at home, make profitable the development of thousands of acres of land now idle or only partly productive and furnish to the potato growers of our large potato-growing districts a seed grown under conditions that will assure good results backed by a certification that will guarantee quality. Another important function of the show will be to assist in bringing together the buyer and the grower of seed potatoes for their mutual benefit.

W. P. Romans, general manager of the Pacific Northwest Potato show at Spokane, reports increased interest taken in the potato show this year, as compared with last year. Exhibits are coming in from Montana, Idaho, Washington and Oregon. Mr. Romans also reports that the growers are especially concerned over mosaic and leaf roll, as menacing the potato industry, and are anxious to learn of the most effective means of eradicating these potato diseases. There will also be a special interest taken in the subject as to how far it is practicable to regulate potato planting acreage.

A study of potato production in the United States during the last 40 years shows not only a growth in the amount produced, but in the per capita consumption as well. In the decades previous to 1905 there were produced in the United States three bushels of potatoes per capita. For the decade ended 1915 there was produced 3.7 bushels and in the years following 1915 to 1921, inclusive, the average production has been 3.5 bushels for each man, woman and child in the country. In later years people have found potatoes more desirable as a food and greater qualities have been consumed. There has also been an increase of yield per acre. From 1880 to 1900 the average yield was approximately 77 bushels per acre; for the last 20 years the average has been about 90 bushels.

In the '80s the biggest crop was in 1883, when about 210,000,000 bushels of potatoes were raised. This yield was not equalled again until 1891, when more than 250,000,000 bushels were produced. In 1895 the yield went up to nearly 300,000,000 bushels, and the average total production during the last few years has been around 350,000,000 bushels. There is, however, a great difference in the quantity of the potato crop from year to year. For example, in 1919 the production in the United States was 323,000,000 bushels. In 1920 it went up to 403,000,000 bushels, and in 1921 back to 347,000,000 bushels.

In 1920 Montana produced 4,400,000 bushels; in 1921 5,060,000 bushels. In 1920 Idaho produced 8,100,000 bushels; in 1921 10,545,000 bushels. In 1920 Washington produced 8,215,000 bushels; in 1921 7,425,000 bushels. Oregon's production in 1920 was 5,590,000 bushels and in 1921 3,870,000 bushels.

It is noticeable that the potato crop of the United States is produced and consumed practically entirely within the 12-months' period.

Graded Potatoes

"Practically all other farm products except the potato have been standardized, and many of them packed in special packages," says M. D. Armstrong, extension horticulturist of the state college. "If the potato were standardized much in the same manner as apples it would greatly increase the returns to the growers and cut down the tonnage shipped.

"In the first place, grading would overcome the surplus that is being experienced this year. It would bring more money to the grower for what he does sell. It would also save resorting at the wholesale houses.

"An increased consumption would be the result of a more attractive potato. An even sized, smooth tuber is always preferred by the housewife and more would be used.

"When potatoes are not graded the grower pays freight on the culls, which are thrown away. If all market potatoes were carefully graded and the culls left at home for the stock feed it would cut down the total tonnage from 10 to 20 per cent. This would eliminate part of the freight charges, and yet the total returns would be as great, if not greater than they are by the present system.

"In Idaho and Colorado the potato growers have come to realize that they must grade their product and they get from 20 to 40 cents more per 100 pounds from the eastern market than do the growers from some of the potato sections in the middle west. The dealers buy the potatoes on their reputation and when once a district has established a name for putting out a good product it is an easier matter to handle the succeeding crop.

"A careful study of the potato grades established by the United States department of agriculture will help any grower sorting over his crop for the market. Some growers are already using this standard with good results. There are times when two of the grades can be combined and sold as a combination No. 1 and No. 2, but it would not pay on a year like this when there is already a surplus. It is best under such conditions to market only the best grades and keep the rest at home.

"When possible it is a good plan to put out a fancy grade, which is one of the United States grades," concluded Mr. Armstrong. This, of course, is for special trade, and in most cases they want them selected carefully for size and shape. The returns from such a grade more than compensate for the extra trouble of putting it up. The small tubers that are sorted out can often be sold to restaurants for boiling, and in this way save feeding them to stock.

Thurston Has Potato Show

The Puget potato properly prepared is
Pleasing to the palate.
Such propaganda, properly promulgated,
Promotes permanent prosperity.

The above jingle painted on a canvas was the keynote of the Thurston County Potato show, held in one of the Olympia garages November 3 and 4. And it was properly promulgated, with special emphasis on quality. Some of the local potato growers and E. B. Stookey, the county agent, thought their motto complete, but another farmer, whose market had not been the best, added the following:

"Provided proper prices prevail."

The potato show was the result of an effort to get the farmers and merchants together in the marketing of the local crop. Good potatoes have demanded a better price at all the stores, but the home-grown potatoes very seldom came up to the standard of the ones shipped in from the potato-growing sections.

Careful grading and close adherence to the varieties are demanded by the average housewife, the long white tuber being given as the best solution to the problem of selling the home-grown tuber. The White Star was shown in greater numbers, while the Burbank and Pride of Multnomah were well represented. There were also a few Netted Gems and Beauty of Hebrons.

The exhibits, which were in 100-pound and 32-tuber classes of seed and market stock, were placed on long tables. Each group was labeled and after the judging was finished by M. D. Armstrong, the extension horticulturist of the state college, the name of the exhibitor and the placing were added.

There was splendid cooperation shown by the Olympia Chamber of Commerce and the merchants, who furnished the prizes for the classes. A Champion potato digger, offered by the chamber of commerce for the best 100 pounds of White Star, Burbank or Improved Pride of Multnomah, was won by Roy Taylor of Olympia, while his father, Guy Taylor, took second. Both had Burbanks. The other placings were Irving Lassen, third; Sam Madden, fourth; F. A. Johnson, fifth, and Walter Smith of Lacey, sixth.

In the seed potato classes Roy Taylor again won over his father on certified Burbanks. For White Star, F. A. Johnson stepped to first place and Roy and his father took second and third. With the uncertified Burbank seed Sam Madden won first, Roy Taylor second and Guy Taylor third. Guy Taylor won first and F. A. Smith second with Beauty of Hebron seed. Guy Taylor was the only entrant for the Pride of Multnomah.

In the table stock classes F. A. Johnson took first on White Star, while Guy and Roy Taylor won second and third. Guy Taylor won over Roy with the Burbanks. In the Pride of Multnomahs Guy Taylor won first, Walter Smith second and F. A. Smith third.

The sweepstakes prize was taken by F. A. Johnson, who showed White Star table stock. Roy Taylor took the sweepstakes on seed potatoes with his first prize Burbanks, thus winning the bushel of Burbank certified seed offered as the prize. In most cases the prizes were merchandise, while some of them were in the form of savings accounts given by the local banks.

A potato grader had been set up at one corner of the room. It was the type advocated by the state college and was built by Sam Madden of Olympia, at a cost of $1.75 for material. A sack of ordinary local-grown potatoes had been purchased from one of the stores and placed on the grader. Mr. Armstrong was asked to grade the tubers and he found that fully 35 per cent should have been placed in a lower grade.

The sack, of course, was not sold as No. 1, but it was what the housewife is forced to accept when she buys local potatoes. Mr. Stookey pointed out the fact that this was one reason why it was difficult for the Thurston county farmer to sell his potatoes. The growers in some of the potato-producing sections are more careful about what they send out and they are better able to get good prices.

In order to show the cooking qualities of the different varieties, Miss Ruth Kennedy, county home demonstration agent, prepared three of the main varieties and displayed them on plates. The time required for cooking each variety was indicated.

There was little difference in the time required for the Burbank, White Star and Netted Gem, since each took one hour to bake and from 28 to 36 minutes to boil. Steaming, however, took from 38 to 50 minutes. As a direct contrast to the long white type, the Gold Coin was cooked in the same three ways. This potato is the round white type and is not advocated for this section of the state. When baked it was found to be very mealy and it required but 45 minutes in the oven. Steaming took 35 minutes, while boiling required but 22. For the last two purposes, however, it proved to be inferior to the other three varieties, since it all cooked down to a mash. This feature discounted the variety as a potato for general use in the kitchen.

Potato Crop in Germany

In the three years before the war Germany was producing about 44,000,000 tons of potatoes a year, only 12 million of which were consumed as human food—less than one-third of the crop. The rest was used largely for the feeding of live stock and for industrial purposes. It was this enormous surplus of potato production that enabled Germany to go through the four years of war without actual starvation, and it has also enabled them to get on since the war, by greatly increasing potato consumption and reducing bread consumption.

The following table shows the pre-war and post-war utilization of potatoes in Germany:

	Pre-war Tons.	Post-war Tons.
Human food	12,000,000	18,000,000
Seed	5,200,000	5,000,000
Starch	1,400,000	150,000
Alcohol	2,500,000	100,000
Animal food	17,600,000	2,000,000
Spoiled	4,300,000	1,000,000
Total	43,000,000	26,250,000

The human consumption of potatoes

F. H. Bell, Steger building..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Railway Excuses Will Not Satisfy the Northwestern Fruit Growers

Rufus Woods, editor of the Wenatchee World, and Benton Bangs, representing the fruit growers' committee of the Wenatchee Commercial club, made a spectacular appeal to Yakima to join Wenatchee in a systematic campaign to save the fruit growing industry from the destructive consequences of the break-down in the service of the transcontinental railroads. They traveled by airplane from Wenatchee to Yakima and put before the people of the Yakima valley a statement that has constructive merit.

Their first appeal is to public opinion, "which is the strongest argument in America today," "for a coordinated call on the interstate commerce commission to turn its attention toward an immediate diversion of cars to take care of the perishable crops."

They also ask "for immediate opening of the Spokane gateway and that a representative of the interstate commerce commission be stationed at Spokane to see that this diversion is properly complied with." The Wenatchee delegates then add in their statement:

"This program aims at quick and immediate relief, so far as it is physically possible to give it now, but, beyond that, it looks to a far-seeing, permanent preventive of a repetition of the present disaster."

The heads of the transcontinental railroads are making excuses, but their explanations are not convincing. It is clear that they have been drifting without systematic coordination, or even energetic and sagacious action by individual railway systems to supply the orchard industry with the necessary cars and locomotives to move the perishable fruit crops to market.

The Result of Reclamation

The people of the great manufacturing districts of the east and middle west appear slow to realize the value to them of the development of the arid and otherwise waste land of the west. They do not realize the increase that will result in their business when these lands are developed and made the homes of large numbers of prosperous people.

On this point some interesting figures have been prepared by the Western States Reclamation association. The figures apply to five projects in Washington and Idaho, namely, the Minidoka, Twin Falls south side, Twin Falls north side, Yakima and Nachez Valley projects. They show that during the year 1920 the railroads of the Union Pacific system alone shipped to these five projects a total of 18,975 carloads of manufactured goods and other merchandise from 38 of the 48 states of the Union. In addition to this, millions of dollars of merchandise in less than carload quantities were shipped to the same projects. The state of Massachusetts, little larger than some of these irrigation projects, and situated on the Atlantic coast, shipped eight full carloads of goods to the people of these formerly waste lands. New Jersey, also on the Atlantic coast, shipped 25; New York, 48; Pennsylvania, 26; Ohio, 97; Michigan, 213; Illinois, 283; and so on.

Such figures as these should convince the most skeptical easterner that he should be interested in the development of these western lands, and that he should support rather than oppose legislation in congress looking to that end.

Stupendous Changes Wrought

Death has called John H. Bartlett, who settled at Port Townsend, in this state, in 1852. Washington was then a part of Oregon territory, and Port Townsend and Olympia had high expectations of growing into the metropolis of the Puget sound region. Ezra Meeker, who with his brother rowed the full length of Puget sound in a skiff in 1852, then noted that Port Townsend, rising impressively on its heights, had an appearance of great activity. That was the period of the extraordinary growth of San Francisco, and Port Townsend harbor was dotted with sailing vessels loading lumber and shingles for the California market. Port Townsend was booming in 1853. Its boosters argued that they had the strategic position for the coming trade with the orient, but Olympia countered with the boast that it was the point where the ships would make the nearest approach to the products of the interior.

All eyes were then on Port Townsend and Olympia; Tacoma was not even a beginning. The only thing at Seattle was Yesler's sawmill, and the small population gathered around that pioneer activity had little to boast of and laid claim to no great expectation.

As for agricultural development, it was only in its beginning in the vast wilderness north of the Columbia river. The Willamette valley in Oregon, by 1852 and 1853, had become a region of considerable productiveness and was finding a profitable market for its products in San Francisco. But north of the Columbia settlement was only starting on the few open spaces or comparatively open prairies, on some of the islands and in the river valleys.

As for the vast region east of the Cascade mountains, it was still nearly as wild and untenanted by white men as when Lewis and Clark broke into it in 1805. A few stockmen had invaded the Walla Walla valley, but the Palouse country, the Big Bend region and the rich prairie parts of northern Idaho and eastern Oregon were grazing grounds for Indian ponies.

Eighteen hundred and fifty-two seems a long way into pioneer history. It was 70 years ago, but even so, Mr. Bartlett was a youth of 17, and in those days youths of 17 played a man's part in the pioneer communities. His was a life of extraordinary changes, not only in this region but in the Union and the whole world as well.

LOOKING INTO OTHER FARM FIELDS

Bananas valued at $19,088,000 were imported into the United States during the year 1920. Imports of bananas during the previous two years were valued at about $15,000,000.

* * *

In New York city unloads of Texas onions during April and May amounted to 832 cars, and in the same period the following equivalent carloads arrived from foreign countries: Egypt, 300; Bermuda, 72; Chile, 56; Australia, 20; Argentina, 16, and Mexico, 8.

* * *

The monthly report of the ninth federal reserve district, issued from Minneapolis, sees expansion in the northwest of the sheep raising industry, as this part of the country has been placed in the strongest strategic position by the new tariff on wool and sheep products.

* * *

The Southern Pacific company has placed an order with eastern steel plants for 75,000 gross tons of rails, valued at between $3,000,000 and $4,000,000, for delivery in 1923, it was announced at San Francisco by the company. Approximately 50,000 tons will be used on the Pacific system of the company, providing a total of 330 miles of rails in the west.

State Farm News

Dr. Paul W. Allen, Cortland, N. Y., has been appointed bacteriologist of the experiment station at Washington State college to succeed W. I. Nightengale, resigned. Dr. Allen received his early training at St. Lawrence university, Cornell university and the University of Illinois, receiving his doctor's degree from the latter institution. He was associate in dairy bacteriology at the University of Illinois and in the agricultural experiment station of that institution from 1914 to 1918, inclusive.

* * *

Dairymen of Clallam county held their second annual banquet in connection with the Clallam county fair. County Agent A. W. Holland and Extension Dairy Specialist F. W. Kehrli were speakers on the program.

* * *

J. W. Peterson, a beekeeper of the Edgewood district, in Pierce county, reports two colonies each of which produced 200 pounds of surplus honey. In addition he increased his 30 colonies to 60, some of which were made from natural swarming, while others by division, which was done before the honey flow was over. All hives are strong and a good strong queen is used in each.

* * *

Anticipating more or less of a car shortage to be an annual occurrence for many years, W. F. Gwin of the North American Fruit Exchange believes that more cold storage and more paved roads, as well as more transportation, is needed for the Wenatchee district.

* * *

Although the car shortage is being keenly felt in the fruit districts of the state, shippers have been taking advantage of every means of transportation. Many coal cars that have come in loaded have been reloaded with hay, grain, fruit or potatoes and covered with a large canvas before being shipped out. It is estimated that over 200 cars loaded in this manner have been sent from the Yakima valley in one week.

* * *

It is estimated that the sugar beet crop of the Yakima valley grown on 3200 acres this year will yield as large a tonnage as was harvested from 6000 acres last year. One farmer on the reservation, A. B. Bartlett, reports harvesting 294 tons from 15 acres, an average of 19 1-2 tons of beets to an acre.

* * *

The fruit packers of Yakima are confident that a new record in packing boxed apples has been made by Mrs. Minnie Markel. One day she packed 225 boxes of Rome Beauties and another day at the Yakima Orchards company plant at Moxee her total was 216 boxes. Mrs. Markel is reported to make daily packs of Winesaps of between 150 and 180 boxes, while the fastest man packer is credited with a daily average of 150 boxes.

* * *

W. H. Talley, the newly appointed secretary of the Washington Farm Bureau federation, will make his home in Yakima. He was formerly county agent in Walla Walla. Mr. Talley says that one of his first activities will be a drive for a greater farm bureau membership through the state.

* * *

Donald Urquhart has transferred to Mr. Lich at Colfax his holdings near Wilson Creek, comprising more than 6000 acres. Part of the land is irrigated from Crab creek and the ranch is considered one of the finest in the county for grazing. The reported consideration is in the neighborhood of $200,000. Mr. Urquhart settled on part of this land in 1886.

* * *

Bellingham may ship its first carload of head lettuce, sending the product to Montana. The lettuce was bought from growers at $1.75 per crate.

* * *

Seattle has had a short-lived milk "war" of about a week, the cut of 2 cents a quart being restored. Under the regular winter price delivery is to be made at the rate of 13 cents a quart and eight cents a pint, with a price at the retail stores 1 cent less in each instance.

* * *

Kittitas and Yakima counties, constituting horticultural district No. 5, will have 32 delegates to the state grade and pack convention at Spokane early in December, according to W. L. Close, Yakima county horticultural inspector. The representation is based on production, one apple delegate for each 750 carloads produced in 1921, and one for each 300 cars of potatoes.

Preliminary meetings will be held in each county this month to select delegates.

* * *

Squash farming has been unusually successful in Skagit county and squash canning is a feature of the packing industry there.

* * *

The best yield of wheat reported this year is that of R. H. Schroeder of Mount Vernon, whose production is given as 105.6 bushels per acre. This recalls the record yield of 117 bushels that was produced by the Comstock brothers of Coupeville, which is said to be a world's record.

* * *

The canning season for the Mount Angel Packing company has closed with a total of 32 cars disposed of and, although about 14 cars still are in the warehouse, most of the product has been sold. The packing and shipping probably will require several months and the management is planning on having things pretty well cleaned up by January 1. The plant is a growers' cooperative concern.

* * *

There were 274 predatory animals killed by federal hunters in the month of September. Of this number there were 4 stock-killing bears, 255 coyotes, 2 foxes and 1 wildcat. This report comes from Glenn R. Bach, predatory animal inspector.

* * *

The total production of cauliflower in California and New York this year is estimated at 6340 cars by the U. S. department of agriculture. Production last year was 5567 cars.

* * *

Sixty-three students of the agricultural department of the Yakima high school put on a remarkable fair in the Yakima Commercial club rooms. The apple display was particularly fine for its selection. There were 274 plate displays of fruit and 21 varieties of apples shown. The fruits were judged by W. L. Close, district horticultural inspector and the vegetables and grains by County Agent A. L. Lovett. Awards were made on corn, watermelons, pumpkins, squash, potatoes, beans, tomatoes, cucumbers, carrots, onions, popcorn, shelled and sheaf grains, alfalfa, timothy, red clover, sunflowers, wool, hops, eggs and canned exhibits.

FARM BUSINESS AND MARKETS OUTLOOK

Although it is universally recognized that agriculture has benefited least of any of the major industries from the business improvement which has occurred in recent months, yet farmers are much better off than they were.

A measure of the change that has taken place is furnished by a comparison of present prices with those prevailing at the corresponding time last year. The table below gives average prices of the leading farm commodities early in November this year, and on the same date in 1921, together with the percentage of change. Of the 22 commodities 17 are higher than last year and in most cases the gains are quite substantial. With but a few exceptions the advance is not at the expense of crop yields or quantity of production of live stock or live stock products. In the five instances in which prices are lower than last year, decidedly increased production was a factor.

Commodity.	Nov. 7, 1922.	Year ago.	Per cent increase.
Fat hogs, cwt.	$ 8.30	$ 7.55	10.0
Steers, cwt.	10.20	7.70	33.8
Lambs, cwt.	13.75	8.80	56.3
Sheep, cwt.	6.65	4.00	66.3
Wool, lb.	.57	.35	63.0
Butter, lb.	.485	.43	12.8
Cheese, lb.	.23	.20 1-4	17.3
Eggs, doz.	.425	.51	16.7 (a)
Hens, lb.	.18	.225	20.0 (a)
Wheat, bu.	1.185	1.015	16.8
Corn, bu.	.71	.47	51.1
Oats, bu.	.44	.35	25.7
Rye, bu.	.863	.77	12.0
Barley, bu.	.655	.495	32.3
Kaffir, cwt.	1.70	.91	86.8
Hay, ton	22.00	21.50	2.3
Flax, bu.	2.575	1.725	45.8
Cotton, lb.	2.63	.1875	40.3
Beans, cwt.	7.00	4.40	59.1
Potatoes, cwt.	.95	1.725	44.9 (a)
Onions, cwt.	1.65	3.75	56.0 (a)
Apples, bbl.	5.50	2.25	33.3 (a)

(Note: (a) decrease.)

This is not the only evidence in the case. Last year farmers were hard pressed for funds to carry on their activities and the war finance corporation was making extensive loans. These loans are now being repaid at the rate of $14,000,000 a month. Furthermore, in some sections, at least, most farmers are paying off their bank obligations in advance of the due date.

High taxes and interest have not eaten up all the increment, as farmers are buying more general merchandise than last year. Two of the leading mail order houses sell largely to farmers, hence it is significant that one reports an increase in its Ortober sales of 35.31 per hent over October, 1921, and the other a gain of 17.7 per cent in the same interval.

Slump in Cattle Checked.

Liquidation of short fed steers from the corn belt was checked at last, after values had declined from 50 cents to $2 below the October high spot and a small upturn was scored. The range supply also gave signs of running out, especially on southwestern markets. The dressed beef market has been congested by heavy slaughter in the last few weeks, but showed a prompt return to health as soon as the fast cure was applied, indicating that a broad demand for beef persists in spite of the competition from pork and poultry.

Car shortage has delayed the movement of westerns and the run promises to remain more heavy than usual during November. In the southwest, however, it is reported that a cleanup will be affected in another week. Some Canadian cattle are still coming into this country in spite of the tariff.

Prices on prime steers probably have reached the crest and from this time on the trend of values will be downward. Prices on intermediate grades will be influenced by the rate at which the large number now on feed are returned to market. Always there are many feeders without shelter, or enough feed or faith in the market to continue feeding well into the winter. Broad demand for beef may maintain values somewhere near the present level, but there is little prospect of fully recovering the recent loss.

The movement of stockers and feeders remains heavy and would be still greater if cars could be obtained for shipment from the central markets. Prices have declined in the last few days, especially on heavy feeders. Stock cows and heifers are unusually cheap in view of the level of cattle values, most of those going out from Chicago at from $3.50 to $4.75.

Hog Market Looking for Bottom.

Lighter receipts of hogs and greater willingness of packers to purchase when prices at Chicago approached the $8 level brought about a moderate upturn for a few days. A further addition of 25 per cent to the supply is probable in the next six weeks and further declines in values are to be expected. The increase will be offset in part by an increase in purchases for eastern shipment, which at the present time are only about 60 per cent of those at the corresponding period last year. All observations in the country indicate that the hogs are reaching market condition at a rapid rate and a heavy run during the late fall and early winter months is assured. At the present time $8 at Chicago seems to be the fighting level, but it will not be surprising to see numerous dips to $7.50 when the movement is at high tide.

Consumptive demand remains broad and the movement for export is heavy. The number of hogs slaughtered during October appeared to be about 13 per cent above the average.

Recovery in Lamb Market.

After the worst break in a number of months, due to heavy runs at Chicago, Buffalo, and a break in the eastern dressed lamb trade, growers shut off the supply and prices have recovered about half of the loss. This week receipts at 10 markets have dropped about 40 per cent and with feeders taking their full quota the number for slaughter is limited. Lamb feeders have been made cautious by the break in fat lambs and prices of thin lambs have not come back so rapidly. Range lambs arriving now are mostly in feeder condition.

Wool Market Continues Firm.

The wool market continues firm, with prices slowly working higher. The goods market is healthy and mills are about as active as they ever become. Only the limited supply of wool in the hands of dealers or growers prevents the consummation of larger sales. Foreign markets are strong and give evidence that prices are not yet at the top. Growers are primarily interested in the prospective value of the new clip and predictions of materially higher prices appear justified. Some of the fed lambs now returning to market have been shorn, as feeders are looking for higher wool prices.

Wheat Prices Maintained.

Wheat prices remain close to the highest figure of the season since the 1922 crop began to move in volume. Mills are the chief factor in the market and the scarcity of choice wheat was exemplified by the sale of Canadian wheat to a Chicago mill notwithstanding the 30-cent duty. Moderate sales for export are being reported every day, mostly Manitobas, but clearances of wheat alone from United States ports have been averaging over 3,000,000 bushels each week. Sterling exchange is fairly firm, but the weakness in francs and marks is hampering business with those countries.

Rains in the southwest have vastly improved prospects for winter wheat planted in that section, but the entire dry area was not relieved and reports continue to point to a decrease of approximately 10 per cent in the acreage.

The first official report on the coming Argentine crop shows an increase of 3,000,000 acres over last year and a crop of 216,820,000 bushels, compared with a final estimate of 181,000,000 bushels last year. The surplus for export according to the official estimate is 148,000,000 bushels. The increase in the Argentine crop over last year largely offsets the decrease in the Australian prospect, so that the total surplus from the southern hemisphere should be about the same as a year ago.

The wheat situation remains a merchandising affair, with prospects of higher prices later on if importing countries can finance the purchase of as much wheat as they need.

Corn and Oats.

The government's estimate upon the new crop and carryover were 110,000,000 bushels higher than the private reports. However, the former showed a total supply, including stocks at terminals of only 3,084,000,000 bushels, compared with 3,385,000,000 bushels last year and an actual disappearance of 3,197,000,000 bushels in the last 12 months.

Production of oats in 27 countries for which comparable data are available totaled 3,017,538,000 bushels in 1922, compared with 2,742,438,000 bushels last year, 3,269,712,000 bushels in 1920 and an average of 3,007,788,000 bushels in the five years, 1909-1913.

Cash grain markets—The range of cash grain prices for the week ended November 8 was as follows: Chicago—Wheat—No. 2 red, $1.22 3-4@1.25 1-4; No. 3, $1.18 1-2@1.22 1-2; No. 2 hard, $1.17@1.20 1-2 Corn—No 2 mixed, 69 1-4@72 1-4c; No. 3, 66 3-4@71 1-4c; No. 2 yellow, 69 1-2@72 1-2c; No. 3, 67 3-4@72c; No. 2 white, 70@72 1-4c; No. 3, 66@71 1-2c. Oats—No. 2 white, 43 1-4@45c; No. 3, 42 1-4@44 1-4c; No. 4, 41 1-2@43 1-4c. Barley—60@70c. Rye—84@86 3-4c.

Seed Market Gaining.

The seed market is gradually advancing, with timothy especially showing a sustained upward trend. Receipts are fairly heavy, but the demand is ample to absorb them. The tariff has practically shut off imports of European clover seed.

Chicago, per 100 pounds—Clover, $15.50@21; timothy, $6@6.75;. Toledo, per bushel—Prime clover, $13.40; prime timothy, $3@5.

Feed prices are firm, with the strength in coarse grains the most obvious sustaining influence.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $25.50; standard middlings, $26.50; flour middlings, $28; cottonseed meal, 36 per cent, $45.50; 43 per cent, $49.50; hominy feed, $29.50; gluten feed, $34.85; old process oil meal, $52.50; tankage, $65.

Hay Market Slightly Easing.

Receipts of hay have increased slightly and the market shows an easier tone as demand remains unlimited. Price changes were slight.

Prices per ton in car lots: Chicago—No. 1 timothy, $21@23; No. 2, $20@21; No. 3, $12@15; No. 1 light clover mixed, $20@21; No. 1 clover mixed, $17@19; No. 1 alfalfa, $25@27; upland prairie, $20@21; midland prairie, $13@15; rye straw, $12@13; oat and wheat straw, $9@12.

Fresh Eggs Extremely Scarce.

Fresh eggs are becoming more and more scarce on the leading markets and a further advance in values occurred last week. The period of greatest scarcity generally arrives from November 15 to December 15. Storage eggs, however, are still abundant.

Receipts of poultry are running above the average for this time of year, but the rate of consumption also is above the average and storage stocks of frozen poultry are accumulating very slowly. The increase in holdings at the four leading cities during October was only 16 per cent of that of last year.

Another Advance in Butter.

Butter prices advanced again last week as the supply on the leading markets declined and consumptive demand remained strong, although a part of the consuming public is turning to substitutes. Medium and undergrades and storage butter were helped by the advance on top scores.

Prices for 92 score fresh butter on November 8 were: Chicago, 48 1-2c; New York, 49 1-2c; Boston, 49c; Philadelphia, 50 1-2c.

Cheese markets were decidedly irregular last week. Chicago reported a very weak tone, with dealers overstocked and ready to sell at prices below the Wisconsin country market. Eastern markets, on the other hand, were firm and absorbing large quantities of cheese.

Prices for No. 1 American cheese on November 8 were: Chicago—Flats, 24 3-4c; twins, 23 1-2@24 1-2c; single daisies, 24@24 1-2c; double daisies, 24@24 1-2c; young Americas, 24 1-2@25c; longhorns, 24@24 1-2c; square prints, 25 1-2c.

Fruits and Vegetables.

Potato markets have been glutted during the last two or three weeks and extremely low prices have prevailed. During the next month, however, a decrease in shipments from producing sections of 50 per cent or more can be looked for confidently and values as a result should recover. Large quantities are being left undug and a period of cold weather would enhance values by destroying unharvested potatoes and causing heavy losses or shipments in transit, but few of which are now moving in refrigerator cars. Northern sacked round whites are quoted at 85 cents to $1.25 on midwestern consuming markets.

Shipments of apples likewise are due to decline in the next 30 days, but, owing to the limited movement of boxed apples, thus far, the heavy shipping season is apt to be strung out over a longer period than usual. Car shortage is partly responsible. Prices have held steady to slightly higher in the last week, with extra fancy large Jonathans quoted at $2 to $2.50 per box in the Chicago car lot market.

LATEST QUOTATION.

Washington Ranks High at Pacific International

The Best Livestock of the West Divide Honors in the Climax of the Winter Livestock Show Season

Well balanced, strong in every department and a great show from whatever angle it is viewed—this in a word expresses the correct view of the 12th annual Pacific International Live Stock show at Portland, November 4-11. It had everything to make it a great stock show, and it had so many great features as to make it hard to say just what deserves most commendation.

The Northwest Land Products show, in the industrial division, is a show alone that does what its name implies. The perfect fruit, splendid corn, potatoes, cereals and other products of the soil made up a show that well represents the productive capacity of the great northwest. Added to this the Northwest Dairy Products show, exploiting the many uses of milk; the exhibits of the Oregon Agricultural college, the Washington State college and the Idaho university, all strictly educational shows, on which one might well spend days taking in the lessons taught, and the exhibit of the United States dairy division, with its colored and illuminated charts showing farms properly managed and the effect of dairy farming, all made up a section of the show that meant much valuable information to those who studied them properly.

The night horse show, the great entertainment feature, was even better than a year ago and the seating capacity of the big pavilion was frequently taxed.

The poultry show was the mecca of many a visitor and did its part to hold the great interest manifest through the week.

The attendance, when this was written, promised to equal and possibly surpass the record of 101,000 made last season. All the foregoing features helped to awaken and hold the interest of the public; to overcome the handicaps inevitably met with and to give full right to still call the Pacific International "the greatest live stock show on earth."

It is one thing to get a lot of animals together and quite another to make a show of them—such a show as the public wants to see. The Pacific International building, covering 10 acres with one roof, is arranged for the purpose of display. It was the result of years of effort on the part of the management, and the 1922 exposition was the result of a full year's planning and hard work.

The dairy division was easily the outstanding feature of the show. Holsteins led in numbers, with Jerseys a good second, then Guernseys, next Ayrshires, and, for the first time, Brown Swiss. It is no exaggeration to say all breeds averaged just a little better in quality than ever before. The spectacular features of this division were the Jersey Islands barn, in imitation of unhewn stone, in which the world record cow of the breed, Lad's Iota, was housed with her stable mate, Rinda Lad's Lady, and the special quarters suggestive of Holland, in which the world record milch cow, Segis Pieterje Prospect, Holstein, was domiciled. A Dutch windmill, actually running, added to the picturesqueness of the setting. These two cows, with their unique surroundings, drew crowds at all hours of the day. While the Guernseys had not as elaborate a booth, they did have an inviting rest room, and at its end was the breed's world record 4-year-old, Edna of Mountain View, owned in Washington. The tent of the American Jersey Cattle club, in charge of the A. J. C. C. field man, Mr. Astroth, was an added attraction.

THE BEEF CATTLE SHOW.

With every beef breed except the Hereford showing an increase over last year in the number of cattle on exhibition in the big wing under the superintendency of E. J. Fjelsted, it was not difficult for this department to roll up almost a 20 per cent increase in total number exhibited, the actual count showing 558 head of all breeds, as compared with 469 in 1921. The absence of such outside Shorthorn herds as those of the Maxwell-Miller herd of Colorado, the Pacheco Cattle company and T. S. Glide, both of California, and the Hereford herd of A. B. Cook of Montana, made the competition less interesting and perhaps brought down to some extent the general tone of the show.

The Shorthorns.

No less a connoisseur than Frank Thompson, formerly editor of Shorthorn in America, declared that each year of the Shorthorn show at the Pacific International has shown improvement in quality, and he has been here every year for four years. Not only that, but the greater uniformity shown in the various classes indicates a little better established type, and it is entirely fair to say that the better entries are in the same class with the better ones at the Chicago International or any other of the foremost middle western shows.

Hercules breeding of the younger generation "showed its heels" to competition and carried off both of the major purples, though interest was lent to the awards by the winning of senior championships by George Bertrand of Castle Rock, Wash., a comparatively new breeder, and by Washington State college.

Judge: Captain T. E. Robson, London, Ontario, Canada.

Group of three bulls owned by exhibitor—1 and 3, Day & Rothrock, Spokane, Wash.; 2, A. D. Dunn, Wapato, Wash.; 4, George Bertrand, Castle Rock, Wash.; 5, G. W. DeLay, Hot Lake, Ore.; 6, State College of Washington; 7, W. A. Heater, Sublimity, Ore.; 8, A. Chalmers, Forest Grove, Ore.

Group of two bulls bred and owned by exhibitor—1, 2 and 4, Day & Rothrock; 3, Dunn; 5, Foothills Farm, Carlton, Ore.; 6, Bertrand; 7, Heater; 8, DeLay; 9, Chalmers.

Bulls: Aged bull—1, Bertrand on Max Hill Criterion (senior champion); 2, DeLay on Village Reserve; 3, Heater & Brown, Sublimity, Ore., on Gainford Modus; 4, A. H. Tarbell, Warren, Ore., on White Cup; 5, Chalmers on Superb Lad 3d; 6, J. W. Fox, Cedonia, Wash., on Captain. Two-year-old—1, Dunn on Matchless King; 2, DeLay on Hercules Cornerstone; 3, Foothills Farm on Clover Meadow Victor. Senior yearling—1, T. J. Dannen, Shedd, Ore., on White Cup 2d; 2, State College of Washington on Hercules Rex. Junior yearling—1, Day & Rothrock on Hercules Conqueror (junior and grand champion); 2, Dunn on White Clipper; 3, Bertrand on Criterion 2d; 4, John Matheson, Zillah, Wash., on White Forest; 5 and 6, DeLay on Linden Laddie and Village Baron; 7, Chalmers on Seaforth King 2d. Senior calf—1, 2, 3 and 4, Day & Rothrock on Hercules Ideal, Hercules Radiance, Hercules Marshall and Hercules Bandmaster; 5 and 7, Foothills Farm on Cloverland Choice and Craigielea Guard; 6, Bertrand on Criterion 3d; 8, State College of Washington on Village Cup; 9, Dunn on Dunbro Lad; 10, DeLay on Missie's Villager; 11, Heater on Gainford Silvertip. Junior calf—1 and 3, Day & Rothrock on Hercules Brilliant and Hercules Marquis; 2, State College of Washington on Doune Sultan; 4, Bertrand on Criterion 5th; 5 and 7, Heater on Little Gainford and Gainford Nugget; 6, Matheson on Marcellas; 8, DeLay on Royal Villager.

Females: Aged cow with calf at side—1, State College of Washington on Orange Blossom Lady (senior champion); 2, R. H. Parsons, Hilts, Cal.; 3 and 4, DeLay on Dunbro Maid and Scottish Jane 3d; 5, Chalmers on Rose Queen. Aged cow—1 and 2, DeLay on Ruberta's Missie and Scottish Jane 4th; 3, Dunn on Queen of Dunbro; 4, Fox on Cedonia Bell. Two-year-olds—1, Dunn on Supremacy 2d; 2, Heater on Memory's Roan Lady. Senior yearling—1 and 2, Day & Rothrock on Hercules Matchless 3d (junior and grand champion) and Perfection Lady; 3, DeLay on Village Missie; 4, Heater on Memory's Snowdrift; 5, Bertrand on Red Velveteen Cow; 6, Chalmers on Straphstay Rose. Junior yearling—1, 2 and 3, Day & Rothrock on Hercules Victoria 4th, Hercules Topsy 5th and Hercules Jasmine 2d; 4 and 7, Foothills farm on Scotch Heather 6th and Red Rose B.; 5, Bertrand on Erma Criterion; 6, Heater on Thistle Bloom 2d; 8 and 9, Dunn on Bonnie Girl and My Lassie; 10, DeLay on Village Maid. Senior calf—1 and 5, Foothills farm on Craigielea Coral and Craigielea Lovely; 2, 3 and 4, Day & Rothrock on Hercules Sylvia 3d, Hercules Missie 5th and Hercules Violet 6th; 6, Dunn on Cup's Princess; 7 and 8, Bertrand on Bessie Criterion and Cup's King's Pride; 9, Heater on Memory's Roan Beauty; 10, Delay on Village Duchess D. Junior calf—1, Parsons on Dale's Marigold; 2, DeLay on Gainford Beauty; 3, Chalmers on Superb Rose 2d.

Graded Herd—1, Dunn; 2, DeLay. Yearling herd—1, Day & Rothrock; 2, Dunn; 3 and 5, DeLay; 4, Bertrand; 6, Chalmers. Calf herd—1 and 2, Day & Rothrock; 3, Foothills farm; 4, Dunn; 5, Bertrand; 6 and 8, DeLay; 7, Chalmers. Get of sire—1 and 2, Day & Rothrock; 3, Foothills farm; 4, Dunn; 5, Bertrand; 6 and 8, DeLay; 7, Heater; 9, Chalmers.

The Herefords.

Though Herefords showed some falling off in number from last year, the difference was not large (29 head), and the general condition of the white-faces exhibited quite made up for it. Standards of type were well maintained, not only by the regular exhibitors, whose presence contributes so much to the success of the show, but also by newer ones, chief among whom was the Methow Valley Live Stock company, which brought 18 head of well-fitted animals. All three of the female championship honors were well won by Herbert Chandler of Baker, Ore., and Henry Thiessen, another veteran at the game, took senior and grand champion honors on bulls. The University of Idaho broke into the purple ring with a junior champion bull. There were 150 head of Herefords in the show.

Judge: James L. C. Painter, Reggen, Col.

Group of three bulls owned by exhibitor—1, Henry Thiessen, Sweetwater, Idaho; 2 and 4, Methow Valley Live Stock Co., Winthrop, Wash.; 3, Baldwin Sheep Co., Madras, Ore.; 5 and 7, Herbert Chandler, Baker, Ore.; 6, A. H. Barnum, Moro, Ore.; 8, Herman Nordby, Lewiston, Idaho; 9, W. G. Haworth & Son, Monroe, Ore.; 10, Platt Bros., Genesee, Idaho.

Group of two bulls bred and owned by exhibitor—1, Thiessen; 2, 3 and 8, Methow Valley Live Stock Co.; 4, 6 and 7, Chandler; 5, Baldwin Sheep Co.; 9, Barnum; 10, Weatherford Bros., Dayton, Wash.

Bulls: Aged bull—1, Baldwin Sheep Co. on Chesney Lad 70th; 2, Chandler on Bonnie Prince; 3, Barnum on Beau Carlos; 4, Nordby on Blanchard; 5, Haworth & Son on Happy Fairfax. Inland Seed Co.

Spokane, Wash.,

"Inland Seeds Are Quality Seeds."

Do you hear the clock strike the night hours?

HOW often you have heard people say, "I can't drink coffee; it keeps me awake nights!" *They've* learned from experience; have you?

If you are a coffee drinker and fail to get sound restful sleep, it means that your nerves are over-stimulated and that health needs protection from coffee's drug, caffeine.

There's no sacrifice in making health safe, as so many thousands have found who have turned from coffee to Postum. It has a delightful coffee-like flavor, and is free from any element that can harm you. As many cups as you like, and no regrets.

Your grocer has Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes.

Postum FOR HEALTH

"There's a Reason"

Made by Postum Cereal Co., Inc.
Battle Creek, Mich.

and of J. A. Scollard of Chehalis, Wash., the "doddies" registered an almost 50 per cent increase in numbers over their show of 1921. The mere presence of the Yakima herd is a guarantee of quality in any Aberdeen-Angus show, and the judge in these classes took particular occasion to commend the exceptional type and smoothness which he found in them. Better animals, he said, he had never seen anywhere, his admiration being reflected in the awarding of 12 out of 14 blue ribbons on individuals, all four on groups, and all six championships, to their owners. There were 65 head in the Aberdeen show.

Judge: T. Milton Tudor, Iowa City, Iowa.

Group of three bulls owned by exhibitor—1, Congdon & Battles, Yakima, Wash.; 2, J. A. Scollard, Chehalis, Wash.; 3, L. A. Wells, Trout Creek, Mont.

THE DUAL PURPOSE CATTLE.

The Milking Shorthorns.

There was a decided increase in the number of milking Shorthorns exhibited, this breed ranking next to Aberdeen-Angus in percentage gain, and two of the greatest bulls of the breed were shown in the aged bull class by Santa Rosa Stock farm of Santa Rosa, Cal., and Northwood farms of Redmond, Wash. More bulls of that type would mean much to the success of this popular farmer's breed. The Harrison entry won the grand championship, while Foothills farm of Carlton, Ore., took the junior honors on males. The latter took senior and grand champion female, in competition far from being as keen as that on bulls, and a California exhibitor won the minor purple. There were 96 head exhibited, giving the breed third rank in number shown.

Judge: W. J. Hardy, Willoughby, Ohio.

Bulls: Aged bull—1, Thos. Harrison, Santa Rosa, Cal., on Count Tickford (senior and grand champion); 2, Northwood Farms, Redmond, Wash., on Gretna Challenger. Two-year-olds—1, Northwood Farms, on Northwood Defender; 2, Foothills Farm, Carlton, Ore., on Foothills Milkman; 3, Alexander & Kellgg (J. D. Rowe & Sons, lessees), Davis, Cal., on Innisfail Perfector; 4, E. C. Truesdell, Centralia, Wash., on Fancy Jeweler. Yearlings—1 and 4, Northwood Farm, on Northwood Pride and Northwood Viscount; 2, Foothills Farm on Foothills Bagpipe; 3, Harrison on Count Marshall; 5, Truesdell on Walgrove Protector. Under 1 year—1 and 5, Foothills Farm on Foothills Milkman 2d (junior champion) and Foothills Prior; 2, 4 and 6, Harrison, on Count Idaho, Count Royston and Count Madrigal; 3 and 7, Alexander & Kellogg on Galvina and Innisfail Lad; 8, Truesdell on Roan Jeweler 2d.

Females: Five years or over—1, 3, 7 and 10, Foothills Farm on Glemide Daphne (senior and grand champion), Glemide Rose, Rose Darlington and Glemide Elora; 2 and 4, Alexander & Kellogg on Bellevue Daisy and Alma; 5, Northwood Farms on Billing White Ruth; 6, Harrison on Bessborough Curlew 2d; 8, Truesdell on Fancy Question; 9, A. Chalmers, Forest Grove, Ore., on Mary of Scots. Three years and under five (in milk)—1 and 3, Alexander & Kellogg on Gypsy Girl and Beggar Maid's Beauty 2d; 2 and 4, Northwood Farms on Molly and Lady Susie 3d; 5 and 6, Foothills Farms on Foothills Gentian and Foothills Vanity. Two-year-olds—1, 6 and 8, Foothills Farms on Foothills Kismet 4th, Foothills Kismet 9th, and Foothills Purity; 2, Northwood Farms on Vera's Snowdrop; 3 and 4, Harrison on Lovely Perfection and Roan Bess; 5 and 9, Truesdell on Roan Jewel and White Jewel; 7, Alexander & Kellogg on Countess Innisfail. Senior yearling—1, Alexander & Kellogg on Innisfail Betty (junior champion); 2, Foothills Farm on Foothills Kismet 11th; 3, Harrison on Santa Rosa Naomi; 4, Northwood Farms on Moss Rose of Oaklawn. Junior yearling—1 and 6, Harrison on Countess Lavendar and Santa Rosa Rosebud; 2, Foothills Farm on Foothills Kismet 13th; 3, 7 and 8, Alexander & Kellogg on Madge Wildfire 2d, Innisfail Evelyne and Countess Fern; 4, Truesdell on Ora Jewel; 5, Northwood Farms on Northwood Rose. Senior calf—1 and 9, Harrison on Countess Clementine and Countess Rose; 2, 6 and 7, Northwood Farms on Northwood Winnie 2d, Northwood Jessie and Northwood Susan 2d; 3 and 8, Truesdell on Anna Jewel and Petite Jewel; 4 and 5, Alexander & Kellogg on Flower Girl 5th and Innisfail Maid 2d. Junior calf—1 and 3, Foothills Farm on Foothills Kismet 15th and Foothills Kismet 17th; 2 and 4, Harrison on Countess Utility and Countess Yolo; 5, Truesdell on Missie Jewel.

Graded herd—1, Harrison; 2, Alexander & Kellogg; 3, Northwood Farms; 4, Truesdell. Yearling herd—1, Foothills Farm; 2, Harrison. Calf herd—1, Harrison; 2, Alexander & Kellogg; 3, Truesdell. Get of sire—1 and 3, Foothills Farm; 2 and 4, Harrison; 5, Alexander & Kellogg; 6 and 7, Truesdell.

The Red Polled.

F. H. Porter of Halsey, Ore., practically swept the boards of awards in the Red Polled classes, taking most of the blues and all of the championships. His only competition was furnished by C. F. Sargent of Scio, Ore.

Judge: W. J. Hardy, Willoughby, Ohio.

Bulls: Aged bull—1, F. H. Porter, Halsey, Ore., on Peach Knott (senior and grand champion). Two-year-old—1, C. F. Sargent, Scio, Ore., on Senator. Junior yearling—1, Porter on Treston 6th. Senior calf—1 and 2, Porter on Salem (junior champion) and Hanon. Junior calf—1, Porter on Treston 7th; 2, Sargent on Noble Boy.

Females: Aged cow—1 and 2, Porter on Pansy (senior and grand champion) and Violet. Two-year-olds—1 and 2, Porter on Rhoda and Pansy 7th. Senior yearling—1, Sargent on Polly; 2, Porter on Peona 3d. Junior yearling—1 and 2, Porter on Jennie and Senna; 3, Sargent on Queene. Senior calf—1 and 3, Porter on Pascola (junior champion) and Neva; 2, Sargent on Lily. Junior calf—1 and 3, Sargent on Sadie and Marie; 2, Porter on Friette.

Graded herd—1, Porter. Young herd—1, Porter; 2, Sargent. Calf herd—1, Porter; 2, Sargent. Get of sire—1 and 3, Porter; 2, Sargent. Produce of cow—1 and 3, Porter; 2, Sargent.

THE DAIRY SHOW.

Nothing but superlatives can be used in describing the great dairy show that filled to overflowing the east wing of the show pavilion. Superintendent G. C. Finley, who had more than 800 head of valuable animals to look after, stated that there were 127 more entries than at any dairy show previously held in this country, and that there were acutally 100 more animals in the ring than at this year's National. Feature exhibits like the world champion Holstein, Segis Pietertje Prospect, and the world champion Jersey, Lad's Iota, attracted the attention of thousands, and the judging was followed with even more enthusiasm than usual by ringside fans. Holsteins led in the number on exhibition and Jerseys were second. Both showed an increase over last year. There were a few more Guernseys also, while Ayrshires showed a slight falling off. Brown Swiss were admitted for the first time, but brought 45 head.

Holsteins.

"Superb production and superb conformation—a very splendid show," was the way the Holstein judge described the

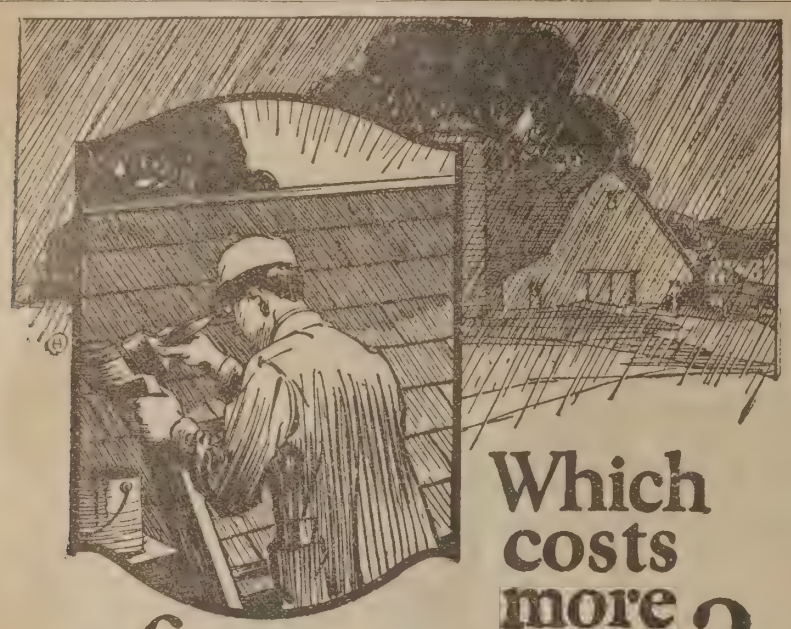
Washington Livestock Ranks High

(Continued from the preceding page.)



exhibition, the female classes of which were considerably better than the male, but the tops of which, more than one eastern visitor declared, would place well anywhere. The management was disappointed that the eastern and California herds which were entered did not arrive, but there were entries from all parts of Washington, Idaho and Oregon, almost 300 head all told, and owned by 47 exhibitors. Bull classes were small and some of them inferior, but there was a wealth of high quality females, and the aged cow class of 22 animals, headed by a Carnation cow that is in the midst of a test on which she is expected to make 30,000 pounds of milk, was easily comparable to the corresponding class at the National. The first two groups in the get of sire class was declared by F. T. Price, manager of the Holstein-Friesian World of Syracuse, N. Y., to be the best that he has seen this season, and he has seen four state fairs, the dairy cattle congress and the National Dairy show. The major honors went to Carnation Stock farm of Seattle, and E. A. Stuart, owner of the farm, won the silver set offered for the first time this year by the eastern breeders who visited the show in 1921 for the best produce of dam. The coveted Segis Matador Walker trophy, for the best get of sire, was won for the second time by John L. Smith of Spokane, who thus has two "legs" on the huge cup and must win it only once more to keep it permanently.

Judge: W. S. Moscrip, Lake Elmo, Minn.

Bulls: Four years or over—1 and 7, Carnation Stock Farms, Seattle, Wash., on Matador Segis Walker 6th (senior and grand champion) and Segis Matador Prospect; 2, University of Idaho, on King Segis Violet Posch Idaho; 3, John L. Smith, Spokane, Wash., on Segis Pietertje Clothilde; 4, William Bishop, Chimacum, Wash., on Skagit Korndyke Pietertje; 5, F. R. Beals, Tillamook, Ore., on Glenco Perfection; 6, David McKeown, Gresham, Ore., on Steve Lady Matador; 8, J. P. Vandecoevering & A. J. Evers, Forest Grove, Ore., on Matador Segis Walker Lad. Three-year-olds—1, Klein Bros., Silverton, Ore., on Matador Segis Walker Gerben; 2, University of Idaho, on Matador Violet Idaho; 3, Oregon Agricultural College, on Oregon Pontiac Jerome. Which costs more —fair weather or foul?

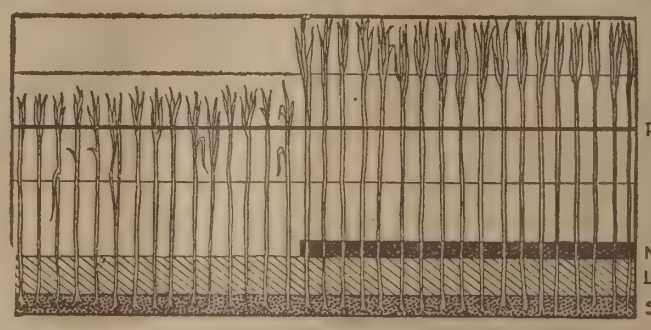
Violent storms are not the only enemies to good shingle roofs—gentle rains, aided by the warping effect of warm sun and drying breezes, are more frequently the real cause of deterioration. Repair bills prove it.



A well-laid roof can be *kept* tight and strong by treating it every few years with ORONITE SHINGLE OIL, the high quality preservative made by Standard Oil Company (California) especially for the care of shingle roofs and side walls. ORONITE SHINGLE OIL penetrates the wood fibre, helps prevent warping and cracking,—cuts repair costs. In fact, it postpones indefinitely the expense of a new roof.

Talk over color-mixing formulas with our nearest agent. Let him show you, also, how easily ORONITE SHINGLE OIL may be applied.

STANDARD OIL COMPANY
(California)

ORONITE SHINGLE OIL

Shoot your crop away up above the profit line

Other things being equal, the difference between the crop that shoots away up above the point where net profits begin and the crop that just pays and no more, is fertilization.

Lilly's Morcrop Fertilizer is a complete fertilizer. It contains complete plant food in readily available form. When you use it your soil takes up automatically exactly what it needs and in the proper relative quantities.

Use Lilly's Morcrop this season. So many have used it and praised it that its unfailing worth is well known. It is ground mechanically, accurately proportioned, thoroughly mixed and ripened fully before being sacked. Order it from your dealer or direct from us.

One User Says:

"I tried one ton of your Morcrop Fertilizer on part of my raspberries this year and am really well pleased with the results. The new shoots in particular are healthier. The color is better and in general they are larger and more vigorous than where it was not used."—A. L. Engdad, Sumner, Wash.

FOR SALE BY DEALERS

Complete information about the various kinds of fertilizers and their use will be sent upon request.

State herds—1, Washington; 2, Oregon; 3, Idaho.

Jerseys.

High point in numbers was reached at the show two years ago, but this year marked high point in quality. And numbers were a few greater than a year ago. Nearly every class was large and in the senior heifer calf class 27 entries faced the judge; 22 in the 2-year-old heifer class, and 21 cows, five years or over. The mature bull class saw last year's champion, Noble Majesty of L, win first in a class of five, and he went on to grand champion, without serious danger of defeat, although he had to meet the 3-year-old Glen Tana Perfection, that was grand champion at Spokane, a great bull, with fine head and pleasing lines all over. The junior champion, Mollie's Chimes of S. B., is a handsome senior calf, with a beautiful head, not quite in as good condition as he might be.

The greatest interest centered in the grand championship on cow. Eminent Jimps Owl, the grand old cow that was grand champion two years ago and senior last year, again won first in her class of over 5 years old, with 21 other competitors, and this in spite of the fact that her udder shows some signs of breaking. She has such wonderful type and so few faults she could hardly be turned down. But the great 4-year-old Rinda Lad's Lady was too much for her. The younger cow is in fine bloom, has one of the most perfect udders, great constitution and with it all type and beauty. The junior champion heifer, Midfields Cicily Winkle, is a wonderful junior calf, having much refinement, but great constitution, and while the older cow had no trouble in winning, the baby made a strong show against her.

Judge: Charles Graves, Liberty, Mo.

Bulls: Four years or over—1, John M. Heldt, Rosburg, Wash., on Noble's Majesty of L (senior and grand champion); 2, A. C. Power, Sandy, Ore., on LaBelle's Noble Fern; 3, J. E. The Harvester Company's Newest Tractor

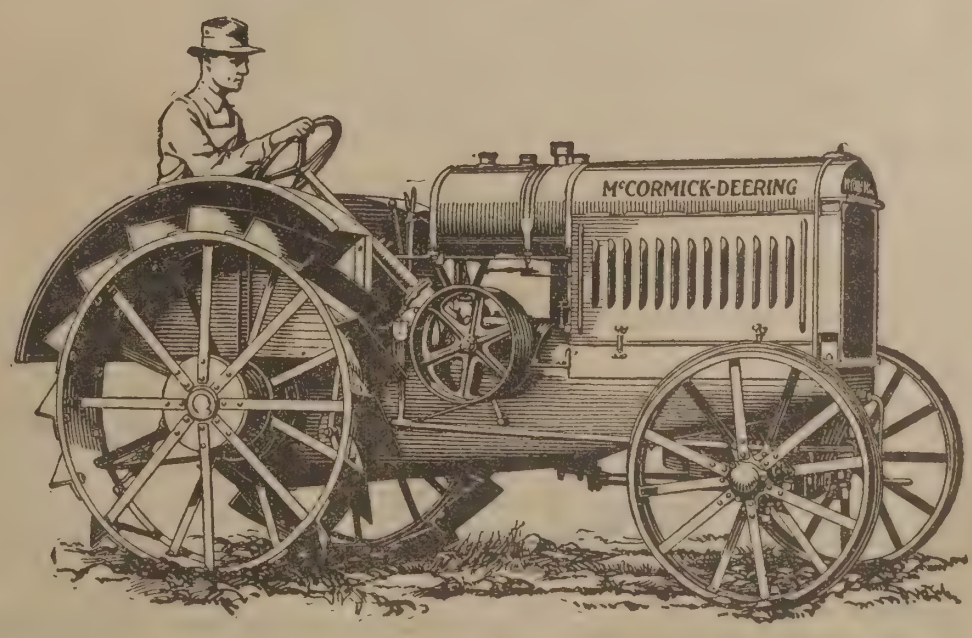
McCormick-Deering 15-30

Smooth-running, long-lived, economical! Years ahead of any tractor heretofore produced! Naturally it remained for the Harvester Company, with long time tractor and farm machine experience and great resources, to bring out the one great epoch-making farm power value. The McCormick-Deering 15-30 stands in a field of its own—the logical choice for the man who wants the best in modern-day farm power.

Ball and Roller Bearings at 29 Points



These dust-proof, quiet-running bearings relieve the McCormick-Deering 15-30 of all excess friction—at drawbar or belt work the power of the 4-cylinder, valve-in-head, kerosene motor is delivered without strain or drag.

In fact, every unit of the new McCormick-Deering 15-30 has been designed for long life, economy, full power, and operating comfort.

The McCormick-Deering 15-30, like all Harvester tractors, is an all-purpose farm power plant. It is equipped with belt pulley, large steel platform, wide fenders, throttle governor, adjustable drawbar, reliable brakes, and removable angle lugs.

You will want to know more about this latest tractor achievement. Ask the McCormick-Deering dealer for complete details or write for our new catalog.

LIVESTOCK AND DAIRY

Smith's Steers Outsell Brown's

Part IV.

The consumer wants meat that is tender, palatable, attractive in appearance, juicy and nutritious. The carcass of the animal that is fat, thick-muscled and not coarse in bones or muscle fiber will produce meat of this sort.

The most important factor in making the carcass satisfactory to the consumer is the finish or degree of fatness, the signs of which have already been described. The steer should not be so fat that it is "gobby" and uneven, but smoothly fleshed, otherwise the carcass is unattractive and the cuts are wasteful. With a proper finish there is a smooth layer of outside fat over the carcass, which preserves it in the process of ripening and improves its appearance. Also there is sufficient fat deposited between the muscle fibers to give the meat a "marbled" appearance when it is cut across the grain.

Steers possessing general quality, indicated by the refinement of the bone, head, skin and hair and by the smoothness and springiness of the flesh when handled, will have quality in the meat from its carcass.

To sum up the argument, the buyer can feel confident that steers of correct beef form, of fine quality and highly fattened, will have high dressing percentages, will be well developed in the choice cuts and that the consumer will pay a high price for the meat cut from its carcass.

There are other things which affect cattle values to a limited extent. One of these is weight. Large carcasses furnish retail cuts too large for the family trade, although hotels and restaurants use them and to some extent favor them. Small carcasses are highly desirable if well finished. Whether yearlings or heavy cattle will bring the high dollar depends on their respective numbers in relation to the demand for each.

Horned loads may be discounted 10 to 30 cents a hundred pounds under hornless ones because the buyer fears scratched, bruised carcasses and damaged hides. Horned cattle are more restless in shipment, so that their carcasses are darker in color. Horned loads also do not have such keen competition from feeder buyers as they do if dehorned.

Brands reduce the value of the hide from 1 to 5 cents a pound or from 60 cents to $4 for the entire hide, depending upon their number, location and size.

Besides the things the buyer can see, he likes to know where the cattle came from and how and by whom they were fed. Cattle shipped long distances are apt to have more bruises, but they have been shrunk out, so that they have high dressing percentages. Exercise before slaughter tends to make the carcass retain blood and kill out dark. This fault crops out in range cattle, which travel much for their feed and "mill" about a good deal under confinement when shipped to market.

Some producers have developed a reputation for good cattle that kill out well and buyers may pay a premium because they feel confident of the results. Corn feeding produces the most attractive carcasses as the fat is whiter, the lean a brighter red and more marbled. Grass produces watery flesh, although there is great difference in the grass from different sections. Beet pulp produces watery flesh, but "pulpers" are high dressers and sell well. Wheat is reputed to produce a fiery red color in the lead meat.

In one or more of these factors given in this series of articles will be found the reason for differences in prices which cattle sell for. Together they are responsible for some steers selling for $12.80, while others are bringing only $3.50 on the same day at the same market.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

SWINE DISEASES. ARTICLE 1.

Certainly within the memory of those of us who are alive today there has never been a time when a great deal of consideration was given to hog raising. This animal has raised as many or more mortgages than any other and is to be found quite constantly on farms of all kinds, as he is able to thrive on the waste of nearly any farming process. But regardless of his general distribution and substantial value his existence has been accepted as a matter of course and if he has thrived on our farms it is in many instances in spite of the fact that he has had to overcome difficulties that other domestic animals have not been subject to.

It is difficult to understand how the opinion got so widely spread that the hog could thrive on any kind of food and could live in quarters where other animals would certainly die, but it has been his lot in many instances. Why the hog must eat kitchen refuse and all the garbage of the barn, while the cow and horse have clean food, is hard to understand, and why he must be housed in the small, muddy pen in winter and be required to occupy the small, dusty one in the summer is equally hard to understand, but such has been the lot of this mortgage raiser.

We learned long ago that filth wa a breeder of disease and the association became so clearly evident that we had to protect our other animals from it. We did so by preparing a clean foaling place for the mare and caring for the navel of the foal; we did a similar service for the cow to prevent the infections that are so frequent just after birth; clean lambing sheds for the ewes are in many places considered a necessity, but we have been slow to realize that the hog is also subject to disease that threaten to exterminate this animal and so far we have been slow to provide the protection that the hog deserves.

It is true that a hog enjoys a flop in the cool mud by the side of the stream on a hot summer day, but that does not mean that he likes to have a pen that is floored with filth and mud from 2 to 10 inches deep. Yet I have seen this condition on many farms. It doesn't mean that he enjoys a damp bed on cold winter nights, yet he is frequently neglected to that extent. His quarters are seldom cleaned, as the stables of the cows or the horses are, and yet we expect him to remain as healthy as the other farm animals. Indeed, he did so for many generations, even though living closely housed in the combined filth of many generations.

We in the west have not yet realized from experience the error of our ways in treating the hog, but in certain sections of the middle west this has been brought home in a way that can not be mistaken nor disregarded. The hog himself simply refused to be a party longer to the method of treatment afforded him. He could not be induced to thrive and present a profit,

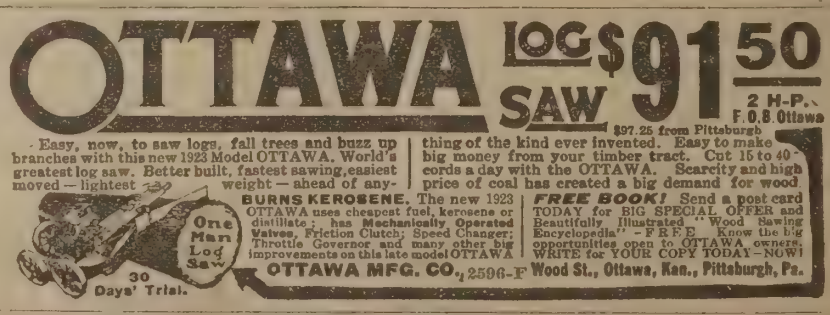
New Meat Curing Book Sent Free to Farmers

It Tells How To Sugar Cure, Smoke and Sell All Kinds of Meat and Meat Products



Every farmer should read "Meat Production on the Farm," a new illustrated book which is being distributed free to farmers only. It tells how to cure, smoke and sell every kind of meat and explains quick, easy methods that produce fancy high-priced sugar-cured meats with no more trouble than plain "salt stuff." It also tells how to save spare parts and make sausages, head cheese, pickled meat and other delicacies.

Send your name to the E. H. Wright Co., 852 Broadway, Kansas City, Mo., and this book, priced regularly at $1, will come to you free. Write for it today—a card will do.—Adv.

Guernseys.

Though the Guernsey show gained but little in numbers over that of last year, there was material improvement in quality. Classes were far more uniform, and it was evident from this and from the condition in which the animals appeared that the breeders are taking to heart the advice of judges in former years to leave inferior animals at home and to spend more time on those which they bring to the show. Only one large exhibitor was missing from last year, and there were were several new ones, including one from Montana, three from Oregon and two from Washington. Idaho and Wisconsin were also represented, more states contributing than to any other of the dairy shows. The judge was particularly impressed by the quality in the bull classes, the first four junior yearlings, he said, being the most uniform lot he ever saw. The first three or four in the senior bull calf class, he said, would take first at any state fair he has seen this season, and that included the one in New Jersey, the best of the eastern shows.

Judge: John S. Clark, Hardwich, Mass.

Bulls: Four years or over—1, F. J. Rueping, Fond du Lac, Wis., on Superb of Edgemoor (senior and grand champion); 2, Ira G. Lance, Tillamook, Ore., on Jelly Fermaine; 3, A. Macrae Smith, Bellingham, Wash., on Kulshan Hayes May King; 4 and 5, Hawkins & Riggs, Springfield, Ore., on Reporter Boy and Ross Langdon; 6, A. L. Gile, Chinook, Wash., on Chicona Buster; 7, Shannon B. Shafer, Deer Island, Ore., on Chicona Bill Rose. Three-year-olds—1, Wallace & Fordyce, Sunnyside, Wash., on Chicona Lover Bold; 2, Oregon Agricultural College, on Flora's Secret of Vimiera. Two-year-olds—1, Rueping, on Gay Girl's Golden Secret of Owland; 2, Homer Mason, Tillamook, Ore., on Beauty 14th of The Forget's Royal Knight; 3, W. O. Bohart, Bozeman, Mont., on Fantassia's Jewel Bill Bella. Senior yearling—1, Thousand Springs Farm, Wendell, Idaho, on Masterpiece's Ultra King of Edgemoor; 2, C. A. Bradt, Kalama, Wash., on Kulshan Jethro. Junior yearling—1, Ben H. Ridgway, Chimacum, Wash., on Khedive Ketahene of Sequin P. (junior champion); 2, Wallace & Fordyce, on Fawndale Marose; 3, John A. Hilles, Hood River, Ore., on Chicona Jason; 4, Rueping, on Corium Brownie's Count; 5 and 6, David H. Looney, Jefferson, Ore., on Laird of Alsea and H. B.'s Prize. Senior calf—1, Rueping, on Corium Nellie's Rosa's Delos; 2 and 5, Smith, on Fircrest La France Rival and uncatalogued; 3, Thousand Springs Farm, on Deacon of Thousand Springs; 4, Gile, on Chicona Luke; 6, Looney, on unnamed. Junior calf—1, Rueping, on Corium Ladock Jenny's Prince; 2, Smith, on Fircrest French Boy; 3 and 7, Gile, on Chicona Deemster and Chicona Terence; 4, 6 and 10, Wallace & Fordyce, on Fawndale Boulder, Fawndale Bold Laddie and Fawndale Comet; 5, Shafer, on Columbia Boy of Clover Hill; 8 and 9, Looney, on unnamed and Francis Khedive.

Females: Five years or over—1 and 5, Smith, on La France of Braelee and Brookdale's Pink; 2 and 3, Rueping, on Topsey of City View and Imp. Ladock Jenny; 4, Wallace & Fordyce, on Edna of Mountain View; 6, Thousand Springs Farm, on Imp. Fascination 2d of Caches Farm; 7, 8 and 10, Cottonwood Farm, Tillamook, Ore., on Janis of Sequoia, Governor's Blossom of Valevue and Oregon Queen; 9, Shafer, on Merry Maid's Beauty of Clover Hill. Four-year-olds—1, Gile, on Jewel of Rose City (senior and grand champion); 2, Rueping, on Meta of Louis Corners; 3, Calkins & Riggs, on Chene Quintine; 4, Cottonwood Farm, on Gail of Sequoia. Three-year-olds—1, Rueping, on Vera's Pride of Hammond; 2 and 4, Wallace & Fordyce, on Filipina of Groton Farms and Catherine's Dimple Queen; 3, Ridgway, on Jasmine of Rose City; 5, Calkins & Riggs, on Middledale Virginia 2d. Two-year-olds—1 and 4, Thousand Springs Farm, on Yeoman's Mixter Babbett and Judy of Thatch Meadow; 2 and 3, Rueping, on Jeanette of Louis Corners and uncatalogued; 5, Cottonwood Farm, on Ra's Belle's Daisy of Few Acres; 6, Gile, on Arleta of Chicona; 7, Calkins & Riggs, on Virginia's April Rose; 8, Smith, on Fircrest Bettey Maid; 9, Wallace & Fordyce, on Molly of Lavaland. Senior yearling—1, Gile, on Doris of Chicona; 2 and 5, Thousand Springs Farm, on Imp. Chene Fascination of Thousand Springs and Mixter May Hopeful; 3 and 7, Smith, on Fircrest La France's Pride and Fircrest May Blossom; 4, Rueping, on Corium Beulah; 6 and 9, Looney, on Chehulpum's Bessie and Chehulpum Francine; 8, Shafer, on Art's Beulah of Clover Hill. Junior yearling—1, 3 and 10, Rueping, on Corium Caroline (junior champion), Corium Rose Des Houards and Corium Cadock Jenny's Chloe; 2, Thousand Springs Farm, on Rosanne of Thousand Springs; 4 and 9, Wallace & Fordyce, on Anchor Rose of Fawndale and Dot of Fawndale; 5 and 8, Cottonwood Farm, on Grumby's Glenda of Greenacres and Evangeline's Princess of Few Acres; 6, Gile, on Sunlight of Chicona; 7, Shafer, on May Rose Babe of Clover Hill. Senior calf—1 and 3, Rueping, on Corium Nancy's Cassie and Corium Pretty Maid's Cora; 2, 4 and 7, Thousand Springs Farm, on Noreen of Thousand Springs, Betty of Thousand Springs and Suzette of Thousand Springs; 5 and 10, Gile, on Lavinia of Chicona and Diana of Chicona; 6, Wallace & Fordyce, on Fawndale Leading Lady; 8 and 9, Looney, on Hermoine Chehulpum and Khedive's Augusta.

Junior calf—1, Rueping, on Corium May Queen's Donna; 2, Gile, on Patience of Chicona; 3 and 8, Shafer, on unnamed calves; 4, 6 and 7, Looney, on Khedive Patricia, Khedive Zeilpha and Khedive Hermoine; 5, Oregon Agricultural College, on Oregon Valentine Bell; 9, Ridgway, on Jasmine of Sequim Princess; 10, Cottonwood Farm, on Gail's Anna Belle of Few Acres.

Cow with official record begun at five years or over—1, Smith, on Brookdale's Pink; 2, Cottonwood Farm, on Janis of Sequoia; 3, Thousand Springs Farm, on Imp. Fascination 2d of Caches Farm. Cow with official record begun under five years—1, Gile, on Jewel of Rose City; 2, Smith, on La France of Bralee; 3, Rueping, on Imp. Ladock Jenny; 4, Wallace & Fordyce, on Edna of Mountain View; 5, Cottonwood Farm, on Oregon Queen; 6, Calkins & Riggs, on Middledale Virginia. Advanced registry cow shown with two progeny owned by exhibitor—1 and 2, Smith, on La France of Bralee and Brookdale's Pink; 3, Rueping, on Imp. Ladock Jenny; 4, Wallace & Fordyce, on Edna of Mountain View; 5, Ridgway, on Jasmine of Rose City; 6, Calkins & Riggs, on Middledale Virginia.

Exhibitor's herd—1 and 3, Rueping; 2, Smith; 4, Gile; 5, Wallace & Fordyce; 6, Shafer; 7, Cottonwood Farm; 8, Calkins & Riggs. Young herd—1 and 2, Rueping; 3, Shafer; 4, Smith; 5, Gile; 6, Looney; 7, Cottonwood Farm. Calf herd—1, Rueping; 2, Shafer; 3, Smith; 4, Thousand Springs Farm; 5, Looney; 6, Gile. Dairy herd of five cows in milk—1, Rueping; 2, Wallace & Fordyce; 3, Cottonwood Farm; 4, Calkins & Riggs. Get of sire—1 and 3, Rueping; 2, Shafer; 4, Wallace & Fordyce; 5, Gile; 6 and 7, Looney; 8, Smith; 9, Cottonwood Farm. Produce of cow—1 and 4, Smith; 2 and 7, Rueping; 3, Shafer; 5, Ridgway; 6, Cottonwood Farm; 8, Calkins & Riggs; 9, Gile; 10, Wallace & Fordyce.

Lady Oregonian Trophy, presented by the late F. S. Peer, Guernsey importer, to be awarded to the owner of the best group of four Gernsey females, was won by A. Macrae Smith of Bellingham. It was won last year by Appletree Point Farms of Vermont. It must be won twice in succession to become permanent property of winner.

The Ayrshires.

"The best strictly northwest Ayrshires show that has ever been held" fairly describes the exhibition of specimens of this handsome breed, for while as a whole the show lacked something of last year's "class" because of nonparticipation by eastern breeders, it was a distinct credit to the Washington and Oregon herds competing. E. W. Van Tassell of Wenatchee, Wash., was the largest exhibitor and won one championship, but Oregon Agricultural college and Russell Catlin of Albany, Ore., the latter a new exhibitor, captured the major purples. Earlcrest Stock farm of Eagle creek won senior champion on its aged bull.

Judge: J. B. Fitch, Manhattan, Kan.

Bulls: Four years or over—1, Earlcrest Stock Farm, Eagle Creek, Ore., on Happy Triune (senior champion); 2, E. W. Van Tassell, Wenatchee, Wash., on Queen's Scottish Cavalier. Three-year-old—1, Walter J. Domes, McCoy, Ore., on Edgewater Peter Pan 2d. Two-year-

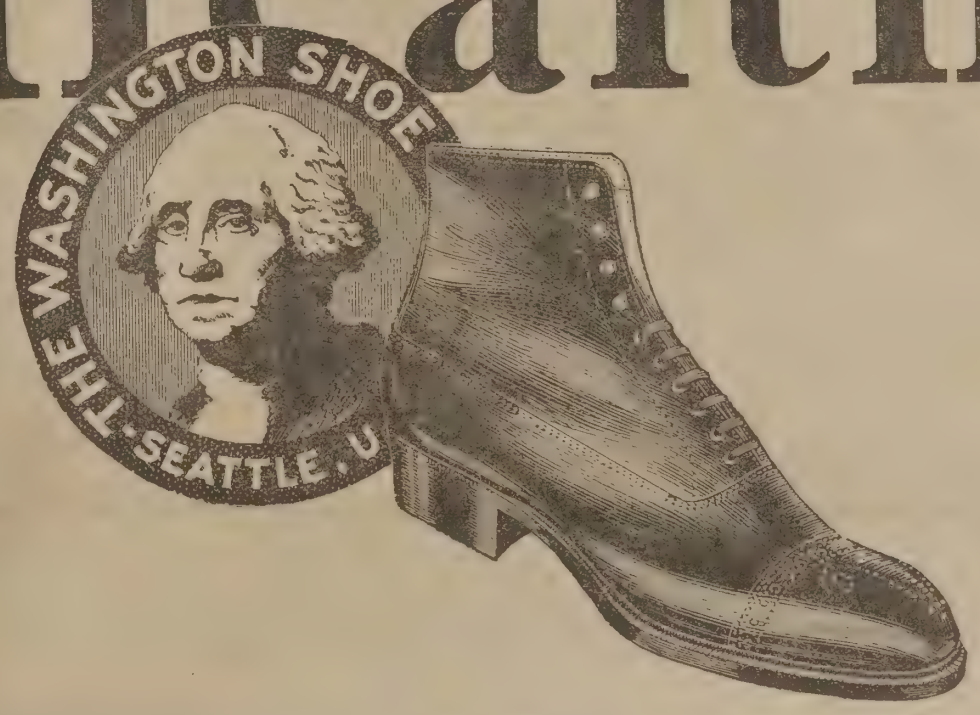
GENERAL ADVERTISING.



Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Health

"Inside" and "Outside" Shoe Health ⤷ **After a long, hard day's work—on your feet all the time—over rough ground—are your feet all in, down and out? If they are—as many men find—your shoes are NOT giving you "inside" health. Washington Dry Sox Shoes are built to fit feet—support them—keep them healthy and fresh through the day's "grind."** ⤷ The "outside health"—do your shoes protect you month after month from rough usage and wet—yes, wet—for Dry Sox Shoes DO keep feet DRY? Enjoy these comforts—wear the brand that is providing them to thousands of others—get Washington Dry Sox Shoes ⤷ Your dealer likes to sell Dry Sox Shoes—not alone for the features enumerated—but because of the extra value he can give you in them. ⤷ The reason! He can carry a complete stock on a very small investment. The nearness of our factory permits filling broken lines on exceedingly short notice—ofttimes over night. Thus he avoids the usual heavy investment in reserve stock—on which interest, insurance, etc., must be figured in the selling price. Saving these charges and turning his stock oftener, he can afford to sell on a much smaller margin of profit—to your benefit and his own.

POULTRY AND RABBITS

Table Poultry

Prices for the Heavy and Light

(From the American Poultry Journal.)

Leghorn breeders feel that of late a great deal of detrimental propaganda has been directed against their favorites, and they are particularly sensitive about the difference in price quoted for heavy and light table poultry.

The breeders of heavy breeds feel that there is too much propaganda favorable to the Leghorn finding expression in spoken word and printed page. These breeders of heavy and dual purpose types point to the fact that the highly specialized state agricultural experiment stations are exponents of the Leghorns and have furnished an immense amount of data on the economic advantages of the specialized egg-type fowl, to the disparagement of the heavier breeds.

It is a fact that we hear very little on the advantage of weight in poultry. One would almost conclude that there was no advantage in size, particularly when he hears a Leghorn man say: "I wouldn't grow the cockerels if I could tell the sex of my chicks as they come from the incubator, and I could afford to throw away the carcasses of my hens after their laying season, for eggs, eggs, eggs are the only thing I want, the only thing in which there is any profit."

The poor old hen that sets in her maternal way and rears a brood of chickens, and then puts on some flesh and fat, seems to be a type accursed by the specialized egg farmer. However, since there are so many of the matronly type, it might be well to see what good there is in them. This will require a comparison, and since comparisons have long been known to be distasteful we shall endeavor to simply produce facts and figures.

We are indebted to John S. Martin for the following data on the subject:

On June 23, 1922, Mr. Martin shipped 70 White Leghorn hens to M. P. Mallon, receiver and exporter of all kinds of poultry, Toronto, Canada. These 70 hens weighed 213 pounds, or a little less than three pounds per head. They brought 10 cents a pound, or $21.30 for the lot. The express on the shipment was $6.20 and the money order for the remittance was 12 cents, so Mr. Martin received exactly $14.98 for the 70 hens.

On July 5, 1922, John S. Martin shipped to the same M. P. Mallon, commission dealer of Toronto, 69 White Wyandotte hens. These 69 hens weighed 450 pounds, or 6 1-2 pounds each. They brought 21 cents per pound, or $94.50 for the lot. The express on the shipment and the return of the empty crates amounted to $7.49, leaving a total of $87.01, which was paid to Mr. Martin by check.

Seventy hens net the shipper $14.98. Sixty-nine hens net the shipper $87.01. That is equivalent to saying that a 6 1-2 pound Wyandotte hen is worth six three-pound Leghorn hens when the carcasses reach the butcher block.

It might appear that this is an unusual case because of an 11-cent differential between light and heavy hens.

A subscriber in Los Angeles sends us the market quotations in that market for September 28, 1922. Hens of 3 1-4 pounds are quoted at 19 cents; hens, colored, of four pounds and up, 30 cents a pound. There again is a difference of 11 cents per pound.

In Chicago October 4, 1922, live fowls of four pounds and over were quoted at 23 cents; small hens and Leghorns, 14 cents. In New York October 4, 1922, heavy fowls were quoted at 27 cents; fancy heavy, 1 to 2 cents more; fowls, poor, 20 to 22 cents; Leghorns, 20 to 22 cents.

These are the facts, recorded here without prejudice on our part. We are just as willing and ready to show that the Leghorn eats less feed in the course of a year, that it loses less time in broodiness, that it produces a white shelled egg which commands a premium in some markets. It is equally important, however, as a matter of fairness, to admit the advantages of a beef or dual purpose hen over a dairy hen, when the two carcasses ultimately reach the market.

Get After Those Mites

The red mite is a very small insect, but does large damage, because there usually are so many of them to do damage. They stay in the cracks and crevices of the walls, perches, supports and nests, where they may be found in countless numbers. The red mites come out from their hiding place and crawl upon the birds during the night, fill up with blood and then crawl back again. The more mites present, the more blood the chickens have to give up each night. We must destroy the mites if we are to receive the maximum number of eggs from the hens. This can only be done by thoroughly painting or spraying the walls, perches, supports and nests with a good disinfectant, such as cresote or shingle oil. The oil drained from the crank case of automobiles is to be highly recommended when it is applied hot with a brush or old broom. It is odorless, inexpensive and, best of all, is very effective for a long period of time, since it evaporates very slowly. The poultry keeper who knows that his poultry house is infected with mites and does not try to destroy them deserves no eggs from his hens.

Stiff in the Legs

By W. D. BUCHANAN,

Could you tell me what is the matter with my cockerel? It is lame and seems to be stiff in the legs. Otherwise it seems fine. It sits down most of the time. When it walks it walks stiff-legged. What can I do for it? R. A.
Tenino, Wash.

If the cockerel appears to be in perfect health, in good physical condition, a good red comb, and still walks lame and sits down most of the time, as you suggest, I would say that he had been injured in some way, but if he appears pale about the head and a little light in weight I would say that he very likely has a case of indigestion, due possibly to too much crude fiber or a lack of green feed. If he appears weak it might be due to intestinal worms. If it appears to be indigestion I would suggest a teaspoonful of castor oil, followed by light grain feeding and plenty of green feed. Lameness is sometimes caused by tuberculosis, but from your description I do not think this is the trouble.

WATCH HER SCRATCH.

While more active and nervous than a low-producing hen, the high producer is more easily caught and handled. The high producer is friendly, while the shy layer is sly, stays on the roost or outer edge of flock and squawks when caught. Hens first off the roost in the morning and last on at night are the birds that lay lots of eggs.

NO ROOM FOR HIM.

Nobody has room for the grouch.

Unbounded Faith

Years ago Grandmother learned that the secret of health is to keep the powers of resistance strong. That is why her faith in

Scott's Emulsion

remains unbounded. For fifty years it has had world-wide recognition as a tonic which is rich in health-building vitamines, *to nourish and help keep the powers of resistance strong.*

Scott & Bowne, Bloomfield, N. J. 22-44

Stop Hatching Weak Chicks

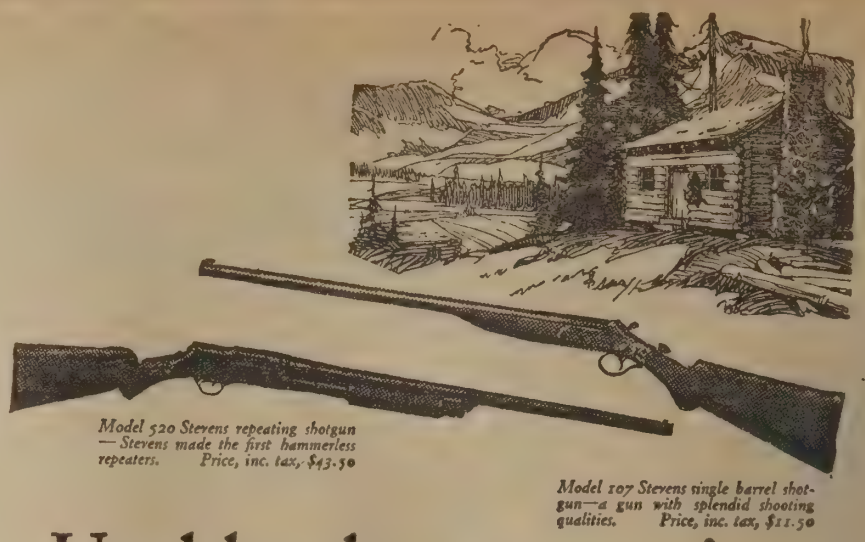
With Cheap Incubators

It's a shame to waste your time and eggs hatching weak, wobbly chicks in cheap incubators, when everyone knows that

Queen Incubators

Hatch Strong, Healthy Chicks—That Live and Grow!

A good incubator is the start to profitable poultry production—it's the cheapest thing you can buy.



One dealer who has sold Queen machines for 9 years says: "I can get hundreds of testimonials of stronger chicks and almost perfect hatches with the Queen."

You, too, will hatch better chicks with a Queen Incubator and raise more of them with the Queen Brooder. Ask about the remarkable Queen Brooder Stove. If your dealer doesn't sell Queens, write us. Catalog free. (54)

QUEEN INCUBATOR CO.
Lincoln Nebraska

Queen Incubators are distributed by:

The Queen Hatcheries, 4th Ave. and Pine St., Seattle, Wash.
The Routledge Seed & Floral Co., Portland, Oregon.
The Brackman-Ker Milling Company, Victoria, Vancouver and Westminster, B. C., Can.

Model 520 Stevens repeating shotgun — Stevens made the first hammerless repeaters. Price, inc. tax, $43.50

Model 107 Stevens single barrel shotgun—a gun with splendid shooting qualities. Price, inc. tax, $11.50

Used by three generations —*still 100% gun*

THE sturdy Stevens shotgun made its first "kills" in the hands of our grandfathers. With it our fathers first experienced the joys of hunting.

And today young men treasure it, not only for its past, but because right today, the good old Stevens still maintains its unbroken record for hard and straight shooting.

In many cases we have found that identically the same gun has been handed down from grandfather to father to son.

You can buy a more expensive gun than a Stevens; but you cannot buy better shooting qualities.

Shotgun or rifle—a Stevens firearm is accurate

When a Stevens barrel is bored or drilled, the final reaming cuts away *less than one-half of a thousandth of an inch.*

A slow method—but when finished a Stevens barrel is *accurate.*

And a Stevens will continue to shoot straight. Stevens guns are fitted so they can't shoot loose.

When you buy a Stevens you are buying unexcelled shooting qualities and you are paying a reasonable price.

Ask at your dealer's or write for the interesting catalog describing in detail our complete line. Address:

1000 EGGS IN EVERY HEN

If You Keep Chickens CUT THIS OUT

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.

The average pullet lays 150 eggs. If kept the second year she may lay 100 more. Then she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle; $5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how. If you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 11035 Herald Bldg., Binghampton, N. Y., and a free copy of "The 1000 EGG HEN" will be sent by return mail. —Adv.

ORCHARD AND GARDEN

Owl and Hawk

Real Menace to Mice in Orchards

That hunters are making a grave mistake in shooting owls and hawks is the statement of John Finley of the United States biological survey, who is in Yakima county, Wash., conducting demonstrations in methods of combating orchard mice. He regards it as poor policy to kill off these enemies of the mice and thereby increase the chances for injury to the orchards. The loss the farmers may sustain through these birds preying on chickens amounts to very little and does not justify the killing of them, said Mr. Finley.

"We have come across quite a few instances where hawks and owls have been killed and left on the ground, indicating that they were merely killed for the fun of it," said Mr. Finley. "Evidently the hunters are in the habit of picking them off as they come along flying low. There is no sense in killing the owls or the hawks. Only two hawks in this region habitually prey upon chickens and they are rarely ever seen. These are the sharp-skinned hawk and the rough-leg hawk.

"Certain owls may have the habit of preying upon chickens, the same as some dogs will kill sheep, but we do not kill all the dogs because some of them have the sheep-killing habit.

"That owls devour a great many mice, we have abundant evidence to prove. It is not uncommon to find as many as 1000 skulls of mice under one perch affected by an owl. I certainly would suggest to hunters and to farmers that they desist from killing owls and hawks, as the depredations which they make on flocks of chickens is so slight as to be of no consequence as compared with the damage that mice do in orchards."

Wintering Bees

By H. A. SCULLEN.

Shall I pack my bees this winter? This is a question many beekeepers are seriously asking after suffering a heavy loss the past winter. No one will doubt that the bees will come through the winter stronger and with less consumption of honey when some protective covering is used. But is the gain enough to pay for the labor and cost of materials? Judging from the testimony of those who have consistently packed for several years we must say it does pay.

The writer is trying out two methods on his personal colonies and the college apiary, using the Williams packing case, such as has been used by a number of beekeepers in the Portland district—a light-weight, one-colony packing case made of cedar.

A similar case has been used by a successful beekeeper of Clarke county, Wash., for many years. It is essential that any packing case used on the west side of the state be water-tight. When painted and well made these cases should last 15 years or even longer. Not counting labor, the individual case will cost little less than 20 cents per year per colony, assuming that it can be used for 10 years or more.

Another method being used by the writer is to wrap the colonies individually with tar paper, allowing enough space between the paper and hives for one inch of dry planer shavings. One roll, costing about $1.60 locally, will wrap an average of 14 colonies at a cost per colony of between 10 and 15 cents. Two men working together can wrap about 10 colonies in an hour. The method followed is similar to the one described by Demuth in Gleanings in the October issue for 1921, page 616, the only difference being that two-inch strips are not used around the bottom. The paper is tacked to the bottom boards, using lath to hold it.

The importance of bringing the colony through the winter strong in order to be better able to hold in check European foul brood can not be overemphasized.

A second essential factor is to see that the bees go into winter with sufficient stores. Remember that in this milder climate more stores are consumed than in colder sections where there are fewer days warm enough for flight. Fifty pounds is not too much to aim at for a winter supply. Some beekeepers have followed with success the practice of feeding 10 pounds of good sugar sirup to every colony, whether it is short of stores or not, about the time brood rearing stops in the fall. This sirup is then consumed by the bees during the winter and practically all of the honey remains for spring brood rearing.

A third condition necessary for good wintering is a large force of young bees. Since it is now too late to build up a colony weak in young bees, the next best thing is to winter two weak colonies together in one hive with a screen partition between.

Storage of Vegetables

Some vegetables must be kept cool and moist, others warm and dry. Professor W. E. Loomis of the department of vegetable gardening of the New York State College of Agriculture, summarizes storage requirements for vegetables as follows:

All root crops and celery—Cool and moist.

Potatoes—Cool and moderately dry.

Onions—Cool and dry.

Squash and sweet potatoes—Warm and dry.

The professor adds:

"There are three classes of injury that must be guarded against; mechanical injury, disease and overmaturity. Vegetables to be stored should be carefully handled to avoid bruising and should be given such protection from freezing and drying as the nature of the product demands. Diseases are favored by high temperatures and moist conditions. The stored vegetables should therefore be kept dry and cool. Overmaturity is best seen in fruits, but is also a cause of loss in vegetables, particularly cabbage, celery and similar crops. Vegetables first lose in quality and then break down and rot. Low temperatures and proper ventilation are the remedy."

TREATING THE FOUL BROOD.

A new method of treating foul brood is being tried out at Elma, Wash., by W. L. Cox, who has had much experience with bees. The treatment consists of a sodium hypofloride spray which is applied hot to the brood combs after caging the queen. The same chemical is fed to the bees in a sugar syrup and promises to be a good means of combating the disease.

Brown Swiss.

The enterprise which the Brown Swiss Cattle Breeders' association showed in offering prizes amounting to half the total offered by the exposition management, in order to secure a classification for this breed, was not matched by the western Brown Swiss breeders. One Montana breeder and three from Oregon entered 43 head, but their exhibits were hardly up to the standard of what this show should maintain. The classes were small and not of top quality, though the first prize 3-year-old and grand champion female was an outstanding individual.

Judge: Professor J. B. Fitch, Manhattan, Kan.

Bulls: Four years or over—1, Theodore Brugger & Son, Gresham, Ore., on Jessie's Lot (senior and grand champion); 2, W. O. Bohart, Bozeman, Mont., on Sunny Hill Bob. Three-year-olds—1, Bohart, on Mick Master's Second. Two-year-old—1 and 2, Bohart, on Bessie's Boy and Jura Master's Don. Senior yearling—1, Bohart, on Bob's Masterpiece; 2, John Boeckli, Linnton, Ore., on Albis. Junior yearling—1, Bohart, on Alice's Beauty (junior champion); 2, Brugger & Son, on Victor Granger. Senior calf—1, C. M. Lounsbury, Boring, Ore., on Billy Sanford; 2, Bohart, on Tessa M's Beauty; 3, Boeckli, on Weisenstein. Senior calf—1 and 2, Bohart, on Dick's Helena and Bob's Beauty; 3, Brugger & Son, on Rosy; 4 and 5, Boeckli, on Kander and Sarnen. Junior calf—1, Brugger & Son, on May Belle; 2 and 3, Bohart, on Beauty's Alice H. and Lucille 2d; 4, Brugger & Son, on Whity.

Cow with official yearly record begun at five years or over—1, Bohart, on Nellie B. Cook. Cow having official record begun under five years—1, Bohart, on Bob's Mascot.

Exhibitor's herd—1 and 2, Bohart; 3, Brugger & Son. Young herd—1, Bohart; 2, Brugger & Son; 3, Boeckli. Calf herd—1, Bohart. Dairy herd of five cows in milk—1, Bohart; 2, Boeckli. Get of sire—1 and 2, Bohart; 3, Brugger & Son; 4, Boeckli. Produce of cow—1 and 2, Bohart; 3 and 4, Brugger & Son; 5 and 6, Boeckli.

THE HORSE SHOW.

The draft horse show was not large—not as large as it ought to have been, for some revival of interest in the drafter is evident the country over. But it was large enough to make a good show, with competition enough to make it interesting from start to finish. While judging was done the first day of the show, before the crowds came, the number of people about the ring showed this interest. The horses shown were all worthy representatives of their breeds, and as the big stallions and blocky mares were lined up or put through their paces they showed as handsomely as any other department of the show.

Percherons.

With the exception of one stallion, the Percheron show was made by A. C. Ruby and D. F. Burge. The one stallion, shown by B. G. Boedigheimer, Mouton by name, made a place for himself in the show by winning senior and grand championship. He is a big horse of correct type, but had no easy time defeating Burge's 3-year-old, Careno, a black that is big and handsome, with plenty of bone and much quality. Ruby's senior champion mare, Lamaladrerie, is a big boned, handsome mare, but the real sensation of the show was the junior champion filly, Cassetta, that finally won grand championship. This is an under year colt, bred and shown by Burge. She is a filly of wonderful quality, of good size, hard, large bone, a fine head and scarcely a fault that can be found anywhere.

Judge: E. L. Potter, Corvallis, Ore.

Stallions: Eight years or over—1, B. G. Boe-

Fur Industry Older Than History

The animals trapped in America include bears, wolverines, coyotes, foxes of all sorts, lynxes, raccoons, skunks, otters, beavers, fishers, martens, minks and weasels.

When the hairy coat of a mammal is densely set and soft and fine in texture, the name fur may be applied to the coat. The use of the fur to the animal is usually to give warmth and thus frequently it is found that the winter coat constitutes a much more valuable product than the summer one. A notable example is the weasel, whose winter coat, under the name of ermine, is one of the most costly of furs. For the same reason, as a general rule, the furs which are most prized are those which are obtained from mammals—as the bear and the arctic fox—inhabiting high latitudes, for it is in these that the coat is densest.

The importance of fur to the beaver is especially its power of throwing off water so as to prevent the chilling of the surface of the skin.

Fur is used both for the purposes of dress and, separated from the skin, for felting in the manufacture of hats. Rabbit fur is used largely for felting. Many of the furs used both for felting and for clothing are really the fine, woolly undergrowth of the skin, and in the unprepared skin are mixed with, or even covered by, a growth of coarser hair. When the hair is to be used for felting these coarser fibers must first be removed.

Many of the most important furs are derived from small animals of the weasel tribe, such as ermine, mink, sable and marten.

The fur trade is a prehistoric antiquity in Asia, while it first appeared in Europe about the sixth century, when sable skins were brought to Rome. Italian traders introduced Asiatic furs into western Europe, but for centuries their use was confined to persons of wealth and restricted by law. Royal personages reserved certain kinds of furs, as ermine, and nobles of various ranks of religious orders kept for themselves some other sorts. The opening of America to trappers and traders offered an apparently inexhaustible supply of excellent furs at steadily lessening prices, and the use of furs rapidly became general in all the varied forms of robes and garments now familiar.

The enormous amount of furs sent to Europe during the seventeenth and eighteenth centuries is almost beyond belief and at the same time constantly increasing supplies were furnished by Asia. The result was a general use and cheapness far greater than at present, when furs of the better sort have again become a luxury.

In recent years the United States has become the chief center of the fur industry of the world.

One of the curiosities of the fur trade is that many furs are sold under names that are not correct and the following is a list of the most common misdescriptions:

American sable is sold as "real Russian sable"; dyed fitch as "sable"; dyed goat as "bear" or "broadtail"; dyed marmot as "mink," "sable," or "skunk"; dyed mink as "sable"; dyed musquash as "mink" or "sable"; pulled and dyed musquash, pulled and dyed nutria and sheared and dyed rabbit as "seal," "electric seal," "Red River seal," and "Hudson seal"; pulled natural nutria as "beaver" and "otter"; sheared and dyed opossum as "beaver"; pulled and dyed otter as "seal"; dyed rabbit as "sable" or "French sable"; white rabbit as "ermine"; white dyed rabbit as "chinchilla"; dyed wallaby as "skunk"; white hare as "fox." In addition white hairs are inserted in foxes and sables to make "silver fox."

In the Markets

It is often said that the packers utilize everything but the squeal. But little besides moisture is lost in slaughtering and the variety of direct and indirect products which result is astounding.

From the bones obtained in the ordinary process of slaughter and in the preparation of boneless cuts, tallow, both edible and inedible; glue, bone meal and a variety of manufactured bone products such as buttons, knife handles, pipestems, tooth brush handles, combs, crochet needles and ornaments are made. The bone meal may be raw or steamed, and used for feed, fertilizer, in case hardening steel or as a filter in sugar refining.

The horns are used for combs, hairpins, hair and other ornaments, buttons, knife, cane and umbrella handles or for fertilizers. The outer shell of the hoof goes as far as possible for the same uses as horns. The inner portion yields neat's foot oil, used as a harness and shoe dressing, stearine and glue and fertilizer.

The hides and skins furnish all kinds of leather goods, automobile and furniture leather, shoes, harness, whips, beltings, bags, suit cases, footballs and drum heads.

Bristles and hair are used in making paint and scrub brushes, artist's brushes, curled hair for upholstering and plaster hair. Pulled wool goes into all manner of woolen goods. Wool as well as hides is usually sold to other companies for manufacture.

Intestinal fats and fat trimmings which are part of the offal are used in the production of soaps, oleomargarine, stearic acid, red, torpedo and heavy lubricating oils, illuminating oil, ointments, candles, cosmetics, polishing compounds and glycerine, either medicinal or explosive.

Meat scraps and blood are made into meal, feeding or fertilizer, tankage and blood meal.

From the intestines, containers for sausage, lard and snuff are obtained, tennis strings, ukelele, harp, violin, and other musical strings, drum snares, gold beater's skins, fancy bottle caps, and surgical ligatures. Ox gall is used in paints and dyes and by laundries and dry cleaners, as a dye fixing agent. Gallstones are used for ornaments.

Nearly a score of gland and other extracts are made for use in treating such maladies as goitre, rickets, mental backwardness, influenza and in obstetrics and other surgical cases. The gland extracts are pituitary, pineal, thyroid, parathyroid, thymus, pancreatin, suprarenalin, pepsin, spleen, uretic, avarian, corpus luteum, and mammary. Other medical preparations from animal tissues include kephalin, lecithin, thromboplastin and red bone marrow.

HIDES

We pay the highest market prices for cow, steer and bull hides and calf skins.

WRITE Percey's FOR PRICE LIST

TRAPPERS!

Exactly fifty years ago Percey's Fur House was established at Oshkosh to barter with the Indians and other trappers. Percey's fair treatment and square deal policy built such a reputation that trappers went out of their way to secure Percey's prices. A man's word was as good as his bond in those days, and through the northwest Percey's word was "as good as gold." It still is.

Make sure your name is on our list. We will advise you of every change in market prices and conditions. Send us a postal Today Sure.

The Largest Fur House In the Northwest

Washington Livestock Ranks High

(Continued from page fourteen.)

dighelmer, Stayton, Ore., on Mouton (senior and grand champion); 2, D. F. Burge, Albany, Ore., on Casino; J. A. C. Ruby, Portland, Ore., on Chieftain. Four years and under eight—1, Burge, on Careno (reserve champion); 2 and 3, Ruby, on Forrest and Forrest King. Three-year-olds—1, A. R. Hunter, Island City, Ore., on Kroumir Jr.; 2, Ruby, on Rufus. Two-year-olds—1, Ruby, on Roscow. Yearlings—1, Ruby, on Dude (junior champion). Colt—1, Ruby, on Oregon.

Mares: Eight years or over—1 and 3, Ruby, on Lamaladrerie (senior and reserve champion) and Kossue; 2, Burge, on Coquette. Four years and under eight—1, 2, 3 and 7, Burge, on Gravette, Jujap, Grainetta and Mauvette; 4, 5 and 6, Ruby, on Diana, Norma and Ora. Three-year-olds—1, Burge, on unnamed; 2, Ruby, on Nora. Filly colt—1, Burge, on Casetta (junior and grand champion); 2 and 3 Ruby, on Kossue's Princess and Leona. Mare and foal—1, Burge, on Grainetta; 2 and 3, Ruby, on Kossue and Ora. Get of sire—1 and 2, Ruby. Produce of dam—1, Burge; 2 and 3, Ruby. Five animals owned by exhibitor—1, Ruby; 2, Burge.

Belgians.

Outside of the aged stallions, A. C. Ruby was the only exhibitor. While few in numbers, it was a thoroughly representative show, with good type from start to finish. Ruby won all but senior champion stallion, which went to Andrew Schwab on Gascon. The 2-year-old Iams, that was made grand champion, is an outstanding colt, with best of type as well as good size and heavy bone. Both female champions are good, but again in this case the junior animal is a wonderful representative of the big, blocky breed.

Judge: George Heyl, Washington, Ill.

Stallions: Eight years or over—1 and 2, A. C. Ruby, Portland, on Nicephone and De Jonkherr. Four years and under eight—1, Andrew Schab, Aumsville, Ore., on Gascon (senior and reserve champion); 2, George Macha, Boring, Ore., on Governor; 3, J. J. Frey, Dallas, Ore., on Lewis. Three-year-olds—1, Ruby, on Indicator. Two-year-olds—1 and 2, Ruby, on Iams (junior and grand champion) and Horace. Yearlings—1, Ruby, on Royal Joe. Colts—1, Ruby, on Buster R.

Mares: Eight years or over—1, Ruby, on Ada W. Four years and under eight—1 and 2, Ruby, on Christabel (senior and grand champion) and Della. Two-year-olds—1, Ruby, on Duchess (junior and reserve champion). Colts—1, Ruby, on Ada. Mare and foal—1 and 2, Ruby, on Ada W. and Christabel. Get of sire—1 and 2, Ruby. Produce of dam—1 and 2, Ruby. Five animals owned by exhibitor—1, Ruby.

Shires.

More competition developed in the Shire classes, probably, than any other of the draft horses, although the show was small. Ruby won senior and grand champion and junior champion also, while A. R. Hunter has the reserve champion in a 3-year-old. Ruby won the senior and grand championship on mare as well, and W. R. Ledbetter was given reserve championship on a mare in the aged class.

Judge: E. L. Potter of Corvallis, Ore.

Stallions: Eight years or over—1 and 3, A. C. Ruby, Portland, Ore., on George B. (Senior and grand champion) and Major; 2, W. R. Ledbetter, on Wilson Idol. Four years and under eight—1 and 3, Ruby, on Durand and Mountain King; 2, Dick Carranga. Three-year-olds—1, Hunter, on Fairfield King (reserve champion). Colts—1, Ruby, on Royal George (junior champion).

Mares: Eight years or over—1, Ledbetter, on Osco Princess. Four years and under eight—1 and 3 Ruby, on Lady Silver (senior and grand champion) and Royal Babe Surprise; 2, Ledbetter, on Fairfield's Exilma (reserve champion). Mare and foal—1, Ruby, on Lady Silver. Produce of dam—1 and 2, Ruby. Five animals owned by exhibitor—1, Ruby.

Clydesdales.

Like the other breeds, the Clydesdales show was not large, but of choice quality. Robert C. McCroskey of Garfield, Wash., and the Dominion experimental farm of British Columbia made practically the entire exhibit. McCroskey had the larger exhibit and a very representative lot of entries, but the Dominion farm won three of the championships.

Judge: George Heyl, Washington, Ill.

Stallions: Eight years or over—1, H. S. Currie, Steveston, B. C., on Edward Garnet (senior and grand champion); 2, R. C. McCroskey, Garfield, Wash., on Hope's Pride. Three-year-olds—1, McCroskey, on Meg's Chief. Two-year-olds—1, Currie, on Adventure. Yearlings—1, Dominion Experimental Farm, Agassiz, B. C., on Topline Buchlyvie (junior champion); 2, Currie, on Drumburle's Best; 3, McCroskey, on Prince. Colts—1 and 2, Dominion Experimental Farm, on Topline Cross and Scotland's Topline.

Mares: Eight years or over—1, McCroskey, on Colony Nancy. Four years and under eight—1, 3 and 4, McCroskey, on Lady Ramsay 2d, June and Fairholme Meg; 2, Dominion Farm, on Doune Lodge Bell Heather. Three-year-olds—1, Dominion Farm, on Melita Pride (senior and grand champion). Two-year-olds—1 and 2, McCroskey, on Garfield Bell and Bonnie Brae Jean. Yearlings—1, McCroskey, on Lady May (junior champion); 2, Dominion Farm, on Topline Chosen. Colts—1 and 2, McCroskey, on Bonnie Brae Topsy and Bonnie Brae Gem. Mare and foal—1, Dominion Farm, on Doune Lodge Nell Heather; 2 and 3, McCroskey, on Maid's Darling and Fairholme Meg.

Get of sire—1 and 3, McCroskey; 2, Dominion Farm. Produce of dam—1 and 2, McCroskey; 3, Dominion Farm. Five animals owned by exhibitor—1, Dominion Farm; 2, McCroskey.

THE JACK SHOW.

A representative lot of big Kentucky jacks was shown by two breeders. These "Missouri canaries" sang very little and their mild manners harmonized with their quietude. They were the object of fully their share of interest and added to the show.

Four years or over—1, A. C. Ruby, Portland, Ore., on Captain Hardison (senior and grand champion); 2, George Macha, Boring, Ore., on Allen Robinson (reserve champion). Three-year-olds—1, Ruby, on Joe Clark. Two-year-olds—1, Ruby, on Sam (junior champion). Yearlings—1, Ruby, on Harold; 2, Macha, on Orphan Boy. Colts—1, Ruby, on Rigg's Boy. Produce of dam—1 and 2, Ruby. Five jacks—1, Ruby.

Willis Sale Holds Spotlight

When Sammamish Topsy, the high-record old Guernsey cow of the Park Weed Willis herd at Redmond, died on the fair circuit a few weeks ago, she little dreamed that before Thanksgiving her children and grandchildren would be dispersed to the four corners of the Pacific northwest. But such is the case, and the sale that will scatter them is the leading event in Guernsey circles next week. The entire herd of Orchard Hill farm, including 19 direct offspring of the great old cow, will go at public auction on the farm Wednesday, November 22, Dr. Willis being compelled to devote his entire time to his medical and surgical practice in Seattle. The farm is but a few miles out of Seattle, and special arrangements have been made to carry the people who will attend by stage and other means.

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

CHAPTER TWENTY-ONE.

The Night Marauder Repulsed.

"Wasn't he even wounded?" asked Orlando.

"I doubt it. At any rate there wasn't a drop of blood on his trail, when we looked for it next morning. That wasn't at all surprising. A crowd of excited men seldom hit anything when they're all shooting together. The wonder is that in our excitement we didn't wound or kill some of our own party."

By this time the cow had ceased her bellowing, but she could be heard lowing, in a restless, uneasy way, every now and then. Frisk had retreated to the campfire, but his erect bristles could only mean that he was angry and suspicious of danger.

"There must have been a bear not far off," Sanders said. "Of course it might have been a bear without being a grizzly. Animals will make a great to-do over any big beast of prey. The scent of such a beast is dead sure to alarm farmyard stock."

"Could ha' been a mountain lion, too," Esau suggested.

"Whatever it was, the varmint came close enough to give Brindle a good scare," remarked Brindle's owner.

"What could we do if a grizzly was to attack us?" Givens wanted to know.

It was Cooper that answered: "If a grizzly charged down on us we could climb some of those trees out there, or maybe this rock. That is, if all of our rifles and six-shooters together couldn't stop the varmint. Bullets enough will kill one of the brutes. Not a doubt of that. Of course if a mountain lion came we'd have to fight it out with 'im on the ground. He could climb faster than any of us. But they're not so hard to put an end to. One good bullet in the right spot will lay any of them out cold."

"Wish—wish I had Brindle up here close to the fire," the cow's owner said. "Don't suppose either a grizzly or a mountain lion would dare to venture very near to a light. At least I've always heard they won't."

"Not close to a big, bright light. Not close to a great, crackling fire like this," Cooper answered. "But it's not recorded that a bear is as much afraid of mere firelight as many people imagine."

"Do you think it would be safe for me to take a blazing chunk and go out and bring the cow in?" inquired Orlando, addressing his question to Cooper.

"Ye-es. I rather reckon it would. But you needn't venture out there alone just now. Some of us or all of us can go with you. Boys, two or three of you grab up a chunk of fire apiece and we'll help Lando escort Mrs. Brindle up close to camp and safety. Too valuable an animal—altogether too valuable an animal, that old packhorse of ours is, for us to let her be made bear feed of."

"Fire's a bully thing to fight any kind of a big varmint with," Givens remarked, while moving round to where he could get hold of a good-sized, blazing stick.

And Holloway answered: "Fire's all right. Not much doubt about that. But here's a boy that proposes to take a chunk of it in one hand and a shooting iron in the other.

Soon four of the party, each armed with a gun, his six-shooter and a blazing pine stick, began to move along near the foot of the great rock, toward where the cow was tied. At this Frisk, regaining his lost courage, ran on ahead of them. Passing across the open ground, he disappeared into the thick woods and thicker darkness beyond.

Scarcely had the four men got well away from the campfire when they heard a series of sharp barks, followed by a roar of rage. And the roar was quickly followed by a terrified yelp. Somewhere out in the woods Frisk had come upon some lurking beast of prey. Either the beast, whatever it was, had been lingering all the time not far beyond the opening, uncertain about approaching, or he had gone away for a little while and Frisk had met him returning.

And not long after that meeting did the frightened dog linger out there. Uttering yelp after yelp, he came rushing back. And close behind him rushed that big beast of prey, pouring out roars of rage as he charged.

In his flight Frisk passed close by the cow. And Brindle, already in a state of panic from her previous fright, suddenly began to pour out terrified bellows as she turned and dashed away.

She was running toward the campfire. Perhaps she was fleeing to the men for protection. Just as probably, though, she was fleeing in that direction because that roaring beast of prey was approaching from the opposite side. Quickly she lunged against the lariat that held her. It was a strong rope, but the pine bush it was tied to was jerked up by the roots.

Here came the cow, bursting through the men with torches! And she ran bellowing on! But a few yards behind her charged the huge, ungainly form of a grizzly bear!

Cooper, from the moment Frisk had uttered that first frightened yelp, had known that some big beast of prey was coming. On seeing the great bear rushing out of the darkness he wanted to shoot, but could not with one hand.

Struck almost in the face by that fiery chunk, the brute started back, growling out a terrible roar of rage as he retreated.

But not far did he retreat. The blazing stick bounced away, and the bear was quickly charging his enemies again. Able now to use both hands, Cooper sent a shot at him from his rifle. Whether, in the semi-darkness and excitement, the bear was hit is uncertain. But he came on as fast as before.

Straightway all the men began a hasty retreat toward the campfire. But all were retreating backwards. And Cooper, quickly transferring his empty rifle to his left hand, jerked the six-shooter from the scabbard at his belt and began to use that. Shot after shot roared out, a stream of fire spouting from his wagon every time he pulled the trigger. But the grizzly still came on.

Others had also been popping away. Orlando had no gun, but, having one hand free, he had drawn his revolver and taken a hasty, excited shot at the bear.

But all their shooting failed to stop the big brute or even to check his speed, and the retreat promptly became a rout. Before turning to run, each hurled his stick at the onrushing beast. Torch after torch flew toward the grizzly's head. Each torch checked his speed for a few moments only, then he came on again—came charging and roaring straight toward the men. At once the rout became a panic.

Now, fully inspired with the belief that no weapon of theirs could stop that bullet-proof monster, the four men made a wild, terrified dash for their campfire. Abe Sanders and Jeff Givens, both of whom had remained by the fire, now cocked their guns and ran out to meet the onrushing tumult. But such was the rush that they were quickly swept back to where they had started from.

"Bullets won't check 'im, boys. Give 'im fire—feed 'im fire!" Cooper yelled to his partners.

Some were prompt to act upon the suggestions. Grabbing up blazing-ended chunks from the campfire, they hurled them with all their might. Others, having regained their lost courage when close to the fire, began to discharge shot after shot from guns or six-shooters.

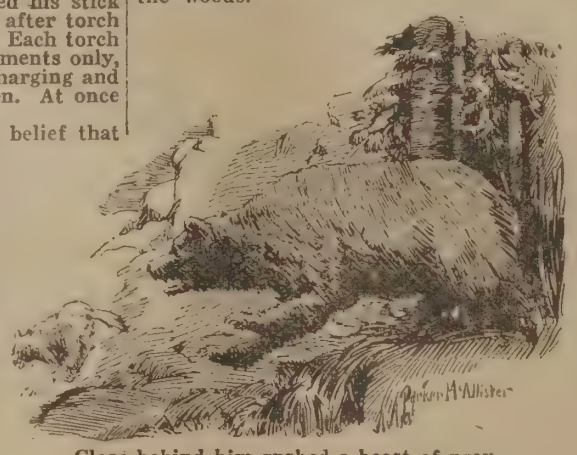
Any person who has had experience at shooting in the dark knows how hard it is to hit anything. And it is even harder to hit any object off in the dark while the marksman is in the light. What real harm was done to the grizzly will never be known. Not very much, it seems safe to say. But between the flying bullets and the hurled firebrands, with the shouting of the men, the barking of the dog and the bellowing of the cow, the bear must have decided that he had stirred up a hornet's nest.

Though still growling and roaring all the time, the brute stopped, apparently bewildered and uncertain what to do. Perhaps that big, crackling campfire, now but a few yards ahead, also helped to frighten him. And when a blazing pine knot struck him full in the face, he promptly turned tail and fled. And his going was even faster than his coming.

When he had vanished into the darkness his assailants ceased to hurl fire and to shoot. In the silence that followed they could distinctly hear grunts of disgust and rage as the grizzly continued his retreat into the black forest.

"Well, boys, by hard scrabbling we finally drove 'im back!" Cooper remarked, as all six of them stood there in anxious, listening silence.

"That we did! That's just what we did! But it was the fire that stopped 'im rather than our firearms," Jess Holloway answered.



"That varmint does shorely despise bullets!" exclaimed Givens. "I'd hate—yes, I'd hate like blazes to be the lone man to tackle 'im. Wouldn't be a grease spot left of the poor chap."

"I'm afraid most of our bullets flew off harmlessly through the air—those that the tree trunks out yonder didn't stop. That ferocious varmint stirred up too big a rumpus among us and too much wild excitement for straight shooting," Sanders told his party.

Now that the grizzly had taken to flight, and did not seem likely to return, Orlando found himself growing anxious about another matter.

"I wonder—I'm wondering what has gone with old Brindle."

"Last I saw of that cow brute she was clattering by here at a mile a minute, and bellowing at every jump," Givens informed him. "Her stake rope and a pine brush were trailing behind her, and keeping up with the cow. It's doubtful if she stopped running till she was a mile or two out in the woods."

Close behind him rushed a beast of prey.

And the cow's owner said: "I do hope our old pack horse hasn't butted her head against a tree trunk and knocked her poor brains out. And even if she didn't do that, there's danger that some big booger like that grizzly will drag her down and make a meal of her before morning."

"Why, oh why, didn't you have your bell on her, Lando?" asked Holloway. "With that you could find her easily now.

"Of course! But I wasn't prophet enough to foresee that a big brute was going to come ripping and roaring in and make her break loose. I'm not in the habit of belling her when I tie her up."

Orlando was greatly worried over the loss of his cow. And the whole party were worried with him at the thought of losing their only pack animal. What they would do with all that load she had been carrying was more than any of them could even guess.

"Don't you suppose she'll find her way back to camp sooner or later, Lando?" asked Sanders.

"Who knows? She could do such a thing, of course. But the chances are she won't, so it seems to me. She's never been bad to wander away when I turned her loose. But I've always hobbled her, and that makes a difference. And tonight she's had such a terrible fright here I'm afraid she won't stop running till she's miles off in the woods. And then, even if she has a mind to come back, there's not more than one chance in a hundred that she can find the way. More likely, after her scare at this place, she'll be so disgusted with the neighborhood that she won't care to return to it. Which means that she'll wander on and on till beasts of prey put an end to her. And that, of course, won't be long."

"I'm of the opinion we may be able to hustle out and trail her when daylight comes. In that way we ought to overhaul her if she's still alive," Cooper said.

"Give us bare ground to trail her on, and I'm sure we could find her, or what the varmints leave of her," Sanders answered. "But on these pine needles, deep-bedded like they are, I've got my doubts. Yes, I've got my doubts. A redskin might follow the trail; but, ten to one, our poor eyesight isn't keen enough. We can try, though. And we will—of course we will."

After talking the matter over till all realized that, without the cow, they would have to abandon this whole prospecting trip, they decided not to wait till morning to get out and do some hunting for her. There were so many beasts of prey in these primeval wilds, a lone animal, and especially a farm-raised animal, could hardly survive many hours when unprotected.

"I'm thinkin' it's a good idy for us to follow her along the way she went tearin' off, and see what we can find," Esau said.

"We'll be 10 times more likely to stumble over another grizzly bear or over a mountain lion tonight than we will to bring up against any lost cow," declared Givens.

"Well, if we rustle up grizzly No. 2, or grizzly No. 1 the second time, there'll be trees a-plenty for us to shin up," Cooper answered. "And if we run afoul of a mountain lion, all of us together ought to be able to settle his hash. By common report they don't wear bullet-proof hides, like grizzlies do."

Now Sanders said: "One thing we clean forgot, boys. Or at least I forgot it. That cow's trailing a rope. And not only a rope, but a pine bush at the end of it. A cow's hoofs won't leave much sign in the pine needles; but a dragging rope and a bush ought to mark out and sweep out a pretty plain trail."

"Of course they ought. Plain enough for us to foller it, even by torch light," spoke out Esau. "And we'd better move fast, too. Won't do us much good to find a passle of wolf-gnawed bones.

"Indeed it won't," answered Holloway. "If we lose our old pack horse and milch cow, we're not likely ever to run across any other brute that will do double duty for us like she did."

(To Be Continued.)

Bits of Fun for Everyone

The Strategic Moment.

Citizen—That's my car. The thief is just fixing a blowout.

Policeman—All right, I'll go over and arrest him.

Citizen—Sh-h-h! Wait till he gets the tire pumped up.—The American Legion Weekly.

Silence.

Mrs. Light—What do you think, John? I peeped into the parlor and saw that rich Mr. Fatwallet sitting at the piano with May, and he's holding both her hands!"

Mr. Light—Oh, that's only a scheme of his to keep her from playing the piano.—Selected.

Where It Might Have Helped.

"Don't talk to me about colleges" scoffed the self-made man. "Look at me! Do you suppose I would have been any more successful than I am if I'd had a college education?"

"No," admitted the professor, "but you might have been less inclined to brag about it."—Judge.

He Found Them.

"When I was a little boy," sweetly piped the hard-boiled sergeant, "I had a set of wooden soldiers. One day I lost those soldiers, and I cried very much, but my mother said, 'Never mind, Johnny! Some day you will get your wooden soldiers back.' And, believe me, you bunch of wooden-headed blockheads, that day has come."—Judge.

Now Look at It.

"I won't wash my face!" said Dolly defiantly.

"Naughty, naughty," reproved grandmother. "When I was a little girl I always washed my face."

"Yes, and now look at it," exclaimed Dolly.—Selected.

The Drawback.

The Bride (inspecting the wedding gifts)—They're awfu' fine, Wullie.

The Bridegroom—Ay, but maist o' them are from folks no' yet marrit, Jean.—Punch, London.

Paddling and Padding.

Willie was being measured for his first made-to-order suit of clothes.

"Do you want your shoulders padded, my little man?" inquired the tailor.

"No," said Willie significantly; "pad the trousers."—Answers, London.

Why, It's Outrageous.

"Out after hours again, hey?" said the father.

"Only 10 minutes late," replied his son.

"Well, go at once to your room, sir, lock yourself in, and bring me the key. This thoughtlessness must be checked!"

Just Folks

As a boy of 9 or 10 I was on a visit to my grandfather's farm in New Hampshire. The "old family horse" on the farm was a mare a dozen years old. She was colored like a Holstein cow, only she was brown and white instead of black and white, being locally classed as a "Rocky mountain" animal.

This mare had lead a strenuous life, having been in harness since a 2-year-old colt. She was no pampered animal as to feed or grooming, although she was in tolerable condition. She had produced a numerous progeny of colts, some of them the pride of the neighborhood. Her temper was pretty well under control except when she had a colt at her side; then look out! But I didn't know that. My cousins on the farm did. So when grandfather came out and wanted the mare harnessed to go to town my cousins hesitated in starting out to bridle the mare, she being lose, feeding in the field with her small colt. I perked up and said I would catch her. I thought myself conversant with horses, as I was a pretty fair rider on a pony. I marched bravely up to the Rocky mountain mare, and just about the time I lifted the bridle the mare rose on her hind legs and with her open mouth gave me a slap on the side of my head, laying me flat on my back, and then deliberately walked over my body without touching me with her feet.

I do not know whether that was a good or bad experience. It certainly knocked a good-sized chunk of self-assurance out of my system and I have never regarded a horse in just the same light since.

Just when the big head in a boy or girl needs to be reduced is a problem which is not as easy of solution as it might at first seem. Experience, however, seems to take that problem out of the hands of parents, teachers and other mentors of youth now and then.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle: I send you this little poem to read and read again and think about. If anything has been omitted to round out a noble character I do not know what it is. A. W. B.

IF.

If you can keep your head when all about you
Are losing theirs and blaming it on you;
If you can trust yourself when all men doubt you
But make allowance for their doubting, too;
If you can wait and not be tired by waiting,
Of being lied about, don't deal in lies,
Or being hated don't give way to hating,
And yet don't look too good, nor talk too wise;

If you can dream—and not make dreams your master;
If you can think—and not make thoughts your aim,
If you can meet with Triumph and Disaster
And trust these two impostors just the same;
If you can bear to hear the truth you've spoken
Twisted by knaves to make a trap for fools,
Or watch the things you gave your life to, broken,
And stoop and build 'em up with worn-out tools;

If you can talk with crowds and keep your virtue,
Or walk with Kings—nor lose the common touch,
If neither foes nor loving friends can hurt you,
If all men count with you, but none too much;
If you can fill the unforgiving minute
With sixty seconds' worth of distance run,
Yours is the Earth and everything that's in it,
And—which is more—you'll be a Man, my son!

—Rudyard Kipling.

Dear Mrs. Barland: I have been reading THE FARMER for six years and I always turn to the Circle page first. I want to tell the sisters that I make stockings last twice as long by running the heels closely with silkaline before they are worn. I also mend or make over canvas gloves by ripping out the worn palms. Beginning at the seam where the thumb is sewed in rip it all around all the fingers and down to the wrist from the little finger, and then cut the palm out up the middle of the fore finger, then I press out all the seams and lay on new material I have for the purpose. I use heavy canton flannel, cutting the cloth a seam larger than the old one, and sew in the new palm on the sewing machine and in a few minutes I have as good as a new pair of gloves.

Idaho. MRS. M. T.

Dear Mrs. Barland: As a young mother of two little children under school age I am interested in Circle topics in general.

I wonder if the Circle will not be interested in making plans for a devotional service in the home for the Sunday school hour when living too far away from a regular Sunday school. My children dearly love the Sunday school, but since we can not take them the year around I have started a little service of our own.

I allow the children to take part in everything, but insist upon strict attention when the scripture lesson for the day is being read. We study about different Bible characters and use the sand table; we sing hymns and close with the Lord's prayer. It takes a great deal of patience to repeat a prayer, sentence by sentence, but the little tots are so earnest about it all that the effort is well repaid.

My husband isn't a church man, but this doesn't bar me from the responsibility of training the little folks so they shall grow up in the knowledge of God and learn to trust to him for guidance over the rough ways of life. I am aware that this is an age when many scoff at the these things, but Washington and other great men have been strong believers in religious training and the foundations of our government rest upon the good old gospel of Jesus Christ. MRS. M. B.

SELECTING THE RIGHT APPLE.

As a help in selecting the right apple at the right time, extension specialists recommend, for eating apples during November the Delicious, Gravenstein, Jonathan, King David, Grimes Golden and Winter Banana. Cooking apples for this month include the Jonathan, Grimes Golden, Gravenstein and King David.

Apples which are good to eat during December and January include: Delicious, Spitenburg, Jonathan, Grimes Golden, Winter Banana, White Pearmain, Stayman Winesap, Wagener, Rome Beauty and Ortley. When it comes to apple pies, dumplings or sauce, use the Jonathan, Spitzenburg, Rome, Wagener, Grimes Golden, Red Cheek or Ortley.

Family Circle Girls

Dear Mrs. Barland: I have just finished reading Tinnie's letter and I think it very fine for the girls to write and I think it would be nice if the girls were to write to each other.

I have been thinking of bobbing my hair, but have been advised not to do so as it is very long and thick. Do you think it helps hair to bob it?

Is it right to go with the same young man very long? I have been going with the same boy for almost a year, but have met another whom I like better. Is it right to quit going with the first one? Some say I am too young to go with boys, but I would have to stay home most of the time if I didn't go out with them. For my part, I think it all right to go out with boys if they behave themselves.

I am in high school but I don't care much about it. What do you think would be a good thing for me to take up? I like to sew and read. I make a good many of my own clothes. I don't like to cook, but I have a lot of it to do. I will soon be 17 years old.

Is it wrong to dance? "BILLIE."

My Dear "Billie": Don't bob your hair. You say it is long and heavy and therefore there is no good reason for bobbing it and the fashion has passed now anyway and will soon be ancient history. It was only a fad. If hair is short and thin bobbing is likely to help it, though it doesn't always do so.

There is no harm in going with the same boy all the time if both are satisfied, but since you have met another one whom you like better or think you do, it is perfectly proper for you to accept his attentions. That is your privilege and in fact is quite likely a wiser thing to do than to settle down at your age to the first boy you go out with.

The best advice I can give is that you stimulate your interest in high school and finish with credit. But if you have not the determination to do this I think if you like to sew dressmaking would be a good thing to take up. I will discuss dancing some other time. What do you girls think about it?

ALICE W. BARLAND.

Home Recipes

Ginger Cookies—One pint each of molasses and corn sirup, to this add 1 level tablespoonful of soda and ½ cup of butter or a mixture of lard and butter, 1 tablespoonful of ginger (level). Mix thoroughly and set aside, then beat the yolks of three eggs well, add 3-4 cup of sour milk and 1 level tablespoonful of soda and add to the sirup mixture and use flour enough to roll out and bake in a moderate oven.

When baked ice them with the following—Two and one-half cups of granulated sugar and 1 cup water, boil until it threads then pour over the beaten whites of 3 eggs. Take note that there are 2 level spoons of soda in these cookies. These are fine and the frosted cake delights the kiddies. MRS. T. A. W.

Deer Park, Wash.

Salad Dressing—One beaten egg, ½ cup vinegar, small lumps of butter, pepper, salt and mustard to taste. Put all over the fire, boil till it thickens, stirring to keep smooth and remove from fire to cool. It can be thinned with cream or milk or buttermilk or used without thinning.

MRS. A. M., Wash.

Chocolate Cream Fudge—Two cups light brown sugar, 1 cup thick cream, 1 teaspoon butter, 2 squares chocolate, or cocoa can be used. Let it cook till it will form a soft ball in cold water, stirring occasionally to keep from burning. Season with vanilla and pour over nut meats. It should be stirred till it is thick, but must be poured before it sets.

MRS. M. L. T., Wash.

Boston Roast—Press 1 pound well cooked kidney beans through meat grinder or coarse strainer. Add ½ pound grated cheese and bread crumbs to make a stiff mixture, season to taste with salt and pepper, bake in a moderate oven basting as necessary with hot fat and a little warm water. Serve with thick tomato sauce.

GENERAL ADVERTISING.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color the buttermilk. Tasteless.

Wells & Richardson Co., Burlington, Vt.

Had Your *Iron* Today?

Good November Food

For Men on Farms

The reading of newspapers and farm journals in easy chairs calls for different kinds of food than plowing days require.

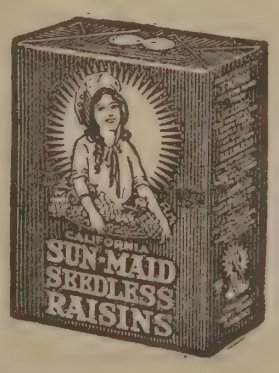
Inactivity is particularly the foe of good health on the farm.

You need foods then that tend to do what exercise does during busy times.

Stewed Raisins Are Luscious and Effective.

Stewed raisins served with cream is a most delicious breakfast fruit-dish, and one that brings real winter benefits.

Eat them frequently when exercise is lacking. For raisins are 75 per cent fruit sugar in practically predigested form.



Stewed Raisins

One package Sun-Maid Raisins; 1 slice orange or lemon rind; 2 cups cold water.

Put raisins and water in saucepan and bring to boiling point. Add slice of orange or lemon and cook for 30 minutes. Sugar may be added, but it is not necessary. Stewed raisins being very rich should be served in small portions.

Sun-Maid Raisins should cost you no more than the following prices:

Seeded (in 15-oz. blue pkge.)—20c.
Seedless in 15-oz. red pkge.)—18c.
Seeded or Seedless (11 oz.) —15c.

Red package (Seedless), best for stewing.

And this sugar and the raisins skins make a mildly laxative food that's the most effective natural fruit-laxative we know.

Raisins furnish **food-iron** also—fine food for the blood.

You need but a tiny bit of iron daily, but that need is vital. Stewed raisins will help you get your daily portion of it in a most attractive way.

The fact is, you will like this dish so well that it will be your regular morning fruit-food the year round.

Try it now and note how delicious. Try it every morning for ten days as a test. Decide then if it's also a health food that you need.

Always ask for

Sun-Maid Raisins

Get delicious Sun-Maid Seedless Raisins from your grocer. Stew them as directed in the column to the left.

Mail coupon for valuable free book, "Sun-Maid Recipes," describing scores of other luscious raisin foods.

High Points in News of the Week

The election of last week brought to an end one of the most interesting campaigns in recent years, and resulted in numerous changes in congress and state offices. From a national point of view the election of C. C. Dill, democrat, over United States Senator Miles Poindexter, republican, of Washington, and the election of Elton Watkins, democrat, over Congressman C. N. McArthur, republican, of Oregon, are most interesting in these states. Throughout the country as a whole there was a democratic gain. The republican majority in the lower house of congress was reduced from 165 to about 15, according to latest reports. There was a considerable reduction of the republican control in the senate, but it is apparent that there are now 53 republican senators out of the total of 96. Among the interesting features is the election of Lynn J. Frazier of North Dakota to the United States senate. Frazier, former nonpartisan league governor, ran on the republican ticket.

Especially significant is the winning in Michigan of a democrat for senator over the republican candidate. The new senator was elected on a platform of opposition to the seating of Newberry of Michigan, and goes to the senate with the announced purpose of reopening the Newberry case with a view to unseating him. The opposition charges that Newberry obtained his election two years ago at the end of a campaign in which he spent $195,000 in campaign expenses, in violation of the corrupt practices act. Newberry's friends admit the spending of the money, but maintain that corruption did not enter into the campaign.

The liquor question was also prominent in the election last week. Anti-prohibition leaders claim victories, but the liquor law enforcement leaders declare that no appreciable gain has been made by the liquor forces in congress, notwithstanding a definite move for the election of senators and congressmen who would vote for the modification or repeal of the liquor enforcement laws. It is interesting to note that Congressman Volstead of Minnesota, author of the Volstead enforcement act, was defeated for reelection. Of interest also is the election of Edward I. Edwards, democrat and an avowed "wet," to the senate from New Jersey over Senator Frelinghuysen, republican and a "dry." On the other hand, California, the center of the grape industry in America, voted last week to make the prohibition amendment and the federal prohibition enforcement laws part of the state law of California.

Of special interest in the three Pacific northwestern states were the following election results:

Washington—Election of C. C. Dill over Senator Poindexter by nearly 5000 plurality; defeat of the 30-10 school bill; repeal of the poll tax; reelection of all five republican members of the lower house of congress; defeat of the "certificate of necessity" bill; defeat of the bill requiring voters to register their party affiliation and to vote in the primary of that party only; defeat of the constitutional amendment raising the salaries of members of the legislature.

Oregon—Election for governor of Walter Pierce of La Grande, democrat, over Governor Olcott, republican, by a majority of over 34,000; adoption of the compulsory school bill, the measure requiring that all children attend public school; defeat of the proposal that the city of Portland be permitted to raise $3,000,000 by tax levy for the 1927 world exposition; defeat of Congressman McArthur, republican, by Elton Hawkins, democrat; the reelection of Congressmen Sinnott and Hawley.

Idaho—Election of C. C. Moore, republican, for governor over H. F. Samuels, progressive, and Moses Alexander, democrat; reelection of both of Idaho's present congressmen; election to the legislature of a majority of members favoring the enactment of a state-wide primary law.

* * *

The interstate commerce commission last week denied the application of the railroad companies for permission to give lower rates to Pacific coast points, such as Seattle, Tacoma and Portland, than to interior points, such as Yakima, Spokane, Pendleton, Boise and Salt Lake, on freight originating east of the Rocky mountains or being shipped from the west to eastern points. This action follows a series of hearings by a representative of the commission during the last year and will result in the maintenance of rates to all western points on the mileage basis rather than on the coast-and-back basis. The application of the railroads was based on the old-time claim that water competition in shipments to and from Coast points necessitated lower railroad rates to such points than to interior points where water transportation was not available. The decision of the commission was based on the provision of the interstate commerce act, which provides that no charge for a short haul shall be greater than for a longer haul.

* * *

An earthquake of considerable power occurred somewhere in the Pacific ocean last Saturday, probably near the coast of Chile, where greater damage was done. Tidal waves, however, resulted in the Hawaiian islands and as far north on the American coast as Los Angeles. A considerable number of deaths resulted from the disturbance in Chile.

* * *

The United Stated court of claims has reconvened with a large calendar of important causes for the winter term. Actions involving approximately $350,000,000 arising out of the country's activities during the World war are pending and the influx of these cases has hardly begun. The ultimate aggregate of such claims is estimated by the attorney general at between $2,000,000,000 and $3,000,000,000. These actions are brought into the court by plaintiffs having claims against all departments, including actions for requisitioning of ships and railroads, transportation of troops, ammunition and supplies, infringement of patents for high explosives, submarine boats and torpedoes, wireless and radio apparatus, contracts for anti-aircraft engines and guns, military and naval supplies and ammunition, appropriation of camp sites and naval bases, together with contracts for manufacturing and acts of commandeering of almost endless diversity.

* * *

President Harding has issued a call for the opening of congress in a special session November 20. It is understood that he is especially anxious that this session take up the ship subsidy bill and enact it into law.

* * *

Armistice day was observed throughout the United States and in other allied countries November 11. A feature of it in this country was the formal placing of a wreath on the tomb of the "unknown soldier" by President Harding in the Arlington National cemetery.

* * *

Former President Woodrow Wilson appeared at his residence in Washington, D. C., on Armistice day and spoke for five minutes to a crowd of friends who had gathered to pay him honor. It was his third public appearance since he left the White House March 4, 1921.

* * *

In an Armistice day address in New York, General Pershing warned his hearers that this country must be constantly prepared for national defense. He declared that the situation in the Near East, brought about by the defeat of the Greeks by the Turks, was menacing to the peace of this country.

* * *

Former Premier Clemenceau of France sailed November 11 from Havre for the United States, where he will spend a few weeks with a view to bringing about a better understanding between this country and France. The former premier, who was at the helm of the French government during the war, is 82 years old.

* * *

The peace conference between the allies and Turkey will open at Lausanne on November 20, the object being to solve, if possible, problems resulting from Turkish aspirations for return to Europe.

* * *

A statue of former President Roosevelt was unveiled and dedicated in Portland last Saturday, Armistice day. Unable to be present in person, President Harding sent a personal message, which was read at the ceremony.

* * *

Andrew Bonar Law, the new British premier, at a recent meeting expressed a desire that influence be brought to bear on the United States to get this country to join the league of nations.

* * *

There is now pending before congress a resolution proposing a constitutional amendment to put an end to the issuance of tax-exempt securities. High government officials and members of congress express the desire that this resolution be acted upon as soon as congress reconvenes for the short regular session in December. President Harding is understood to be giving the measure his personal support. It is argued that capital is seeking investment in tax-free securities in ever increasing amounts, not only causing direct and large loss in taxation to both the federal and state governments, but tending to attract investment away from industrial enterprises that must bear taxes.

Potato Shows Grow in Interest

(Continued from page three.)

since the war has increased about 50 per cent, while the consumption of bread has decreased about as much, showing a clear substitute of potatoes for bread. Also, the use of potatoes as stock food has fallen to a very low figure, consequently reducing live stock production.

Commenting on these figures a writer in the Rural New Yorker says that the point of special interest to the American potato grower with a large surplus of potatoes, which occurs every two or three years, is the utilization of the crop for other purposes than human food. Even if the production of starch or industrial alcohol may be out of the question, it seems to him that the utilization of potatoes as stock feed in this country has never been fully appreciated. Fed either raw or cooked they furnish a succulence to either dairy cattle or pigs.

Inspect Seed Potatoes

Carl W. Grayson, Idaho, county agent, spent two days recently visiting with J. H. Rearden, assistant county agent leader, the plots of certified seed potatoes. The potatoes on the whole were found not to be very good, due to the severe season, and as fields none of them passed the second inspection. Mr. Rearden stated, however, that they were about as good as the average over this part of the state and with a favorable season next year they would probably come back to type. The quality of the spuds were good and very little disease was found. Most of the growers will not have any to sell, as they expect to plant all they have grown next season.

Mr. Rearden advised a few of the men who will have some to spare that they could get them certified by grading them to standard. When this is done the county agent will inspect the bags. If they are found to come up to the standard the sacks will be sealed and tagged.

In spite of the fact that the crop has not shown up very well this year, the men planting the good seed are well pleased with their venture and all made the statement that this seed has yielded many more marketable potatoes than their own seed, and they expect to plant an increased acreage next year. They appreciate the advisability of standardizing the product and the agent considers that the project has been a very good success, even under the adverse conditions under which they have worked this year.

Canned Milk Shortage

Not long ago there was a surplus of condensed and evaporated milk, which sold so slowly that condensers curtailed their outputs. Reduced supplies and a constant whittling away of the reserves have led to a much firmer market, with advances in both advertised and nonadvertised brands. One New York broker, to find sufficient supplies of current make, wired a number of his connections in various sections. One large packer of evaporated came back, saying: "We are forced to buy to cover our October commitments and consequently have nothing to offer." A buyer who covered the middle western producing sections says that it is next to impossible to buy now, with little prospect of improvement for another month. A maker with a monthly capacity of 100,000 cases in the middle west, says: "It was so dry and hot in September that we have nothing to offer." Another packer wires: "There is a temporary shortage here, as we are oversold for 30 to 40 days." "We will have no milk to offer for the balance of the calendar year," says still another.

Farm Business and Markets Outlook

(Continued from page five.)

Corn—No. 2 eastern yellow shipment, November, $34; December, $33; No. 3 eastern yellow, shipment November, $32.50; December, $32.50.

Mill run, November, December, $30.

WALLA WALLA, Nov. 11.—Bluestem and Bart, $1.18; club, $1.04; Turkey Red, 98c.

RITZVILLE, Wash., Nov. 11.—Bart, $1.32; red, $1.08; Fife, $1.04.

DAVENPORT, Wash., Nov. 11.—Bluestem, $1.28; Marcus, $1.05; Gold Coin, $1.05.

Hay and Feed Grain.

Corn—White, $40; cracked, $42 per ton.

Hay—Buying price, f. o. b. Portland: Alfalfa, $18.50@19 per ton; cheat, $18.50@19; oats and vetch, $21; clover, $19; valley timothy, $21; eastern Oregon timothy, $21@22.

SPOKANE, Nov. 11.—Wheat—Feed wheat, $42 ton. Oats—$42 per ton; steam rolled, $44. Corn—$40 per ton; cracked corn, $42 ton. Barley—$42; steam rolled, $44. Bran—$31 ton. Bran and shorts—$32 ton. Shorts—$34 ton.

General Produce.

PORTLAND, Ore., Nov. 11.—Butter—Cubes, extras, 43@44c lb.; prints, parchment wrapped, box lots, 48c; cartons, 49c. Butterfat, 48@49c, delivered Portland; station buying price, A grade, 46@48c.

Eggs—Buying price: Current receipts, pullets, 39c; case count, loss off, 45c; henneries, 48@50c dozen. Jobbing prices: Front street, candled ranch, 50@52c; selects, 53@54c; association selects, 55c; association firsts, 53c; association pullets, 45c.

Cheese—Tillamook triplets, price to jobbers, f. o. b. Tillamook, 30c; Young Americas, 31c; longhorns, 31c pound.

Poultry—Hens, 13@23c pound; springs, 16@20c; ducks, white, 20c; geese, 15@18c; turkeys, live, 30@32c; dressed, choice, 38c; No. 2, 33c.

Veal—Fancy, 11½@12c per pound.

Pork—Fancy, 14@14½c per pound.

General Produce.

SEATTLE, Nov. 8.—Eggs—Select local ranch, white shells, cases included, 50c per dozen; mixed colors, 40@50c per dozen; pullets, 37c per dozen; cases returned to shippers, 1c less.

Butterfat—F. o. b. Seattle: A grade, 50c per lb.; raw milk, $2.10 per cwt.

Poultry—Hens, 4½ lbs. and up, 23c per lb.; over 3½ and under 4½ lbs., 16c per lb.; 3 to 3½ lbs., 12c per lb.; do dry picked, 2c above live; broilers, under 2 lbs., 19c per lb.; old roosters, 11c per lb.; Belgian hares, 3½ lbs. and heavier, 11c per lb.; geese, fat, live, 18c per lb.; ducks, 3 lbs. and heavier, live, 18c per lb.; turkeys, fat, dry picked, 8 to 15 lbs., 35c per lb.; do live, fat, 10 to 15 lbs., 30c per lb.; squabs, large, $4.50 per dozen; pigeons, $2; guineas, $8 per dozen.

SPOKANE, Nov. 11.—Poultry, live weight—Hens, 4 lbs. and over, 17c; light hens, under 4 lbs., 12c; springs, all sizes, 16c; old roosters, 8c; ducks, 15c; geese, 15c.

Fresh ranch eggs—$10.50@12 case, according to quality.

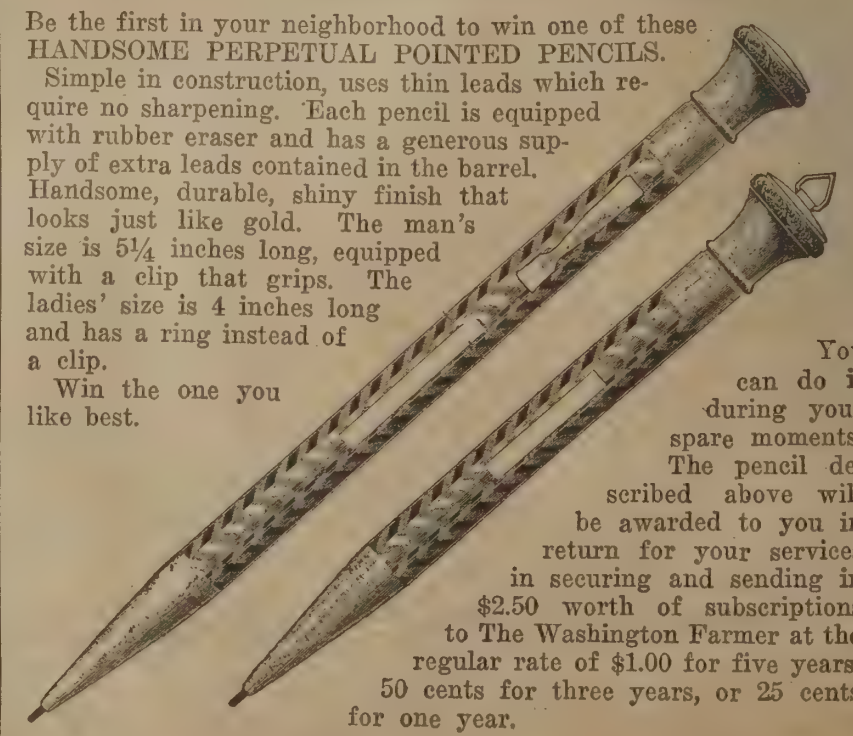
Butterfat—46c a pound.

Cooperators Join Grain Exchange

Announcement has been made that the Northwest Wheat Growers, Associated, has secured a seat on the grain exchange of the Minneapolis Chamber of Commerce. The right to the use of the marketing facilities of the exchange was secured through a membership obtained by Fred L. Jeklin, Minneapolis sales agent.

"The Northwest Wheat Growers, Associated, of course, will not enter into speculative trading in any form," according to an announcement issued by General Manager Jewett. "The membership has been obtained only to facilitate actual selling of the wheat pooled by members of the state organizations.

"There are two distinct divisions of the grain exchange. One is the 'pit,' where speculators play their choices on the ups and downs of the market. The other is the establishment for actually selling wheat—long rows of tables upon which samples are placed for inspection by millers, exporters and foreign buyers. This is the part of the exchange to be made use of by the cooperative organization."



Officers of the association say that the seat was imperative if members were to get the best prices for their pooled wheat.

Win Handsome Pencil

Be the first in your neighborhood to win one of these HANDSOME PERPETUAL POINTED PENCILS.

Simple in construction, uses thin leads which require no sharpening. Each pencil is equipped with rubber eraser and has a generous supply of extra leads contained in the barrel. Handsome, durable, shiny finish that looks just like gold. The man's size is 5¼ inches long, equipped with a clip that grips. The ladies' size is 4 inches long and has a ring instead of a clip.

Win the one you like best.

You can do it during your spare moments. The pencil described above will be awarded to you in return for your services in securing and sending in $2.50 worth of subscriptions to The Washington Farmer at the regular rate of $1.00 for five years, 50 cents for three years, or 25 cents for one year.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Covering the brain are certain supporting and protecting tissues called the "meninges." Like all other tissues of the body, inflammation may seat itself here. When it does the disease is called "meningitis."

Dr. Copeland.

Before there is actual inflammation there may be congestion for a considerable period. But unless this is controlled the actual inflammation occurs.

All brain disturbances have headache as an early symptom. In meningitis this is severe, almost agonizing. Neuralgia, here and there through the head, is another sign of this disease. There is great sensitiveness to noise. Sleep is disturbed on this account.

Stiffness of the muscles of the neck and often of other parts of the body is noted. Sometimes the head is drawn backward by the contracted muscles. The muscles of the abdomen are drawn inward. There may be twitching of the muscles here and there, and also convulsions.

There are various paralyses. One eye may turn outward or inward, due to a paralyzed muscle. The lid may droop. The side of the face may be paralyzed.

Grinding of the teeth, delirium, stupor and unconsciousness are other symptoms.

It is unusual for meningitis to be a primary disease. That is, it usually follows some other disease. For instance, it may complicate tuberculosis. But all the infections—like influenza, measles, typhoid, etc.—may have meningitis following. Bright's disease, the wasting diseases of children, and some forms of heart disease produce this disease.

Sunstroke and blows on the head may cause it.

There must be absolute quiet. Rest in bed in a cool and darkened room must be insisted upon.

An ice-pack to the head will help.

The family doctor will take charge of the medication and search out the cause of the difficulty.

In the Meat Department.

"Hogs are funny things," mused the assistant meat cutter as he whacked off some slices of bacon.

"As to which?" asked the head meat cutter.

"They have to be killed before they can be cured."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4027. Lady's Dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 6 3-4 yards of 40-inch material. The width of the skirt at the foot is about 2 yards. Price 10 cents.

Read the "Want Ad" page this week for good offers of all kinds.

This is the first time we have heard from Eva Lillian Hood for nearly two years. (We are glad to hear from you again). Eva Lillian is 11 years old. Her birthday is July. 13. She says Constantinople is a hard word to spell. Can you spell it? I-t.

Mildred Dazarn wants to join the Corner. (Come, Mildred—the more the merrier.) Mildred writes: "I am 9 years old and I am in the fifth A grade. I like my teacher. She is nice. I like the Corner. I also like THE FARMER. We have one cow and about 40 chickens and 105 ducks. Some are white and black." Mildred has three brothers. Her birthday is February 7.

Linnea Gord, a western Washington girl, writes us a short letter. She is 11. She attends the Lowell school and is in the sixth A grade. She has three teachers. Her birthday is February 11.

We have a letter from Grace Johnson of eastern Washington, Whitman county. Six children in the Johnson home attend school, two boys and four girls. When it rains brother drives, so they will not have to walk. Grace attended a program and pie social on Halloween. She will be 11 January 14, 1923.

The following is from an eastern Washington boy: "I live on an 880-acre farm in Douglas county. My name is Chester Brown. I was 11 years old June 16, 1922. I can drive an eight-horse team. Next spring I am going to help seed wheat. We have nine head of horses, one cow and a calf." Chester has read his friend's Junior Farmer and he likes the stories in it. (Welcome to our Corner, Chester.)

Birthday Greetings

THURSDAY, November 16—Ralph Dean Cain, 10 years old; Hazel Farley, 10; Bessie Wagner, 11.

FRIDAY, November 17—Allen Hutchins, 10 years old.

SUNDAY, November 19—Kirstine Hansen, 11 years old; Dorothy Harbour, 11; Cecil Jellison, 11; Kenneth McClelland, 11; David Slemp, 8.

MONDAY, November 20—Benn Everett Nesbitt, 11 years old; Jack Reid, 11; Loyd Van Wechel, 9.

TUESDAY, November 21—Ethel Leroy Bowen, 8 years old; Fern Hall, 11; Sylvia Lampi, 11; Edna Yochum, 10; Nelson Chrisman, 10.

WEDNESDAY, November 22—Harriett Cook, 11 years old; Laveryne Cox, 11; Kenneth Albert Leamer, 11; Hazel Schafer, 10.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOWSER MEETS HIS MATCH.

Peter Rabbit and Digger the badger had become the best of friends. Every morning Peter stopped at Digger's new home to tell him the news of the Green Meadows, for Digger was so busy that he had little time to go about. Then Peter, who is a great gossip, would go about among his neighbors and tell them what a fine fellow Digger the badger is.

Now, on the green meadows and in the green forest no one is feared like Bowser

"You had better be afraid of me," growled a deep voice.

the hound. When his voice comes booming on the air all the little meadow and forest people, excepting those who fly, shiver and hide, all but Prickly Porky the porcupine, who knows his thousand little spears will protect him, and Unc' Billy Possum, who one time fooled Bowser and is sure that he can do it again. So when Peter Rabbit boasted about Digger the badger and what a big, strong fellow he is, Peter's neighbors shook their heads and said, "Wait until he meets Bowser the hound. Just wait. Then we will see."

Of course, Peter told Digger all about Bowser the hound and what a terrible fellow he is. Digger just laughed.

"I'm not afraid," said he.

"But you don't know him. You don't know what a great, big, fierce fellow he is," protested Peter. "You just better watch out!"

Then one day when jolly, round, red Mr. Sun was smiling his broadest, Bowser the hound took it into his head to go down the lone little path into the green meadows, and there he surprised Digger the badger out for a walk. Bowser stopped and pricked up his ears. He had never before seen such a queer fellow, and he didn't know just what to make of him, for Digger just stood still and grinned at him until he showed all his teeth.

"Bow, wow, wow!" shouted Bowser in his deepest voice that carried terror to all the little forest and meadow people.

Still Digger the badger just grinned. The hair stood up on Bowser's neck and back until he looked very fierce and savage.

"You had better be afraid of me," growled Bowser in a deep voice.

"But I'm not," said Digger the badger, "not the least little bit."

"Then I'll make you afraid," snarled Bowser, springing on Digger the badger.

Then followed such a fight as the green meadows had never seen. The merry little breezes spread the news of it, and soon all the little meadow and forest people gathered about in a great circle.

Over and over in the meadow grass rolled Bowser the hound and Digger the badger, snarling and growling and biting and clawing. Soon Bowser's smooth, glossy coat was torn and Digger's gray coat was in tatters.

Reddy Fox watched from a safe distance and grinned, "Now," thought Reddy, "this will be the end of Digger the badger, and I'm glad of it."

But it wasn't the end of Digger. Oh, my, no! The first thing they all knew Bowser the hound was actually running away. Yes, sir, with his tail between his legs Bowser the hound was hurrying up the lone little path, whimpering, with the tears rolling down his cheeks. The little meadow and forest people looked at each other. They could hardly believe their eyes. Then they gave a great shout and all hurried up to shake hands with Digger the badger and tell him what a wonderful fellow he was—all but Reddy Fox, who ground his teeth and sneaked off in disappointment.

Cook With Coal Oil Gas

The simplest and most economical coal oil gas burner ever known has been patented by Leonard Conow of San Francisco. This great invention is entirely different from other burners now in use. Fits any wood or coal stove, oven and waterback. No priming, no roaring, no carbon. Just turn a valve and get an intense heat that is regulated at will. Cheaper than coal or wood—and better. Brings happiness into the home.

To prove that the Conow Burner is exactly as represented, the manufacturers agree to send the outfit on 30 days' trial and let you see how it works before deciding to keep it. Write today for free literature, which explains all.

CONOW BURNER CO. 15 Columbus Ave., Dept. K, San Francisco, Cal.—Adv.

FARMERS' COOPERATIVE SUBSCRIPTION PLAN-

Another year of success for our farmers' cooperative subscription plan is the mark we have set for ourselves as we look back upon the remarkable record of achievement for this revolutionary method of securing and renewing subscriptions.

Farmers and fruitgrowers in all parts of the state have congratulated us upon the adoption of this plan, being interested in any effort designed to give the farmer the things he needs for less money by eliminating the expense of getting the articles into his hands.

We say to our friends, and again repeat; first of all see that your own subscription is paid well in advance, preferably sixty days before the expiration date on the wrapper. Secondly, let your neighbors know about our cooperative plan and when mailing your own order include theirs as well. Thirdly, if your own subscription is attended to for the year find us just one new subscriber.

By doing this the agent is eliminated and the farmer, fruitgrower and stock breeder gets the benefit of every penny which would ordinarily be paid out for the agent's salary, automobiles, gasoline, rigs, hotel and garage bills, railway fares, and incidental expenses.

If you are a believer in the principle of cooperation please do your part in making this cooperative plan a success in your neighborhood.

Nov. 16, 1922.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash. .....1922.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to THE WASHINGTON FARMER.

More Money From Hogs!

Free Book on Sanitary Improvements Shows How to Prevent Loss from Disease and get larger Profits

Healthy hogs are the real money hogs. And they don't just "happen." Healthy hogs are the result of healthy surroundings. Treat your hogs right and they will pay you more.

Cholera, white scours, pneumonia and worms are developments directly due to unsanitary surroundings.

Prevent disease and save feed by providing your hogs with clean, warm, comfortable quarters.

Our book, "Concrete on the Hog Farm" tells how to build permanent, sanitary improvements. Some of the subjects covered in this book are—Hoghouses, Feeding floors, Hog Wallows, Troughs, Waterers, Corncribs, Dipping Vats, Brine Tanks, etc.

Plan your improvements NOW. Send for this Free Book and know how to save on replacements and how to build for all time. Address office nearest you.

Ayrshires Coming to Front

Not to be outdone, proportionately, by other breeds, northwest Ayrshires are coming to the front. The latest issue of the Ayrshire Digest credits a Washington State college cow, Willowmoor Ila, with producing more butterfat during the month of July than any other Ayrshire cow on official test in the entire country during that period. At the age of 7 years, this animal led the list of 89 mature cows (class A) that produced 50 pounds or more in July, with a monthly credit of 1369.1 pounds of milk and 80.09 pounds of fat. Her nearest competitor was a Pennsylvania cow that made 77.09 pounds. "Ila's" supremacy is the more remarkable in that she had been on test longer (217 days) than any other cow in the list except two, her total credit for the seven months' period being 10,065.3 pounds of milk and 523.24 of fat. Oregon Agricultural college also has a cow in the list, and there are several from this territory among the younger animals producing a proportionate amount of fat for their age and reported by the Digest.

Among 18 senior 4-year-olds that made 47.5 pounds or more, appear Chinook Peter Pan Bessie, owned by Washington State college, and Oregon Robinetta M., owned by Oregon Agricultural college. The former was second in the list with 65.91 pounds to her credit during her seventh month on test, and the latter was twelfth with 52.71 pounds, also in her seventh month. They are both "college bred" heifers.

Ester Marea, owned by Earlcrest Stock farm, and Oregon Robinetta R., owned by O. A. C., brings Oregon to the front among junior 4-year-olds, for they stood seventh and eighth, respectively, among 22 heifers that made 45 pounds in July. Their records were 56.85 and 56.83 pounds, the former in her sixth month on test and the latter in her third. E. W. Van Tassell of Wenatchee, Wash., had a heifer among nine senior 3-year-olds that made 42.5 pounds or more, another among 13 junior 3s that made 40 pounds, and still another among 32 senior 2s that made 37.5. His three animals produced 45.15, 50.86 and 53.34 pounds each, respectively. O. A. C.'s Oregon Panetta H. was among the honored junior 3s, and its Oregon Panetta J., a junior 2-year-old, lead the list of heifers of that age, which produced 35 pounds or more in July, her record being 54.48 pounds of fat from 1210.6 of milk in her tenth month on test. O. A. C. had another of its own breeding in the junior 2-year-old honor list, and W. S. C. had one also.

Willowmoor Ila was of course A. R. state leader in Washington for the month of July, and O. A. C.'s mature cow, Robinhood's College Douglas, was state leader for Oregon. The two states had 13 cows in the 50-pound list, out of 211 for the entire country, five herds and 35 cows being on test out of 124 herds and 993 cows for the United States.

Life Preservers

(Continued from page ten.)

and we know on certain farms in the middle west hog raising was discontinued because they would not thrive. The reasons are the basis for a few articles on hog diseases that will follow this introductory one.

The condition mentioned above has not been brought to my attention here in the west as yet, but it is coming as certainly as the present conditions are continued and, while hog raising has not become as great an industry here as in the corn belt, it is nevertheless important now and must become more important still as diversified farming becomes more prevalent. Now while there may be no farms where hog raising is impossible there certainly are farms where the industry is not as profitable as it should be. Where, instead of a thrifty litter, there is a runty, scaley bunch, you may rest assured that there is trouble at the source that is going to become more troublesome as time goes on and will result in an unprofitable venture until conditions surrounding the hog are changed. I think hogs can be raised profitably in any part of the United States, but the present system can not continue.

This is the first of a series of articles by Dr. Wegner that will, if the advice in them is heeded, add thousands of dollars to the incomes of the farms of this state.—Editor.
